It requires great temerity to discuss this water question in California, where water is the basis of the economy of the region, and before western lawyers who know more of the detailed case history of this problem than I shall ever learn; but I am convinced that the answer will depend in the long run upon the social, economic and political views of the Congress, and, perhaps we might add, of the Supreme Court.

The problem falls into two phases, first, the economic effect upon the owners of land and particularly those in the western States; and, second, our philosophy of government, which must underlie the interpretations of some of the Federal constitutional clauses about which the controversy rages.

The decisions with reference to many of the questions of Federal control of water will have a profound effect upon the future economic life of our country, and even upon the governmental structure of the United States. In at least half the geographical area of our country the control of water means the direct control of land, for the land without the water is useless; it means the control of the location of industry, which in turn means the control of the location of population; it means the power to replace an existing economy with a new economy; to sound the death knell of settled areas and to raise up new areas—all by the manner in which we administer this water resource.

We have built the tremendous industrial and agricultural strength of this country upon the principle of the individual ownership and control of land and water and of complete freedom of industrial opportunity. We built it upon the theory that every man has the right to engage in any business his fancy chooses and to sink or swim, live or die, by his own foresight, ingenuity and effort.

To me it was a shocking thing in the Department of the Interior to have people come from those areas in which there is practical Federal control of water and say, in substance, "Please, Mister, can I have X kilowatts of energy from Government-controlled water with which to start myself in a little manufacturing business?" And yet that is the point we reach when we follow the doctrine of Government control of such a basic resource as water, and let us realize that is exactly the situation in which we put every landowner, every municipality, and every industry in the country, if we are not careful of the length to which we extend governmental control of this basic natural resource, regardless of what constitutional powers may exist.

So much for the practical consequences that flow from an undue extension of Federal control over the waters in the United States.

But the controversy which I shall primarily discuss is really a controversy over Federal constitutional law. Certain powers enumerated in the Constitution of the United States were delegated to the Federal Government, and it is by what many believe to be exaggerated claims for the undue extension of those powers that this controversy has arisen. These powers may be enumerated as follows:

The power to regulate interstate commerce (Constitution, art. I, sec. 8):

"The Congress shall have power * * * to regulate commerce * * * among the several States."

The war power (Constitution, art. I, sec. 8):

"The Congress shall have power * * * to raise and support armies."

The property clause (Constitution, art. IV, sec. 3):

"The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States."

The General welfare clause (Constitution, art. I, sec. 8):

"The Congress shall have power * * * to pay the debts and provide for the common defence and general welfare of the United States."

The treaty power (Constitution, art. VI):

"This Constitution, and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land."

It is the implication of some court decisions and the arguments propounded in several cases by the Justice Department that have alarmed the West as to the validity of its water rights, as much or more than what has actually been decided. These alarms were intensified and given more substance by the Pelton Dam decision in 1955[2] and some implications from the Ivanhoe decision in 1958.[3]

As to the Pelton case, a very brief background may be recited:

Beginning more than a hundred years ago, the rule of appropriation of water, as applied in the West, grew by common usage of the settlers and later by court decision into a law of waters. He who first applied the waters of a stream to beneficial use, whether his land bordered the stream or no, acquired a property right in the use of the water—restricted somewhat in some States (including California) by a limited application of the older English doctrine of riparian rights.

Such was the situation at the close of the Civil War, when the passage of the Homestead Acts and other acts were designed to open up the West to settlement and to give encouragement to the development of western lands.

In 1877 Congress passed the Desert Land Act (19 Stat. 377), which provides:

"All surplus water over and above such actual appropriation and use, together with the water of all lakes, rivers and other sources of water supply upon the public lands and not navigable, shall remain and be held free for the approproation and use of the public for irrigation, mining and manufacturing purposes, subject to the existing rights."

This, so most lawyers supposed, was clearly settled by the opinion of Mr. Justice Sutherland in *California Oregon Power Co.* v. *Beaver Portland Cement Co.*, 295 U.S. 142, in 1935, when the Justice—a native, by the way, of Utah and an acknowledged authority on western land law—said, at pages 162–164:

"As the owner of the public domain, the Government possessed the power to dispose of land and water thereon together, or to dispose of them separatively. * * * The fair construction of the provision now under review is that Congress intended to establish the rule that for the future the land should be patented separately; and that all nonnavigable waters thereon should be reserved for the use of the public under the laws of the States and Territories named. The words that the water of all sources of water supply upon the public lands and not navigable 'shall remain and be held free for the appropriation and use of the public' are not susceptible of any other construction. The only exception made is that in favor of existing rights; and the only rule spoken of is that of appropriation. * * * What we hold is that following the act of 1877, if not before, all nonnavigable waters then a part of the public domain because publici juris, subject to the plenary control of the designated States."

However, when the Pelton case arose in which a proposed dam was between a Government reservation of public lands for power sites on the one side of the river and an Indian reservation on the other, the court held that the Desert Land Act did not apply to waters on Government reservations, and that the Federal Power Commission had exclusive jurisdiction to grant a license for the use of such water and the State of Oregon had no rights therein.

Many of us question whether the Congress in 1877 gave any thought to the niceties of distinction between public lands and reserved lands. Most of the reservations have been made since that time. Can the Government make reservations now and hence eliminate future enlargements of the appropriation of water?

The effect of this decision is momentous. What are the reservations referred to? How large are the areas affected? No one knows the exact acreage of the numerous power site withdrawals in the West, which were made in large part during the Theodore Roosevelt era, at a time when it was currently believed that cheap hydroelectric power was all one word, just like "damnyankee."

At any rate, such power site withdrawals constitute millions of acres. There are approximately 145 million acres of forest reserves. Are they included in such reservations? The Government position is that they are.[4] There are other millions of acres of Indian lands, some of whose water rights are vested by treaty, but others by the doctrine of implied transfer of reasonable amounts of water with the land (the Winters doctrine).[5] There are other large withdrawals under the Small Tracts Act[6] and various mineral laws. The Taylor Grazing Act[7] provides for the

---

[1] One which will be extremely helpful is a "Digest of Certain Supreme Court Decisions Pertinent to Western Water Rights, Etc.," prepared by Mr. Elmer F. Bennett, Solicitor of the Department of the Interior, for the benefit of the Senate Interior Committee, committee print, June 20, 1957.

[2] *Federal Power Commission* v. *Oregon*, 349 U.S. 435.

[7] Act of June 28, 1934, 48 Stat. 1269, 43 USCA 315.

formation of grazing districts. There are also substantial recreational and wilderness areas set aside. Are all these within the scope of the Pelton opinion?

It is easy to understand the terror that gripped the Western States, where most of these reservations are located, when it was realized that hundreds of water rights of farmers, miners, and municipalities which were acquired under the State laws of appropriation, but some of whose water comes from Government reservations, might, therefore, be held void as against a future Government use of that part of the water because of this overriding Government right, never before known or believed to exist.

The opinion is ventured that very few of the major water rights of the larger irrigation districts and water developments of the West are not materially contributed to by the water from some type of Government reservation. Does this mean that there is the possibility that at least a portion of such water rights may be ultimately held to be under Federal control instead of under the control of the appropriator under the laws of the States? What rights downstream from such Federal reservations are firm.

This potential cloud upon the title to water rights may rather obviously have some effect upon the credit of the districts. There is a widespread feeling of instability resulting.

These fears were not lulled by the actions of the Government in the well-known Hawthorne case[8] in Nevada. Here a Government installation using underground water had complied with the laws of Nevada by making application for apropriation of this underground water. Just as the applications were about to be allowed by the State Engineer of Nevada, the Pelton decision came down, and immediately thereafter these applications under State law were withdrawn on the theory that there was no further need for compliance with the laws of the State.

There is controversy in this litigation about the facts, both as to historical background, involving cession of jurisdiction by Nevada, dispute as to the vested rights of the Navy prior to the Nevada act relating to underground water, and numerous other controversies. But the principle which the State of Nevada believes to be involved is this same principle of Federal immunity from the laws of the State.

Substantially the same situation applies to the Blue River case in Colorado, affecting the water supply of the city of Denver, where, despite the investment of millions of dollars by the city for a water supply in the mountains, the Government took the position that the water belonged to the Government and was not subject to normal appropriations by the city of Denver. Fortunately, this one was resolved by compromise.

The situation has caused widespread intensive study of the Federal powers and of the viewpoint of the Federal Government, as expressed from time to time by the Supreme Court, by the Justice Department, and by congressional action.

It is asserted by the States that their water rights are vested property rights under State law, and that the States under the American system are the repository of all real property law—to which, of course, answer is made that no State can adjudicate the rights of the Government of the United States, and that those rights arise under the Constitution and laws of the United States.

It is asserted that all of the land and the water of the western streams were owned by the United States, having been acquired by purchase (Louisiana, Gadsden, etc.), or by conquest or by treaty, and that unless conveyed away, such land and water rights are still U.S. property, and any such conveyance must have been by an act of the Congress under the property clause.

The position of the Government with reference to title to the waters on these reservations is well expressed by the answer of the Government to interrogatories in the Fallbrook[9] case, to one of which interrogatories the Government replied:

"The United States of America claims that the title to the rights to the use of water upon the reserved lands of the United States of America resides in it and has never been conveyed away. Those rights are part of the land and may be administered by the United States of America independent of the laws of the several States. They are in some regard similar to State-recognized riparian rights, as use does not create them and nonuse does not cause their loss; yet to the extent they are required to meet the beneficial uses for which they were reserved they are not subject to diminution by appropriative or riparian rights which vested subsequent to the reservation. They differ from appropriative rights as they exist as parcel to the land and require no act on the part of the United States of America to initiate or maintain them. These rights have been reserved by Executive orders and statutes."

Upon this same theory it has been asserted by the Justice Department that the United States is still the owner of all the unappropriated water in nonnavigable western streams. The most recent assertion of this claim was made in *Nebraska* v. *Wyoming* (325 U.S. 611), where the question was bypassed by the Court, which found that there had been actual compliance with State law by the agency utilizing the water right. But the same position is still taken.

The States point out several State constitutions that provide either for State ownership or State plenary power over all water within the State; that such constitutions were ratified by the Congress when the States were admitted to the Union; and such action constitutes in substance, if not an actual conveyance by the Congress, at least a compact with the admitted State.

This argument is answered by the statement that we are dealing with real property when we deal with water rights, and that there is no semblance of any ordinary instrument of real property conveyancing present. This is unquestionably true, but are such instruments essential to an agreement between a sovereign State and the National Union?

The States also contend that a long line of congressional acts recognizing the State laws of water are further confirmation of the intention of Congress to treat the waters of nonnavigable streams as being under State jurisdiction.

As a result of this total confusion, it was only natural that clarifying congressional legislation should be offered, and Senator Frank Barrett, of Wyoming, together with 16 other Senators, joined in proposed legislation (S. 863, 84th and 85th Congs.) to correct the situation, to repeal the effects of the Pelton decision, and to settle supposedly vested water rights in the West as they have been commonly considered by the bar for three-quarters of a century.

Under the property clause, which says that "the Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States," it seemed a relatively simple matter to say, as did the original Barrett bill:

That all the navigable and unnavigable water in the States * * * are hereby declared free for appropriations under the jurisdiction of the State, and thereafter subject to the laws of that State with respect to control, use, and distribution of such appropriated waters for all beneficial uses."

And:

"Federal officers, employees, agencies, and instrumentalities the same as private persons shall proceed in conformity with the laws of the State in which the appropriation has been or shall be instituted or perfected, and that each of them shall be governed by the laws of such State in respect to the control, use, and distribution of the appropriated water."

Extensive hearings on the subject, however, conducted by the Senate Committee on Interior and Insular Affairs during March of 1956, disclose that the problem is not a simple one, and in those hearings the Department of Justice, I believe for the first time, rather fully and completely explained its views with regard to all of the constitutional questions which from time to time have raised.

From these hearings the views of the Department of Justice (and I should make clear they are long-standing views of previous, as well as the present, administrations) are apparent.

First, it is asserted that no State delineated from former public lands, as such, owns any water. This is on the theory of original Government ownership and failure to convey, which I have discussed; that only individuals have acquired property rights in the use of water; and that those rights have been acquired directly from the Federal Government by reason of permissive Federal statutes (the Desert Land Act, among others), which provide that they may be acquired by complying with the laws of the States. This, of course, is a denial of any validity in the argument that ratification by Congress of State constitutions is acquiescence in the States' rights asserted therein.

Second, that the water rights of individuals acquired from the United States through compliance with State laws are vested property rights and cannot be impaired without compensation.

Third, with reference to the rights of the Federal Government under the commerce clause, it is asserted, and quite properly I believe, that there can be no vested rights in the appropriation of water from navigable streams; that they are subject to the power of the Federal Government under the commerce clause to impair such rights for navigational purposes, as may be later determined.

How far the navigation power may be extended in the years to come, no one can foretell. In the Appalachian Power Co. case[10] the Court held that the New River, a tributary of the Kanawha in the mountains of West Virginia, was a navigable stream (based on historic facts), but used very interesting language:

"To appraise the evidence of navigability on the natural condition only of the waterway is erroneous. Its availability for navigation must also be considered. * * * A waterway, otherwise suitable for navigation, is not barred from that classification merely because artificial aids must make the highway suitable for use before commercial navigation may be undertaken. * * * Nor is it necessary that the improvement should be actually completed or even authorized."

With suggestions not too far distant that the Missouri River should be made navigable to Fort Peck, Mont.; that the Arkansas should be made navigable through Oklahoma and Kansas; and with a hundred other schemes throughout the country to make navigable channels where none, in fact, have ever existed; it would be a hardy soul indeed who would prophesy the extent of the Fed-

[8] *Nevada ex. rel. Shamberger, State Engineer* v. *United States*, U.S. District Court, Nevada, No. 1247.

[10] *United States* v. *Appalachian Electric Power Co.*, 311 U.S. 377, 407, 408.

eral power to control inland waters under the commerce clause.

Fourth, the war clause—here again no one can define the outer limits of the powers of Congress to raise and support defense forces, which implies, of course, the construction of military reservations, the attendant necessity for water, etc. Certainly we must concede the importance of the Federal Government in this rather limited but sometimes highly controversial area. Whether such power can be used for the taking without compensation of water already appropriated is something else again—depending on the facts.

I shall not discuss the notorious Santa Margarita case, still pending, other than to say I am told that Justice is now claiming only such rights as were accrued and vested in the purchased land, plus a "reasonable" right to exercise riparian rights, and that the Military Establishment is a "beneficial use" of a riparian landowner.

Fifth, the property clause—it is to what are alleged to be implied restrictions on the property clause that the Justice Department has given the most minute attention. It is said that the property clause, while permitting the Congress to dispose of Federal property, i.e., water rights, does not permit the Congress to subordinate the control of such Federal property to the laws of the States, and, therefore, laws which undertake to subject such water, or Federal officials managing water, to the laws of the respective States are an unconstitutional delegation of legislative power.[11]

Some of the Senators had difficulty in understanding why it was unconstitutional under the property clause to vest the management of Federal water rights in the control of the States, when at the same time it is conceded that valid title might be acquired from the Federal Government by congressional delegation under the laws of the States.

In this connection it is interesting to note that the Supreme Court, as long ago as 1914 in the Midwest Oil case,[12] said:

"For it must be borne in mind that Congress not only has a legislative power over the public domain, but it also exercises the powers of the proprietor therein. Congress 'may deal with such lands precisely as an ordinary individual may deal with farming property.' Like any other owner it may provide when, how, and to whom its land can be sold. It can permit it to be withdrawn from sale. Like any other owner, it can waive its strict rights."

And in the more recent second *Tidelands* case[13] the Court, after quoting from the *Midwest Oil* case and others, said:

"The power over the public land thus entrusted to Congress is without limitations. 'And it is not for the courts to say how that trust shall be administered. That is for Congress to determine.' "

This language was again quoted with approval in the Ivanhoe case, but it is interesting to note that the opinion in Ivanhoe does not deal with the language of section 8 of the Reclamation Act, namely, "The Secretary of the Interior in carrying out the provisions of this chapter shall proceed in conformity with such laws."

This position, that there are restrictions on the power of Congress with reference to subjecting public lands to State law, goes to the heart of the matter and brings in question the constitutionality of several laws which have been on the statute books for many, many years. The most conspicuous of these is section 8 of the Reclamation Act (32 Stat. 390), which since 1902 has provided that nothing done under the said act in the reclamation program "shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this chapter, shall proceed in conformity with such laws." Incidentally, the Bureau of Reclamation has been able to proceed through the years, complying in large part with this statute, albeit sometimes grudgingly.

But there are numerous other acts of the Congress whose constitutionality is seriously questioned by this argument of unconstitutional delegation. Perhaps we should briefly review what Congress has said on the matter of the supremacy of State laws in the last century.

In the act of July 26, 1866 (14 Stat. 253), the Congress said that water rights for mining, agricultural, manufacturing, and other purposes which had vested and accrued under the laws of the States on the public domain should be maintained and protected.

Thereafter follows a long line of Federal statutes which say substantially the same thing, and the pertinent sections of these statutes are attached as an appendix to this paper. Briefly, they are:

The act of July 9, 1870 (16 Stat. 218), further expanded and confirmed the act of 1866.

The Desert Land Act of March 8, 1877 (19 Stat. 377), we have already referred to.

Section 8 of the Reclamation Act of 1902 (32 Stat. 390) we have already referred to.

The act of June 4, 1897 (30 Stat. 36), establishing the national forests apparently confirmed the right to appropriate waters from the national forest lands.

Sections 9(b) and 27 of the Federal Power Act of 1920 (41 Stat. 1077) make clear that nothing in that act "shall be construed as affecting or intending to affect or in any way interfere with the laws of the respective States relating to the control, appropriation, use, or distribution of water."

Section 18 of the Boulder Canyon Project Act of December 21, 1928 (45 Stat. 1057), clearly provides that nothing shall be construed as interfering with water rights which the States now have to the waters within their boundaries.

Section 3 of the Taylor Grazing Act of 1934 (48 Stat. 1269) says that nothing shall be construed as diminishing or impairing any State water rights.

The Great Plains Water Conservation and Utilization Projects Act of October 14, 1940 (54 Stat. 1119), reiterates the same principle.

The Water Conservation Act of 1939 (53 Stat. 1419) provides that the Secretary shall only proceed as the water rights have been acquired under State law.

Section 1 of the Flood Control Act of December 22, 1944 (58 Stat. 887), acknowledges State law and in addition provides (the O'Mahoney-Milliken amendment) that the uses of water for navigation west of the 97th meridian shall be subordinate to consumptive uses (under State law).

The Mexican Water Treaty, U.S. Treaty Serial No. 994 (59 Stat. 1219 (1945)) provides that nothing shall be done to control the distribution of water contrary to the uses within individual States.

The National Parks Act of 1946 (60 Stat. 885) requires "establishment of water rights in accordance with local custom, laws, and decisions of courts."

Section 208 of the act of July 10, 1952 (66 Stat. 560), consents that the United States be joined as a defendant in the course of acquiring or contesting water rights secured under State law.

Subsection 3(e) of the Submerged Lands Act of May 22, 1953 (67 Stat. 31), says that it shall not "be construed as affecting or intended to affect or in any way interfere with or modify the laws of the States * * * relating to the ownership and control of ground and surface waters" which shall continue in accordance with State law.

The act of July 28, 1954 (68 Stat. 577), authorizes the Secretary of the Interior to "construct facilities for the Santa Margarita River project" and provides that "the basis, measure, and limit of all rights of the United States of America shall be the laws of the State of California."

The act of July 23, 1955 (the multiple use of lands) (69 Stat. 368), provides that it shall not "be construed as affecting or intended to affect or in any way interfere with or modify the laws of the States * * * relating to the ownership, control, appropriation, use and distribution of ground and surface waters."

These statutes all evidence a century of congressional action regarding water law, in which the Congress has consistently made provision for the following of the laws of the States. Is it possible that they may all be held unconstitutional, as constituting an illegal delegation of power over Federal water rights by the Congress to the States?

How does this square with the facts that admittedly valid water rights have been secured from the Federal Government by following the laws of the States? And are not these statutes reasonable "regulations respecting * * * other property belonging to the United States?"

What right does the Congress have to adopt or recognize the laws of the States as governing a situation with reference to which Congress itself is silent? How far can it "incorporate State law by reference?"

This question has arisen in numerous other cases, quite apart from water rights. The Lands Division of the Department of Justice, under the direction of my friend Perry Morton, has compiled a monumental work closely related to this subject, entitled "Report of the Interdepartmental Committee for the Study of Jurisdiction Over Federal Areas Within the States."

In that connection attention is directed to the very recent *Sharpnack* case.[14] In that case the court held that the Assimilative Crimes Act of 1948 (18 U.S.C.A. 13),[15] which makes applicable the criminal code of the State, whether enacted now or hereafter, to persons on Federal lands within the State, is a proper and not an unlawful delegation of power by Congress.

Are we to say that the Congress may constitutionally subject the thousands of citizens on Federal areas to the criminal code of the States but lacks power to subject Federal lands to the water code of the States?

Prior to the *Sharpnack* case the argument regarding unlawful delegation of power was effective enough that substitute language for the Barrett bill, tendered by the Interior Department and approved by Justice, Defense, and Agriculture, is being considered. This latest version says:

---

[11] Hearings before the Subcommittee on Irrigation and Reclamation of the Senate Committee on Interior and Insular Affairs, 84th Cong., on S. 863 (March 1956).

[12] *United States* v. *Midwest Oil Co.*, 236 U.S. 459, 474.

[13] *Alabama* v. *Texas*, 347 U.S. 272, 273.

[14] *United States* v. *Sharpnack*, 355 U.S. —, 2 L. ed. 2d 282 (1958).

[15] "Whoever within or upon any of the places now existing or hereafter reserved or acquired as provided in sec. 7 of this title [Any lands reserved or acquired for the use of the United States, and under the exclusive or concurrent jurisdiction thereof], is guilty of any act or omission which, although not punishable by any enactment of Congress, would be punishable if committed or omitted within the jurisdiction of the State, Territory, possession, or District in which such place is situated, by the laws thereof in force at the time of such act or omission, shall be guilty of a like offense and subject to a like punishment."

"SECTION. 1. The withdrawal or reservation of surveyed or unsurveyed public lands, heretofore or hereafter established, shall not affect any right to the use of water acquired pursuant to State law either before or after the establishment of such withdrawal or reservation.

"SEC. 2. Nothing in this Act shall be construed as:

"(a) Modifying or repealing any provision of any existing Act of Congress requiring that rights of the United States to the use of water be acquired pursuant to State law, to the extent that such provisions are otherwise applicable.

"(b) Permitting appropriations of water under State law which interfere with the provisions of international treaties of the United States.

"(c) Affecting, impairing, diminishing, subordinating or enlarging (1) the rights of the United States or any State to waters under any interstate compact or existing judicial decree; (2) the obligations of the United States to Indians or Indian tribes, or any right owned or held by or for Indians or Indian tribes; (3) any water right heretofore acquired by others than the United States under Federal or State law; (4) any right to any quantity of water used for governmental purposes or programs of the United States at any time from January 1, 1940, to the effective date of this act; or (5) any right of the United States to use water hereafter lawfully initiated in the exercise of the express or necessarily implied authority of any present or future act of Congress or State law when such right is initiated prior to the acquisition by others of any right to use water pursuant to State law."

An examination of this language will disclose that section 1 is designed to allay the fears raised by the Pelton decision. There seems to be a general agreement that for the future stability of the appropriative water rights of the West, the Government should dispel the cloud which the numerous Government reservation may create over downstream rights.

As a possible alternative, it has been suggested that, without affirming or denying all of the claimed Federal powers, Congress simply pass an act declaring that the exercise of Federal powers relating to waters shall only be exercised when authorized by Congress. Naturally, in view of the long history of Congress in protecting State rights, some such provision would meet State approval.

But to this it is answered that such a statute will tie the hands of the President and is unconstitutional, because it infringes upon the supremacy clause and the duty of the President that (Constitution, art. II, sec. 3) "he shall take care that the laws be faithfully executed." It is asserted that the laws in that clause include these alleged constitutional rights of the United States. If I can judge from the brochures which reach my desk, there are at least two views of what constitute the laws of the United States, which the President should see are executed.

There are two other factors in this situation which exert a powerful pressure toward the extension of the Federal control of waters on nonnavigable streams:

The first of these is the tremendous and nationwide urge for the utilization of the Federal function of flood control, for the actual purpose of providing storage reservoirs to provide municipal water supplies.

The authorization in the recent flood-control acts for structures to be enlarged where feasible, to provide municipal storage water, is an evidence of the ultimate drawing of the Federal Government, under the flood-control aspects of navigation, into being the rich uncle for municipalities. This is a policy and a political issue, but it will create an increasing pressure for the liberal construction of the commerce clause to control presently nonnavigable waters.

Another great force urging in the same direction is stream pollution. This is not the time or place to discuss pollution, other than to say that many of our larger streams are badly polluted—the Potomac is a terrible example.

There is a widespread feeling that stream pollution is completely beyond the control of State and local authorities. Much of this arises because of the interstate character of so many of our streams. More of it arises because of the impossibility of making acceptable allocation of responsibility for pollution. In any event, the Department of Health, Education, and Welfare estimates that if the United States undertakes a national program for the control of pollution of streams, we are talking about at least a billion dollars a year.

Naturally, to avoid unpopular local bond issues and considering the other problems just mentioned, there is here also a great force clamoring for further extension of the Federal Government into the field of water control. Here we also get on the fringe of the welfare clause.

I have tried to point out the legal problems involved in this controversy between the States and the Federal Government. I have tried to outline the claims of the contending forces. Your conclusions as to the outcome of the controversy will have to be drawn from the past decisions of the courts and your best guess on the future political climate.

APPENDIX

PROVISIONS OF FEDERAL STATUTES IN RECOGNITION OF STATE LAW AS GOVERNING WATER RIGHTS

1. The act of July 26, 1866 (14 Stat. 253):

"Whenever, by priority of possession, rights to the use of water for mining, agricultural, manufacturing, or other purposes have vested and accrued, and the same are recognized and acknowledged by the local customs, laws, and the decisions of courts, the posessors and owners of such vested rights shall be maintained and protected in the same; and the right-of-way for the construction of ditches and canals for the purposes herein specified is acknowledged and confirmed; but whenever any person, in the construction of any ditch or canal, injures or damages the possession of any settler on the public domain, the party committing such injury or damage shall be liable to the party injured for such injury or damage" (R. S., sec. 2339) (30 U.S.C.A., sec. 51).

2. The act of July 9, 1870 (16 Stat. 218):

"Whenever, by priority of possession, rights to the use of water for mining, agricultural, manufacturing, or other purposes, have vested and accrued, and the same are recognized and acknowledged by the local customs, laws, and the decisions of courts, the posessors and owners of such vested rights shall be maintained and protected in the same; and the right-of-way for the construction of ditches and canals for the purposes herein specified is acknowledged and confirmed; but whenever any person, in the construction of any ditch or canal, injures or damages the possession of any settler on the public domain, the party committing such injury or damage shall be liable to the party injured for such injury or damage.

"All patents granted, or preemption or homesteads allowed, shall be subject to any vested and accrued water rights, or rights to ditches and reservoirs used in connection with such water rights, as may have been acquired under or recognized by this section" (R. S., secs. 2339, 2340) (43 U.S.C.A., sec. 661).

3. The Desert Land Act of March 3, 1877 (19 Stat. 377):

"All surplus water over and above such actual appropriation and use, together with the water of all lakes, rivers, and other sources of water supply upon the public lands and not navigable, shall remain and be held free for the appropriation and use of the public for irrigation, mining and manufacturing purposes subject to existing rights" (43 U.S.C.A., sec. 321).

4. The act of June 4, 1897 (c. 2, sec. 1 (30 Stat. 36)):

"All waters within the boundaries of national forests may be used for domestic, mining, milling, or irrigation purposes, under the laws of the State wherein such national forests are situated, or under the laws of the United States and the rules and regulations established thereunder" (16 U.S.C.A., sec. 481).

5. Section 8 of the Reclamation Act of 1902 (32 Stat. 390):

"Nothing in this chapter shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this chapter, shall proceed in conformity with such laws, and nothing herein shall in any way affect any right of any State or of the Federal Government, or of any landowner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof" (June 17, 1902, c. 1093, sec. 8, 32 Stat. 390) (43 U.S.C.A., sec. 383).

6. Sections 9(b) and 27 of the Federal Power Act of 1920 (41 Stat. 1077):

"(b) Satisfactory evidence that the applicant has complied with the requirements of the laws of the State or States within which the proposed project is to be located with respect to bed and banks and to the appropriation, diversion, and use of water for power purposes and with respect to the right to engage in the business of developing, transmitting, and distributing power, and in any other business necessary to effect the purposes of a license under this chapter" (16 U.S.C.A., sec. 802(b)).

"Nothing contained in this chapter shall be construed as effecting or intending to affect or in any way to interfere with the laws of the respective States relating to the control, appropriation, use, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired therein (June 10, 1920, c. 285, sec. 27, 41 Stat. 1077)" (16 U.S.C.A., sec. 821).

7. Section 18 of the Boulder Canyon Project Act of December 21, 1928 (45 Stat. 1057):

"Nothing herein shall be construed as interfering with such rights as the States now have either to the waters within their borders or to adopt such policies and enact such laws as they may deem necessary with respect to the appropriation, control, and use of waters within their borders, except as modified by the Colorado River Compact or other interstate agreement" (43 U.S.C.A., sec. 617q).

8. Section 3 of the Taylor Grazing Act of 1934 (48 Stat. 1269):

"Provided further, That nothing in this chapter shall be construed or administered in any way to diminish or impair any right to the possession and use of water for mining, agriculture, manufacture, or other purposes which has heretofore vested or accrued under existing law validly affecting the public lands or which may be hereafter initiated or acquired and maintained in accordance with such law" (43 U.S.C.A., sec. 315b).

9. The Great Plains Water Conservation and Utilization Projects Act of October 14, 1940 (54 Stat. 1119):

"As a condition to extending benefits under sections 590r–590x of this title to any lands not owned or controlled by the United States or any of its agencies, the Secretary of Agriculture may, insofar as he may deem

necessary for the purposes of sections 590r–590x of this title, require—

"(1) The enactment of State and local laws providing for soil conserving land uses and practices, and the storage, conservation, and equitable utilization of waters" (16 U.S.C.A., sec. 590u).

10. The Water Conservation Act of 1939 (53 Stat. 1419):

"(2) the Secretary has found (i) that water rights adequate for the purposes of the project have been acquired with titles and at prices satisfactory to him, or have been initiated and can be perfected in conformity with State law and any applicable interstate agreements and in a manner satisfactory to him; and (ii) that such water rights can be utilized for the purposes of the project in conformity with State law and any applicable interstate agreements and in a manner satisfactory to him" (Aug. 11, 1939, c. 717, sec. 3, 53 Stat. 1419; Oct. 14, 1940, c. 861, 54 Stat. 1120) (16 U.S.C.A., sec. 590z–1 (b)(2)).

11. Section 1 of the Flood Control Act of December 22, 1944 (58 Stat. 887):

"In connection with the exercise of jurisdiction over the rivers of the Nation through the construction of works of improvement, for navigation or flood control, as herein authorized, it is declared to be the policy of the Congress to recognize the interests and rights of the States in determining the development of the watersheds within their borders and likewise their interests and rights in water utilization and control, as herein authorized to preserve and protect to the fullest possible extent established and potential uses, for all purposes, of the waters of the Nation's rivers; to facilitate the consideration of projects on a basis of comprehensive and coordinated development; and to limit the authorization and construction of navigation works to those in which a substantial benefit to navigation will be realized therefrom and which can be operated consistently with appropriate and economic use of the waters of such rivers by other users.

"In conformity with this policy:

* * * * *

"(b) The use for navigation, in connection with the operation and maintenance of such works herein authorized for construction, of waters arising in States lying wholly or partly west of the 98th meridian shall be only such use as does not conflict with any beneficial consumptive use, present or future, in States lying wholly or partly west of the 98th meridian, of such waters for domestic, municipal, stock water, irrigation, mining, or industrial purposes (33 U.S.C.A., sec. 701–1).

12. Reservation (c) to the Mexican Water Treaty, United States Treaty Serial No. 994 (59 Stat. 1219 (1945)):

"That nothing contained in the treaty or protocol shall be construed as authorizing the Secretary of State of the United States, the commissioner of the United States section of the International Boundary and Water Commission, or the United States section of said commission, directly or indirectly to alter or control the distribution of water to users within the territorial limits of any of the individual States."

13. The National Parks Act of 1946 (60 Stat. 885):

Appropriations for the National Park Service are authorized for "investigation and establishment of water rights in accordance with local custom, laws, and decisions of courts, including the acquisition of water rights or of lands or interests in lands or rights-of-way for use and protection of water rights necessary or beneficial in the administration and public use of the national parks and monuments" (16 U.S.C.A., sec. 17j–2(g).

14. Section 208 of the act of July 10, 1952, authorizing suits against the United States in State courts for the adjudication of water rights (66 Stat. 560):

"Consent is given to join the United States as a defendant in any suit (1) for the adjudication of rights to the use of water of a river system or other source or (2) for the administration of such rights, where it appears that the United States is the owner of or is in the process of acquiring water rights by appropriation under State law, by purchase, by exchange, or otherwise, and the United States is a necessary party to such suit. The United States, when a party to any such suit, shall (1) be deemed to have waived any right to plead that the State laws are inapplicable or that the United States is not amenable thereto by reason of its sovereignty, and (2) shall be subject to the judgments, orders, and decrees of the court having jurisdiction, and may obtain review thereof, in the same manner and to the same extent as a private individual under like circumstances: *Provided*, That no judgment for costs shall be entered against the United States in any such suit" (43 U.S.C.A., sec. 666(a)).

15. Subsection 3(e) of the Submerged Lands Act of May 22, 1953 (67 Stat. 31):

"Nothing in this chapter shall be construed as affecting or intended to affect or in any way interfere with or modify the laws of the States which lie wholly or in part westward of the 98th meridian, relating to the ownership and control of ground and surface waters; and the control, appropriation, use, and distribution of such waters shall continue to be in accordance with the laws of such States" (May 22, 1953, ch. 65, title II, sec. 3, 67 Stat. 30) (43 U.S.C.A., sec. 1311(e)).

16. Subsection 3(c) of the act of July 28, 1954, to authorize the Secretary of the Interior to construct facilities for the Santa Margarita River project, California (68 Stat. 577):

"For the purposes of this act the basis, measure, and limit of all rights of the United States of America pertaining to the use of water shall be the laws of the State of California: *Provided*, That nothing in this act shall be construed as a grant or a relinquishment by the United States of America of any of its rights to the use of water which it acquired according to the laws of the State of California either as a result of its acquisition of the lands comprising Camp Joseph H. Pendleton and adjoining naval installations, and the rights to the use of water as a part of said acquisition, or through actual use or prescription or both since the date of that acquisition, if any, or to create any legal obligation to store any water in De Luz Reservoir, to the use of which it has such rights, or to require the division under this act of water to which it has such rights."

17. The act of July 23, 1955 (being sec. 4(b) of Public Law 167, 84th Cong.), the act providing for multiple-use of the surface of tracts of public land (69 Stat. 368):

"*Provided further*, That nothing in sections 601, 603, and 611–615 of this title shall be construed as affecting or intended to affect or in any way interfere with or modify the laws of the States which lie wholly or in part westward of the 98th meridian relating to the ownership, control, appropriation, use, and distribution of ground or surface waters within any unpatented mining claim" (30 U.S.C.A., sec. 612(b)).

Tribute to the Late Barrow Lyons

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, April 17, 1959

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared in tribute to the late Barrow Lyons, who passed away on April 5 at his home.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

When Barrow Lyons passed away in his home at 3 a.m., April 5, the people of this country and the Capitol Hill community lost a selfless crusader for humanity and democracy. He was an effective crusader without fanaticism, a fighter without hate.

A rounded man with interests in literature, music, and philosophy, Barrow Lyons in recent years devoted himself especially to the conservation of the natural resources of the United States. He believed unshakably that the natural resources of the United States should belong to all the people of this Nation rather than to a self-appointed few. His book, "Tomorrow's Birthright," published in 1955, remains one of the outstanding studies of the resource problem.

Mr. Lyons had a long and distinguished career as a newspaperman. He worked on such great dailies as the New York Times, the Christian Science Monitor, the Baltimore Sun, and many others. As a science reporter for the Associated Press, as financial editor of the New York World Telegram, as business editor of Newsweek, and as a writer for many other magazines, he brought to bear a scholarly interest in fact with the quick perception of the reporter and the ability to analyze and describe in crisp, concise prose.

In 1938 he came to Washington as a financial economist for the Securities and Exchange Commission to prepare a massive study of the financing of small business from the time of the Revolution to the present century. He served also with the Temporary National Economic Committee.

Later Mr. Lyons became an information specialist with the War Production Board. In 1944 he moved over to become the chief of information for the Bureau of Reclamation. It was in this position that his interest in and knowledge of "tomorrow's birthright" deepened. He retired from Government service in 1952, but continued to write voluminously on economic, political, and resource affairs.

Throughout his years in Washington, Barrow Lyons was well known to dozens of Senators and Congressmen, many of whom sought his advice. He was respected and liked by his newspaper colleagues. He was also known widely in the cooperative movement throughout the Nation. He was an active, effective member of many organizations, ranging from the Cosmos Club and the National Press Club to the National Grange, the Cooperative Forum, the Electric Consumers' Information Committee, and American Newspaper Guild.

Although he had been suffering from heart trouble for several years, Mr. Lyons remained always ready to lend his amazingly youthful vigor to a humane cause, large or small. Typically, during the last few weeks of his

life, he was spearheading an effort to organize a memorial service for his friend, the late Tom Stokes, the renowned columnist who, like Mr. Lyons, was concerned over the depletion of our natural wealth.

The world has no shortage of cause supporters. It was Barrow Lyons' quiet distinction that he remained doggedly independent and courageous without bluster, bluff, or sham. He never let his interest in one goal blind him to the significance of others. Thus, although he is most closely identified with conservation and public power, Barrow Lyons also worked without fanfare for election reform, for aid to small business, for decent unionism. He never made a nickel out of his services; he never sought remuneration. He was sophisticated, but in 69 years he never grew cynical.

Beyond this, Barrow Lyons never grew inconsiderate of human beings because of a preoccupation with humanity. His generosity of spirit, his twinkling humor, his thoughtfulness, and his literal love for his fellow men affected—and bettered—all those who knew him. More than anything else, this is the birthright he leaves to tomorrow.

Friends and Enemies—Book Review of Adlai Stevenson's Report on Russia

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, April 17, 1959

Mr. HUMPHREY. Mr. President, in addition to my remarks on the article by Mr. Bowles I ask unanimous consent to have printed in the Appendix of the RECORD a book review I was privileged to write on the book entitled "Friends and Enemies," written by Adlai Stevenson, the review being entitled "Stevenson on Russia: The Great Battle May Be Economic," published in the Washington Post and Times Herald of March 22, 1959.

There being no objection, the book review was ordered to be printed in the RECORD, as follows:

STEVENSON ON RUSSIA: THE GREAT BATTLE MAY BE ECONOMIC

(Reviewed by HUBERT H. HUMPHREY)

(Senator HUMPHREY's own visit to Russia, and his interview with Khrushchev, made news last December.)

("Friends and Enemies: What I Learned in Russia," by Adlai Stevenson; Harper.)

Any report from Governor Stevenson of his visit to the Soviet Union is to be welcomed. This slim volume summarizing a series of articles which appeared immediately following Governor Stevenson's return to the United States should be must reading—especially for those of us with responsibility in the field of American foreign policy. I read the original articles with keen interest and am delighted that they are now available in this permanent form.

Mr. Stevenson's book stresses the warmth and friendliness of the Soviet people and the startling paradox of the Soviet leaders who exhibit public wrath against the United States and private cordiality to visitors from America.

In his introduction, Mr. Stevenson raises some important questions: Why shouldn't we trade with the Soviets? Why shouldn't we help them to improve their living standards? The inferred answer is that a Soviet nation with a high living standard may be a more peacfully inclined power.

These questions also reflect his conviction that it is the economic battlefield that may well be decisive in the world struggle. He dramatically underlines the success of the Soviet economic-political offensive in the underdeveloped countries.

Russian, he says, has a great attraction for other poor nations, because as a poor nation it has pulled itself up by its own bootstraps. He points out that the Russian offensive in these decisive areas employs many techniques: cutting prices to get foreign exchange and to capture markets, bartering, purchasing commodities which other countries desperately want to sell, lending money at long-term, low-interest rates, and constructing industrial plants. And—this is important—providing technicians who speak the languages and live humbly like the local people.

Every thoughtful American should reflect on Governor Stevenson's conclusion that the West could go the way of the Athenian democracy in its long struggle with Sparta when an infinitely superior civilization went under, because it lacked the self-discipline to survive. Is the United States today, asks Stevenson, so preoccupied with the military struggle that we have forgotten the values upon which our country is founded?

Stevenson hopes that we will be willing to change our habits, our political behavior and to replace our complacency with a new sense of urgency. And, so do I. Stevenson's book should be of great help in convincing the leadership of America that the time is very late, the adversary is formidable, and things are not going to get better automatically. His wise and humane approach to the problems of foreign policy is a good example of what American leadership should be.

He believes, and I believe, that our leadership must learn more understanding of the deep human suffering and the vigorous human aspirations that underlie the social and political unheavals now rocking the world—as well as more understanding of the truly magnificent human and economic resources of our Nation which could be employed in more constructive and meaningful policies in the have-not areas in the world.

Tribute to Gerald Cullinan

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, April 17, 1959

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a tribute recently paid to Gerald Cullinan, of Dallas, who has just left Government service and returned to private business.

Mr. Cullinan came to Washington 5 years ago as Assistant to the Postmaster General. He became Deputy Postmaster General and established a nationwide reputation among postmasters and postal supervisors for his fairness and willingness to be of assistance regardless of the political affiliations of the individual who needed help.

The article I am asking to have printed in the RECORD appeared recently in the Mountaineer Postmaster, official publication of the West Virginia branch of the National Association of Postmasters. It was written by F. Alvin Webb, postmaster of Keystone, W. Va., a member of the executive committee of the National Association of Postmasters, and the immediate past president of the West Virginia chapter of that organization.

The fact that Mr. Webb was appointed postmaster by a Democratic administration while Mr. Cullinan served as an appointee of the present administration lends special interest to this well-deserved tribute.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CULLINAN QUITS AS SPECIAL ASSISTANT, TAKES PRIVATE POST

(By F. Alvin Webb)

West Virginia postmasters will be saddened to learn that their stanch friend, Gerry Cullinan, Special Assistant to the Deputy Postmaster General, has resigned from Government service. He has accepted the position of senior associate in the well-known public relations firm of Edward K. Moss, Inc., 1025 Connecticut Avenue, Washington, D.C. He will engage in the practice of domestic and foreign public relations and Government relations. The Moss firm also has offices in New York, Paris, and Rome.

However, as could be expected, Gerry, as he is known to thousands of postmasters over the country, has no intention of deserting his old friends and he has been asked to assist in the NAPUS public relations program on a consultant basis and he has accepted the offer. So at least some of his time will be spent working for and with postmasters.

Rarely has a postal official caught the imagination of postmasters or earned their affection to the degree that Gerry Cullinan did during his 5½ years of devoted service. His brilliant oratory, his burning devotion to the Postmaster General and to the postal service, his unflagging energy and good humor and his tremendous talent for friendship all contributed to the total of affection and respect in which postmasters in every corner of the United States held him.

He was so unsparing of his strength and unstinting of his talents that on two occasions his health broke through sheer exhaustion. No one knows how many members of our association were helped out of serious trouble through his efforts. Gerry Cullinan never let it be known who had been in difficulty or whom he had helped.

Aside from his work for and with postmasters, his permanent achievements have been many. But his crowning achievement was his swan song at the national convention at Cinoinnati when he wrote and produced "The Summerfield Story" which thrilled the entire overflow audience in the Taft Auditorium.

In a letter to me afterward he said, "Since I knew that the necessity of planning for the future would force me to return to civilian life right after the convention, I tried to pour into that presentation all that I felt about that great and courageous human being who serves as our Postmaster General as well as all that I felt about the greatest group of men and women I have ever known, the postmasters of the national association." He kept his plans for retirement secret during the convention lest it dampen anyone's spirits or lessen anyone's enjoyment.

West Virignia postmasters feel especially close to Gerry Cullinan because he always responded to our requests and desires. He first came here in 1954 for our convention at Martinsburg. He returned to Beckley in 1957 and to Parkersburg in 1958. And last March he came to Charleston to deliver the address at the Dave Blackwood testimonial banquet.

His departure leaves a void that will be all but impossible to fill. It is good to know that he will be in our corner in his new career. Our thoughts and hopes and prayers go with him.

NATO in the Years Ahead

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, April 17, 1959

Mr. KEFAUVER. Mr. President, I wish to call attention to the fact that the Hon Paul-Henri Spaak, Secretary General of NATO, is at the present time visiting our country. Mr. Spaak has done much to make possible the North Atlantic Treaty Organization and more solidarity in the Atlantic Community. This is his 10th anniversary of NATO.

A very thoughtful editorial in regard to what is ahead and what is in store for NATO appeared in the Christian Science Monitor of April 6. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATO IN THE YEARS AHEAD

The 10th anniversary of NATO passed with due celebrations. But it also was blessed with what is more nourishing for the North Atlantic Treaty Organization. That is, stern reminders from the Communist world in 1959 as to why most of the free nations of the West found it possible and necessary in 1949 to harness their vigorous individualism to a concept of long-term unity.

The speech that President Eisenhower delivered to the Council meeting last week, though unfortunately lacking in freshness of approach to the subject, did serve to underscore a fact that is still too little appreciated among people who are longing for the outlawry of war and for the end of national reliance on arms for security. This is that the West must be prepared to "live in a world in which tension and bickering between the free nations and the Soviet Union will be daily experiences." And that the main strength which NATO brings to the Western world for this test is not a strength of armaments so much as the strength of a moral and mental element—the element of unity.

One other important thing the President's speech did was call attention to the highly creative contribution the Secretary-General of NATO, Belgium's Paul-Henri Spaak, is making to NATO's civilian development.

Of all NATO leaders, Mr. Spaak has seemed to see at once and most clearly the contrast between NATO's vast possibilities and the outlooks of the key governments on which its development mainly depends. As he has said in a recent statement:

"Fortunately, NATO is not, as some people think, in a state of crisis. On the contrary, it is flourishing. * * * Nevertheless * * * commonsense solutions seem to be running head on into stubborn forces of nationalism and individualism within the alliance.

"Yet is it not contradictory to say to an ally, 'I insist on sharing all your secrets, knowing your innermost thoughts, but I intend to keep my own freedom of action; I agree to consult with you, but I retain all my rights to do as I see fit'? Here we are faced with the real weakness of the Atlantic alliance in every sphere—the lack of unity."

Now, the attitudes the Eisenhower speech and the Spaak statement disclose are not so contradictory as they may seem. The unity is there, as against threatened or actual aggression. It is inadequate, however, as against the problems Mr. Spaak cites as scientific research, armaments production, aid to underdeveloped countries, military organization, or the conduct of diplomacy. It is also inadequate as regards economic, social, and even cultural and educational relations within the Atlantic community.

The alliance, Mr. Spaak correctly declares, deserves to be served "with the same energy, love, and pride that for centuries have been put at the service of each individual country." He knows that at present this is "a dream." Yet he says, "The dream must become a reality, for it is on this reality that our future depends. Of that I am convinced."

If this sense of unity once permeates the attitudes of peoples it will be reflected in the attitudes of governments. But this does not excuse the governments—especially the bigger ones—from providing more vigorous leadership toward unity than they have yet offered.

PTA's History Called a Prelude

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, April 17, 1959

Mr. WILEY. Mr. President, we recognize that today we face serious problems in the field of education.

To meet these challenges demands the coordinated efforts of all our citizens.

Over the years, the parents and teachers associations throughout the country have made a significant contribution not only toward resolving problems for individual students and schools but also in developing ideas and planning for an overall better educational system.

This week, the Wisconsin Congress of Parents and Teachers met in Eau Claire, Wis. The theme of the meeting was "A Half Century of United Effort—Toward Meeting Each Individual's Needs for Tomorrow's World." This theme, indeed, embodies the essence of an educational philosophy by which we must meet the challenges of the future.

Recognizing the tremendous contributions which our PTA's, not only in Wisconsin but across the country, have made to bettering our educational programs I welcome this opportunity to pay tribute to these splendid organizations.

A recent issue of the Milwaukee Journal carried two articles touching upon the highlights of the recent PTA Congress in Eau Claire, Wis. I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

PTA'S HISTORY CALLED A PRELUDE—GROUP MUST EXPAND IN APPLYING IDEALS, NATIONAL PRESIDENT SAYS AT EAU CLAIRE

(By Louise Cattoi)

EAU CLAIRE, WIS.—"A Half Century of United Effort—Toward Meeting Each Individual's Need for Tomorrow's World," is the theme of the golden jubilee convention of the Wisconsin Congress of Parents and Teachers, which opened a 2-day session here Monday.

Keynoting the theme at the opening session was Mrs. James C. Parker, Grand Rapids, Mich., president of the national PTA, who observed that "this half century (of PTA achievement), is but the prelude for that which is to come."

Mrs. Parker pointed to the need for "ever expanding application of all the discoveries and knowledge and experience that has been ours."

IS ACTION TOO CASUAL?

She said that "we have talked rather philosophically in the past about developing the individual child," but she wondered if "we have been rather casual and uncommitted in our devotion."

"I do not like to think so," she went on, "but I am convinced that the fact that we can no longer coast along in our general concepts of the rights of the individual is because we are faced with a big, strong, young pioneering nation which declares that the individual no longer matters.

"It is a nation that says the individual belongs to the state, not as a contributing citizen, but because the state says, 'you are mine. I shall take your talents, your inborn capacities, your skills, your ability to learn, and direct and develop it as I see the need and the place to use it.'"

PHILOSOPHY DIFFERS

This is very different from the philosophy we hold, which in a large measure thinks of man in relation to God, and of free will to choose his pathway, she commented.

"You know how the PTA works in Russia?" she asked. "Parents are required to have conferences at stated intervals with their children's teachers."

Although the PTA, as the largest volunteer organization in the country, has much to its credit for the welfare of the school child, the home and the community, she said, the next 50 years should show a more potent achievement.

In her final formal message to the convention Monday, Mrs. James Lohr, Sheboygan, whose term as State president ends in June, paid tribute to PTA work of the last 50 years, but urged greater efforts in the future.

Mrs. Lohr observed that "the love of children is the seed of greatness in parent-teacher workers. * * * Properly nourished, the seed will bear good fruit."

EXPLAINS LEGISLATIVE PROGRAM

She told of having looked over some of the early histories of the National and State PTA congresses, and noted that in "the area of legislation, more than in any other, the women were ridiculed in newspapers, magazines, cartoons, and in speeches."

"This (legislation) was not supposed to be the business of the female," she commented. "But the ridicule did not stop the women. They kept right on reporting the glaring social evils, enlisted the support of their husbands and teachers until they developed the pressure arts—ringing doorbells and sending telegrams until the legislators just had to listen."

The PTA congress, he went on, in the last 50 years has helped bring about educational and social progress, and has recognized that more than children's physical environment is important—moral and spiritual values and habit development are important.

LEGISLATION STUDIED

Mrs. Lohr reported that 7 of the 11 PTA districts in the State prepared legislative programs for the current session of the legislature. Recently, district legislative chairmen came to Madison for a meeting planned and financed by the State PTA congress. This included intensive study of pending legislation and a visit to the capitol to see the legislature in action.

Mrs. Lohr reported that 5,500 new members came into the PTA in the last year. Official figures have not yet been compiled, but the total State membership is now about 145,000 in some 950 PTA units.

Mrs. Willis Van Horn, Appleton, was nominated for president, Monday. Nominees for other offices were Mrs. Howard Thomas, Wisconsin Rapids, vice president; Mrs. George Gregg, 7710 Stickney Avenue, Wauwatosa, vice president, and Mrs. Marden Phillips, Madison, secretary. Other officers hold over. The election will be Tuesday.

FOUR PTA LEADERS, WRITER GET AWARDS

EAU CLAIRE, WIS.—Life memberships in honor of outstanding activities were awarded to four leaders at the golden jubilee luncheon of the Wisconsin Congress of Parents and Teachers, Tuesday, at the American Legion auditorium here.

The winners are: T. J. Kuemmerlein, Milwaukee, a State PTA vice president and director of the department of pupil personnel in the Milwaukee public schools; Mrs. Caroline Hartl Allen, Marshfield, and Dean Lindley Stiles of the University of Wisconsin, and Philip H. Falk, both of Madison.

A fifth life membership was awarded Monday night to Miss Louise Cattoi, club editor of the Milwaukee Journal. The award was a surprise for Miss Cattoi, who described herself as "neither a parent nor a teacher."

The citation said that the life membership was given her in appreciation of long years of press relationship and service.

OFFICERS ELECTED

Officers elected Tuesday morning and installed at the luncheon were:

Mrs. Willis Van Horn, Appleton, president, to succeed Mrs. James Lohr of Sheboygan, whose term expires in June; Mrs. George Gregg, 7701 Stickney Avenue, Wauwatosa, vice president; Mrs. Howard Thomas, Wisconsin Rapids, vice president, and Mrs. Marden Phillips, Madison, secretary. Other officers hold over.

PLATFORM ADOPTED

The platform adopted Tuesday morning dealt with four areas.

1. Concern for the individual: By seeing that the educational program be for each child and that it is adequate for his needs and capabilities.

2. Concern for the family: By supporting statewide programs which would increase the knowledge of the family regarding children and increase family life education programs; by supporting programs which help prevent mental illness and preserve the mental health of all members of the family; by encouraging family participation in group recreational activities.

3. Concern for the community: By promoting and supporting an expanding educational program; by helping the general public in understanding the program of the schools; by supporting programs which will give to each child a well-rounded program of education.

BEST QUALIFIED TEACHERS

By supporting efforts which would protect communities from forces harmful to children and adults; by helping provide adequate services in all communities to meet the needs of the mentally ill, and physically and emotionally disturbed children and youth.

By continuing to support efforts of the State to train and secure the best qualified teachers; by supporting appropriate legislation at the State level to bring about these programs.

HELP CIVIL DEFENSE

4. Concern for the world community: By securing desired legislation for youth which would provide adequate financial support for schools and equalization of educational opportunities for all.

By coordinating with civil defense authorities; by cooperating with those agencies which foster world understanding with the ultimate goal of world peace; by propounding democratic ideas.

Gettysburg Our Gettysburg

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. QUIGLEY. Mr. Speaker, it just so happens that Gettysburg Battlefield is located in the 19th Congressional District of Pennsylvania which I have the honor to represent. But the issue of preserving the battlefield in a manner fitting to the honor of the men who fought there and the living who visit this hallowed ground is of more than regional interest. Gettysburg is a national shrine. Its 2,500 monuments and markers will be outnumbered by custard stands and beer parlors unless the Congress of the United States takes action now to wipe out the eyesores already surrounded by the national park boundaries. I have introduced into the RECORD articles and editorials from a half dozen sources outside of my district. I would like to introduce still another and commend it to my fellow Members as further evidence of the scope of this issue. The following editorial is from the Columbus, Ohio, dispatch of April 11, 1959:

Unless the U.S. Senate restores the request of the National Park Service for $750,000 for fiscal 1960 to preserve portions of the Gettysburg battlefield threatened by commercialization, one of the great focal points of American history and sentiment interest will be irrevocably damaged if not destroyed.

The House of Representatives, piously practicing an "economy" for which it has shown no great regard in other areas of Federal finance, has cut from the NPS appropriations bill every penny designated for acquisition of Civil War battlefield sites next year.

Under consideration is a plan to reproduce the Battle of Gettysburg 4 years from now, as a patriotic spectacle of profound historic interest, on the 100th anniversary of the engagement.

Unless the NPS gets the additional 691 acres it needs to preserve the approximate battle area intact (it now owns 2,762 acres) spectators of the restaged conflict may see Pickett's men charging around hot dog and ice cream stands.

Some of the first-day's fighting may lose some of its authenticity by being carried out on the front lawns of a new ranchhouse subdivision.

Total cost of the land needed, and scheduled for acquisition over a 3-year period by NPS—if it can pry the money loose from a suddenly tight-fisted Congress—is $2.4 million.

This isn't exactly small change, even in these days of huge Federal budgets and extravagant spending. But it is little indeed when it represents the preservation or loss of what is perhaps the most meaningful of all the Nation's historic shrines.

The Civil War is recognized as the most significant single event in American annals, a genuine great divide in human history. The Battle of Gettysburg decided that war. It would be unthinkable to go as far as the Nation already has gone to commemorate this mighty event for posterity without going the full way to keep it intact.

Much of the terrain the NPS wants to acquire is now being farmed under lease, and the same is true of a goodly part of the battlefield it now owns, including the famous Peach Orchard, thus duplicating its appearance as it was in July 1863. The new acreage would be put to productive use in the same manner.

Present owners of the land still needed to preserve the whole battlefield, however, say they can't afford to pass up attractive offers from all sorts of commercial enterprises and real estate interests.

Apparently the only way to protect the hallowed ground of Lincoln's immortal address from desecration by the incongruous presence of motels, miniature golf courses, taverns, candy shops and an amusement park, is to add the additional 691 acres to the NPS holdings.

It is greatly to be hoped that the Senate may reverse the House's almost scandalously shortsighted and insensitive action.

Senator Smathers a Friend of the Latin American Countries

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Friday, April 17, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Miami Herald concerning one of our able and distinguished colleagues, the junior Senator from Florida [Mr. SMATHERS].

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IN A POSITION TO SERVE

Florida's Senator GEORGE SMATHERS, as true a friend of the Latin American countries as there is in Congress, will soon be in a position to give point to his oft-expressed good will.

The Senate Commerce Committee will undertake a searching study of our declining world trade. Senator SMATHERS, as a ranking Democratic Member, is expected to head the Latin American subcommittee.

In that spot Florida's junior Senator will try to discover why U.S. trade with Latin America, our best customer after Europe, is plunging downward at a time when our neighbors are most hungry for American goods.

Nearly every country to the south is embarked on some kind of program to raise living standards. To South and Central Americans, as to North Americans, a better life is visualized in terms of American automobiles, refrigerators, washing machines and goods of all kinds.

Yet in the first 8 months of 1958 these countries cut their U.S. purchases by 10 percent. It was an alarming drop. And it is continuing.

The reasons are not hard to find. Most of our neighbors are plagued with inflation and unemployment. They lack the purchasing power to satisfy the needs of the people.

The stake of the United States is more than economic. Never in history have there been so many democratic regimes in office in Latin America. In Mexico, Chile, Venezuela, Colombia, Argentina, and Brazil there are leaders who place public welfare ahead of personal power. But some of them are sore beset. Political signs are favorable for freedom if only the economic roadblocks can be hurdled. American aid is needed for that.

Senator SMATHERS understands this well. His knowledge of Latin American people and needs is intimate and broad. That is why his assignment to head the Commerce subcommittee would be a happy one. He would be able to serve in practice the closer hemispheric relations he so often preaches.

Tribute to the Late Rodney McLean, of Naples, Tex.

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, April 17, 1959

Mr. YARBOROUGH. Mr. President, the late Rodney F. McLean, of Naples, Tex., was a friend of the people.

Judge McLean came from a pioneer family of lawyers and leaders in Texas. He was continually busy at projects to help his neighbors.

He was disabled serving his country in war, but that did not slow him. He labored zealously for the people.

Rodney McLean showed great personal and physical courage. He also exhibited a highly commendable interest in the welfare of his neighborhood and his State. He managed five campaigns for us in the Naples area in our campaign for good government in Texas.

Last November, the people of Naples elected him to serve as justice of the peace. But he passed away shortly after.

Mr. President, in memory of Judge Rodney McLean, and as a mark of respect for his family, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of his obituary which was published in the Naples (Tex.) Monitor under the heading: "Rodney McLean, Justice of the Peace-Elect, Dies at Shreveport."

There being no objection, the obituary was ordered to be printed in the RECORD, as follows:

RODNEY MCLEAN, JUSTICE OF THE PEACE-ELECT, DIES AT SHREVEPORT

Rodney F. McLean, a longtime resident of Naples, died at the Veterans' hospital at Shreveport at 6:10 p.m. Sunday.

He suffered a stroke at his home here last Wednesday and, after treatment at the local hospital, was transferred to the Shreveport hospital Thursday.

Mr. McLean was born at Gilmer, but had spent almost all of his life in Naples. He worked for many years as a traveling salesman and was elected justice of the peace here in the November 4 election.

Survivors include his wife, Mrs. Leona McLean of Naples; one son, Flippen McLean, of Lake Charles, La.; a brother, L. L. McLean, of Hot Springs, Ark.; one sister, Mrs. J. W. Martin, of Naples; and three grandchildren.

Funeral services were held at 10 a.m. Tuesday at the First Methodist Church here with the Reverend Frank Richardson officiating, assisted by the Reverend Morris Hill. Burial was in the Naples cemetery under the direction of the Hanner Funeral Home.

Pallbearers were Kennard Fleming, Dick Lowery, Homer Cole, Lynn Moore, E. E. Shirey, Vesta McMichael, Leon Garrett, and J. W. Spencer.

A Long Look at China

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, April 17, 1959

Mr. HUMPHREY. Mr. President, there is a great deal of concern in this country about the Communist economic offensive. Sometimes we think of Communist economic power exclusively in terms of the Soviet Union. Any calculations which leave out the tremendous actual and potential economic power of Red China are misleading and can be dangerous.

This point is well brought out in an excellent article by Representative CHESTER BOWLES, entitled "A Long Look at China," which appeared in the April 4, 1959, issue of the Saturday Evening Post.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A LONG LOOK AT CHINA
(By CHESTER BOWLES)

"China—there lies a sleeping giant. Let him sleep for when he wakes he shall shake the world."—Napoleon Bonaparte.

On April 20, 1958, in the province of Hunan, the Communist Chinese Government launched the world's first effort to establish pure communism on a nationwide scale.

The commune that was established there was to be the first of many similar organizations which would harness the energies of every man, woman, and child in rural China to the total service of the state.

It was named Weihsing, the Chinese word for sputnik, and Mao Tse-tung, chairman of the Chinese People's Republic, confidently stated that it carried potentialities for tomorrow's world as explosive as the Soviet thrust into outer space.

Four months later, on August 6, Radio Peiping announced that the first stage of this extraordinary program had been completed. More than 500 million individuals belonging to 120 million households and representing 99 percent of the population of rural China had been organized into 26,000 communes.

"The attainment of communism in China," the announcement triumphantly concluded "is no longer a remote future event."

But in China, as elsewhere, old ways die slowly. On December 18, Radio Peking admitted that orders had been given to slow down the pace of rural regimentation. A breathing spell was needed, it was said, so that "alien class elements" could be purged, "skeptics and doubters" convinced, and local party leaders rid of their tendency to see "only things, not men."

The announcement added that Mao Tse-tung had asked to be freed from his post of national chairman so that he could "concentrate his energies on dealing with the direction of policy" and devote more time to his writings on Communist theory. His request had been granted. Mao would, of course, continue in his key post as head of the Chinese Communist Party.

This succession of announcements set off a whirl of speculation in the world capitals. Belgrade wondered if Mao's resignation might be due to differences with Khrushchev. New Delhi hoped that the slowdown in rural regimentation might indicate a new moderation in Peking. Nationalist leaders in Taipei even suggested that civil war on the mainland might be in the offing.

But those who study Chinese Communist economic and political policy most objectively were inclined to dismiss such explanations as products of wishful thinking. In their view the two central questions posed by recent swings of the political pendulum inside China go far deeper:

1. Can Communist economics, which forged Russia into a modern industrial state in two generations, succeed in Asia, or do the totally different conditions which exist there doom Asian communism to failure?

2. Whether or not this program succeeds, what role is the "New China" likely to play in our future and Asia's?

These questions deserve urgent and thoughtful consideration by American policy makers of both parties. On their answers may depend in large measure the nature of tomorrow's world.

The one-fourth of mankind who live in China are among the toughest, hardest-working people on earth. By the time this years' American high-school graduates reach their thirtieth birthdays, China's population will have soared to 900 million men, women, and children.

Since the 1920's, most Americans have tended consistently to misjudge the strength, competence, and durability of the Chinese Communist leaders who now rule this vast expanse of land and people, an error which may be explained by our bitter disapproval of their policies.

In the first years following Chiang Kai-shek's retreat to Formosa in 1949 we looked on the new government in Peking as no more and no less than one more backward satellite of the Soviet Union.

When Red China began to merge as a world force in its own right, our official pronouncements patronizingly promoted its government to the rank of junior partner in the Communist hierarchy.

Recently some American observers have veered to the other extreme. When reports indicated that it was Mao's influence, in 1958, that caused Nikita Khrushchev to take a tougher position in foreign affairs, they insisted that here was proof positive that the Chinese tail was now wagging the Soviet dog.

The actual relationship between Moscow and Peking remains obscure. We can assume that the balance of influence between the two is in flux, with each partner forced in various ways to accommodate itself somewhat to the ambitions and fears of the other.

But here is the important point: Moscow and Peking view our fast-changing world from rather different perspectives, and these differences may grow.

The men in the Kremlin rule a nation blessed with plenty of living space, plenty of natural as well as human resources and—they think—plenty of time.

Their military might, industrial power, and political influence have been growing with spectacular speed. They assume that Soviet power plus Communist ideology will ultimately add up to world domination.

Their task, as they see it, is to ride and exploit the revolutionary wave which they believe constitutes the future. They have Lenin's assurance that history is on their side, and they can see no reason to take chances.

In contrast, the Chinese Communists face appalling problems, which are now testing

their political and economic theories under the most difficult conceivable conditions.

If the Peking government goes through with its present plan for rapid industrialization on the Soviet model, it may place an impossible burden on the rural Chinese economy, which must feed 650 million people and provide surplus agricultural products to help pay for critically needed imports.

If it seeks to encourage increased food production by appeasing the peasants, it will almost certainly be forced to abandon its Communist political objectives.

This, in a nutshell, is Peking's ultimate dilemma.

The system of pulling a whole nation up by its bootstraps, which worked in Russia at such heavy cost, may fail in China because the conditions there are almost totally different. The most inportant of these differences relate to land, food, and people.

The Soviet Union sprawls for nearly 10,000 miles across two continents. Like our American West, the vast, rich expanse beyond the Urals was opened up only in the last 200 years. It is still largely underdeloped.

Before the coming of the Communists the Russian people had rarely known hunger. Indeed, before the outbreak of World War I Czarist Russia exported some 10 million tons of wheat each year.

Yet, even with this massive, built-in agricultural advantage, the Soviet experiment nearly collapsed during the 1930's for lack of food. If we are to understand the problems now facing the Communist regime in China, we must understand the reasons for this narrowly averted disaster.

During his early struggle for full control of the Kremlin, Stalin continued Lenin's relatively benevolent policies toward the peasants. With total political power securely in his hands, Stalin then turned to the speedy industrialization of the Soviet Union. This, he saw, would require the diversion of enormous quantities of food to the cities to feed the growing industrial population.

In a non-Communist country as potentially rich as Russia, this extra food production could be secured by offering the incentive of higher prices for agricultural produce and a corresponding improvement in rural living standards. But Stalin knew that he could not offer the Russian peasants this special measure of economic freedom without undermining the iron political discipline demanded by the revolution.

He responded to this dilemma with characteristic ruthlessness. Boldly scrapping Lenin's promises of independent land ownership and increasing opportunity for each peasant family, Stalin moved to mobilize all of rural Russia along tightly regimented political lines.

By the late 1930's almost every peasant family in Russia had been pressed into collective farms. All farm machinery was pooled. The number of dairy and meat animals was drastically reduced to save more grain for human consumption. Tightly administered controls forced the shipment of more and more agricultural produce to the cities. Although total farm production declined, the percentage reaching the industrial workers increased.

The short-term result of Stalin's rural program was an eruption into violence and repression without precedent in human history. The peasants resisted and were brutally crushed. Apparently reliable reports indicated that nearly 10 million died and millions more were shipped to Siberia. In a land with an unlimited agricultural potential, food production dwindled and the already meager living standards dropped abruptly.

For more than 20 years the Russian peasants were badgered and terrorized to increase their production. By setting low prices on agricultural products at the farm and charging high prices in the government-owned retail stores, huge profits were extracted from the peasants to produce more and still more capital for the rapid growth of industry.

Only a very small investment was made in rural development, and consumer goods were almost nonexistent. The Soviet Union lived precariously on its built-in food surplus, created not by communism but by nature.

In long-term results, however, this fantastic gamble paid off. Although the cost in human misery was staggering, Stalin's determination and the limitless potential of the Russian land enabled the Soviet Government to create a powerful industrial state in less than two generations.

Since World War II the annual rate of Soviet economic growth has been double our own. Only now, after 30 years of ruthless exploitation, are the first economic benefits beginning to trickle down to the patient Soviet peasants whose forced sacrifices made industrialization possible.

Now it is this Stalinist program that the Peking Government adopted as a blueprint for China's development. In doing so, under the infinitely more difficult Chinese conditions, it embarked on what is by all odds the most daring economic and political gamble of all time.

Mao, like Lenin, had based his revolution on the most dramatic promise that can be offered to any peasant people: "Down with the landlords. Land to the tiller." But when the time was ripe, Mao, like Stalin, did not hesitate to repudiate this promise and to press China's peasants into an economic and political system that had no place for private land ownership.

In 1954, after long, careful preparation, a program of complete rural collectivization was announced. By 1957 practically all Chinese rural families had been organized into 740,000 collectives.

Then, in 1958, Mao, as we have seen, went one giant step further. Henceforth all farm collectives, rural industry and local militia would be consolidated into communes. This was a step so breathtakingly radical and ruthless that even Stalin had not dared to attempt it.

The objective was the total mobilization of 500 million villagers into a massive human work force, the destruction of the family as a social unit and the substitution of a new disciplined loyalty to the Communist state.

Every able-bodied man and woman worker was assigned to the fields, to irrigation projects, to the small decentralized factories and blast furnaces. The organization was along military lines so that work squads, platoons, companies and battalions could be transformed overnight into military cadres.

Every hour of each individual's day was rigidly supervised. Children were to be brought up in common nurseries, workers fed in great central messhalls and the old and infirm assigned to what are described as "happiness homes."

Previous to its December 18 announcement of a slowdown in the organization of this fantastic program, the Peking Government had credited it with huge increases in agricultural production and rural development.

The 1958 cotton crop and the early rice crop are said to be double that of 1957. The wheat crop is up 67 percent. Hundreds of thousands of work teams laboring from dawn to dusk were reported to have opened up 69 million acres to new irrigation. This is fifty times the irrigated areas of America's biggest river project, Grand Coulee, and six times that of India's spectacular Bhakra-Nangal on the Sutlej River in the Punjab.

This, boasted Peking, is only the beginning of an irrigation program that will set the stage for further enormous increases in agricultural production in the next few years. Next on the development agenda is the harnessing of the wild, wasted waters of the Yangtze itself.

To what extent can we separate fact from propaganda? Does the December 18 announcement indicate that the system of tightly organized communes will be abandoned? Or does it suggest no more than a cautious pause for breath-catching in the "great leap forward" toward the total regimentation of Chinese society?

No one can doubt that the 10,000-word announcement, which took 4 hours and 10 minutes to read over Radio Peking, indicates formidable opposition among China's 500,000,000 villagers.

Although it was stoutly maintained that there is to be no reversal in the program itself, some wage incentives were admitted to be necessary to encourage "labor enthusiasm." Fears that all private property was to be immediately surrendered must, it was said, be dispelled.

Every worker should be assured 8 hours' sleep, with 4 hours' freedom for relaxation and meals, leaving 12 hours for work and study except at times of harvest.

Henceforth communal mess halls and children's nurseries must be better run. Parents should be allowed to take their children home occasionally. In building "residential quarters," space should be provided "suited to the living together of men and women and the aged and young of each family."

Although this suggests that the Peking Government has run into difficulty, it would be wishful thinking to assume that a change of direction is in the making. The goals of the commune program have been sturdily reemphasized. The stress is on the need for a somewhat slower pace to educate the laggards and to restrain certain overeager comrades.

The leaders of Communist China know that the success or failure of their efforts will be determined largely in the villages. Although the difficulties are admittedly great, they may argue persuasively that here at least they are far more experienced than were their Soviet counterparts.

The Russian Revolution was made by only 200,000 party members. They were mostly intellectuals and workers with their roots in the cities. Lenin's announcement of "all land to the tiller," skillfully timed to climax the revolutionary upheaval in Moscow and Leningrad, secured the cooperation of the Russian peasants. But they were never made to feel a part of the movement itself.

The Chinese Revolution, on the other hand, has always been deeply rooted in the villages. The 5 million party members who organized the countryside as a prelude to the advance of the Red armies have now grown to 13 million, and most of them are of peasant stock. Under the direction of this rural-oriented Communist leadership and subleadership, many of China's 1 million villages have already known two decades of evolving discipline.

Out of this intensive rural experience have evolved certain strong social and political appeals which have been tested and perfected under varying conditions. With these techniques the Communist leaders believe they can maintain a revolutionary enthusiasm which will carry China through this perilous period of development and create the capital for rapid industrialization.

In place of the uncertain but highly personal security rooted in close family relationships and ancient religious dogma, they have substituted a system that provides a dreary day-to-day sustenance in, return for unswerving subservience to the will of the central government.

In place of the traditional economic incentive of increased consumer goods, they have substituted festivals, complete with booming brass gongs and sputtering firecrackers, dances, parades and mass condemnation of "enemies of the people."

Millions of official loudspeakers, supplemented by constant "study meetings," goad

the people to greater effort, often by fanning the flames of external conflict. In this process the United States serves as a special target for vituperation unmatched even in this age of international mudslinging.

When the occasion calls for it, the Kremlin can muster thousands of angry demonstrators against the West. But the Peking government can produce millions, as the Middle East and Quemoy crises demonstrated.

"All of China boils with wrath," proclaimed Radio Peking when the U.S. Marines landed in Lebanon.

"I will send all my six sons to the front again," a ——— "democratic mother" is reported to have said.

"Americans take care," warned a scientist in Canton, "or you will have your brains bashed out."

In Fukien, the province directly across the Formosa Strait from the Nationalist-held island, the peasants are said to have "pledged themselves to outstrip last year's production as a concrete contribution to helping our army units liberate Formosa."

A successful revolution generates its own initial enthusiasm. Through the expert use of radio, the printed word and mass organization the Chinese Revolution has surpassed most others. But the Chinese Communist leaders face an infinitely greater task, and human nature being what it is, a diet of promises, parades and propaganda, no matter how skillfully administered, ultimately may prove inadequate.

What then can be said about Chinese claims of record-breaking crops already achieved through China's "4-year campaign of suffering to build a glorious future"?

Agricultural experts who know Asia best reject the 1958 production figures as substantially beyond agricultural experience anywhere in the world. Sizable increases have undoubtedly been achieved, and more will follow.

But even with the most favorable weather and the near-total mobilization of human energies, food production in China, as elsewhere, faces certain harsh realities which cannot be exorcised by Communist slogans. The chief obstacle to the success of her effort is China's vast population, growing at the rate of 16 million souls each year and crowded into her enormous but limited land area.

The present average is less than 2 acres for each rural family. With the exception of a few western areas, most of China's readily arable land is now under intensive cultivation. New acreage even there can be brought under cultivation only at a very high cost.

The fact that the people are already living largely on rice, wheat, and vegetables means that there is little grain to be saved by reducing livestock consumption, as Stalin did. Furthermore, output per acre is already high. Long before China succumbed to communism the peasants were using better seeds, more abundant natural fertilizers, and more skilled planting and harvesting techniques than in almost any other underdeveloped country except Egypt.

Although Japanese output per acre has been almost twice as great, these levels appear beyond China's reach in the foreseeable future. Each Japanese peasant family has the incentive of working its own small farm. Equally important, the Japanese peasant can buy ample supplies of commercial fertilizers on easy credit.

If the Chinese peasants could match the Japanese use of nearly half a ton of fertilizer per acre annually, they could boost their output substantially. The massive Hwai and Yangtze River irrigation programs could increase it still further. But the building of a chemical industry that could provide fertilizer in any such quantity does not appear in the cards, even with substantial help from the U.S.S.R.

These, then, are the harsh social and economic realities of China's rural economy which must be considered side by side with Peiping's boasts of a steel industry that will soon outproduce that of the United Kingdom, of endlessly expanding coal production, booming hydroelectric development, and fast-spreading new railroad systems.

If this extraordinary totalitarian experiment succeeds in spite of these obstacles, the world Communist movement will almost certainly be centered in a vital new China, with one-fourth the world's population on a rapidly developing industrial base. Unless there is an unforseen change in Chinese attitudes toward the people of America and Europe such a development would be ominous.

But what is the most likely course of events in Asia if this breathtaking gamble fails to pay off? There are at least three possibilities on which we may speculate.

First, under such circumstances it is barely conceivable that the Peiping Government would modify its external policies and become gradually easier to live with. It is not essential that each country produce all its own food. Britain, the Netherlands, and Japan are among the many crowded nations with high living standards which import a major part of their food requirements. A more moderate Chinese leadership, confronted with increasing difficulty in feeding its people and eager for a period of peace, could trade its manufactured goods for rice and wheat grown elsewhere.

But such a change appears unlikely. The "New China" is driven by a doctrinaire nationalism, fiercely intent on economic self-sufficiency. As her leaders consider China's vast and rapidly growing population insecurely based on limited land resources, they may be expected to look beyond China's borders for new areas which can be brought under their control.

Second, a possible solution lies in the Soviet Union itself. With a population one-third that of China, the U.S.S.R. has twice her land area. In theory, a decision by the Kremlin to allow the comradely sharing of her eastern lands with Chinese colonizers would allow China's rapid industrialization to proceed on schedule. The resulting economic, political, and military colossus would include nearly one-third of the world's populatiion. Stretching in one unbroken, tightly controlled Communist federation from Berlin to Canton, it offers a chilling prospect.

Fortunately, there are some formidable physical, nationalistic, and human obstacles in the way of its fulfillment. The limitations of climate and water, for instance, make Siberian agriculture a season-to-season gamble. An even greater barrier is the national pride and security of the Soviet Union itself. Economic and political integration on a scale sufficient to solve China's land hunger would be a giant step toward Chinese domination of the Soviet Union, the Communist movement, and, ultimately, of the world itself. The men in the Kremlin could scarcely be expected to welcome such a development.

Finally, there remains a third possibility. The Chinese Communist leaders may look increasingly toward Southeast Asia as the solution to their economic and political dilemma. In terms of China's long cultural history, most of this area is newly colonized land and relatively underdeveloped. It is also fertile land, blessed, by and large, with rich soil, ample rainfall, and a warm, year-round sun that normally assures two crops annually.

Although some areas, such as Java, are greatly overpopulated, nearby Sumatra could absorb 40 million to 50 million more people. Burma could support far more than its present population. So could the Philippines, South Vietnam, Cambodia, Laos, Thailand, and Malaya.

If the Chinese leadership decides further to increase its pressure into these lush lands to the south, it will be a case of history repeating itself. Down through the centuries Chinese dynasties in their glittering imperial court in Peking sent their emissaries to demand tribute from southeast Asian princes.

In periods of aggressive strength, Chinese emperors sometimes sought to buttress this big-brother relationship both by extensive trade relations and military expeditions southward. Chinese influence was particularly strong in Vietnam, where Chinese-satellite states existed for centuries. If the Ming emperors in the mid-15th century had not pulled back from the beginnings of an unprecedented national program of naval and maritime expansion, southeast Asia might today be part of China.

Meanwhile, modern China appears already to be on the move. The Communist successors to the emperors of Peking are reasserting their traditional role in this area. Chinese trade to southeast Asia is being increased substantially. In 1949, Chinese exports were almost nonexistent. By 1955 they had risen to $209 million. In 1958 they were $309 million.

India's trade in southeast Asia has been cut nearly 40 percent by these new Chinese exports. Great Britain's has also been seriously hurt. Japanese goods are being undersold 10 to 15 percent in countries on which Tokyo has been counting as an essential market and source of raw materials.

Ironically, most Chinese exports into southeast Asia are the very consumer goods which the Peking Government denies its own people. A British bicycle in Kuala Lumpur costs $35. The Chinese equivalent, which sells for $70 in Peking—more than a year's average income—costs the Malayans only $14.

Although these exports fell abruptly early this year, it seems likely that the flow will again be resumed. Some observers speculate that the interruption was due to the need to meet overdue payments to the Soviet Government for heavy machinery delivered to China early in 1958.

At the same time, Peking has been stepping up its effort to win the political allegiance of the 13 million Chinese who live in the larger southeast Asian cities and who retain close cultural and linguistic ties with the Chinese heartland. Chinese maps, inherited, so Peking says, from Chiang Kai-shek, still proclaim Chinese sovereignty over sizable border sections of Burma, Bhutan, and India. Radio Peking regularly asserts Chinese superiority over all foreign barbarians.

Regardless of the success or failure of China's experiment in pure communism, it is apparent that an explosive new force is being generated in Asia which will exert increasing influence on the world power balance.

The means by which we can help blunt this force and lay the basis for orderly and peaceful relationships are beyond the scope of this article. A few brief observations, however, may be in order:

1. Communist China will be with us for the foreseeable future. It is wishful thinking to assume that it will vanish conveniently in a peasant uprising.

2. Although the entrance of this dynamic new element into the world stage creates profound difficulties for us, it also constitutes a potential threat to the Soviet Union. The ultimate effect on relations between Moscow and Peking is impossible to foresee.

3. In order to cope effectively with the challenge, we Americans sorely need a long-term perspective and long-term plans to go with it. These plans should be rooted in the realities of Asian attitudes, economics, politics, and geography. Expedient, crisis-to-crisis moves based on the illusion of American military omnipotence will almost certainly fail.

4. The principles and techniques which will work best in Southeast Asia should be fundamental to American policy throughout the underdeveloped continents. These may include a more careful selection of the men and women to represent us abroad, a revamped economic-aid program, less emphasis on regimes and more on people, some such device as a World Food Bank to distribute surplus food more effectively and a program to help stabilize the prices of raw materials.

5. Although most Southeastern Asian governments are frail and uncertain, they are increasingly aware of the danger of Chinese aggression and the brutality of Communist techniques. It is particularly reassuring that this awareness is spreading to India, which centuries ago provided the principal counterforce to Chinese expansion into Southeast Asia and may conceivably play this role in the future.

6. Once we begin to act positively within the economic and political framework of the American revolutionary tradition, we will elicit a heart-warming response from non-Communist peoples throughout the world.

In these next decisive years an awakened America, prepared to look the facts about modern Asia squarely in the face, can play a vital role in stopping the spread of communism without war. Thoughtful men in Asia, Africa, Latin America, and Europe fervently hope that we will play it.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Sand Dunes Seashore Park

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, April 20, 1959

Mr. NEUBERGER. Mr. President, all new ideas evoke some negative response, so I have not been surprised that a degree of opposition has resulted over the proposal for establishment of the Oregon Dunes national seashore area. This National Park Service development would dedicate portions of a 23-mile stretch of Oregon's scenic coastline to recreational use of the Nation. Many of the newspapers in my home State have recognized this long-term value of the seashore area, both to Oregon and the Nation, and have endorsed the idea in varying degrees of support. I ask consent to have printed in the Appendix of the RECORD thoughtful editorials on the Oregon Dunes seashore area from the Oregon Journal, the Eugene Register-Guard, and the Astorian-Budget.

There being no objection, the editorials were ordered to be printed in the RECORD, as follow:

[From the Oregon Journal, Apr. 14, 1959]

SEASHORE CREATION TAKES TIME

If a national seashore recreation area is to be created in the dunes between Florence and Reedsport, it will not become full-blown overnight. The process will be slow and gradual. It will take into account the needs and desires of local interests. There will be time for adjustment from whatever dislocation is caused. The plan is not to be "crammed down the throats" of local people. No final boundaries have been fixed. They may be adjusted to avoid undue conflicts with other interests.

These are some of the essential facts told by National Park Service representatives at meetings in Reedsport and Florence, southern and northern terminal cities for the proposed area.

They may have allayed some of the apprehensions felt by local residents. If they have not, there will be plenty of further opportunity to ask questions and voice objections.

Senator RICHARD L. NEUBERGER, author of the bill which would establish the recreation area, has assured the people that public hearings will be held. Passage of the bill itself would not determine the boundaries. These would be decided after negotiations by the Park Service with other agencies and with local interests. And acquisitions of the land itself would take a period of years, depending on the availability of funds. All this lends weight to a word of advice given by William E. Walsh, Coos Bay attorney who presided at the Reedsport meeting, to the effect that if we are going to have such an area set aside, the sooner we get started the better, for the longer we wait the more difficult and costly it will be.

The history of all such developments is that they spark local opposition. Nobody knows for sure how strong the opposition really is on the Oregon coast. Some voices have been heard, but they do not necessarily represent the feelings of all the people. Some have expressed the belief that, with the exception of Florence, opinion on the coast is more favorable than unfavorable. And many persons just want to learn more facts before making a final judgment.

Park Service people now are doing the best job they can to give the facts. They have paid our coast a high compliment in telling us that we have here "a very great thing, perhaps greater than you yourselves realize."

The establishment of any such area is usually a painful and difficult process. If Oregon people are willing to take the long view and not let immediate interests determine their thinking, they will avoid making it any more difficult than it has to be.

[From the Eugene Register-Guard, Apr. 14, 1959]

PARK IDEA WORTH PURSUING FURTHER

Residents of the Florence-Reedsport area should be able to relax a little now, after Sunday's information session on the proposal for a National Park Service reserve between the two cities. They have facts now that they did not have before. And they realize, as they perhaps did not before, that the proposal is highly tentative, with its details to be worked out by negotiation and after more intensive studies of park values and the local economy.

Two questions are of apparently legitimate concern to the people who live in the vicinity of the proposed national preserve. How much of the land east of the highway, especially the lakeshore land, must the Park Service acquire? And how will this proposal bear upon the financial plight of the nearby communities?

Park Service spokesmen made it clear that some land east of the highway would have to be acquired. This is reasonable. The territory would be needed to provide camp sites, to complete the natural borders of the park area, and, perhaps most important, to serve as a buffer between the scenic shorelands and industrial development. It would not be in the National Park Service tradition to permit there being a sawmill next to a picnic area. Thus the Park Service must have some buffer land. But it also appears likely that the Government would not insist on all the land around all those lakes. Cannot a reasonable agreement be worked out? Would it be essential, for example, that the Crown Zellerbach tree farm at Tahkenitch be included in the park?

How about the tax base? How about present bonded indebtedness? Answers here must be highly speculative. The Park Service contends that experience in other parks has shown that the cities on the edges of parks profit tremendously from such developments. Land on the edges of the parks becomes more valuable, business booms, and the general economy is enriched, far more than it would have been enriched if the park had not been established. A detailed study of this type was carried out on the edges of Great Smoky Mountains Park. A copy of this study is coming, and we'll report on it as soon as we get it. Those who are worried about such matters should take comfort in the knowledge that a park area is not born full blown overnight. These things grow. With the growth will come the other readjustments, not suddenly, but gradually.

The proposal, of course, will find no favor with those who dream of a great industrial city spanning the Siuslaw. Industry can exist side by side with a park, but the presence of the park is a drag on industrial development. The park uses land and trees and water, the same things industries use. Moreover, the idea will find little favor with those who hope to speculate in land values inside the proposed park area. These objections are valid, from the points of view of those who make them. However, they should be recognized for what they are—objections from special interest groups for special reasons.

More broadly, of course, the Park Service is interested in this area as a national park, not a local park. The national interest will weigh heavily. While the people of the Florence-Reedsport area need not fear being trod upon, they must also recognize that in the long run broader interests than theirs will determine the character and shape of the park—if one is established.

As we listened to the discussion in Reedsport Sunday, we saw a few drawbacks to the idea and much to recommend it. We urge now that plans go forward, that more specific details be worked out, and that all parties remain calm as they seek a solution that will bring the many benefits of a park and that at the same time will do the least violence to the varied development of the community.

[From the Evening-Astorian Budget, Apr. 15, 1959]

COMPROMISE OUGHT TO BE POSSIBLE

Senator RICHARD NEUBERGER'S proposal for a 35,000-acre national park to include dunelands south of Florence and the Sea Lion Caves seems to be meeting opposition in the area affected. This newspaper has received a letter from a taxpayers' association there citing several granges, the Florence City Council, and the chamber of commerce as opposed to the plan.

The reason given is that several hundred homes would be taken over and destroyed in converting the area into a park.

This seems to be a situation amenable to compromise. If the basic idea of a park to include the dunelands is good, as it seems to be, some adjustment of boundaries ought to be possible to prevent undue acquisition of private property in other uses.

The idea of a Federal park seems good. The Oregon coast has a potentially fine future in the tourist business, and for the furtherance of the business the maximum possible number of public park facilities is needed in scenic spots or areas unsuitable for other use.

The State of Oregon has many parks, almost more than it can take care of, so it seems a good idea to have the Federal Government share the task.

We have no information as to the value of the homes and farms which lie inside the proposed park boundaries, but some of them may be property of more potential recreational than agricultural value.

Ike's Strange Behavior

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, April 20, 1959

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appears in the Washington Daily News of today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IKE'S STRANGE BEHAVIOR

The strangely unenthusiastic elevation of Christian Archibald Herter to be Secretary of State is cause for grave concern.

Even in quiet times, it is an exacting job. Mr. Herter assumes it in an hour of crisis with war or peace in the eventual balance.

To maintain the influence of the United States in rapidly approaching international conferences he needs every bit of prestige and authority the President can give him. There should be no question in the minds of foreign diplomats that he speaks for Mr. Eisenhower—has his complete approval and confidence.

And yet the President's announcement of the nomination, when it finally came Saturday, did not include a word of praise. After a couple of routine sentences—which made no mention of Mr. Herter's qualifications or special apprenticeship—the President walked out of the room, leaving Mr. Herter to explain as best he could the 3-day delay in naming him to succeed John Foster Dulles. And, in the process, Mr. Herter had to cope with repeated interruptions by Presidential Press Secretary Jim Hagerty while trying to answer reporters' questions.

This awkward session was the climax of a week in which event after event conspired, if only inadvertently, to get the new Secretary off to a bad start.

There was the major foreign policy speech of Vice President NIXON, under the circumstances ill timed; and the announcement of Mr. NIXON's mission to Moscow this summer for a frank discussion with Soviet leaders. Also the last-minute health examination of Mr. Herter, despite the fact he has been in training for the last 2 years to act for Mr. Dulles in an emergency, and despite the fact that he has been Acting Secretary for 2 months with succession inevitable for several weeks.

If all this is according to plan and not just clumsy accident, there is cause to wonder if Mr. Herter is going to be something considerably less than principal adviser to the President in determination and execution of foreign policy—cause to wonder whether it is planned that Mr. NIXON may play a major role—even the major role—as spokesman and negotiator for the President in foreign affairs.

RICHARD NIXON is a man of considerable abilities, and we cast no reflections upon them. But this is a system that won't work. We recall that other Presidents have bypassed their Secretaries of State and leaned heavily on the advice of their Colonel Houses, Harry Hopkinses, and Joe Davises. The historical record of those periods is not pleasant reading.

Mr. Herter is an able man—the best available by long public experience and by recent training as Under Secretary of State to succeed Mr. Dulles. The Senate will confirm him promptly this week and next week he will fly to Europe to speak for America.

We hope the impression produced by last week's events is false. If so, the President should speak up promptly.

He should dispel even the slightest doubt that Chris Herter is Secretary of State in fact as well as in name.

New Atom Smasher at the University of Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 20, 1959

Mr. WILEY. Mr. President, Wisconsin is extremely proud of its splendid record of valuable contributions to development and progress in science, as well as in other fields.

Today I should like to call attention to a new development at the University of Wisconsin—the scheduled installation of a 10-million-electron-volt atom smasher. This machine is the second of its kind, and the first to be located in the United States. The other has been installed at the Atomic Energy Laboratory in Ontario, Canada.

Two years ago, the Atomic Energy Commission awarded the $1,050,000 machine to the university's physics department. According to reports, the atom smasher is now undergoing final factory testing and will be assembled on the campus this summer.

We recall that two earlier atom smashers developed at the university, under the direction of its highly qualified staff, made an important contribution to the development of the atomic bomb.

As this new machine goes into action—in coordination with advanced work now underway—I believe it will better enable our Wisconsin scientists to continue making their constructive contributions toward development in the field of atomic energy.

To call attention to this forward step in the university's work in atomic science, as well as to pay tribute to the scientists who are performing so outstandingly in this field, I ask unanimous consent to have a brief article from a recent issue of the Janesville Gazette printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW ATOM SMASHER TO BE INSTALLED AT UNIVERSITY OF WISCONSIN IS FIRST OF ITS KIND IN THE UNITED STATES

MADISON.—A $1,050,000 atom smasher awarded to the University of Wisconsin physics department 2 years ago by the Atomic Energy Commission will be delivered and assembled here this summer.

The 10 million electron volt (Mev) machine known as a tandem-style Van de Graaff, will occupy new underground quarters on the compus between Sterling and Birge Halls.

Final laboratory tests are now being completed by the manufacturer, High Voltage Engineering Corp., Burlington, Mass. Shortly the machine will be dismantled and shipped to Madison.

The Wisconsin smasher is the second of its kind, and the first to be located in the United States. The other was installed this winter at the Atomic Energy of Canada laboratory near Chalk River, Ontario, Canada.

Allocation of this much-sought machine to the university recognizes previous work by nuclear experimenters Profs. Raymond Herb H. H. Barschall, Willy Waeberli, and Hugh T. Richards.

USED AT LOS ALAMOS

Professor Herb who designed and built two other atom-smashing machines now operating in Sterling Hall, also contributed to development of the new machine.

He was the first to achieve a high yield negative ion source and to demonstrate the practicability of stripping electrons from negative ions with a gas. Both these developments are incorporated in the new model.

Two earlier Wisconsin atom smashers played an important role in the development of the atomic bomb. They were shipped to Los Alamos for top-secret research in the early 1940's, and one was returned here after the war.

The new machine is basically a two-headed version of the earlier models.

Negative charged ions are accelerated from ground potential by a positive electrode in the middle of the machine's 34-foot vacuum tube. This step boosts particle energies to 5 to 7 Mev—the electric potential of the electrode.

LEAVES POSITIVE CHARGE

These particles then collide with the cloud of electrons surrounding gas molecules which are fed into the machine at this stage. In the collision, electrons—negative units of electricity—are stripped away leaving particles with a positive charge.

Since the accelerated particles have far greater momentum than the electron cloud, they continue undeviated after the collision. They receive a second 5- to 7-million-electron-volt energy boost in moving from the electrode to ground potential at the opposite end of the tank.

This second step in acceleration is why the machine is referred to as a two-headed Van de Graaff. Older machines are to a rough approximation just the first stage of the new system.

For protons, which have a single negative charge when they leave the negative ion source and unit positive charge after collision, the total energy gain is 1,014 million-electron volts.

PRECISION WORK POSSIBLE

Oxygen negative ions contain nine electrons. If they lose five electrons in collision—the greatest probability—peak energy after acceleration may be more than 30 million-electron volts.

Some exploration in this 10- to 30-million-electron-volt range has already been done in the United States with cyclotrons, a circular design atom smasher. But in these machines precision work is difficult since particle energies are not homogeneous and since the energy cannot be varied easily.

Wisconsin physicists have done precision work in the 1- to 4-million-electron-volt range with their present machines.

The new machine may make possible experiments with polarized particles, that is, particles whose spins are alined in the same direction. This experiment is of particular interest to university researchers because it will give much better information about particle disintegration in the atom-smashing process than has previously been available.

DOORS 2 FEET THICK

The underground facility to house the atom smasher has been built with funds from the Wisconsin Alumni Research Foundation (WARF).

Three large underground rooms occupy nearly the entire distance between Sterling and Birge Halls.

The machine's ion source will be housed in one room along with the 34-foot main tank which is 8 feet in diameter. Coming out of the tank the beams of particles will be bent 90° into a second room by magnets.

This is the target area, where beams will come off into three experimental stations.

A third room, shielded with a 4-foot thickness of iron-ore concrete to protect against radiation, will house the equipment for taking data. Doors to the rooms are of solid steel, 2 feet thick.

Treatment of Cancer

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, April 20, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Washington Post of April 18, 1959, by Mr. Drew Pearson, entitled "Bills on Cancer Defeated in Past."

Mr. President, I agree heartily with Mr. Pearson that we should continue research and testing of anything that might produce a cure or relief from any dreadful disease, whether it be discovered accidentally by a layman or by a highly technical expert.

On March 25, 1959, I introduced a bill, S. 1540, providing for simple research and a testing program on burns using a product made from a vegetable base known as B–N–G solution. I hope very much that this bill will be reported by the Armed Services Committee as soon as possible.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BILLS ON CANCER DEFEATED IN PAST

(By Drew Pearson)

MIAMI.—News that the inexorable spread of cancer had finally forced the resignation of John Foster Dulles as Secretary of State came to Miami as the author of the cancer bill was eating lunch in a little restaurant.

"It was over 20 years ago that we introduced the bill creating the National Cancer Institute," said former Senator Claude Pepper, now an attorney in Florida. "That was in 1937. The bill passed and carried an appropriation of $500,000. But although the Cancer Institute was established, it did not seem to have enough money to operate. So in 1946 Matt Neely, of West Virginia, and I introduced another bill appropriating $100 million to be spent until used up, to fight cancer.

"Our bill never passed," Pepper recalled, "and since then Senator after Senator has died of cancer. Now John Foster Dulles is suffering tragically.

"Matt Neely himself died of the disease he tried of eradicate. Senator Taft introduced a bill to appropriate $75 million to fight cancer. It did not pass and he died of the disease he tried to stamp out. So did Senator Wherry of Nebraska, Senator Vandenberg, of Michigan, Senator Brien McMahon, of Connecticut. The march of death continues.

"What I wanted to do," said Senator Pepper, "was to call together scientists from all over the world to fight cancer. Just as we got scientists from Italy, Hungary, Germany, and Denmark to help devise the atom bomb, so we should use scientists to fight cancer. This is one field where we and Russia can heartily cooperate."

DULLES WANTED TO QUIT

Some people had the impression that John Foster Dulles was trying to cling to his job as Secretary of State until the very last minute. But during the last 2 weeks, nothing could have been further from the truth.

Repeatedly during that period, Secretary Dulles urged the President to accept his resignation. Just as frequently the President refused. Dulles argued that it was only fair to the man who would be his successor that he be given time to prepare for the series of foreign ministers conferences.

Finally after Dulles had gone to the Air Force hospital in Palm Beach, Fla., and found that cancer cells probably had spread to his neck, he phoned the President in Augusta and sadly told him he didn't think he had much time to live.

Even then Eisenhower refused to listen. He told Dulles to return to Washington for further treatments. Independently, however, Eisenhower checked with the medical authorities and found it was true that Dulles' condition had worsened.

Despite this, the President wouldn't give up. So he returned to Augusta from Washington determined to hold off any announcement of Dulles' resignation until the weekend.

Later that afternoon Dulles called him to say that the newspapers were making it appear he was determined to hang on to the job with his last dying breath. So he virtually demanded that the resignation be announced immediately.

Eisenhower asked him to sleep on the decision, and when Dulles insisted the next morning that his mind was made up, the President called a hasty press conference and made the long-awaited announcement.

TWO UNBUDGEABLES

It will take some time for historians to evaluate the happenings of the past 2 weeks. But in rapid succession two of the most unbudgeable leaders of the Western World have dropped out of current history. First, Chancellor Konrad Adenauer, the incorrigible, unflinching foe of appeasing Russia, decided to retire for old age. Second, John Foster Dulles, Adenauer's close friend and supporter of a rigid stand for the reunification of Germany on Western terms, was forced to the sidelines by the spread of cancer.

What will this mean to future history?

As of today allied diplomats are hopeful. They say that the old stand of the unbudgeables was getting us nowhere. Since conditions could have been no worse, they believe they can get better.

Area Redevelopment

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, April 20, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from an outstanding weekly newspaper in my State, the Exeter News-Letter, complimenting my colleague in the Senate, NORRIS COTTON.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Exeter News-Letter, Apr. 9, 1959]

KEEP FIGHTING

U.S. Senator NORRIS COTTON appears to have his eye on the ball in calling the attention of his constituents back home to the massive area redevelopment bill which recently passed the Senate.

Under the provisions of the $400 million piece of "pork," COTTON points out the fact New Hampshire tax money would help bail out once wealthy but now nearly bankrupt States like Michigan.

Granite Staters who have tightened their belts and shortened sail when the economic horizon darkened, would not qualify for a penny of this Federal handout for the simple reason they lack the required degree of unemployment.

"Self reliance and frugality will go out the window and the floodgates will be opened for a vast tide of expenditures with all kinds of discrimination and favoritism," COTTON said, if the bill becomes law.

Michigan, he said, had dissipated its wealth on lush vote-getting welfare programs, and the bill would have the effect of using New Hampshire tax money to provide Michigan with new industry.

Although New Hampshire has a relatively small representation in Congress, we hope this will not be a deterrent to their creating a storm of protest over such an immoral bill.

While conservatives in Congress are badly outnumbered they should bear in mind there are millions of unorganized people throughout the country who are frugal, thrifty, and dependent on a sound dollar for a respectable existence. The continuing erosion of the fruits of their labor is a national scandal.

The Administration Move Toward Private Financing for REA—A Darkening Outlook for Lighting

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, April 20, 1959

Mr. YARBOROUGH. Mr. President, President, the Rural Electricification Administration was originally set up in 1935 to bring light, and it has accomplished a fine result of bringing electric power to the farms and small communities of this Nation.

Yet, in spite of the great strides accomplished in illumination, the outlook for REA during this administriation is dark. REA has tamed the mighty Tennessee and other large rivers to provide electrical power, but now it finds itself up against a different type of power. This is not the type of power generated by rushing water, it is the type produced by the rushing self-interest of a nationwide business that wants REA, too.

I feel that the effort to drive rural electric co-ops to private financing to obtain their loans for operation is poorly advised. I call the attention of my colleagues to the word loans—not grants

from the Government, but loans to help the family-sized farmer and others who otherwise perhaps could not afford it, to help themselves to have the power and lights which REA can bring. The money is loaned and must be paid back with interest.

We are all familiar with the benefits which power from a rural electric co-op brings to a farm or small rural community. The economic boost which REA has given has benefited not only agricultural economy, but the related fields of our farm machinery, home appliances, and other lines.

The word interest is a very important one in this discussion. This move toward private financing for REA projects is in the self-interest of those who want REA out of the cheap power field. I need not say that these interest rates would skyrocket for rural electric co-ops if the administration's plan were adopted.

REA has proved its worth and has shown it can work well if it is unmolested. It needs to continue its work for the benefit of our agricultural economy.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Jay Richter which apepared in Texas Co-op Power magazine for April 1959, under the heading "Down the Chute to Wall Street?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOWN THE CHUTE TO WALL STREET?

(By Jay Richter)

White-haired Senator GEORGE D. AIKEN has a typical New Englander's way of economizing on words. When he read President Eisenhower's budget message proposals on farm policy, the veteran Vermont Republican delivered himself of one of the understatements of the year.

Some of these proposals, AIKEN commented drily, will be controversial.

One of these controversial proposals would affect every farmer, suburb dweller, and businessman served by a rural electric system. It is a revival of last year's Eisenhower plan to send rural electrics into the private money market for part of their financing; the big brother of the companion plan to raise interest rates to all REA borrowers.

NO BILL YET

The President's plan stirred up so little enthusiasm on Capitol Hill last year that no Member of Congress bothered to introduce it as a bill. But the administration has made it clear that this Wall Street legislation will be proposed again this year.

This private financing scheme poses a real threat to America's rural electric consumers. At least that's the considered opinion of their elected officials, who didn't hesitate to speak out on the subject at the recent annual meeting of National Rural Electric Cooperative Association in Washington.

There they unanimously adopted a resolution urging Congress "to oppose any and all proposals which would increase the REA interest rate and/or send the rural electric systems into the private money market for their financing."

In his message to Congress, the President uses language that sounds sweet and reasonable. He wants to strengthen the REA program, he says, and to help rural electrics meet their growing needs. The lawmakers weren't taken in by this soft talk. They spotted the bitter pill under the sugar coating. Here's how they reacted:

"The proposal on REA co-ops won't get anywhere," AIKEN said briefly. "It's an opening wedge toward forcing the co-ops to go to commercial banks for money."

Another Republican Senator, THOMAS H. KUCHEL, of California, went on record at the NRECA meeting that "The aspersions on REA interest and loan policies are a threat to the magnificently successful rural electrification program."

Senator Majority Leader LYNDON JOHNSON, Democrat, of Texas, had harsh words to say about the administration's financing proposals. "They want to send you down the chute * * * but we're not going to raise your interest rates, or send you to Wall Street." He warned meeting delegates, though, "You'll have to fight."

"If fighting and common sense will do the job," said House Speaker SAM RAYBURN, "we'll keep rural electrification on the track it has been running on for nearly 25 years."

WHY BE CONCERNED?

If these are attitudes that most Members of Congress are apt to share, why are rural electric leaders so concerned? If members of both parties in Congress agree that private financing would bring only harm, why should the rural electric consumers be concerned?

The answer lies in the fact that the administration is clearly hoping to build up public backing for its plan, with the idea of eventually winning the war even if it loses the battle this year.

Rural electric leaders see two dangers—either of which they believe could be fatal to many electric systems—in the idea of raising funds in the private money market.

First, if the systems have to approach Wall Street, they may not get the money they need. Bankers who lend money on this scale don't like to deal with borrowers who can't show substantial ownership in their business. And even today, most rural electrics don't have what bankers consider substantial equity.

By the end of 1957, only 48 out of 948 rural systems had a net worth of more than 50 percent. Average for all systems was under 16 percent. Suppose these systems were turned loose to find the capital they need to serve the growing needs of their consumers?

They probably would be told to run along and come back when they could show a better balance sheet—exactly as farmers were advised to get along with kerosene lamps, before REA.

The second danger rural electric leaders see in private financing is cost.

BOUND TO COST MORE

Not even the administration spokesmen pretend that interest rates on funds raised from private sources would be anywhere near as low as REA's rate.

So—the argument is not whether the cost of running the nonprofit systems would go up. It's how big the increase would be—and how much of this increase would have to be passed along to consumers in their monthly light bills.

Let's see what the men who manage the rural electrics think about the effect of higher interest rates on their systems. National Rural Electric Cooperative Association surveyed them to find out. Forty-one percent replied.

Thirty-five percent of the electric systems replying say that if there is any increase at all in the interest they pay on new construction loans, they will have to raise rates at once.

Eighty-five percent of the systems replying say they would have to raise rates if the interest goes as high as 4 percent.

Almost all said higher interest rates would force them to cut down many of their present services and construction activities. And good service is increasingly important, both to farmers and nonfarm consumers on the rural lines.

Eventually, rural electric leaders believe, private financing and higher interest rates could kill off the nonprofit, rural electric systems—force them to sell out to the commercial power companies. If this happened, those rural consumers fortunate enough to keep their electric service at all, probably would have to pay a good deal more for it.

This is because the rural electrics carry a burden that the profit companies don't have—the obligation to serve everyone in thinly populated, high-cost areas. If the nonprofit systems are forced to do this high-cost job with high-cost money, their leaders say they will eventually go under.

Administration officials have no similar surveys to back up their argument that many electric cooperatives are now strong enough to pay higher interest rates and begin to get their feet soaked in the private money market. Who's right? You decide.

Unity of Purpose in the Coal Industry

EXTENSION OF REMARKS

OF

HON. JOHN M. SLACK, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. SLACK. Mr. Speaker, the Members of this House have heard frequent reports during this session regarding the problems of the coal industry, and we have had introduced a number of measures designed to establish a long-range program of coal research in an effort to stabilize this basic industry. The leadership of the coal industry on both the management and labor side has always been characterized by a high degree of realistic and independent thinking, and it is gratifying to note that their sense of realism has again asserted itself to bring about the formation of an organization which will give them a proper vehicle by which they can seek answers to industrywide problems. I refer to the recently formed National Coal Policy Conference created as a joint effort of the coal producers, union leaders, rail carriers, and utility users. As a commentary on this new organization I would like to call your attention to the following syndicated column by the noted labor writer, Victor Riesel, which was published this week in several hundred newspapers:

While blood once flowed and heads rolled in thin black dust, cabbages now roll in truckloads, symbolic of man's ability to be decent to man after all.

It's time now to talk of those cabbages and kings, too; namely, coal and John L. Lewis. It is time to talk of hunger in what once was bloody Harlan and in the other mine patches where hunky men must sit jobless and weep inwardly while their womenfolk find work.

While bus and train loads of AFL–CIO demonstrators from the big cities poured in on Washington the other day, gift truckloads of cabbages poured in on mine-laden Harlan County, Ky. The unemployed miners needed food; not demonstrations.

While other labor leaders talked from the podium to the march on Washington, the

mine union chiefs sat around tables talking with the leaders of the coal-carrying railroads, the coal-burning utilities, and the coal-digging companies. These men talked of the common good—saving their industry.

Their time to talk aloud and in public will come on April 27. That evening the venerable white-haired giant, whom I have called other things in past years, will stand on the dais amidst the men of industry. And despite his 78 thunderous years, John L. Lewis will be heard from again.

This will be the banquet of the new National Coal Policy Conference. Its director is Joseph E. Moody, head of the Southern Coal Producers Association, the man who did most to turn a gun-filled dynamite-laden, civil-war-torn industry into a vale of peace. There are other models of cooperative labor-management efforts, but this is more model than the rest.

John Lewis and his friends of mining and transport and power know they have a sick industry. But they want no subsidies, no handouts. They want to help themselves. That's why these giants, such men as George Love of the Consolidated Coal Co. and Philip Sporn of the American Electric Power Service Corp., have been conferencing with the United Mine Workers' chiefs.

Where once over 600,000 men hacked at the coal veins, now less than 185,000 go into the pits—and not each day at that.

Those were the days when no President had his morning coffee before reaching for his paper to glean whether he'd have an afternoon coal crisis. Today that industry needs to sell at least another 100 million tons a year to stay live. In Kentucky alone, land of Old Bloody, there is a surplus of more than 40 million tons.

Yet if Old King Coal totters just a little more, what will happen to the fuel power needed by this Nation to defend itself? If the men of helmet lamps and pickaxes realize they will be working less and less and tell their sons to get the hell out of the mine patches forever, who will dig coal? There is no machine that can do it all either. Just as I have heard John L. growl that you cannot mine coal with bayonets, you cannot mine all coal with automatons.

Leaders of the National Coal Policy Conference know that the industry will come into its own in two decades. Then the big atomic energy plants will guzzle the black stuff.

But how to survive through the first 20 years of the spatial age? That is why Lewis and the industry have gathered. They have been ignored by the Government—which has special commissions for natural gas, for atomic energy and for oil, but not for coal.

People Are Not Property

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal Star of April 15, 1959:

PEOPLE ARE NOT PROPERTY

A totalitarian concept has been infiltrating American thinking. It is a concept that should be rooted out.

In its most dangerous form, it is the idea that people are assets of the state. But we see it also in the form of the belief that an executive is an asset of the corporation for which he works; or the belief that a corporation may meddle in an employee's family affairs, on the theory that they affect the value of its assets.

A few days ago, Dr. Dael Wolfle, executive officer of the American Association for the Advancement of Science, said that men and women of higher education are national rather than local assets and, therefore, the Federal Government should pay for their education.

Undoubtedly the Nation needs men and women of ability and education. In a sense, they are assets. But when we regard them as assets in which the Federal Government must invest money, we get to thinking of them as property of the state. It is a short step from that concept to the idea that the Federal Government should regiment people according to their ability, direct their training, and assign them to work where they are most needed by the Government.

A similar concept has infiltrated business and industrial thinking. When management says to an employee, "We have invested a lot of money in you," it is implying that the employee has become an asset (or the property) of the company. It is but a short step then to the concept of giving that man (and his wife, too) psychological tests, since the company has a right to know about its assets.

The idea of being an asset, in this sense, is abhorrent to any person who has real understanding of the dignity of human personality. Only under collectivism do people surrender themselves to the state and become assets or liabilities. Only where totalitarian ideas have infected business do employees and their families become business assets.

People are individuals. They must have liberty and freedom of choice. Great souls will not tolerate regimentation.

Collectivism has infected our thinking more than we realize. We need a strong, new infusion of the philosophy of individualism, the kind of thinking expressed in Ralph Waldo Emerson's essay, "Self-Reliance."

Our Liberties Versus Our Responsibilities in a Free Society

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. McCULLOCH. Mr. Speaker, each year the American Legion of Ohio promotes an essay contest among the high school students in Ohio.

The subject assigned always has some connection with civic or governmental responsibility.

This year, the subject assigned was "Our Liberties Versus Our Responsibilities in a Free Society."

Three winning essays are selected from each class group. I am proud of the fact that out of the 12 Ohio winners, one is from the Fourth Congressional district.

Miss Virginia Etter of Piqua, Ohio, is one of the 10th grade winners. Her prize-winning essay is as follows:

OUR LIBERTIES VERSUS OUR RESPONSIBILITIES IN A FREE SOCIETY

Like the recurrent theme in a great symphony, the concern for personal liberty runs through and through the Constitution. The world has never had a good definition for the word "liberty." We all declare ourselves in favor of liberty, but in using the word we do not all mean the same thing. From one viewpoint, it is the individual on the one hand and the powers of government and society on the other. From another viewpoint, it is the preservation of property rights against predatory demands of a multitude of forces. From still another viewpoint, in the context of the American scene, it is the freedom from external restraint or compulsion, the rights and immunities of all the citizens guaranteed by the Bill of Rights. Our Bill of Rights which looks so simple when we first read it, is a dynamic, flexible, ever-expanding and growing definition of our fundamental rights and responsibilities.

When we consider the citizen's responsibility in relation to his liberty we are discussing our daily duties as citizens of a unique democratic system, and we are discussing what should be the fundamental knowledge of many people. The duties involved can be stated in one simple sentence: Active participation in all the actions of governments on all levels. Actually, liberty demands responsibility: the two are so interwoven that it is impossible to have one without the other. With this thought in mind, that liberty and responsibility are inseparable, let us consider briefly the Bill of Rights.

The first amendment guarantees the freedom of religion, speech, press, assembly, and petition. The second and third, of less importance today, uphold the citizen's right to bear and enjoin the quartering of soldiers in private homes. The fourth amendment restricts searches and seizures in a citizen's home without warrant. Amendments five, six, and eight constitute a bill of rights for accused persons. The 7th and 10th amendments restrict the power of the Supreme Court of the United States and limits the power of the Federal Government.

What a heritage is ours. But certainly one cannot accept such liberty without realizing the responsibility that comes with it. It has rightly been said a man has no more or fewer liberties than responsibilities. We should be careful to remember that liberty is made up of the personal duty of the individual. The supreme need today is for a greater number of men who have an understanding of liberty, its rights and obligations, and who will by their speech and conduct, influence their neighbors to acquire a like state of mind.

The protection of liberty, which the Bill of Rights weaves into the fabric of our governmental obligations, is one of the most basic responsibilities of a democratic society. Despite the difficulty of drawing an unwavering line between the privileges of liberty and the necessity for responsibility, Government in America has fostered and helped maintain a free and open society. Whatever faults may be found with Government in America, the fact remains that our political expectation—and the spiritual and moral values which underlie those expectations—have, on the whole, been well served by the democratic instruments at our disposal. The rights of a free people are the rich dividends of the willingness of men to invest time, energy, money, and sometimes life itself, to meet their obligations as citizens.

If we today practice and insist upon free discussion, respect the laws and institutions which surround us, participate in the common life of our local, State, National, and international community—then we can say our responsibilities are truly our liberties.

Resolutions of Dairyland Power Cooperative

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 20, 1959

Mr. WILEY. Mr. President, we recognize that over the years the cooperative movement has assumed a tremendously important role in our economy.

Over the years, co-ops have helped communities, particularly our farmers, to meet and resolve serious problems.

Although co-ops cannot solve the whole problem, they have made a real contribution toward enabling farmers to better weather the economic storms.

Recently I received a copy of a composite resolution with reference to current legislation adopted by the board of directors of the Dairyland Power Cooperative of La Crosse, Wis. Dairyland represents 27 member distribution cooperatives, serving in excess of 100,000 farm homes and rural establishments.

Recognizing the outstanding way in which this fine cooperative, as well as others, is serving its patrons, the farm economy, and bettering life in many communities, these resolutions, I believe, merit the attention of the Congress, particularly as they relate to problems in agriculture. I ask unanimous consent that the resolutions be printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

DAIRYLAND POWER COOPERATIVE,
La Crosse, Wis., April 15, 1959.

HON. ALEXANDER WILEY,
U.S. Senate, Washington, D.C.

DEAR SENATOR WILEY: Our board of directors at its last regular meeting passed a more or less composite resolution with reference to current legislation that has come or will be coming to your attention in the immediate future.

I know you have a sincere interest in our program and I felt getting this resolution into your hands would be helpful to you. We sincerely appreciate your interest and efforts in our behalf.

Thanks for all past favors and I hope to see you one day in the near future. Best personal regards.

Yours sincerely,
DAIRYLAND POWER COOPERATIVE,
JOHN P. MADGETT,
General Manager.

EXCERPT FROM THE MINUTES OF THE MEETING OF THE BOARD OF DIRECTORS OF DAIRYLAND POWER COOPERATIVE OF MARCH 20, 1959

The board of directors of Dairyland Power Cooperative, representing 27 member distribution cooperatives, serving in excess of 100,000 farm homes and rural establishments, does hereby go on record in support of and in opposition to certain measures now pending in Congress as follows:

"In support of:

"(a) Senate Resolution 21, introduced by Senator AIKEN and others, to show congressional intention for the construction of the Rural Electrification Act of 1936 as it was construed prior to the ruling of the Comptroller General of July 1958, which ruling was adverse to the interests of rural electric cooperative borrowers and their consumers.

"(b) Senate bill 144 and House of Representatives bill 1321 known as the Humphrey-Price bill, to restore to the REA Administrator the loanmaking authority which the Secretary of Agriculture took away from him.

"(c) Senate bill 931 and House of Representatives bill 3460 to give Tennessee Valley Authority the right to issue revenue bonds to finance needed power generating capacity. The passage of this bill is important to the many rural electric cooperatives served with wholesale power by TVA and is based on sound principle.

"(d) The House of Representatives bills 8289 and 1591, introduced by Congressmen TRIMBLE and MILLS, for natural resource development, and to reestablish Congress as a predominant policymaking body in determining feasibility and cost allocations of multipurpose development river projects.

"(e) Senate bill 683, introduced by Senator GORE, providing an accelerated power program of vital concern and benefit to all of the citizens of our country.

"The board of directors of Dairyland Power Cooperative is unalterably opposed to the REA interest rate increase bills, including House of Representatives bills 372 and 1781, and other bills which may be introduced of a similar nature. Retention of the present REA interest rate is essential if the rural electrification program being carried on by rural electric cooperatives the country over is not to be seriously endangered. Vigorous opposition is also justified against proposals to eliminate loan financing by Rural Electrification Administration in favor of Wall Street financing, and to those bills introduced by Congressmen MASON (H.R. 198), CURTIS (H.R. 3150), and DAVIS (H.R. 3848) designed to put a punitive and discriminatory tax on cooperatives. Even though these bills as introduced might not apply to rural electric cooperatives they are based upon faulty premise and have the very obvious purpose of hampering and injuring agricultural cooperatives.

"It is further resolved that copies of this resolution stating the position of the board of directors of Dairyland Power Cooperative be sent to all Senators and Congressmen in the areas served by Dairyland and its members."

A Solid, United Hemisphere

SPEECH
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. JUDD. Mr. Speaker, when a person goes to a foreign land, either for a visit or to live, the first impression is of the things that are different. Customs are different, languages are different, traditions are different, sometimes the color of the skin is different. These are the things that stand out.

During the 10 years I lived in a foreign country, the biggest lesson I learned was that "different" is not the same as "worse." I looked the two words up one time in the dictionary and they are not synonymous. A thing can be different without necessarily being worse. Sometimes I think the English word that causes more trouble in the world than any other is the four-letter word "only." "This is our way—ergo, it is the only way." Now, it is a good way, we like it, we are proud of it, but it is not necessarily the only good way. Sometimes we create animosity around the world or alienate others largely because, with all good intentions, we are so sure of our way being the best or the only way that we give the impression of failing to appreciate that other folks are just as justifiably and properly proud of their way as we are of ours.

But as one continues to live in the other country, what one becomes more and more conscious of are not the things that are different, but the things that are alike; the deep things, the love of home and of family and of country, pride of culture, and the desire that things will be better for their children tomorrow than they are today. These are the same all around the world.

There is no better demonstration of this than here in the Western Hemisphere. The things on which we agree and the interests that unite us far outweigh the differences and the things that divide. There is no better example of the capacity of peoples with different backgrounds and cultures and traditions to live together in good will and mutual respect and cooperaton for the benefit of all. The unities are deeper and broader based than the difficulties that arise from time to time. There is more to be happy about in the relations between our countries than there is to be embarrassed or upset about.

Actually, we can be proud of the behavior of both sides. First, we can be proud of the overall record of our country in the Western Hemisphere.

We could have seized control or imposed our will on the hemisphere at almost any time in the last 150 years, but we never did. We declared a policy that guaranteed the independence of the American States from external domination, including our own domination, and we stuck to it. It was not a Democratic or a Republican policy; it was a U.S. policy. No matter what party was in power, Latin America knew, and the whole world knew, that the United States would not permit any European systems or sovereignties to establish themselves in the Western Hemisphere.

With all the mistakes that we freely admit have been made, mistakes due more to oversight or neglect than to action or to intent, the basic record of the United States is one in which we can take satisfaction.

Equally we can pay tribute to and be proud of the record of the Latin American countries. It is much harder to be the smaller brother than to be the bigger one. On the whole, these countries have exhibited great maturity and understanding, sometimes under difficult circumstances and despite irritating provocations. This demonstration of giving first importance to the fundamental likenesses and common concerns is the best assurance of steadily improving relations in the future—deeper understanding and greater cooperation in working for the things that are in the best interests of all of us.

I commend my colleague on the Committee on Foreign Affairs for the fine

leadership which, as has already been said here, he has been giving to his Subcommittee on the Western Hemisphere. When it has sometimes been neglected by us a bit, it was not deliberate, but in a sense constituted a compliment to the Latin American nations. It evidenced that we had every confidence in their friendship and understanding and steadfastness, just as we expected them to have confidence also in ours. But even in your own family things go better if you do not take your loved ones too much for granted. They know that you are loyal and devoted to them, but they like it better if you take pains to reaffirm your attitude every once in a while.

Mr. Speaker, it is important to take advantage of Pan American Day and every occasion that comes along to speak out in behalf of the good things that stand out in our hemisphere—the unbreakable ties of common interest, of loyalty, and of common dedication to the basic values of freedom and democracy. Those are the things that we can rightly emphasize. They are even stronger today than in the past. The very fact that more of the smaller countries will speak up right to our face about matters where they believe we are in the wrong, is a sign of better relations, not of deteriorating relations.

I look forward to the next decade as the best in the history of our hemisphere. We are going to try our best to achieve that, and I know the wonderful group of fine people most of us have been privileged to meet from Latin America are going to try their best. Together we will continue to make headway toward this goal of a really solid, united hemisphere.

Verrazzano Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. MULTER. Mr. Speaker, 435 years ago, on April 17, 1524, the first white man entered New York Bay and discovered Manhattan Island.

This man was the great Italian navigator and explorer, Giovanni da Verrazzano; a man whose name should rank with those of Columbus, Vespucci, and Magellan, but who instead, has been largely forgotten and ignored. He is rarely, if ever, mentioned in the textbooks and his history is only known to a few scholars. Yet, the fact remains that, 85 years before Henry Hudson and 96 years before the *Mayflower* pilgrims, Verrazzano had come to these shores, explored them carefully, and told Europe about them.

Giovanni da Verrazzano was born near Florence about 1485. His family was engaged in the trading of spices, silk, and other precious commodities from the Orient. Quite early in life Giovanni acquired his geographical and nautical knowledge in Egypt and Syria. He made his first trip to the New World in 1508 at the age of 23. Some years later he attracted the attention of the King of France who decided to send Verrazzano to discover a northwest passage to Asia. In January 1524, therefore, the navigator set sail on the 100-ton, 3-masted *Dauphine*. More than 3 months later he landed on the coast of North Carolina and named the new continent Francesca, after the King. He then proceeded northward as far as Newfoundland. En route the *Dauphine* anchored in New York Bay and was greeted by a group of surprised Indians whom Verrazzano described as agreeable, friendly, and pleasant. Unfortunately, the stay was cut short by an unfavorable wind, but not before New York was given its first name of Angoulgeme. A few years after this historic expedition Verrazzano, while exploring new lands, was captured by the natives and killed.

The contributions of Verrazzano to American history are many. He was the first man to chart and name the harbors, bays, capes, and islands that he discovered, thus opening the path to other voyagers who have come to these shores in ever-growing numbers since then. The principal merit of this great Italian, however, stems from the fact that he was the first European to sail to our shores with the express purpose of exploring them. His voyage has been called one of the most scientific and purposeful of all those made in the 16th century and his report of the voyage one of the most accurate of those written at that time.

Thus Verrazzano Day should serve to keep awake the appreciation and knowledge of our great historical heritage and as a reminder of the cultural relations between the Old and New Worlds that had their beginnings with the famous Florentine explorer, Giovanni da Verrazzano. It should also serve as just one more reminder of the great contributions made by the Italians to these United States.

From Verrazzano and Columbus down through the ages to LaGuardia and Fermi the Italians have left their mark on American history and culture.

Toll Charges for the St. Lawrence Seaway Are Grossly Inadequate and Once Again the American Taxpayer Is Headed for Another Multi-Million-Dollar Ride

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. VAN ZANDT. Mr. Speaker, recently, it was announced that the United States and Canada had formally set the tolls which ships will be charged to use the St. Lawrence Seaway when it opens late in April. The tolls as announced for from Montreal to Lake Erie will be 6 cents on each ton of a ship's official weightplus 42 cents for each ton of bulk cargo or 95 cents a ton on general cargo.

In my opinion, these tolls will prove to be grossly inadequate and once again the poor taxpayer will be taken for another multi-million-dollar ride. The public who today pays for practically all of the costs of maintaining our entire system of inland waterways, is probably getting used to paying and paying for facilities which benefit only a handful. But that doesn't make it right.

It is inconceivable how the St. Lawrence Seaway Development Corporation, the American principal in drafting the tolls, can accomplish with the announced tolls the mandate of the Congress which is self-liquidation within 50 years of the $128 million cost. It is going to be utterly impossible to follow this mandate with inadequate toll charges which are based on highly speculative volumes and an estimate of prospective traffic volume which exceeds the practical capacity of the facilities soon to be opened.

In addition to the provisions of law regarding self-liquidation through toll revenues, there were important economic considerations which Congress must have certainly recognized when it was decided that tolls would be charged. One of the most important of these considerations was the seaway's effect on the overall costs and adequacy of the Nation's transportation system. Unless the seaway is fully self-supporting, with no element of subsidy to the users, it cannot possibly contribute to the true economy of the whole transportation picture. In a competitive transportation situation, inadequate tolls are going to create uneconomic transportation patterns by shifting traffic from less costly methods to the more costly, subsidized method.

These inadequate toll charges which will not cover full costs place the railroads on a standby basis. This consequence will be all the more serious and disruptive because the seaway is only a part-time transportation facility, whereas the Nation for its commerce and defense requires dependable transportation services in both summer and winter. The Nation's transportation requirements for defense obviously do not cease with the close of the navigation season, nor does its commerce hibernate.

Subsidizing the seaway, through inadequate tolls, further aggravate these factors of instability, with seasonal disturbances of employment. This is in direct conflict with existing aims of national policy to encourage stability of employment conditions in the United States and in its several industries, including the railroads.

To arrive at the charges just announced, the Seaway Corporation, in estimating the annual tonnage that the seaway could handle, is as far off first base as were the cost estimates presented in 1954 to the Congress to gain approval of the project. The cost estimates have now proven to be unrealistic and it is just a matter of time before

there will be two outs. The official estimate of the annual capacity of the seaway has been for sometime 50 million tons—and now a seaway official has said that it may reach 75 million tons. All I can say about both of these estimates is: fantastic. And I will tell you why.

The main purpose in deepening the St. Lawrence was to encourage oceangoing vessels having a draft of 27 feet or less to serve inland ports on the Great Lakes. In order to reach those ports, these ships must pass through the only connecting link between Lake Ontario and Lake Erie, the Welland Canal.

The capacity of the Welland Canal has generally been recognized as the critical limiting factor governing the volume of traffic that can move through the seaway. It is amazing to me why the U.S. Tolls Committee in its report of last June said nothing about this very vital matter although a press release accompanying the report mentioned a maximum tonnage of cargo of 60 million tons at Welland. There was absolutely no explanation of how the figure, which of course is totally unrealistic, was picked out of thin air.

The records show that the peak traffic volume through the Welland Canal was 23 million tons in 1956. While I realize that the deepening of the canal and the seaway to allow passage of ships having drafts up to 27 feet will mean that ships with greater tonnage capacity will use the facilities, it is utterly ridiculous to assume that the tonnage capacity at Welland will ever within the forseeable future reach 60 million tons a year. This, believe it or not, is more than 2½ times the traffic which has ever passed through the canal in 1 year.

Gentlemen you must understand that the agreed-upon tolls were set using this fantastic tonnage capacity as a starting point and I am sure you are wondering how the Government is ever going to recoup its investment. You can stop wondering because there is not one chance in a thousand that it will.

How am I going to tell my friends back in Altoona, Pa., where the only water we have is Brush Run, which is deep enough for canoes after the rainy season, that they are going to help pay for the deficit which the Government faces because of inadequate tolls for the seaway? They already know they are helping to contribute close to $40 million each year just to maintain navigation on our inland waterways system and many more millions to improve it. Soon they will be asked to help defray the costs of the seaway.

And what about the Great Lakes, the nearest of which is almost 200 miles from my district. In a recent statement, commenting on the fact that the imposition of any tolls on the seaway constituted a distinct threat to the economic well being of the Great Lakes area, Adm. Lyndon Spencer, president of the Lake Carriers' Association, said:

> The Gerat Lakes are a natural highway for moving grain from western growing centers to eastern consuming centers.

Certainly the Great Lakes are a natural highway that no ships could use unless harbors were deepened, locks maintained, and channels dredged. Do you know how much the Government has spent to date on this natural highway—more than $500 million of your money and mine.

Many people have said that the recession caused most of the unemployment in the railroad industry that exists today. Perhaps it caused some layoffs, but to me a principal cause has and will continue to be the Government's subsidizing the water carriers. This must be curtailed.

But let us get back to the Welland Canal and its capacity. I wonder if the Development Corporation when it suggested the tolls which are supposed to cover the costs of the seaway understood what the workable capacity of Welland meant. Certainly much more is involved than figuring the maximum number of lockages that can be performed per day and multiplying by the number of days in the navigation season to obtain a total of physical capacity in lockages. If they made this kind of mathematical caper, we are in for trouble.

In determining tonnage capacity, allowances should have been made for interruptions because of adverse weather and accidents. More important still is the fact that the traffic will not flow with uniform regularity all hours of the day, in all days of the peak month, in all months of the navigation season, or from one navigation season to another. These variations of traffic have a pronounced downward effect upon the practical capacity of the canal and should have been used as a basis in formulating toll levels to cover costs.

Available data clearly show that traffic at Welland is not evenly spaced throughout the navigation season, but starts off slowly, rises to a summer peak, and tapers off with the approach of cold weather. Therefore, any calculation of Welland's capacity that treats every day or month of the navigation season as equivalent is certain to involve substantial error and cannot represent the effective capacity.

So it is also with respect to year-to-year variations in traffic resulting from fluctuations in the general economy. This simply means that the top capacity of Welland, whatever it may be, will not be used every year, owing to business fluctuations affecting such major commodities as ore, grain, coal, as well as others. On the average, over a period of years, it is unlikely for this reason that the full annual capacity of Welland would be used to a greater extent than 90 percent, since the capacity cannot be exceeded but utilization will frequently fall below it. Over the 10 years from 1948 through 1957, for example, the volume of bulk freight on the Great Lakes ranged from a high of 200 million tons in 1953 to a low of 151 million tons in 1954. A realistic determination of toll levels should have taken these cyclical fluctuations into account.

Summing up all of these pertinent considerations, and giving them a realistic evaluation, points out clearly that the effective capacity of Welland cannot exceed 40 million tons and will be less than that year in and year out. This would allow for a maximum of 7,200 transits, with more large vessels than have used the canal up to now and fewer possibilities than in the past for multiple transits. It also allows for greater average cargo tonnage per vessel transited, but there appears to be no reason to assume that the average cargo tons per transit will exceed 5,500 tons at any time in the foreseeable future, which is more than twice as great as the average in recent years. There will be very probably some larger vessels, but there will also continue to be many small ones and empty ones to keep the average size of the vessels from soaring as the unrestrained optimists have led us to believe.

I am sure that if you agree with my analysis of the cargo tonnage capacity of Welland, which I think is very realistic, it goes without saying that the 40 million ton figure provides the top limit of tonnage that should have been taken as a basis for determining appropriate tolls for the St. Lawrence Seaway and for Welland.

Unfortunately for the taxpayer, the Tolls Committee in recognition of the functional relationship between the St. Lawrence and the Welland Canal has set the maximum seaway traffic at 50 million tons compared with 60 million tons for Welland. The difference of 10 million tons is principally accounted for by interlake traffic which does not use the St. Lawrence River. Very probably this interlake traffic will expand and further reduce the remaining seaway traffic potential as affected by Welland.

Since my analysis shows that the Tolls Committee has overestimated the Welland capacity by at least 20 million tons, it has likewise overestimated the available traffic potential of the seaway in the St. Lawrence by at least the same amount. Hence, the maximum traffic for the seaway will be no more than 30 million tons instead of 50 million tons. This means that the seaway revenues as calculated by the Tolls Committee on the basis of the agreed upon tolls will suffice to cover only 60 percent of the seaway costs, thus falling far short of the requirements of law with respect to self-liquidation.

It is indeed unfortunate that those responsible for setting the tolls did not fully take into account a realistic tonnage capacity for Welland. If they had it would have been clear that considerably higher tolls were necessary to effect self-liquidation within the required period. I am sure the higher tolls would not have discouraged ships from using the seaway because traffic that will become firmly attached to this route as the most advantageous means of transportation can afford to pay full-cost tolls. I can see no need to offer a bargain variety of tolls for traffic which can be realistically expected to develop for the seaway on an economic basis. And yet, this is what has been done as the seaway prepares to open for its navigation season.

Although the law states that a review of the situation must be made before July 1, 1964, this is much too long to wait if we are ever going to rectify the mistakes that have already been made. I therefore strongly urge that the St.

Lawrence Seaway Development Corporation should insist that, after the close of the navigation season in 1960, a review of the toll charges be made to determine how much the tolls should be raised. After two full seasons, sufficient statistics should have been developed which will show whether we are collecting enough to cover our costs. I am sure these figures when they are made public, will show the absolute necessity for making an upward readjustment of tolls for the seaway and the canal.

Outdoors Unlimited Program of Conservation of Natural Resources

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 20, 1959

Mr. WILEY. Mr. President, the preservation and sound use of our water, forests, soil, mineral, wildlife, and other aspects of our outdoor heritage is, indeed, a real challenge confronting our Nation.

This is particularly true, since, in many regions, the expansion of urban areas and industrial activities overflows onto the countryside and often wipes out many natural out-of-door areas.

Consequently, we face a real challenge in the need for vigilant protection, preservation, conservation, and proper utilization of the remaining natural heritage.

Today I should like to call attention to a program in Wisconsin, Outdoors Unlimited, aimed at uniting conservation-minded individuals, clubs, and businesses in a coordinated effort for intelligent and frugal use of our natural resources and the perpetuation of our wholesome and traditional outdoor forms of recreation.

Through the years too much of our Nation's priceless top soil has already been lost to erosion. Many of our streams have been polluted and other irreplaceable resources have been dissipated or lost completely.

The program, Outdoors Unlimited, is undertaking a constructive approach to the preservation of our outdoor areas. I ask unanimous consent to have a résumé of its objectives printed in the Appendix of the RECORD.

There being no objection, the résumé was ordered to be printed in the RECORD, as follows:

Natural resources: Outdoors Unlimited will actively promote judicious, long-range planning of natural resource utilization.

Wildlife: Outdoors Unlimited will strive for the preservation and improvement of our remaining wildlife habitat, and will seek to restore all possible habitat areas that have already been destroyed.

Outdoor recreation: Outdoors Unlimited will defend and seek to enhance our public heritage of outdoor recreation, promote advanced farmer-hunter cooperation programs, etc.

Legislation: Outdoors Unlimited will provide an organized medium with which to oppose legislation contrary to the interests of conservation, and will promote favorable legislation.

Watersheds: Outdoors Unlimited will work for and promote a greatly accelerated upstream watershed improvement program that will reduce flooding, minimize siltation, conserve topsoil, advance water utilization, and improve wildlife habitat.

Research: Science is our hope for the future. Outdoors Unlimited will promote continued and increased conservation research so that improving resource utilization and development may keep pace with our advancing population.

Education: Statutory laws and hnman policies and techniques are not permanent. They are merely a fluid part of our "passing parade." Permanent victory in conservation cannot be achieved without a broad anti continuing program of education. Outdoors Unlimited will work to promote public conservation education.

Public rights: Outdoors Unlimited will work to stop private exploitation of public wildlife and other natural resources.

Safety: Outdoors Unlimited will formulate programs of hunter education, gun and boat safety, and otherwise promote public freedom to enjoy our great out of doors.

Unity: While individual sportsmen, conservationists and conservation groups have minor differences relating to hunting and fishing, regulations, etc., they virtually all agree on the fundamental principles of conservation. We must not allow petty differences to disunite us and frustrate the cause of conservation. Outdoors Unlimited will work to promote unity among our various outdoor groups.

District Home Rule

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. O'KONSKI. Mr. Speaker, in his famous Cataline oration, that great Roman statesman, Cicero, spoke seven words which legions of schoolboys over the intervening centuries have committed to memory. These words are:

Quo usque tandem abutere, Catalina, patientia nostra.

How long, oh Cataline, will you abuse our patience?

The sense of frustration which Cicero expressed in the Roman Senate is one that we experience from time to time in this modern forum of representative government.

It is one that aptly describes my personal sentiments when I contemplate the situation of home-rule legislation in this body today. After years of study and despite the broad support for this bill, we have, at this hour, gotten exactly nowhere in obtaining consideration of the bill by the District Committee.

It is not as if this legislation were new or revolutionary. This home-rule bill has passed the Senate four times in the last five Congresses. It is presently being heard by the Senate District Committee.

It is not that there is no interest in the bill. Twenty-three members of this House, of both parties, have introduced the legislation.

It is not that the bill has no urgency attached to it. The president of the District Commissioners has characterized it as the most important piece of legislation affecting the District before the Congress.

Nor can one say that there is little sentiment in favor of home rule in the District itself. In the District Democratic primary of 1956, nearly 80 percent of he voters expressed their support. Similarly, in a recent Republican mail poll, two-thirds were for it.

No, it is not lack of support, lack of interest or lack of importance that have stalled action. It is because there is wide support and interest—because the majority of the Members of this House are anxious to vote in favor of home-rule legislation—that the legislative process has been obstructed. Such obstructionism abuses our patience. How long will it last?

What Price Steel?

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, April 20, 1959

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which appears on the editorial page of the Washington Post of today.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WHAT PRICE STEEL?

The exchanage of letters between the 12 steel companies and David McDonald, the leader of the steel union, shows that both parties want to hold the line at the expense of the other.

There is little hope for a common platform regarding the gains of productivity either, unless there is third party intervention in the public interest.

With steel wages well above the national average it is not in the public interest to raise them. The gain of the increased productivity should be passed on to the consumer in the form of lower prices, just as it was recently done by the soft coal and the can industries.

Slince the unions are primarily interested in getting something for their members, and the leaders of the industry only in their stockholders, it is time for a new approach to get for the consumer his due, and stop inflation.

Whether the public notice proposed by Senator O'MAHONEY would suffice or a utility-type regulation envisaged by Senator GORE would be necessary depends on the outcome of the forthcoming steel contract negotiations. In the past 10 years the steel contract became a pattern for the rest of the industry, and a lot of our economic and financial problems are caused by the unduly high steel profits which made it impossible for the industry to deny wage increases which the rest of the economy could not afford.

Besides raising the wages to a level which is too high for the less concentrated and protected sectors of our economy, the steel industry proceeded to levy an extra toll on the consumer amounting to about $1 billion per annum. Thus, in the postwar

years the steel industry could rebuild and expand its facilities to the tune of about $10 billion, not by raising funds in the market, but by charging its customers not only for its products but for its plants.

It also increased dividends far beyond the increase granted to its workers, and gave its executives substantial extra benefits in stock options. These stock options feed on inflation because the executives have a vested interest in higher stock prices.

Some of the already published preliminary reports indicate, and Wall Street analysts estimate, that steel profits will exceed in 1959 all previous earning records, and will be about 50 percent higher than in 1958. The substantial rise in profits is due to increased productivity and to a 15-percent cut in the labor force.

The real issue in the present steel contract negotiation is the future of the 200,000 unemployed steelworkers who lost their jobs to the increased use of labor-saving machinery. There is no hope for reemployment for them in the steel industry, and neither a shorter workweek nor a 3-month vacation every 5 years would solve the problem.

The victims of automation in the steel and automobile industries must be relocated to other jobs, and judging from the preliminary skirmishes between the representatives of the industry and the unions there is little inclination by either party to face this and act accordingly. The burden of providing for the unemployed is left to the community. The high profits of the industry and the high wages of the steelworkers thus present a problem of public interest.

With profits for the leader of the steel industry, rising from $7.47 per ton in 1953 to $20 at present, it is clear that there is ample room for a cutback in prices. A reduction of 5 percent would leave profits of about $12.50 per ton for the United States Steel Corp. and would assure net profits of about $6 per common stock, more than twice the average earnings of 1946–54, and about the same as in the highly prosperous 1955–58 period.

A 5-percent cut in steel prices would be less than the cut announced by the can companies paying the same wages as the steel industry, and it would save the consumer more than a billion dollars a year.

This could change public psychology from inflationary expectations to confidence in steady growth assisted by a sound dollar. It could help to restore the disturbed balances of our economy and could absorb the laid-off workers in the steel and automobile industries.

EUGENE HAVAS.

WASHINGTON

A High School Student's Faith in America Lives on After Her Untimely Death

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay which won the district VI competition in New York State in the national Good Citizens Essay Contest sponsored by the Daughters of the American Revolution. Miss Cynthia Maurer of Franklin, N.Y., a high school senior submitted the essay, and shortly thereafter was killed in an automobile accident. The judges were not advised of the tragic interim death, and Miss Maurer's essay won the district prize. Though the author has met an untimely death, her words, symbolic of the faith of young Americans in their Government, live on:

THE DIGNITY OF MAN UNDER OUR REPUBLIC

Our great American Republic was founded upon the concept of the dignity of man—the belief that every individual, however, humble, is of infinite worth in the eyes of God, and the firm conviction that his sacred rights ought not to be infringed upon.

Our forefathers were aware that they were not being treated as creatures of worth. They were denied representation in the Government which made the laws under which they had to live. Their legislatures had no voice with which to speak out against injustice. So these men came together and began the task of establishing a Republic where tyranny would not rob man of his God-given dignity. And one of them, Thomas Jefferson, took up his pen and wrote a most perfect summation of the dignity of man:

"We hold these truths to be self-evident that all men are created equal; that they are endowed by their creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness."

In these words, the cornerstone of a mighty nation was laid.

Innumerable changes have been wrought in our country since the days of Thomas Jefferson. Technological progress has eased man's burdens by creating devices to do a large share of his work. Agricultural advances have made possible the production of a vast bounty of life-giving food.

We Americans can be justly proud of our great Republic, for in it we see the realization of the dream that men have cherished since time began. A way of life where the dignity of man cannot be crushed under the brutal heel of tyranny.

Let us ever hold fast to our great American ideal, so that in a world where totalitarianism is constantly seeking to enslave human minds we may stand as a shining example, pointing the way to a new age when all men everywhere shall live with all the rights and privileges accorded to them by their Creator when He bestowed upon them the unspeakable gift of dignity.

Anniversary of Lincoln's West Virginia Statehood Proclamation

EXTENSION OF REMARKS

OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. HECHLER. Mr. Speaker, today is an important date in the history of my home State of West Virginia. On this date 96 years ago, the Great Emancipator, President Abraham Lincoln, signed the proclamation that designated West Virginia a new State.

The actual admission of West Virginia into the Union came 60 days later, on June 20, 1863, under the terms of President Lincoln's proclamation. This latter date is celebrated as West Virginia Day in our State, but the confirmation of its entry into the Union occurred on April 20.

President Lincoln, sorely beset by the crushing burden of wartime leadership, probably had little time to reflect on the consequences and importance of his action. But there is little doubt that the formation of this new State was widely acclaimed. The courageous stand against slavery—and particularly against being drawn into war with the indissoluble Union—which the hardy and independent mountain folk had taken was thus rewarded with status as a free and equal State, and deservedly so.

It is an oversimplification, however, to say that the western counties broke away from the mother State over the issue of slavery alone. This was a contributing factor, but not the only one by any means.

There had long been sentiment for the creation of a separate State west of the crest of the Appalachians.

Geographically, the mountaineers who settled the slopes and valleys of West Virginia were much closer to their neighbors in the Ohio Valley than to other sections.

By sentiment, too, the Western Virginian belonged with his hardy counterparts in Kentucky and Ohio. The mountaineer, struggling to forge a better life for his family amid the towering, forbidding mountains, felt that the voice of the mountain dweller—then as today—was not always heard.

Thus, we can see that in many respects—in fact, in almost all respects—the stage was set for West Virginia statehood long before the slave issue set the Nation aflame. There had been repeated efforts to form a separate State long before the war triggered the final break.

West Virginia has come a long way since then. Vast deposits of untold mineral wealth have poured from her mountains, particularly in the unbelievably rich coalfields to the south. Chemical, glass and steel manufacturers have chosen the many resources of the State in the manufacture of their products. Her forests are still undepleted, although millions of feet of timber have been taken from her majestic hills.

This growth might have been slowed, might possibly never have attained its present stature at all, had not President Lincoln determined to permit this economic entity to become a separate State 96 years ago today.

Today, the State of West Virginia already is making forward-looking plans for its centennial, 4 years hence in 1963. Already, elaborate preparations are being made to pay fitting tribute to a great State entering its second century. Realistic and thoughtful planning is being done in regard to West Virginia's future, in an attempt to assure that the second century will be even greater in achievement than the first.

It is only fitting that we pause, as these many preparations gain momentum, to pay tribute to the great American who affixed his signature to the document that proclaimed West Virginia's birth, during the year that marks the 150th anniversary of his birth.

Under unanimous consent I at this point insert the text of Abraham Lincoln's proclamation of April 20, 1863:

PROCLAMATION ADMITTING WEST VIRGINIA INTO THE UNION, APRIL 20, 1863, BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

Whereas by the act of Congress approved the 31st day of December last, the State of West Virginia was declared to be one of the United States of America, and was admitted into the Union on an equal footing with the original States in all respects whatever, upon the condition that certain changes should be duly made in the proposed constitution for that State; and

Whereas proof of a compliance with that condition, as required by the second section of the act aforesaid, has been submitted to me:

Now, therefore, be it known that I, Abraham Lincoln, President of the United States, do hereby, in pursuance of the act of Congress aforesaid, declare and proclaim that the said act shall take effect and be in force from and after 60 days from the date hereof.

In witness whereof, I have hereunto set by hand, and caused the seal of the United States to be affixed.

Done at the city of Washington, this 20th day of April, in the year of our Lord, one thousand eight hundred and sixty-three, and of the independence of the United States the 87th.

ABRAHAM LINCOLN.

By the President:

WILLIAM H. SEWARD,
Secretary of State.

Statement by Korean Finance Minister Song on the Occasion of an Award to William E. Warne, for Service as United Nations Command Economic Coordinator in Korea

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, April 20, 1959

Mr. ENGLE. Mr. President, the effectiveness of American representation abroad has been the subject of a variety of reports, factual or fictional, in recent months. I should like to offer some direct evidence on the issue, in the form of a statement by Finance Minister Song In Sang of the Republic of Korea. Minister Song's statement is directed in particular to the work of America's Economic Coordinator for Korea, William E. Warne, who is from my State. After 9 years abroad, including the past 2½ in Korea, Mr. Warne now has returned to California to accept appointment by Governor Pat Brown as our new State director of fish and game.

The U.S. aid program in Korea, the largest we have abroad, has been coordinated in Seoul by the Combined Economic Board on which Mr. Warne was the chief American representative and Minister Song the chief Korean representative. The regular weekly Board meetings were attended by Korean cabinet officers, U.S. Embassy officials, representatives of the United States 8th Army, and others. It seems to have been a particularly efficient binational coordination device. At the meeting of the Board on March 25, the last attended by Mr. Warne, Minister Song observed that his Government had intended to present a medal to Mr. Warne but had been prevented from doing so by regulations of the U.S. Government. In lieu thereof, he offered a personal tribute. It is a remarkable testimonial, not only to Mr. Warne, but also to the positive effectiveness of our foreign assistance program in this important country. I ask unanimous consent that Minister Song's comments be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT MADE BY MINISTER SONG AT THE 148TH COMBINED ECONOMIC BOARD MEETING HELD ON MARCH 25, 1959

I have long known that this day must come. The fact that this day has come at last finds me no more prepared to meet it than I would have been 6 months or a year ago—and no better prepared were it a year, or 10 years, from now.

This is the 148th meeting of the Combined Economic Board and the last to be conducted by my esteemed and respected cochairman, the United Nations Command Economic Coordinator for Korea. Between Combined Economic Board meeting No. 16, when Mr. Warne took charge of the United Nations Command side of this operation, and today's 132d meeting under his leadership, a whole new chapter has been written in Korea's long and ageless history.

It is needless, I feel, for me to go into detail concerning the strong impetus that my cochairman has exerted in the Combined Economic Board. I would, however, like to give you a few figures from the Combined Economic Board record. During the 4½ years of Combined Economic Board operations—from the original meeting in 1952 until the 16th meeting on August 1, 1956, when Mr. Warne first presided as Economic Coordinator—a total of 1,313 Combined Economic Board actions were finalized. At that time the Board met infrequently—an average of about once every 3 months. Usually not more than a half dozen men attended representing each side.

Since then the Combined Economic Board has met every week and sometimes more often. In 2 years and 9 months under Mr. Warne the Combined Economic Board has finalized 1,574 actions. We have had to move several times to accommodate more and more representatives of our governments who have wanted to see this showcase of democracy.

My purpose in mentioning these figures is not to emphasize the volume of action but to illustrate the massive effort that has gone into the Combined Economic Board. More important to me, and to the Republic of Korea side, than the great number of finalized actions taken by the Combined Economic Board is the manner in which the actions were taken.

The primary function of the Combined Economic Board, under the agreement on Economic Coordination signed by our governments on May 24, 1952, is to promote effective economic coordination through the means of consultation and recommendation.

We are all aware, of course, that Korea has been the recipient of large material benefits and has, at no time, been in a position—had it been desirable from our point of view—to take a strong negative stand. But, with Mr. Warne, I am happy to say we never were forced into humiliating positions, either as individuals or as representatives of the Korea Government. Through consultation and recommendation we have been able to proudly hold up our heads. We have been able to face our Government, our people and our own hearts knowing that our actions were taken in honesty and full accord. For this we are profoundly grateful.

Many major issues on which my Government has depended have been taken by the Combined Economic Board and hundreds of minor actions, likewise, have been fitted into the effort that has restored my country and placed it in a higher position than it ever before held in the free world. No single action ever taken by the Combined Economic Board is as important as the approval of the stabilization program, now in its third year. The stabilization program, wisely guiding the financial and fiscal policy of our Government, has been significant in the development of Korea's economy. While I am proud that Korea stands with the very few nations of the world that have avoided inflation, I am happier about other, more human evidences, of the effectiveness of the stabilization program.

Everywhere one can see what stabilization means to Korea. There is a new radiance in the faces of Korean people: in the fat, warm babies; in the faces of the schoolchildren, now decently clothed and seriously working over their studies undisturbed by empty stomachs. One can see the stabilization program in many ways—in the spirit of Korea's music and art; in the untiring effort of the farmers serenely working their fields; you feel it in the air, like spring.

The stabilization program is the result of consultation and recommendation. It is the result of discussion, compromise and mutual determination as negotiated within the organization of the Combined Economic Board.

This has great meaning to us and the credit for this and a multitude of other evidences of progress is due to one thing: the superb leadership of Mr. Warne.

Mr. Warne has been virtually a one-man technical assistance program. Through his dignified example he has shown me, and my associates, techniques which have given us new confidence and new determination.

The Government would like to decorate Mr. Warne with one of the medals of the highest order of our nation to commend his outstanding contribution to the rehabilitation of our wartorn economy, as well as the betterment of the relationship between our two countries, were it not for U.S. Government regulations. Our people, as well, would share this feeling with the Government in recognizing Mr. Warne's achievements in our country.

It is with deep regret that we are together today for our final meeting. Except for a few brief periods when one or the other of us has been absent, there has hardly been a day when Mr. Warne's true genius has not been felt by me and by my associates assembled here.

It is my desire that my words be incorporated in the permanent documents of the Combined Economic Board as an expression of our sentiments toward the UNC economic coordinator, William E. Warne.

It is my feeling that Mr. Warne is Korea's greatest peacetime hero and that a thousand monuments to this great and sincere effort will forever mark my homeland.

As Mr. Warne flies over our land, he will see the long plumes of smoke rising from industrial plants that did not exist until he helped create them. He will see bridges and highways; railroad and communication lines. He will see the now peaceful fields where for two consecutive seasons our farmers have produced bumper crops. He will see new hospitals and schools. He will see the lights

generated by the powerplants he helped to build. They are his monuments.

He will not see, as he flies above us, the new spirit in the Korean heart, the stimulated minds of our new, young leaders; the determination that is a part of nearly 23 million of my countrymen. But I want him to know that these qualities are there—thanks, thanks to him.

United Nations Emergency Force

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mrs. BOLTON. Mr. Speaker, when I was in the Near East in 1958 I spent several weeks in the Palestine refugee area including the Gaza strip. One of the highlights was the peaceful atmosphere which had developed almost immediately upon the arrival of the United Nations Emergency Force. Border depradations stopped and everyone breathed more easily. Having seen at first hand what is done by the mere presence of these soldiers from many lands, and under unanimous consent to extend my remarks, I insert herewith the testimony relative to UNEF presented last week to the Committee on Foreign Affairs by Francis O. Wilcox, Assistant Secretary of State for International Organization Affairs:

U.N. FORCE IN GAZA

(Statement of Francis O. Wilcox, Assistant Secretary of State for International Organization Affairs, before the House Foreign Affairs Committee in support of the mutual security program for fiscal year 1960, April 16, 1959)

I appreciate this opportunity to present the request for $3,500,000 of mutual security funds to enable the United States to make a voluntary contribution to the United Nations Emergency Force (UNEF) for calendar year 1959. I have already testified before the Subcommittee of the House Appropriations Committee, chaired by Mr. THOMAS, in support of our request for $4,943,146, which is the U.S. assessment for UNEF expenses in calendar year 1959.

As you will recall, following the outbreak of hostilities in Egypt in October 1956, at the time of the Suez crisis, the United Nations was faced with the problem of restoring peace in the area. First it was successful in obtaining a cease fire, and, then, in order to facilitate the withdrawal of foreign troops it resolved to establish a United Nations Emergency Force.

According to the terms of the resolution of November 5, 1956, the mandate of the Force was "to secure and supervise the cessation of hostilities on Egyptian territory." The mandate was later elaborated by a resolution of February 2, 1957, which stated that "scrupulous maintenance of the armistice agreement requires the placing of the UNEF on the Egyptian-Israeli demarcation line."

The Force was originally composed of troop contingents from 10 countries, Norway, Sweden, Denmark, Canada, Colombia, Brazil, Finland, Yugoslavia, India and Indonesia. These countries—which do not include any of the great powers—represent every region of the world. At first the force consisted of about 6,000 men. It now consists of some 5,000 men from 7 countries and is stationed in positions between Egypt and Israel, as well as near the entrance to the Gulf of Aqaba. Since its inception the contingents of three countries—Colombia, Finland, and Indonesia—have been withdrawn primarily for financial reasons.

The creation of the Force represents one of the outstanding achievements of the United Nations, and has demonstrated that Organization's capacity for effective action. The success of UNEF can be attributable to many persons and many nations, high on the list being the Secretary General, Mr. Dag Hammarskjold, and his staff, whose drive and administrative talents translated a resolution of the General Assembly into a force in being on the spot in a matter of only eight days.

The existence of UNEF has contributed greatly toward maintaining a considerable measure of stability in the area of its responsibility. In his report of August 27, 1958, the Secretary General of the United Nations notes that "the operation of UNEF through this year, in all respects of its task, has continued to produce the same favorable results described in previous report," and that "during the period covered in this report, virtually unbroken quiet has prevailed along the entire line between Egypt and Israel." This situation is all the more noteworthy when one considers the heightened tensions in certain other aspects of Middle East affairs.

The United States wants a stable situation in which there can be orderly growth and development in the area. We therefore fully support the UNEF undertaking, which, together with other UN initiatives, has contributed toward that goal.

UNEF costs during the first calendar year of its existence were $30 million; during the second year (1958) they were $25 million. For calendar year 1959, a sum of $19 million has been authorized by the U.N. General Assembly. Although there is no specific terminal date on the existence of UNEF, it may well continue during calendar year 1960.

Despite the substantial decrease in UNEF costs, the sums involved represent a large additional burden on an Organization whose regular budget has been about $55 million annually. Hence additional assistance in the form of vouuntary contributions has been required in order for the U.N. membership as a whole to be in a position to shoulder this additional budgetary load. For its part, the United States granted special assistance totaling approximately $13 million to UNEF during its first 2 years, using funds appropriated under the mutual security program. When added to the United States assessment for the same period also about $13 million), the United States has thus paid about 47 percent of the authorized UNEF appropriations of $55 million. Our support of UNEF in this respect contrasts sharply with the negative attitude of the Soviet bloc, which has continuously maintained that these costs should be borne by what they called "the aggressor nations," i.e., Israel, France, and the United Kingdom.

In line with our previous policy and taking account of the extra costs of the United Nations observer group in Lebanon which had to be added to the U.N. budget, the United States has pledged a special voluntary contribution of $3.5 million of UNEF for calendar year 1959, subject to appropriation of the necessary mutual security funds. This amount, when added to the U.S. assessment of $4,943,146 for the same period, would mean that our support of the authorized UNEF expenses of $19 million would be at a level of about 44.5 percent, i.e., a somewhat smaller percentage than the 47 percent which we paid for the first 2 calendar years.

When account is taken of the possible consequences of an outbreak of hostilities in the Near East area, it becomes evident that the stabilizing presence of the U.N. Emergency Force constitutes a great benefit both to the free world in general and to the United States in particular. I am convinced that the contribution which UNEF has made to peace in the Middle East—if it could be measured in financial terms—is worth many times the amount we have contributed toward its existence.

France's Prospects With General De Gaulle

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, April 20, 1959

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article titled "France's Prospects With General De Gaulle," by Dr. Nicolas de Rochefort, of the faculty of American University, which appeared in the spring 1959 issue of the publication World Affairs. The article emphasizes the new friendship between the political leaders of West Germany and the Fifth French Republic.

The article was called to my attention by an associate editor of the publication in which it appeared, Rev. Joseph F. Thorning, of Frederick, Md., who is an esteemed friend of mine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FRANCE'S PROSPECTS WITH GENERAL DE GAULLE

(By Dr. Nicolas de Rochefort, department of political science, American University, Washington, D.C.)

Throughout the long and dramatic history of France its political aspirations oscillated between two main, although often contradictory, goals: Freedom and progress on one hand, stability and security on the other. For many centuries, the instability of the internal situation, which caused the nation to welcome and support the slow rise of a strong central power, assuring internal security and order and defending expanding frontiers, culminated in the absolutism of Louis XIV.

The Great Revolution of 1789 exploded the long-restrained aspirations for freedom, but when its excesses endangered internal and external security, the sobered-up and fearful nation readily accepted Napoleon.

The violent social agitation which arose in the wake of the revolution of 1848 caused a frightened people formally to accept by a plebiscite Louis-Napoleon Bonaparte, first as President, then as "Emperor of the French," thus submitting again to an authoritarian regime. The downfall of the Second Empire at a time when it was developing a liberal evolution was due to its inability to live up to its very raison d'être, national security. After Sedan, the Empire made no sense.

In 1914, as in 1870, the regime collapsed on the battlefield, held responsible, quite unreasonably, by public opinion for the defeat. Again the nation accepted, indeed welcomed, an authoritarian regime in whose hands the disintegrating institutions of the

Republic suicidally abdicated the powers entrusted to them. That was Pétain.

Economic instability and the Parliament's impotency in the 1930's accounted for the growth of various rightist movements, whose agitation culminated in the riots of February 6, 1934. The Republic suvived, but only in the indifference and contempt of many.

The Fourth Republic, envisaged by its initial planners in the resistance as a renovation of the nation, was molded in the old, loose forms of the Third. It rapidly displayed the same invertebrate impotence. The military setback and loss of Indochina in 1954, and the loss of the north African protectorates drastically increased the feeling of insecurity which was developing at the sight of functional disorder of the institutions. The bloody and inclusive struggle in Algeria brought this feeling to a quasi-hysterical pitch.

Once again the nation veered to the "right"; that is, to authority even at the expense of some freedom. It would be senseless to reduce the significance of the May 1958 events to the size of an attempted "putsch." The operation would not have been launched. It certainly would not have verged on success had it not contained an appeal to the masses and found a favorable climate in the nation.

As always in such cases, the craving for a strong protective government materialized in a call for an outstanding leader. This time it was the hero of the Liberation, Gen. Charles de Gaulle.

The National Movement had already achieved partial success. A rebel, rightist, quasi-government was shaping in Algeria and was receiving pledges of allegiance from various parts of the metropolitan territory. If General de Gaulle had accepted the role planned for him by the plotters, France now would be under a dictatorship, possibly complicated by civil war. By refusing to come to power by a coup d'état, and by stipulating unequivocally that he would accept power only under the due process of constitutional law, De Gaulle saved the prospects of democracy in France.

It is truly amazing how both the May plotters and France's sincere friends abroad, particularly in the United States, misjudged De Gaulle. The former expected him to become the leader of a coup. The latter at first viewed his acceptance of the Premiership as the establishment of a reactionary dictatorship. The whole past of the man, who said, "No" to the defeat in 1940, vouchsafed for his stanch attachment to republican legality and democratic process.

In his active exile and struggle for liberation De Gaulle repeatedly averred that his aim was not only the restoration of France's sovereignty and independence, but also the reestablishment of the Republic. As head of the Committee on National Liberation in Algiers, soon to evolve into the Provisional Government of the French Republic, he hastened to recreate such forms of democratic institutions as were possible under the circumstances. Thus, the Consultative Assembly, a quasi-parliament, was established.

On the Provisional Government's transfer to Paris, when De Gaulle's prestige and power would have permitted him to exercise dictatorial authority for as long as he wished, he prompted the elections to the Constituent Assembly. Although an outspoken partisan for a restoration of the Third Republic, with its constitution dating back to 1875, he let the nation choose freely between this solution and a new democratic regime. France preferred a supposedly new constitution.

After the elections, De Gaulle, now vested with executive power by a unanimous vote of the Constituent Assembly, could have again forced his will on both that body and the nation. Instead, he resigned from office and returned to private life when he found himself in disagreement with the majority of the Assembly.

In refusing in May 1958, to assume the leadership of the rebellion, and thus thwarting the coup d'etat in embryo, he remained entirely consistent with his ideals and his past. The Committee of Public Salvation (which is a more correct translation than "Safety" for Comité de Salut Public) made another momentous blunder in counting on De Gaulle to carry out their program when he assumed a legally proferred power. It was unrealistic for the committee to revert unconditionally to a policy of domination in Algeria, which was considered as an integrated part of the state, and to deny any personality to this territory and its Arab population. In clamoring for De Gaulle to power, they evidently expected him to endorse and follow these reactionary policies.

However, the liberal views of De Gaulle on colonial problems, in general, and on Algeria, in particular, were well known from his history-making speeches in Constantine, Algeria, and Brazzaville, West Africa in 1944. At that time he was hated in Algeria and was denounced as little less than a traitor by some of the very diehards, like Alain de Serrigny, who launched or joined the Algeria Committee of Public Salvation and called for De Gaulle to seize power. The reorganization of the French overseas possessions to bring about an articulate associatoin of autonomous states, which started under De Gaulle's direct inspiration and prompting, was bound to disappoint the diehards.

What is the balance sheet of De Gaulle's administration at this writing, now that he has been swept into the presidency by popular enthusiasm?

The constitution, which he proposed and which was adopted by an unprecedented majority, drastically limits the actual power of the legislative. It was the evils of legislative omnipotence which were the very cause of the near collapse of democracy in France and which had brought the nation to the brink of political chaos. The reaction led to the strengthening of the executive in the new constitution, which was both understandable and urgently needed. Quite conceivably, there are potential dangers in the strength of the executive, but it is essential to end the abuses of an ataxic, yet all-powerful legislature.

Liberal terms of association were offered to and accepted by the overseas territories, with the single exception of Guinea which took advantage of the offered right to secession. The main problem, Algeria, remains unsolved. However, sincere efforts are being made to bring about a solution in a manner which would have been inacceptable to the French under any other government.

The National Assembly election results are but a mixed blessing for de Gaulle. However, they had the positive effect of pulverizing the Communist Party which will be represented by a mere handful of Deputies. But contrary to de Gaulle's candidly expressed wishes, the constructive moderate left was also trounced. The executive might find that la marié est trop belle (the bride is too beautiful) as happened to the restored Bourbon monarchy in 1815 with its chambre introuvable and its majority of ultras, who were more royalist than the king. Brandishing de Gaulle's banner, a rightist majority was swept into the National Assembly, so strongly rightist that concern is expressed here and there lest de Gaulle be forced to withdraw from his own liberal position.

For the voters, pledges of fidelity to de Gaulle by the candidates meant and counted for more than platforms and programs. This, together with the provisions of the new constitution, such as the right of dissolution giving an upper hand to the executive over an excessively recalcitrant legislature, will supply de Gaulle with both psychological and technical means for curbing the ultras. There is no doubt that he will permit any rightist extremism now, since he refused its patronage in May. Even later he put an end to their activities by vigorously recalling the army to its duties of servant to the civil authorities. Another indication was the decisive manner in which he ended the rabble-rousing Algerian Committee of Public Salvation. General de Gaulle is in a position to exercise a moderating influence on the legislature. This writer believes that he will do so.

Prospects of liberalism and moderation under De Gaulle offer the hoped-for chance of the Frence nation. Previously, when France searched for stability and security, it inevitably conjured ruthless, ambitious leaders whose character and philosophies escluded any notions of such principles of freedom, popular will, and democracy.

This time a unique historic conjuncture was made available to France at a time of dismay and quest. De Gaulle, endowed with the necessary strength of character and dedication to the mission entrusted to him, is inspired by liberal principles. Instead of leading the nation on the road to dictatorship, he will endeavor to preserve its democratic institutions and structure, possibly even despite itself.

Beyond the present accomplishments, which are still in projection and can be but speculated upon, there is a striking, hopeful psychological phenomenon brought about by De Gaulle's reappearance at the helm of state. This phenomenon is unity in confidence. Men who yesterday refused any strength and stability to the executive, lest it open the door to some Bonaparte-like adventure, now accept a constitutionally strong executive, because they trust De Gaulle.

Moreover, men who branded as traitors statesmen who attempted the slightest liberal gesture toward Algeria, not to mention an emancipation of overseas territories, confidently followed De Gaulle when he proposed his revolutionary reform of the French Union. A Guy Mollet or a Pflimlin proposing this would have been stoned on the steps of the Palais Bourbon. The phenomenon, which made a broad national reconciliation possible—is faith, faith in a man who so well expresses the will for survival and the ideals of the nation.

In the field of international relations, De Gaulle is still probing his way. However, his fidelity to the West to which, spiriutally and politically, he belongs, should not be questioned. This includes continued French participation in NATO. The first cautious probes launched by De Gaulle's government in this direction seem to indicate that he will seek more active participation in the deliberations of this body. This may produce headaches in the future and the United States may well have to exercise forbearance and restraint in dealing with De Gaulle's France.

However, is it not better to have to deal with a somewhat demanding and temperamental, yet reliable associate on whose word one can depend, than with one who reverses himself every few months or one who would be constitutionally unable to live up to his assumed obligations?

Fears have also been expressed that De Gaulle's war and resistance record might bias his attitude toward Germany and cause him to drift away from the French-German rapprochement developed by the Fourth Republic. The two Adenauer-De Gaulle encounters and their results, whether in the economic field or on the weighty problem of West Berlin, should by now dissipate these fears.

The first moves of De Gaulle's cabinet, notably the consultation with several Euro-

pean governments which his Minister of Foreign Affairs undertook almost immediately upon his assumption of premiership, would seem to indicate that this former professor history at Saint Cyr is inclined to resume the traditional policies of France: uniting and coordinating the international action of the so-called secondary powers in which France often was, and more often tried to be, the champion or spokesman. Circumstances are different. France no longer is the dominating power in Europe it was under Louis XIII or Louis XVIII, nor is she in a position to aspire to domination. Indeed, with Germany, her traditional rival, she comes close to being a secondary power herself on the new world scale. Her claim for European leadership can no longer be but a claim for spokesmanship or, at best, a role of coordinator. She can be neither tempted to seek supremacy nor even be suspected of it. This may facilitate De Gaulle's quest, and if he succeeds, he will sublimate France's role.

That the new conditions of the European situation are realistically appraised and well understood by De Gaulle's government is exemplified by its concern for achieving close cooperation with Germany. This cooperation, if it develops, will assure an era of stability and through this cooperation the unification of Europe may be achieved. Far from dimming this prospect, the restoration of France's self-confidence and self-respect with De Gaulle as her leader will remove the inferiority complex which would make the European unification policy of France hesitant and half-hearted in the future as it frequently was in the recent past.

A small picturesque detail may be significant in this respect. The French Postal Administration is circulating a stamp which displays a name new in its official use: Europe. Thus for the first time, on French initiative, "Europe" becomes more than a geographic expression.

The sense of Western solidarity, facilitating the concept of a unified Europe and transcending it throughout the free world of Western civilization, is sharpened in De Gaulle by his stanch catholicism, backbone of that civilization. Not by accident, for the first time in over a century, in addressing the official congratulations of the French Government to the newly elected pope, John XXIII, Charles de Gaulle assured the sovereign pontiff of his filial respect.

Rural Development

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. McINTIRE. Mr. Speaker, Washington County in my district is participating in the new rural development program. With its great potential for balancing and strengthening the economies of our rural regions, this program can be of considerable help in solving the farm problem. To date, however, the rural development program has received neither the attention nor the support it deserves.

Under leave to extend my remarks, I would like to include in the RECORD a brief report from Washington County summarizing the work of our very active county rural development committee.

[From a news story by Lloyd G. Rozelle, Washington County extension agent assigned to rural development program]

The Washington County rural development committee, a group of farm and business leaders in the county, have been working since the start of the program to develop industry based on the large acreage of unused hardwoods in the area. Their long-term efforts are beginning to pay dividends.

Expansion of the lumber business in Washington County is beginning to look encouraging. There's been a larger demand for softwood logs than can be met by the supply. However, hardwood logs have been in surplus. What to do with the abundance of hardwood in the county was one of the first problems tackled by the rural development committee.

They first assembled concrete, accurate information on forest resources from the Maine Forest Service, large companies, and county people who knew the woodlands. Meetings were sponsored by the committee on forest produce development. State and Federal agency representatives were called in, as well as those of companies with large timber acreage in Washington County. One major company agreed to make available large supplies of hardwood to encourage small industries. Recently a new mill utilizing this hardwood went into operation, assisted by committee members. Some 50 new jobs have been created as a result.

The county rural development group is also pushing timber-working facilities, so that more finished lumber and products will be produced in the county.

A Constituent Salutes the Congress

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from a constituent of mine, Miss Alma Madden, of Bellingham, Wash.

In her letter, Miss Madden reminisces about her Congressman back home in Illinois, the distinguished former Speaker of this House, "Uncle Joe" Cannon, of the 17th Congressional District of Illinois.

During these days when a Congressman seems to be beset from all sides, it is refreshing to read this tribute to Congress and to a great Congressman.

Miss Madden's letter follows:

BELLINGHAM, WASH., *April 5, 1959.*

Hon. JACK WESTLAND,
Washington, D.C.

DEAR JACK WESTLAND: Thank you very much for the directory which came so promptly. I cannot say that all the information in it overwhelmed me with joy. There was too much evidence of the shellacking we took last election. But I was quite proud of the way our Washington Republican delegation resisted the onslaught.

I want to thank you, too, for the inquiry after my health, which is now quite improved. I cannot recall any Congressman before who ever inquired about my health. From that and other indications of your constant interest in your district convinces me you are worthy of the toga worn by our Congressman back home.

Let me tell you about him. He was like an older brother or a benevolent uncle to his constituents. No trouble was too much, no worry too small if the matter concerned one of his folks back home. It was said there was hardly a rail fence in his district on which he had not sat discussing matters with the farmers. If Johnny wanted to be in the Army, our Congressman got him in. If later Johnny wanted out, maybe to help Pa with the spring plowing, our Congressman got him out. His "folks" wrote him about their wants and he sent them packages of seeds and agriculture reports. When we went to the county seat, we passed our Congressman's house, an imposing brick structure that looked a little like a medieval castle, we were as proud of that house as if we had owned it. In those days we didn't think a man was necessarily a rascal because he lived in a fine house. It was right and proper for a man, especially if he was a big man, to have been born in a log cabin, but it was equally right and proper to get out of the log cabin and into something better at an early stage. In spite of his big house, our Congressman was all linsey-woolsey. He boasted that he never paid more than $13 for an overcoat and it was remarkable what fine garments he got for that price, until it was discovered there was an understanding between the tailor and the Congressman's daughter, who paid the difference. Our Congressman liked big black cigars, which the tradesmen in his hometown gave him for free. Maybe because he came from the tall-corn country, his favorite food in season was roasting ears, which he ate with the hearty gusto of our Saxon ancestors. All of these things and many others like them were related by his people with humor and affection. His colleagues sometimes called him a tyrant—"czar" was the word they used then—but to the homefolks he was a kind and trusted friend.

In those halcyon days, Government was not the ever-present, all pervading omniscient thing it is today. Bureaus were marble-topped affairs which were handed down from grandma. The only supervisors we knew were those who cared for our few poor, and the first time we ever heard of foreign aid was when our boys went over the water to save the world for democracy. Washington was a real, but distant place, which comparatively few of us had visited. The Government was personified by the one man whom we knew represented us at the Capitol; the man who interpreted the acts of Government to us. By comparison even the President, whose office, though vastly respected, remained an awesome and distant figure. For these reasons we didn't favor changing Congressmen. We liked to keep the same one as we liked to keep the same family doctor and the store where we traded. And in that era of blessed memory this was easy for we were mainly a one-party district. (We were not then a long line of lonely men. It was the opposition then, who was lonely, only the line in our district was very short. We knew most of them by name.)

Our Congressman, in his day, was a power not only in his district but in the Congress as well. Some chafed at this until finally when he was an old man they revised the rules and clipped his wings. It was in these last years of his tenure that I took some of my first school-teaching money and went to Washington to attend some conventions and see the sights. I looked in on the House and Senate Chambers—marvelling at their near emptiness, it was near the end of the session, viewed Trumbull's famous pictures in the rotunda, looked with awe at the declaration in its glass case. Then I visited the House Office Building and stood a few faltering moments outside the door of our Congressman's office. I wanted to tell him something I thought he might have liked—

that I shared the same given name with his Quaker mother, that his forebears and mine had come out of Pennsylvania and down the river valleys into Virginia together—but some awe of his office made this seem a little foolish. So I left, something I have regretted ever since. I went instead to the Lincoln Memorial and looked upon that brooding face. I visited Mount Vernon and sat in Washington's pew in the church at Alexandria. I stood on the veranda at Mount Vernon and looked out on the Potomac and wondered if the river looked as it did in Washington's day.

Every American citizen should before he dies make a pilgrimage to Washington, not to ask favors, not merely to see the sights; but to gain a sense of history which is there perhaps to remember far back when representative government was a group of men sitting on the ground, gathered there at certain times to discuss the affairs in their districts. From the Saxon folk mote or witanagemot has come this most important national parliament in the world. So important has our Capitol become that a recent magazine article said the next President of the United States would hold the history of the world in the hollow of his hand. God grant that he may be a very good man and as wise as he is good.

As you may already have guessed our Congressman was Uncle Joe Cannon from what is now the 17th Illinois District. A salute to his memory and a salute to all good Congressmen who obey their God and serve their constituents faithfully.

Yours loyally,

ALMA MADDEN.

Pat Boone—Idol and Model for the Younger Generation

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. EVINS. Mr. Speaker, the State of Tennessee is proud of its native son, Pat Boone. We are proud of him not only because of the success he has achieved in the field of entertainment, which has made him an idol of his own generation, but even more we are proud of him because his life and deportment have been a credit to his Christian upbringing. Mr. Boone recently has written a book entitled, "Twixt Twelve and Twenty," an autobiography addressed largely to young people of his own generation. In this connection, the magazine Partners, in its March issue, published a review of this book. Because this book deserves wide reading, I request unanimous consent to have the review inserted in the Appendix of the RECORD. The review follows:

"'TWIXT TWELVE AND TWENTY"—A PAT FOR THE BOONE BOY'S WELL-AIMED VALEDICTORY

(By Jenny Lee)

Not every book on the bestseller list has sufficient intrinsic merit to warrant its popularity. A fair number of bestsellers catch on for reasons less solidly grounded.

This isn't true of Pat Boone's book. "Twixt Twelve and Twenty," it seems to me, fully deserves its tumultuous sales. For it is an unusually effective communication, the mind it communicates is both wholesome and positive, and the message it conveys is steeped in practical wisdom.

Pat Boone, himself but recently out of his teens, has graduated with top honors and, through his accomplishments both academic and professional, has become the idol not only of his own generation and his juniors but of countless elders as well. His school, in the larger sense, was the school of developing adolescence, in a modern world not too happily balanced and seething with crosscurrents of opportunity and temptation, hope and disillusionment, clean beauty and its sloppy degradation. In that larger school of life, as in the formal institutions wherein he studied, he applied himself, took hold of the healthy side of things and came through as a master of this world, not as another sordid slave. He won the right to become valedictorian of his "class"—through preserving, developing, and presenting his talents for the good of all. His book, in a way of speaking, is his valedictory—and in all ways worthy of him it is.

His 176-page address is, in form, his autobiography—conceived not in pride of personal accomplishment or youthful vainglory but in humble gratitude to the millions who granted and encouraged his authority; and it is delivered not as a smart aleck tour de force but as a charming and positive service to all who can profit by his experience.

Pat's aim is to chart the route to maturity as he found it, for the benefit of the young who are still headed in its direction. If at every turn he is at pains to point out the main roads and distinguish these from a complex of incrowding byways, he is equally careful to utter no stern commands. Instead, he offers full individual choice to the youthful pilgrims, making sure only that the effect of such choice is fully understood.

His technique is one of humble suggestion, and the suggestion, honestly carved from personal experience, is that the mature happiness all youth is seeking is to be found only by sound minds in healthy bodies at peace with moral principle.

His address is directed on a straight line to American kids, in words they can and want to understand—in the good-naturedly humorous slang they learn at school and quickly learn to use among themselves. Throughout his text, Pat's thoughts and always powerful advice are thus translated and effectively conveyed, with no echo of pontification. He is Big Brother, class president, school hero and singing star all rolled into one who is their pen pal. As such, his authority is enhanced by self-confession, and no need ever arises to "lecture." By letting his countless young readers into his life to share in his glory, he establishes full and perfect rapport usually found only in the innocent exchange of a "bull session." Pat Boone is thus, intuitively, an extremely effective psychologist.

WHAT THE BOY COMMUNICATES

And what are the details of the message the good-looking Boone boy, as Big Brother to all teenagers, so effectively communicates?

They are the simple guideposts to decent, effective growing up which conscientious parents in every meaningful home are at this very moment endeavoring in a variety of ways for all they are worth to plant in the lives of their young. Boone, speaking "from the inside" rather than "from on top," offers significant patterns for spiritual, mental, physical, social, and economic growth—based on Christian faith and principle, on filial devotion, on warmth of feeling for one's fellows, on rational confidence in oneself, on the importance of work as honest effort. By means of personal anecdote and sharp illustration, Pat points out that of the 7 teen-age years "'twist 12 and 20" can be a grand adventure during which the individual youngster's growth toward maturity is determined by what he personally does to fulfill his responsibility to the family circle and the world he lives in, either with or against the tide.

Being both religiously inclined and deeply awakened, he speaks knowingly of God as Lord and Shepherd, as "the realest real" in his life; of the Bible as the source of all truth and majesty; of Christianity as "a way of life, not a weekend hobby." Though he unfolds his religious life with boyish simplicity and disarming fortrightness, he nevertheless holds himself broadly responsible to his faith. As a baptized member of the Church of Christ, he had to earn his admission to the fold. He had to prove himself ripe and ready and confesses that even today, through faithful practice of Christian principle, he must continue to deserve the title of even a "trying Christian," as he defines himself.

Without indulging in high-pressure preaching or in any way departing from common sense, he effectively tells why he personally doesn't smoke or drink or use foul words. "Bad language," he writes, "is a dead giveaway that the user is covering up ignorance * * * or is pretty lazy * * * or, worst of all, that he thinks he's pretty smart.

THE GAME OF LIFE

Pat offers sound points on how to be a friend, a good junior citizen, a contributing member of society; on school and education and the ways of taking advantage of every scholastic opportunity. He covers physical and mental hygiene and such homely matters as dress and personal cleanliness. To the fair sex he has this simple bit of brotherly advice to offer: "If you want to be attractive to boys, always look your best. Let the other gals wear dad's shirts and sloppy blue jeans—you'll have the guys all to yourself."

He speaks knowingly of dating, dancing, kissing, going steady, "April love" and "Romance with a capital R."

On the subject of parents, he recognizes the several types—the normal, the over-indulgent, the too-strict—and offers kindly advice as to how to get along with what he calls "problem parents." Of them all, he says this: "Most of the rules parents make, whether we think them right or wrong, don't stem from meanness or narrow-mindedness or wanting to spoil our fun. They are made because our parents care what happens to us."

Every problem encountered from 12 to 20 is approached from the standpoint of empathy, which Pat defines, first academically as "imaginative projection of one's own consciousness into another's, then in good plain talk as putting yourself in the other guy's shoes and trying to see and feel as he does in order to understand him better."

The Golden Rule is Pat's yardstick for measuring every problem, and his discussion of marriage as an institution and the "Happy Home Corporation" as its finest expression could be read with profit by old and new couples alike.

His gentle advice, so in line with that of responsible parents, gains weight and significance when stated by one who is living proof of the effectiveness of the rules laid down. Such advice is hard to resist when uttered by one who, 'twixt 12 and 20, achieved happiness, fame and fortune—by one who in the process of growing up has become a national idol with his feet planted squarely on the ground and who meanwhile has aroused not even a breath of public suspicion that even so much as one toe of those feet might be of clay.

A Republican Editor Brands His Party as the Wasters

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. GEORGE. Mr. Speaker, the editor and publisher of the Moran Sentinel—Moran, Allen County, Kans.—the Honorable R. L. Thompson, has never failed through the years to express himself clearly, distinctly, and forcibly on all political issues. A good, sound Republican newspaper editor, Colonel Thompson always says what he thinks in his editorial columns.

Despite the attempt of the Republican administration to brand the Democratic Party as the "spenders," the fact remains it is the executive department now controlled by the GOP which spends all of the funds made available by Congress. That these expenditures are made in a wasteful and extravagant manner cannot be rebutted.

Although Colonel Thompson and I do not always agree politically, I have always admired him for his courage and frankness. Colonel Thompson took cognizance of the administration's extravaganse and waste in an editorial in the Moran Sentinel on April 9 and makes it clear that the Republican Party is the party of the "wasters."

Under leave to extend my remarks, the editorial of Colonel Thompson is included:

UNEXAMPLED WASTE

The entire Eisenhower administration may be briefly and accurately described with two simple word "unexampled waste." No President in the long and wasteful history of this incomparable Republic has ever remotely equaled him in squandering public money. His 6 years in office have made spendthrift Harry Truman and spendthrift Franklin Roosevelt look like the anchoretic curmudgeons one frequently encounters in the hills of Arkansas.

While bleating vociferously for economy in all departments of Government, the President has carried extravagance even in the White House itself to a point that has never been matched in the history of that revered domicile.

During the current fiscal year he will spend $5,013,750 to keep Mamie and the kid and his family comfortable. This is more than double the amount Harry Truman spent during his last year in office. And let us not forget that Harry's wife, Bess, ordinarily a sensible woman, never washed a dish or made a bed during his last year in office and that Margaret never did anything around the house except sing.

The White House budget includes such upkeep as servants, gardening, and the office staff, but it does not include the expense of helicopters, airplanes, and two yachts. All of this is included in the budget for the executive establishment. Instead of reducing White House expenses, the President is seeking to increase them. In the budget for the coming fiscal year, he is asking for an increase of $322,000.

The total Eisenhower budget for the executive offices is now $52,736,350. This includes money for the National Security Council, the Budget Bureau, and the countless other offices operating under the White House. During his last year in office Harry Truman got along very well with a budget of $6,703,000 for the executive offices.

Frenzied Search for Taxes Shows Reform Closer Here

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am enclosing an editorial which appeared in the Nashville Tennessean on April 13, 1959, with regard to the frantic search of intergovernmental relationships for taxes and the higher and higher tax rates piled on a tax structure set up years ago.

I hope every Member of Congress will read this thought-provoking editorial. It follows:

FRENZIED SEARCH FOR TAXES SHOWS REFORM CLOSER HERE

The frantic search for taxes is playing merry hob with intergovernmental relationships these days.

In New York City the council has voted with "utmost seriousness" to study the possibility of seceding from the State of New York. The reason, in essence, is taxes.

The Governor of New Hampshire is feuding with the Governor of Massachusetts over income tax laws of the latter State. A New Hampshire man has been jailed because he failed to pay income tax to Massachusetts, where he works.

There are rumblings of anger from New York workers who live in New Jersey or other States and commute.

All of these things have a disturbing undertone. If the cases of cross-taxation and double-taxation grow, the result could very well be the opening of a veritable Pandora's box of troubles. It is but a step to gross receipts taxes and then severance taxes—both of which affect intra-State relationships. It is but another step to taxation fights between local governments such as cities and counties.

The big trouble is the growing cost of government on every level and subsequent efforts to tap new sources of revenue or to squeeze more from old sources. There is never enough.

Many local governments, for example, are committed to try to provide a volume of services for which they can't raise enough revenue, no matter if every conceivable tax source were used.

For these, supplementary aids will be necessary—the easiest being Federal grants in aid. But the danger here is obvious. If domestic demands of local governments on Federal sources keep growing, then the Federal system grabs off more and more of the available revenue. One might even visualize the frightening image of a single taxing power—the Federal Government—collecting all the taxes and paying all the bills.

This would end the quarrels over what tax sources rightfully belong to what level of government. Certainly no one wants that kind of a solution. But unless American people wake to the realization that the whole system of tax structures must be examined and reforms provided, there is a chaotic road ahead.

Each year, higher and higher tax rates have been piled on obsolescent tax structures set up decades and even centuries ago.

In 20 years the Federal tax bill has grown 15 times. State and local taxes have quadrupled. The last major innovation in the Federal tax system was the pay-as-you-go plan of 1943. But most State and local systems go back to the turn of the century or further without any major change.

Solutions will not be found in adding accessories and new weight on the old vehicle. The chassis must be reinforced. Federal tax reforms must be brought about and tax sources that can be, must be left to States. Then, State and local structures must be revised. Finally, there must be a program aimed at greater effort in tax coordination between governments on all levels.

There are no long-range solutions in merely decrying taxes, looking with horror on rewriting out-dated State constitutions which close tax sources, or submitting to the inequities of apportionment as purely rural versus urban. The alternatives to action are stagnation, bankruptcy, or a crushing tax burden that pales past loads.

Oregon Trail Caravan Gets Truman Sendoff

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include a newspaper clipping from the Washington Post and Times Herald dated April 20, 1959 entitled, "Oregon Trail Caravan Gets Truman Sendoff":

OREGON TRAIL CARAVAN GETS TRUMAN SENDOFF

INDEPENDENCE, MO., April 19.—Everything went smoothly except one mixed-up mule as seven covered wagons headed out of here for Oregon today in a reenactment of one of the epics of the West.

Several hundred people gathered to watch the start from Independence Square, the some place from which pioneers left in the great overland migration of more than a century ago. The trip over the Oregon Trail is part of the celebration of Oregon's Statehood Centennial.

The morning was chilly under low clouds and water stood in puddles from the night's rain.

On foot at the head of the train was former President Harry S. Truman, honorary wagonmaster. He held up his hand, then dropped it and cried, "Forward, start 'em."

One of the lead mules tried to head back instead of forward but was quickly straightened out, and the trek began.

The 21 persons in the wagontrain planned to camp the first night at a farm south of Kansas City—only a few miles from Independence Square.

A brief prayer service preceded the start.

The Reverend Donald McKay, of the First Christian Church of Independence, asked God's guidance for this modern caravan. He said it served as a reminder of the quest for freedom, righteousness, and truth that took the original settlers west.

Questions Dictator Castro Did Not Answer

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following questions not answered by Fidel Castro:

First. You said that in case of war between the United States and Communist Russia, Cuba should remain neutral. Do you not think that such an attitude would work in Russia's favor?

Second. The Communist newspaper, Hoy, is now being printed in Havana on presses that you confiscated from their legal owners. Is your Government leasing these presses to the Communists, or did you sell them outright, or did you maybe give them to them?

Third. Former President Figuero, of Costa Rica, said in a speech in Cuba, that in the event of war, Latin American countries should support the United States. Why did you disagree publicly with Figuero on this point?

Fourth. People of the United States have always been friendly toward Cuba. The U.S. Government made absolutely no effort to intervene in your revolution. Why did you say you were ready to kill 200,000 gringos if the United States stepped in to protect American lives and property they own in Cuba?

Fifth. You have said publicly that news agencies, newspapers, and magazines have lied about you and your Government publicly. Would you be specific just who lied?

Sixth. Is it true that unemployment has increased to an alarming degree since you took over the Government in Cuba? Unemployment in private enterprise as well as government agency unemployment?

Seventh. By the way, why did you recently suspend 2,500 schoolteachers?

Eighth. When you attacked army barracks in Santa Ana and were captured and then sentenced to 15 years in prison, Batista, then the head of the Cuban Government, let you out in about a year and a half. Since you have become President of Cuba, why do you not follow the same policies? Or do you find it easier to shoot your prisoners? Is it probably cheaper?

Ninth. You have been looked upon as a fighter in favor of a democracy, and antidictatorship man. Why then do you give orders to your courts, and even ask reversals of decisions from "not guilty" to the "death sentence"? Is that democratic?

Tenth. In the famous trial of the 43 Air Force pilots which took place in Santiago, is it true that they were acquitted and that you showed your disapproval, and that therefore the attorneys were expelled from the courtroom and detained? Among them a lawyer who once defended you?

Is it not a fact that as a result of your orders, a new tribunal was formed under the supervision of your brother, Raul, and that he took the position of the district attorney, as well as the defense minister, and that he then accused his lawyers of being Batista sympathizers?

Eleventh. Is it not also true that these acquitted persons were tried all over again and the majority of them sentenced to 30 years at hard labor?

Twelfth. During the dictatorship which you fought against, the embassies in Havana had no trouble whatsoever in getting out of the country, those persons who took refuge in them? Why is there such a great contrast between what went on under Batista and what goes on today, regarding the right of refuge and asylum?

Thirteenth. You have said that the executions in Cuba would not exceed more than 400—yet there are well over 500 already, and 5,000 are still awaiting trial? Do you think such blood baths, and such purges are becoming to a democratic government that professes love for humanity?

Fourteenth. Is it not true that your mother, Mrs. Lina Ruz Castro—your own mother—has said that during the Batista government she not only had personal guaranty of safety, but that her home and family properties were also protected? Would this policy not be better than the one your government presently engages in?

Railroad Retirement and Unemployment Compensation

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. NELSEN. Mr. Speaker, recently I received a letter from M. J. Galvin, of Minnesota, with some comments relative to a resolution adopted by the Minnesota House of Representatives having to do with the Railroad Retirement Act. Mr. Galvin's request is that as a member of the House Interstate and Foreign Commerce Committee I insert his comments in the RECORD and I ask consent to include this with my statement:

MINNESOTA RAILROADS,
St. Paul, Minn., April 6, 1959.

Re railroad retirement and unemployment compensation

Hon. ANCHER NELSEN,
House of Representatives House Office Building Washington, D.C.

DEAR MR. NELSEN: You will note that on March 6, 1959, the House of Representatives in the Minnesota Legislature passed their Resolution 8 purporting to endorse the provisions of the above bills.

This resolution was offered on the floor under motions and resolutions without having been printed and without anyone seeing it. When one of the members of the house gave notice of debate which would have laid it over until the following day when those who were interested in the subject might have had a chance to see it, the proponents conferred with the questioning legislator and agreed to accept language to be put in the resolution to read as follows:

"Whereas we are informed that the retirement fund for railroad employees is actuarially sound and that the increase in retirement benefit proposed in H.R. 1012 would not adversely affect that fund and would not result in increased cost to the railroads or their employees"—

That language was accepted by the authors and then the resolution was passed.

I know that you are somewhat familiar with this subject, being a member of the Interstate and Foreign Commerce Committee before which it was considered and you must have concluded for yourself that the statement contained in the resolution was not true. However, knowing you as well as I have for so many years and having served with you in the legislature, I wish to call your particular attention to some of the matters in connection with this bill; and, as long as the resolution appeared in the CONGRESSIONAL RECORD, I thought I might prevail upon you to have my letter explaining this matter and correcting any misinterpretation that may exist with reference to the contents of the above bills also inserted in the CONGRESSIONAL RECORD. If you could do that, I would appreciate it.

You will note that the rosolution, which I have referred to above, refers, among other things, to the fact that the fund is actuarially sound. The report of the Railroad Retirement Board, which I believe is available to you, states there is an actuarial deficiency in the fund of $219 million per year.

You will note that the resolution also states that the bill would not result in increased costs to the railroads or their employees. This same report of the Railroad Retirement Board, I believe, states that the cost to the railroad industry and its employees for the increased retirement benefits would be as follows: 1959, $114 million; 1960, $115 million; 1961, $117 million; 1962, $175 million.

These costs would be borne equally by the industry and by the employees.

My information also is that the increased unemployment compensation benefits would cost the railroad industry additional amounts as follows: 1959, $40 million; 1960, $41 million; 1961, $42 million; 1962, $43 million.

The progressive tax features of the bill, I think, would ultimately increase the costs to the railroads in excess of $225 million.

It is my contention that our industry is not in a position to assume this load; so, any consideration that you can give us in connection with the matter will be greatly appreciated.

Sincerely yours,

M. J. GALVIN.

Poison in Your Water—No. 60

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the RECORD an article appearing in the San Francisco (Calif.) Examiner on February 17, 1959. That article goes to show the kind of job which is being done in many States for the protection

and preservation of our people by control of pollution. In a word, California's Dickey Act for the control, so called, of pollution has done little if anything. One reason it has been unsuccessful has been the action of lobbyists and the built-in inherent weaknesses of that legislation partly due to special interest inference in its legislative history.

This is just one more reason why a strong Federal pollution control law is requested.

That article is followed by an article appearing in the San Francisco (Calif.) Examiner on February 15, 1959, chronicling how growing water pollution in San Francisco Bay is killing fish and making dangerous areas once useful for swimming and other water recreation.

[From the San Francisco (Calif.) Examiner, Feb. 17, 1959]

WATER POLLUTION: 1949 DICKEY BILL CALLED MEANINGLESS, FULL OF MORE HOLES THAN A FISH NET—NO PROGRESS IN 10 YEARS

(By John McDonald)

Former Governor Earl Warren was generally regarded as a mild and patient man during his term in Sacramento.

But when he read the Dickey water pollution control bill in 1949, he blew his top.

"This bill," thundered the Governor, "would allow the polluters to control pollution. It would complicate government to the point where it couldn't act."

Warren fought the bill's passage. But in the end he was forced to swallow a compromise with more loopholes than a fish net.

LOBBIES ACTIVE

It was no secret that behind the bill were powerful lobbies for mining, oil, lumber, cannery and other industries. And it was no secret that industry representatives closely advised the Dickey committee while it drafted the bill.

The act set up the State water control board and nine regional boards, handled them a set of fuzzy criteria with no real guiding policy and told them to go to work in cleaning up California's waterways.

That was 10 years ago. Have they done the job?

Officials of five State departments close to the water picture—public health, natural resources, agriculture, water resources and fish and game—answer emphatically "No."

ALLOWS POLLUTION

Strange as it may sound, pollution has actually been permitted under the Dickey Act as a "beneficial use of water."

In 10 years there has been exactly one case of pollution abatement by invoking the act's cumbersome procedures.

"I can hardly believe that abatement has not been needed in numerous other cases," says Seth Gordon, State fish and game commissioner, "especially in view of the fact that many of the requirements set down by the regional boards, according to our information, have been violated."

One of the law's basic defects is in its definition of pollution.

Legally it is "an impairment of the quality of waters of the State by sewage or industrial waste to a degree which does adversely and unreasonably affect such waters for domestic, industrial, agricultural, navigational, recreational or other uses."

LEGITIMATE USE

Obviously there is room for a wide range of interpretation of just "adverse" and "unreasonable" mean.

Says State Water Projects Coordinator J. C. Fraser:

"A stream or an area of water can become a stinking septic mess, incapable of supporting any aquatic life. But if this is considered 'reasonable' in the interests of providing an industry or community with an economical means of waste disposal, then it is not pollution under the law.

"Instead it is looked upon as a legitimate use of the State's waters."

No one would argue that the State and regional control boards have stood still for the past 10 years.

Their approach has been toward more and better facilities for treatment of municipal sewage.

And in the bay region alone, which is generally acknowledged to have one of the weakest control boards, more than 25 communities that had no treatment facilities 10 years ago, either have now or are well on their way. Others have improved the degree of treatment.

But the facilities often have been outstripped by mushrooming population.

Even where boards have tackled the problem vigorously, their enforcement powers are weak and their prevention powers almost nonexistent.

From the health standpoint, this means that waters must pass beyond the pollution stage to outright contamination before public health agencies can step in.

BURDEN OF PROOF

"There is little we can do to prevent pollution," complains Frank Stead, chief of the State Department of Public Health's division of environmental sanitation.

"And if the population experts are right and you crowd more millions of people into California, we could be in real trouble."

What frustrates Stead and other officials is that under the Dickey Act, the burden of proof is on them to show not only that pollution exists, but that it has an adverse effect and that this adverse effect is "unreasonable."

The polluter is required to prove nothing, justify nothing.

"Unless we are unfortunate enough to have dramatic kills of fish," says Gordon, "it is virtually impossible to point the finger conclusively at pollution.

"It is my belief that persons desiring to use the public waters for waste disposal should be allowed to do so only if they can demonstrate that such use does not destroy existing resources or other proper uses of water."

The failures of the Dickey Act are many. But they boil down to these:

The act's lack of guiding policy and vague definition of pollution, its cumbersome abatement procedures and its lack of realistic powers to police or prevent.

So for 10 years the tendency has been to drift in muddled seas, left poorly charted by the legislature and with sometimes weak hands at the tiller, unable or unwilling to steer a safe course.

[From the San Francisco (Calif.) Examiner, Feb. 15, 1959]

GROWING WATER POLLUTION IN BAY REVEALED—FISHERIES HARD HIT BY INDUSTRIAL POISONS

(By John McDonald)

It was a beautiful spring day for fishing.

A fisherman in a small boat pushed off from the Richmond shore at dawn through the waters of the slate-smooth bay.

A few hundred yards offshore he sighted a dead striped bass floating on the surface.

Then another. Then 10 more.

He counted hundreds that day.

In the next 48 hours the count of dead fish ran into the thousands. Their carcasses rode the swells in clumps and choked the beaches.

ACIDS DUMPED

When all the evidence was in, the State fish and game commission could document the death of 2,007 striped bass. And it estimated that more than 10,000 fish in all may have been killed on what has come to be called the day of the big kill.

What killed the fish?

After a lengthy investigation, the commission fixed the blame on a chemical firm that has been allowed to dump into the bay caustic, untreated acids that erode the gills of fish.

BIG LOSS TOLD

This was in May 1957, and it was a spectacular kill. But it was only one indication of a mounting pollution problem.

Conservationists maintain there have been many more fish kills that went undetected because the dead fish were dispersed by the tide or because their carcasses never came to the surface.

They say that for every fish that is caught by a private fisherman, a thousand are killed by pollution.

That for every salmon that succeeds in the long swim up the Sacramento River to spawn, many more are killed by pollution along the way.

That much of the shoreline around the bay, the richest area for marine life, and the entire sourthern end of the bay from the Dumbarton Bridge to the mud flats has become so polluted it will not support fish life.

AREAS USELESS

That substantial areas of northern California's waterways once suitable for boating, swimming, and general recreation, have been rendered useless by pollution.

They point to the closing of beaches, the decline and death of once great fishing industries.

What is the reason for this invisible death in the water and the despoiling of potential recreation areas?

Part of the reason lies in progress and its inevitable price. Northern California has expanded so rapidly in industry and in population that sewage and waste disposal have never quite caught up.

But beyond this, California has been hamstrung in the period of its greatest growth by a weak water pollution control law that makes effective control virtually impossible.

The Dickey Water Pollution Control Act, passed by the legislature in 1949, most conservationists agree, simply has not done the job.

It set up a series of regional control boards with limited powers and forced them to work with criteria so fuzzily worded as to preclude sensible administration.

Seth Gordon, director of the Department of Fish and Game, says bluntly the Dickey Act has permitted "maximum degration of water supplies short of public indignations."

CREEPING PLAGUE

The philosophy behind the act says J. C. Fraser, State water projects coordinator, has encouraged a "creeping plague of pollution."

The outcry to amend or replace the act has been so great that Assemblyman Charles W. Meyers, head of the State subcommittee on bay and water pollution, says "the law must be changed * * * we must have enforcement."

Until there is action, the opponents of the Dickey Act say, the same conditions responsible for the dramatic fish kill of May 1957 will continue.

The southern end of San Francisco Bay is likely to remain a virtual cesspool, fed by cannery and other industrial and domestic wastes, eddying in the tides and unable to escape the Dumbarton bottleneck.

Communities with ambitious plans for small boat harbors and shoreline recreation will be frustrated by pollution.

Decaying wastes producing hydrogen sulfide in such areas as Candlestick Cove and the San Jose-Sunnyvale area will continue to give off the familiar "rotten egg" stench.

Seepage from abandoned copper mines as well as silt and industrial wastes on north-

ern California rivers will continue to kill salmon, smother their eggs, and ruin spawning grounds.

There is even the possibility of a "total river block," a concentration of pollution extending from bank to bank that would be 100 percent effective in decimating spawning salmon and could conceivably wipe out the entire salmon population.

Such blocks have occurred in Oregon and Washington rivers.

That is the bleak picture painted by conservationists and officials in the State departments of public health, fish and game, water resources, and others close to the pollution picture.

The Dickey Act, they charge, is a jellyfish. What it needs is spine, muscle, and teeth.

The Politics of Sentimentality

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. ULLMAN. Mr. Speaker, Dr. Nathaniel Peffer, professor emeritus of international relations at Columbia University, is widely respected as an expert on Far Eastern affairs. His extensive writings on this subject as well as his travels in the area have given him the background needed for setting forth a critique of our Far Eastern foreign policies.

The winter 1959 issue of the Columbia University Forum contains an excellent article by Dr. Peffer, entitled "The Politics of Sentimentality." I think it will be of interest to all Members of Congress as I agree with Dr. Peffer that we can no longer afford the luxury of basing our Far Eastern policies on sentimentality:

THE POLITICS OF SENTIMENTALITY
(By Nathaniel Peffer)

The distinction between sentiment and sentimentality is one of which most Americans have generally been unaware. The unawareness has often had consequences in acts. In most situations and relations the consequences are not particularly serious, if sometimes rather foolish; but in political relations, especially international relations, they can be not only serious but dangerous. The most conspicuous example of our sentimentality as guiding political motive is in our relations with the Far East, especially during the last generation; our situation as a result is just now definitely, frighteningly dangerous.

Now, let me make clear what I mean. I understand sentiment to denote genuine feeling genuinely induced by the reaction of something within us to something without; by sentimentality I mean a superficial feeling, whipped up for some inner satisfaction which is not very deep or real. And by such a feeling I think we have been guided in our attitude, policy, and action toward China in recent times. Result: Formosa, Quemoy, Matsu, a vendetta with Communist China and the menace of a war, world war. Consider as a revealing fact how much more harsh is our feeling toward Communist China than toward Communist Russia. In light of all the forces at work in the contemporary world—military, economic, social, ideological—how can one explain this? As rationality? At best, the feeling is symptomatic.

Let there be no oversimplification. America's role in the Far East has been a complicated one since the founding of this Republic, and historians and students of international relations have never been able to come to agreement on the qualities of that role; almost every motive has been ascribed to it. But clearly we have been involved in the Far East—in China particularly—in varying degrees throughout America's history; paradoxically, ours is the country which resolutely foreswore political entanglement with Europe, the Continent from which it sprang and with which it was affiliated by blood, institutions, and traditions.

That it has been so involved is evidenced by declarations, acts, and events in its diplomatic history. It competed actively with England for the China trade in the first half of the 19th century. Immediately after England forced China open to Western trade, America followed with demands for a treaty by which it received the same trade rights and the assurance that it would always enjoy any right in China granted to any other country. In the same decade—the 1840's—America raised vigorous and successful resistance to English and French efforts to annex the Hawaiian Islands, the explicitly stated ground for resistance being that the islands lay on the route to the trade of the Asian coast. With Japan the United States took the initiative and forced it to abandon seclusion. She also played an active part in the opening of Korea. Then, as an incident to the Spanish-American War, the Philippines were annexed and in the debate on the treaty providing annexation the treaty's proponents used as their strongest argument that the Philippines would constitute a base for trade with China.

The most direct and overt intervention in Chinese affairs, however, came in 1899, the year after the European powers began stripping off pieces of Chinese territory, presumably as a prelude to partition. Secretary of State Hay then circulated what were known as the open door notes, in which he asked the powers for assurance of equality of opportunity for American trade in whatever parts of China they controlled. Since this was manifestly impractical if the expanding powers were to establish quasi-colonial areas in China for their own profit, Hay then sent a new series of notes asking for a guarantee of the maintenance of China's integrity. At first a request for a joint pledge, this measure in time became a unilateral American commitment. It was asserted against Russia, which was expelled from China in the Russo-Japanese War, and then over the years against Japan; the Japanese replied at Pearl Harbor.

What should be observed is that this proprietary intervention was without precedent in American history except in our relation to Latin America through the Monroe Doctrine. Throughout the 19th century new states had been created in Europe, old ones extinguished, and others bartered around among powerful nations. The United States had remained unmoved. It had urged no self-denying ordinances. It had asked no pledges of integrity for any European territory. It was undisturbed, for instance, by the cutting up of Africa. Why solicitude only for China, then, which 9 out of 10 Americans knew only as a remote, exotic, and faintly distasteful heathen land?

The commitment became something more than a diplomatic formula in the years after 1900. The race for empire was nearing its climax and China was the last and most valuable prize to be won. Russia tried to capture her and after defeat by Japan was succeeded in the attempt by Japan itself. The Japanese had come close to conquest when the First World War took Europe out of the race. Europe was out but America was left in, and by virtue of the war was richer and stronger than ever before, a world power for the first time. It withdrew from Europe, reverting to its historic principle, but it did not withdraw from Asia. Quite the contrary, it became the sole formidable obstruction to Japan's ambition to absorb China, the protector and sponsor of China's independence. The commitment had become a hostage.

THE SEEDS OF WAR WITH JAPAN

From the Washington Conference in 1921, at which Japan was compelled to renounce the gains it had made in China while the West had been preoccupied by war, the mutual antagonism sharpened. Japan unremittingly strove toward mastery over China. America sometimes wavered but never waived. In 1937 Japan, in confident expectation of another European war which would give it a free hand, invaded China, plainly intending to remain there. America bided its time but did not yield. On the contrary, it imposed penalties on Japan which at length amounted to economic sanctions and blockade. Compromise and evasion were no longer possible and Japan elected to put the issue to the test of war. It bombed Pearl Harbor.

Japan was crushed, almost exclusively by American arms. China was saved. But it should be observed that there was at no time great debate in this country over whether to "let nature take its course" and allow Japan to keep China as a colony. The debate was over letting nature take its course in Europe and whether to allow Hitler to have that continent. This, too, is significant. Without understanding the distinction one really cannot understand American history.

Can the distinction be explained? In the years before the war Japan's generally aggressive stance aroused fear, it is true, but the statement of China's integrity antedated that. The acquisition of the Philippines did draw America to that part of the world, but America took the Philippines because it was already involved in the Far East rather than in order to become so. The zeal of missionaries had some effect, but it is difficult to believe that a few thousand missionaries, most of them from places and classes with little influence, could induce a government to maintain a policy that risked war. There is above all the economic motive to be considered, the appeal of the potential Chinese market, perhaps as an extension of manifest destiny, an appeal that exercised force throughout the 19th century and that acquired more force after the United States became industrially developed.

Any or all of these considerations hardly seem enough to account for what became a truly fateful position, bringing on one major war and now threatening another. However tempting the potential market may have been—it has always been potential rather than actual—it obviously did not matter enough to America's well-being to warrant the risks our policy invoked. Unlike Great Britain, the United States need not export in order to eat. Certainly at no time was there a serious and sustained effort to measure coolly and precisely what the open door for trade in China meant to the American economy and how much was worth sacrificing to preserve it. No doubt a position once taken by a country in its foreign relations is likely to be maintained, if only out of the brummagem consideration of prestige. Abandonment or modification can be construed as confession of past error, something no men in government like to make, especially those concercned with foreign relations.

AMERICA AS GREAT WHITE UNCLE

But there was more to America's fidelity to China than that. There was a curious, inexplicable distortion of thought and feeling. There was an assumption of avuncular, if not paternal benevolence. We were China's protectors, its benefactors. We were the friend of China as the Chinese called us in flattering words and accents. And we laid unction to ourselves, fed the national ego, and found it satisfying. This role may be inexplicable; it was also superficial if not meretricious. At best it betrayed what I call sentimentality, which grew with time.

In the nature of things the feelings behind our China policy could not have been genuine. They could not have been what I call sentiment. There was little or no basis for sentiment, and, insofar as there was, it was scarcely enough to warrant staking the country's future. There seldom exists enough sentiment between governments to warrant a country's risking a dangerous war without the existence of other and more compelling considerations—physical or economic survival; such considerations, for example, as led to Great Britain's undeviating stand on protection of the Low Countries. There has clearly been a genuine popular feeling for England in this country, especially in the South and on the Atlantic seaboard. Kinship, community of language, traditions, and institutions are the obvious grounds. And yet we have not flown to arms even when England was in dire peril and, as in 1940, seemed about to be submerged. Through 1940 and nearly all of 1941 we moved slowly and with deliberation. We did not rise when the Nazi hordes were at the English gate. Many thought we ought never to do so. Even up to our entrance into World War II, a war precipitated by Japan over our protection of China, many thought that it was enough to give England arms and let her save herself.

What analogy is there between our responses to the two situations? Few said, "Let the Far East stew in its own juice." Indeed, many who were resolutely against actively helping England were hardly less resolutely for actively helping China against Japan. Was there a widespread feeling of kinship with the Chinese people? Was there between us a community of attitude, belief, religion, traditions, customs, language? As a matter of fact, we had for decades scandalously mistreated the Chinese people living in this country and by our rigid exclusion of Chinese immigrants discriminated against China as a country. As we kept tactfully reminding the Chinese, we did refrain from exploiting China's weakness, from taking territory in the manner of the other powers; but it is also true that we insisted on sharing all the political and economic privileges which other powers exercised on soil they had wrested from China. We suffered no disadvantages—a fact of which the Chinese were aware but were too discreet to remind us.

We did, however, take on the role of protector of China, and that is hard to justify by the logic of the national interest or the state of world politics in the years before the Second World War. Benevolent neutrality might have been justifiable. Moral indignation at Japan's aggressiveness and cruelty in China was understandable. But no more—unless a good case could be made for the proposition that preservation of China against attack or absorption by any great power put America in jeopardy. Perhaps such a case could have been made but it never was. Even the attempt to make it was rare and not closely reasoned.

We simply adopted China and endowed it with qualities which would sustain our parental pride and generous indulgence. Europeans were faintly amused or sometimes more than faintly irritated by our paternal notions and myths and by the self-righteous airs we gave ourselves. The Chinese, of course, responded with pleasure, occasionally with a touch of cynical amusement and sometimes with some annoyance at the implied patronage. But they are a worldly wise and hard-bitten people, with a skepticism deepened and hardened over the centuries, and they took help where they could, especially since they needed it desperately.

We looked upon China and found it like us and we were pleased. The Chinese were democratic—not altogether true, or if true, then in a sense that had little in common with what was construed as American democracy. China was nominally a republic, though in fact not a real one nor even the semblance of one. The Chinese had a sense of humor—like our own, of course—and that meant much. (Tell Americans that they are scoundrels, liars, thieves, fools and degenerates and they will indeed be resentful; tell them that they have no sense of humor and they will gird for battle.) We thought the Chinese were our plighted friends, with a friendship reinforced by gratitude, and that they would always stand by us. There were few praiseworthy qualities we did not endow them with; more virtues than we credited to most other countries. The abrogation of critical faculties was general in the case of China, and her supporters spoke, wrote, and disseminated their opinions, and they were persuasive.

The Chinese are indeed an attractive people and, moreover, inspire respect as well as liking. Few Occidentals who have lived in China have disliked them, including those who refused to have anything to do with them in personal relations. They are inheritors of an old, subtle, richly embellished culture, one which is not restricted to a small patriciate but has passed down to the lowest order. A Chinese may be impoverished, illiterate, clothed in tatters, unclean and pocked with running sores, and yet have bearing, poise, dignity. Parenthetically, unless one has learned that this is possible one cannot understand any part of the East. I have myself lived many years in China and have a deep emotional attachment to its people, too deep for patronage born of myth. I have never perceived why such emotional attachment and intellectual respect are incompatible with a cool, critical sense based on observation, the kind one applies to one's own countrymen. I have lived in China and it is out of direct experience that respect and affection formed and grew. Not many Americans have had such an experience. And, of those who have, many have returned to disseminate sentimental illusions, not perceiving that sentimental illusions about a people do not denote respect.

THE WARTIME PRETENSES

The Japanese invasion of China in 1937, the attendant and quite natural sympathy for China, and then the Second World War sharpened and popularized the image of China as an upright, if naive, little brother. On the principle that he who is the enemy of my enemy is my friend, China became ally, comrade in arms, one with us in all things. It was officially an ally but, it should be said, not a very formidable one. After the United States entered the war the Nationalist Government began to husband its resources for the coming war against the Communists, content to let us take care of Japan. The Chinese Communists did the same, of course. American military and civil officers stationed in China were revolted by the cloying fiction that China was a democracy striving to safeguard democracy for the world, for they had the truth before them; but they were silent because they had to be. Churchill refers more than once in his memoirs to his astonishment at finding here, even in Government, the belief that China was as stout a pillar of the alliance and of the democratic cause as Britain herself and was as deserving of support. Mr. Churchill plainly was not amused.

Typical of the feeling for China in this country was the emotional orgy that accompanied the vist of Madam Chiang Kai-shek, come to plead for more help. She was a guest of the White House—almost permanently, contrary to the conventions. She addressed a joint session of Congress. There was a full-dress assemblage held at Carnegie Hall in New York, with rows of the highest political dignitaries massed behind her on the platform; and strong, stalwart Governors and stronger, stalwart Senators blinked back unmanly tears as she rose to a polysyllabic peroration. She made a triumphal tour of the country, was received everywhere as royalty, and conducting herself as royalty—more so, in fact, than did the visiting British Sovereigns. She was hailed in rich words and accents—the Joan of Arc of China. By the time she went home she herself appeared to be uncertain whether she was the Joan of Arc of China or Joan of Arc was the French Madame Chiang Kai-shek. It was a silly chapter in the history of the war.

The war ended. Japan was defeated. China was liberated and independent. Then the civil war between the Nationalist government of Chiang Kai-shek and the Communists broke out, despite vigorous American efforts to prevent it. Once more the United States became involved, since the arms and money previously supplied to Chiang's Government to fight Japan were now in use against the Communists; and still more arms were sent. At the same time the Russians managed their withdrawal from Manchuria in such a way that the Communists took over the arms of the surrendering Japanese. The American quasi-intervention was ineffective. Chiang Kai-shek's armies were crushed in a debacle of farcical thoroughness; the remnants of his forces were driven off the continent to Formosa. The Communists took over the country.

CHINA AS SATANIC MENACE

There followed here a reversal of U.S. policy toward China that, like the earlier attitude, cannot be explained rationally. The only possible analogy is that of the fanatic Communist who for one reason or another turns against communism. As a Communist he has twisted, distorted, perverted fact and logic; as a fanatic anti-Communist he also twists, distorts, perverts facts and logic but now in the opposite direction, in both cases untroubled by scruples. So, too, America, mawkish about China before, now turned violently anti-Chinese—not anti-Communist but anti-Chinese, in neither case detained by logic, detachment, observation or analysis. Earlier we endowed China and the Chinese with idealized, fictive qualities; now that they ruled by Communists we endow them with satantic qualities—sentimentality in both cases. And sentimentality outraged can easily become vindictiveness. Twenty years ago our sentimentality was simply foolish and did no serious harm except as it made others deprecate our judgment; now, it is dangerous, perhaps fatally dangerous. Now as before we have given a hostage. This one too may have to be redeemed in blood.

The fact is, this country holds a legitimate grievance against China, one that any people would feel. To our sacrifice China owes its deliverance from colonial subjection. It has now turned Communist and, moreover, become an ally of Russia just when Russia has shown its hostility, when another war is threatened, and there is among us disillusionment at the demonstration that once again a war fought presumably to ensure a lasting peace and democratic forms has been

fought in vain. That Chinese ingratitude, expressed with no little malice, should generate rancor here is natural, but also the rancor would have been less acrid if we had been less sentimental, if we had not assumed that we could always expect filial piety from the Chinese.

THE PRESENT REALITIES

The contrast with our relation to Russia is revealing. Russia, too, is a declared enemy, its hostility expressed with no less bluntness than China's. Its social philosophy is no less inimical to our instincts and beliefs than China's. More important, Russia is far more dangerous than China. Indeed, the threat from China derives from its affiliation with Russia rather than from its own capacities. Yet we manage to remain moderately calm in contemplating Russia and dealing with it. There is suspicion, distrust, anger, but there is no hysteria. We have an embassy in Moscow; Moscow has an embassy in Washington. We debate with the Russians in the United Nations, exchange social amenities. Our citizens visit Russia, Russians visit here—with limitations in each case, it is true. We analyze calmly our position vis-a-vis Russia and do not act precipitately, wildly, or provocatively. There are those among us who go beyond the bounds of reason, but they do not carry with them the government or the majority of the people.

But China? To acknowledge that the Communist government effectively controls China—as the Communist Party controls Russia—is, among our statesmen, to betray the eternal verities. Russia sits in the United Nations—"peaceloving" in accordance with the qualifications for membership—but to admit the effective Government of China would apparently be to defile the high thinking, noble ideals, and fraternal harmony of that body, spread contagion through the American body politic and renounce the principles of the Founding Fathers. And to all this the American people give assent in a kind of national hypnosis. The vendetta has become almost a sacred trust for the Nation.

In the last few months there has been a concrete illustration of the result: Quemoy and Matsu. These islands have become a "symbol" so sacrosanct that we have risked world war over them and still do. Symbol of what? Of what except the degree to which the American people, already susceptible by reason of earlier illusions, have been inoculated with fictions.

Quemoy and Matsu are almost within swimming distance of the China coast. They are garrisoned by the army of Formosa, a sworn enemy of the Communist regime, resolved to return to China and supported militarily by America—America being the Nation which has caused Communist China's ostracism by polite international society. What country would allow islands so situated to remain as an armed outpost of enemies? We, for our part, while we have not made our position on the islands unmistakably clear—diplomatic gaucherie in itself—a few months ago sent powerful forces to reinforce Formosa when the Communists bombarded the islands. As this is written there is momentary pause, a deceptive relaxation; but for how long? The Communists can be counted on to try again to take the islands. If we remain consistent in our policy, formal conflict is inevitable. We are pledged by treaty to support Formosa; Russia is pledged by treaty to support Communist China. Given the international tension under which we live, so taut that a small accident, an incident, an indiscretion can snap it, what is the outlook? It must be remembered that nearly all other nations, including our allies, fail to agree that right is on our side. But we are now so over-committed, not only diplomatically but psychologically, that retreat is all but impossible.

Moral? No country or people at this time in history—or ever—can afford the luxury of sentimentality in that which concerns peace or war. It was a luxury this country could perhaps afford when it was less prominent in world politics; now the United States holds the power of decision for much of the world. How does a people disembarrass itself of folly, of shallow and meretricious psychology—or of any psychology, for that matter? It is a slow and difficult process, but the American people had better begin it. A healthy revision can come only by a cool, reasoned examination of how the psychology took form and of what is compounded.

Castro Lets Communists Infiltrate His Regime

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. O'KONSKI. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Miami News, Tuesday, April 14, 1959:

CASTRO LETS COMMUNISTS INFILTRATE HIS REGIME

(By Hal Hendrix)

There's an old bromide which notes that if you see something that looks like a duck, walks like a duck, swims like a duck and quacks like a duck, then you had better call it a duck.

On the eve of Cuban Prime Minister Fidel Castro's trip to the United States and Canada, this old saw may well be applied to the path along which Cuba appears to be drifting.

Since the overthrow of the dictatorship of Fulgencio Batista, Cuba has been experiencing a complete revolution. It has developed into major surgery, far from just treatment with mercurochrome.

But the overhaul is becoming increasingly tinted with the coloring of the mercurochrome antiseptic—red.

The Communists have gained influence and position steadily in Cuba since the beginning of this year. They have moved openly and without restraint. They have infiltrated deeply into the army, the government, newspapers, labor, radio and television, and the fields of education.

In several instances Castro, while not believed to be a Communist himself, has echoed the Communist Party line in attacks against the United States. He has been strongly influenced by known Communists within his inner circle of friends and associates.

Inadvertently or by design, Castro has allowed strongly Communistic and anti-American supporters to gain strategic positions in the Cuban revolutionary movement.

Developments sparked by these people are causing observers inside and outside Cuba to recall the duck bromide. If communism is spreading in Cuba, they reason, it's time it was labeled as such.

It is no secret that the U.S. Government, as well as other foreign governments and business firms with ties to the West, is deeply concerned. The Red gains in Cuba were reviewed carefully last week at the San Salvador conference of U.S. State Department officials and Caribbean area diplomats.

The Cuban people as a whole certainly have not embraced communism as a substitute for democracy. Nor are they likely to, considering their heritage.

But Cubans are being spoon-fed a bigger and bigger diet of communism with each passing week.

For instance, the daily Communist newspaper in Havana—Hoy—and weekly magazine—Mella—are filled with Kremlin-flavored propaganda. In recent weeks there has been a startling resemblance of articles in Hoy and Revolucion, the official organ of Castro's revolutionary movement.

One of the most notable examples were articles appearing in both papers, written by Juan Juarbe y Juarbe. The stories bitterly assailed U.S. policies, and, among other things, called for Puerto Rican independence from the United States. Puerto Rico was termed a colony of the United States, exploited by Yankee imperialism.

Editor of Revolucion is Carlos Franqui, labeled as a Communist for several years.

At the head of the Cuban Confederation of Labor is David Salvador, an admitted Communist. During a speech last month by Costa Rican ex-President Jose Figueres in Havana, Salvador seized the microphone and shouted, "Why should Cuba or any Latin American nation support the United States? * * * They always have oppressed us."

Guiding new Cuba along its cultural path is a recognized fellow traveler, Dr. Vincentina Antuna de Carone.

In the education field, one of the most boastful of the Cuban Communists is Alfredo Guevara, who is teaching the Red doctrine to illiterate young rebel fighters who joined Castro's July 26 movement in the hills of Oriente province.

Raul Castro, 27-year-old brother of Fidel Castro, long has been considered a Communist. He now is in control of the whole Cuban Army. He is considered by intelligent observers one of the most dangerous of today's leaders in Cuba. He has been violently anti-United States.

Close to both Raul and Fidel is Ernesto (Che) Guevara, now in command of the powerful La Cabana fortress. He also is strongly anti-American and is regarded as a key Communist figure.

If it looks like a duck, walks like a duck * * *.

Sunday and Holiday Border Crossings by Private Airplanes

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. NELSEN. Mr. Speaker, the flying enthusiasts in the National Flying Farmers' Association, and similar groups can in no instance be classified as a commercial operation, and it would seem that they would be regarded much the same as an automobile traveling in and out of the country for personal or recreational reasons. Therefore their problem should be considered much the same as ordinary automobile traffic. These points are very well set forth in a letter dated April 8 from Kenneth C. Butler, of Hutchinson, Minn., past president of the

association and I am introducing legislation which seeks to accommodate the circumstances in a reasonable way.

THE NATIONAL FLYING FARMERS ASSOCIATION,
HUTCHINSON, MINN., *April 8, 1959.*

Hon. ANCHER NELSEN,
House Office Building,
Washington, D.C.

DEAR ANCHER: As per our conversation last week when you were in Hutchinson, I wish to again call your attention to the interest that so many of us have in H.R. 4543 relating to the elimination of the excessive and unwarranted charges made by U.S. Customs and Immigration officers for Sunday and holiday crossings of the border. All of us who use our airplanes for business and pleasure ask that you use every effort to assist in getting this bill favorably removed out of the Ways and Means Committee and passed by the Congress.

Will you please inform me if there is a companion bill to H.R. 4543 in the Senate and send me a copy of the bill and the number.

I am sure that many Congressmen do not realize the importance of correcting the injustice, inconvenience, and loss of time and money that the present system of U.S. Customs and Immigration clearing private aircraft back over the Canadian or Mexican borders. Canada has no charge for any customs at any time; only for taxi service from their office to the airport on request. On Sundays or holidays the charge coming back through U.S. Customs can be as high as $35 to $50 per plane. At the same time automobiles can cross the border at no charge whatsoever. Even at border crossing airports, where a plane can land and taxi up to within a few yards of the customs building, airplanes get the excessive cost and the auto gets through for nothing.

Last Sunday, April 5, Mr. Heston Benson, of Glencoe, and myself went 100 miles out of our way ot come back from Medicine Hat, Alberta, and cross customs at Ross International Airport at Sweet Grass, Mont. Last fall a one way airstrip was completed that is one-half on the U.S. side and one-half on the Canadian side of the border. It has not yet even been officially opened, yet by 11 a. m. I was the eighth plane to land and cross the border customs office. I am not sure what the charge will be because the regulations apparently require that the information be sent to the Minneapolis Office of Customs and in due time I will be billed for what amount I do not know. There was no more work involved in checking me through customs than any automobile which came through the same station. This particular customs station is open 24 hours a day for the convenience of autos yet when we show up with an airplane on Sunday or holidays or after 5 p. m., we with the airplane get stuck with a very unfair charge.

We are in dire need of more of the type of border crossing airstrip such as the Canadian Flying Farmers and the Montana State Department of Aeronautics built at Sweet Grass-Couts last fall. Here an airplane can make one stop and go through both U.S. and Canadian Customs which saves a lot of time. The only thing that bothers now is the Sunday and holiday charges. The Canadian airminded people are also complaining of our customs charges. Many of them would like to come over and do their shopping at U.S. cities and towns: or take in some of our entertainment that is offered. Many also have business on this side of the border the same as we have on the Canadian side. However, with these unrealistic customs charges, it is not only discouraging, but also uneconomic to do any of this any other time except during the week days .

Twenty years ago or more this situation would not have been important. However, today the amount of air traffic between Canadian and Mexican borders present a different picture. It is reasonable to expect that this air travel between our countries will materially increase, especially with Canada. We who use our airplanes for business and as tourists are not asking for any special privileges only that we receive the same treatment that is afforded those who travel by auto or truck. The airplane is only another means of transportation and our customs requirements are the same.

I wish to request your assistance in helping to inform other Congressmen of this situation and to do everything possible to see that H.R. 4543 is passed as soon as possible.

I would also ask your assistance in requesting that a small part of the money appropriated for airports be allocated to the development of more border airstrips at locations where customs offices are now located.

Very sincerely yours,
KENNETH C. BUTLER.

Social Security Makes Nickel-Shooter of Ponzi

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. MASON. Mr. Speaker, under unanimous consent to extend my own remarks I submit the following broadcast I made over the Manion Forum Network on Sunday evening, April 12, 1959, when discussing the inequities and faults of our present old age security insurance system. I do so principally for the enlightenment and edification of the many new Members of Congress.

SOCIAL SECURITY MAKES NICKEL-SHOOTER OF PONZI

DEAN MANION. I think it was Mark Twain who first said that everybody talks about the weather but nobody does anything about it. With our social security system, it is just the opposite. Everybody pays for it, but practically nobody talks about it.

The clever Washington bureaucrats who manage the involved, inexplicable mishmash, known as the Federal social security system, have made it into a political sacred cow. No matter where it roams, what it does, or how precariously it teeters on the brink of bankruptcy, no politician who equates his own chances for reelection with the public interest will dare to remonstrate.

In the handbook of practical politics, it says that all the ambitious Congressman is supposed to do about social security is to raise the benefits and spread the coverage. If he should happen to question the obvious vandalism of thus burning the taxpayer's candle at both ends, he will be deluged with vituperation as a calloused enemy of our needy old people.

Fortunately, there are a few Congressmen in Washington who do not quail before the menacing public relations octopus of the Federal Department of Health, Education, and Welfare, and who thus dare to tell the awful truth about our present social security system.

I have one of these courageous Congressmen with me at this microphone now. Representative NOAH MORGAN MASON, of Illinois, has been a Member of Congress for 20 years. His firmly established reputation for honest, enlightened statesmanship enabled him to throw away the political handbook years ago. I am sure you will agree that his candor is refreshing and that his logic is irrefutable.

Here is my greatly respected friend, Congressman MASON.

Congressman MASON. Thank you, Dean Manion, for those kind words of introduction. I am both honored and delighted to be given this opportunity to speak to your Sunday evening radio audience on the subject of social security. It is a difficult subject to understand or to explain.

Our present social security setup is unsound, inequitable and dishonest. The Brookings Institute, one of the best research organizations in the United States today, after a careful and exhaustive study, recommended that our social security setup be scrapped, abandoned, and that a pay-as-you-go social security program be established in its place.

I agree with that recommendation. If it were adopted and carried out, it would mean, as the Brookings Institute expresses it: "Our generation would care for its own old people and trust future generations to do likewise."

In 1950, after 3½ months of exhaustive hearings before the Ways and Means Committee, I was one of the three members of that committee who voted "no" on a bill that proposed to expand the coverage of social security and to increase the benefits. I was also 1 of 14 House Members to vote "no" on the final passage of that bill in the House.

Since then, I have opposed every attempt to expand our social security program, to increase its benefits, or to increase the social security tax rates. Yet, I am heartily in favor of a sound, liberal social security program to take care of our needy old people.

UNSOUND, DISHONEST, INEQUITABLE

The overwhelming weight of the evidence gathered during the 3½ months of public hearings in 1950 was to the effect that our present social security setup was unsound, dishonest, and inequitable, that it was "a Ponzi-type shell game," sold to the American people, by F.D.R. and his New Deal associates, as a plan to provide security in their old age.

It is an insurance program which if practiced by any insurance company today would land every director and every official of that company in the penitentiary for misuse or misappropriation of trust funds.

The present social security program is characterized in a report of the Brookings Institute as a plan whereby "we (the present generation) do the promising; you (all future generations) do the paying." That is an accurate picture of our present social security program.

The following social security facts bear out these contentions; they cannot be ignored:

First. When the social security law was adopted in 1934, it provided that all money collected in social security taxes should be dumped into the Federal Treasury and that such cash could be used for the general expenditures of the Government, placing Government I O U's or bonds into the social security fund in lieu of the cash as a bookkeeping arrangement. That provision is still in the law.

Second. Under the law, some $50 billion has been collected in social security taxes, but less than half that amount has been paid out in benefits. The balance—all spent for the general expenditures of the Government—is a debt that has been placed upon the backs of future generations.

Taxing American workers to get money to pay social security benefits to the workers upon retirement, then spending half the money collected for other purposes is neither fair nor equitable.

Third. Our social security program, since its inception, has been used for political purposes by both parties. In election years, benefits have been increased to attract votes for the party in power, thereby making the social security fund actuarily unsound.

Then, in the off-election year, the social security tax rates have been increased to try to get the fund back on an actuarily sound basis. (If that is not playing politics with the welfare of our retired old people, I do not know what is.)

Fourth. The original purpose of the social security program was to establish a floor of security under the low-income worker for support in his old age. He was then expected to build upon that floor added security by buying insurance, by establishing a savings account, or by making investments with his extra cash.

To make this possible, a tax was levied only upon the first $2,000 of the worker's income. Today, we levy a tax upon the first $4,800 of the worker's income, leaving little if any cash for the taxpayer to invest for himself.

We have entirely forgotten the original purpose of social security. Today, Uncle Sam acts as though the worker is not capable of spending his own money wisely, for security in his old age; therefore, the Government must do it for him.

SHOULD BE ON PAY-AS-YOU-GO BASIS

These facts—and they are facts—added to the evidence given in the public hearings in 1950, convince me that we should, without further delay, adopt the social security recommendations of the Brookings Institute and place the social security program upon a cash basis—a pay-as-you-go basis.

If we did that, it would eliminate the present yearly $500 million interest charge upon our fictitious social security fund—which will soon become a $1 billion interest charge.

It also would do away with all need for reserves, all need for level premiums, all need for costly and elaborate bookkeeping systems, all need for the present heavy administrative costs of social security, and it would make possible the payment of more liberal social security benefits to our retired old people in the lower income brackets. That in itself would be well worthwhile.

To demonstrate how unsound and dishonest our present social security program is, I offer the following hypothetical case:

John Smith decides to establish his own social security program, so he deducts a certain percent of each pay check he receives and places the cash regularly in his safe deposit box. After doing this for several years and having thus set aside, say, $5,000, to insure security in his old age, John Smith starts to spend each month more than he earns—as Uncle Sam does now.

Then, John Smith hits upon the plan of taking a certain amount of cash out of his lockbox each month to spend, placing in the box, in lieu of the cash extracted, promissory notes to himself. If John Smith keeps this up, when he retires he will have only promissory notes to himself to live on—which he has no way of changing into cash for groceries.

That is exactly what Uncle Sam is doing with the social security tax receipts—the only difference being that Uncle Sam has the general taxing power to invoke in order to change his I O U's into cash to meet his future social security obligations.

But, that means of course new taxes, additional taxes, to meet obligations that are supposed to have been paid for already by the beneficiaries.

I wonder if that scheme of taxing the children and grandchildren of the social security beneficiary for something he and his employer are supposed to have paid for can be called anything but dishonest and immoral, a Ponzi-type shell game that has been sold to the American taxpayer as a plan to provide security in his old age.

For years I have been working in Congress, not to abolish social security, as some people would have you believe, but rather to place our social security program upon a sound basis, a cash basis, a pay-as-you-go basis, collecting each year just the amount of social security taxes needed to pay the benefits due that year for the support of our retired old people.

In that way—paraphrasing the words of the Brookings Institute report—we (the present generation) would take care of our own old people, and you (all future generations) would be expected to do likewise. To my mind, that would be the sensible thing to do in connection with our social security problem.

DEAN MANION. Thank you, Congressman NOAH MASON. Now, my friends, do you see any reason why the irrefutable truth that Congressman MASON has just spoken should not be brought to the millions who are now being ruthlessly taxed under the false pretense that they are thus providing for their old age?

We must take care of our needy old people and that is the very reason why the present so-called social security system, which is merely taxation with misrepresentation, should be changed for something that will do the necessary job.

Send Congressman MASON'S speech to your Congressman. Ask him to give you his frank opinion on the merits of what Congressman MASON has suggested.

Address of Paul G. Benedum at Tyler County Oil Centennial

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. HECHLER. Mr. Speaker, on April 16, the beautiful Ohio River town of Sistersville, W. Va.—once the center of the greatest oil boom in West Virginia's history—climaxed a week-long celebration of the oil centennial. It was a great occasion as oil men from all over the country assembled to celebrate the century of progress of an industry whose development—as I pointed out in my talk at the oil centennial banquet—is a tribute to the American system of free enterprise.

The beloved and respected Sam Mallison was toastmaster at the banquet, and he did a wonderful job in capturing the spirit of the occasion. The main speaker was Paul G. Benedum, president of the Hiawatha Oil & Gas Co., nephew of that great pioneer oilman and public benefactor Mike Benedum. Mr. Benedum's address was so stimulating that I would like to give all Members an opportunity to read it and I include it in the RECORD at this point:

It is a trite pleasantry for a visiting speaker to say, "I am glad to be here," but I say it tonight tonight, and say it with all emphasis at my command, because in my case and on this occasion, it is a truth which I feel very deeply.

This is hallowed ground to me. My father and mother started housekeeping in Sistersville.

Not too many years ago I was in your county seat of Middlebourne, and there beneath a coat of white paint, I saw the faint letters of a sign on the side of an old building. It was a very simple sign, crudely painted, but to me it was more attractive and more thrilling than the great electrical displays on dazzling Broadway. That sign read, "C. Y. Benedum and Brother."

Charles Yantis Benedum was my father. His brother, who was associated with him in the oil business was my uncle Mike, who, due to a kind providence, is still with us as he approaches his ninetieth birthday. I visited uncle Mike this morning before I left Pittsburgh and as I started to walk out the door of his house, he called to me. "Paul," he said, "tell those people down at Sistersville that I would give my right arm to be with them tonight." "And Paul," he said, "tell them that they and all the other people of West Virginia are almost constantly in my thoughts and prayers."

Only oldtimers like Paul Neunschwander and John Wright can remember when my father was a candidate for the legislature from this county. That was in 1896 and I imagine that Paul and John are the only persons present tonight who were old enough to take part in that campaign. And knowing their dedication to the Republican Party, I'd bet $7 that they were both against him. If they were not, they were about the only people in Tyler County who weren't.

My father was a good oilman and a smart businessman. But he was mighty dumb as a politician. He was a Democratic candidate in this, one of the banner Republican counties in West Virginia. Joe Trees was just as artless in the field of politics because in that same year of 1896 he was the Republican candidate for the legislature from Wetzel County.

I profited by my father's mistake. I got smart and joined the Republican Party, and I had no sooner than gotten in before Roosevelt, Neely, and Jennings Randolph came along and took over. They made me out to be even less politically astute than my father. Now I am stuck with the Republicans because JENNINGS and BOB BYRD and their Democratic cohorts won't take me back into their party. They say that I made my own political bed and that I will have to lie in it. And I can tell you that since last November, it has been something less comfortable than a foam rubber mattress. But I do feel at home here tonight with my friends on both sides.

There's Bernie Curry. He said he wouldn't come unless I brought my banjo. Well, if Senator BOB BYRD will join a Republican banjo with his Democratic fiddle, we'll get some harmony in West Virginia.

Bob, I'll bet a heckler couldn't make more noise.

There is another reason why I am glad to be here. It is of far greater importance and significance than the personal delight which I feel. You are observing the 100th birthday of an industry which more than any other single factor has lifted the drudgery from the backs of mankind, elevated the living standards of our country to incredible heights. Furnished the spark and most of the power for the most gigantic and productive economic machine the world has ever known. It has made of America a military fortress that has stood against the assaults of all foreign aggressors.

I am proud to have some identification with the industry which has chalked up such outstanding achievements and which, in so doing, has fully measured up to its public responsibilities by meeting every demand of peace and war.

As a native West Virginian, I am deeply proud that as the result of technological advances, the industry is undergoing a thrilling renaissance here in this State. I am told that more drilling rigs are running in West Virginia today than at any time in many years. I predict that as time goes on and as the demand for oil increases with the growth of population and the expansion of our economy, Tyler County will increase its participation in this resurgence and enjoy the material benefits of another oil and gas boom. We know that three-fourths of the original deposits of these precious resources are still in the sands here. I predict it is only a matter of time until improved methods of recovery will make it feasible and profitable to produce them.

I hope they are as profitable as the well Don Connolly drilled.

If Pennsylvania was the birthplace of the oil industry, then West Virginia was its cradle. Actually oil was produced at Burning Springs in Wirt County in this State before Colonel Drake ever started his well at Titusville. However, at this late date, I am not disposed to start any argument as to the place of the industry's birth. Khrushchev will claim that the first well was drilled in Russia anyway.

The history of the oil industry is a symbol of American "do or die" achievement. The great events of human progress—those that changed the way men live—are not always easy to find in the history books. Too many histories dwell on political changes—changes in the mastery of men over other men. Most political changes are not basic; they are limited in scope and time. They affect a nation, a culture, a civilization; they last for a decade or a century. They do not affect all men for all time to come.

The basic changes come from man's mastery over nature. They change the way men live forever after. They are not wrought by conquerors or rulers or even by statesmen; they are wrought by innovators—men who learn how to do new things.

Babylon rose and fell. She became a forgotten hill on a barren plain. But men still cooked their food and warmed themselves with fire. Alexander conquered the world, and after him his world fell apart. But men still fed themselves by raising crops.

Caesar had his Brutus, and Charles I his Cromwell. But men still moved themselves and their goods on wheels.

Napoleon won at Jena and lost at Waterloo. But men went on shifting their work to machines.

Hitler is dead, Mussolini is dead. But oil and gas still heat and light and carry men.

We owe the way we live to the discoveries and inventors—our unknown ancestors who learned to use fire; the prehistoric men who first grew crops; the nameless geniuses who developed the wheel; the early men who discovered iron and the later men, who made steel abundant; the men who drilled the first modern oil well. To such men we should raise our monuments. They are the men who change man's way of living. Their discoveries are the great events of human progress.

Such an event took place 100 years ago, on a little stream called Oil Creek, in Northern Pennsylvania. A man named Drake drilled a well. Trouble plagued him. He couldn't drill through the water that kept coming into the hole. Then he became an innovator. He tried something new. For the first time in history a string of pipe was set through the water sand and the well went on to success and fame. Failure comes to men who do only what others do. Success, fame and fortune go to those who are not afraid to try something new.

Because of that discovefy, one American in every three owns an automobile, an average of one in every family. Because of that discovery, millions of Americans no longer cut wood or shovel coal; when cold weather comes they turn a valve. Because of that discovery, a father in Stockholm flies to see his son in Detroit in a day; a mother flies home from Calcutta to New York in less than two.

These are not blessings that the rich man has and the common man covets; the common man has them himself. Most oil and gas heaters are owned by workaday people. More common folk than plutocrats ride in American planes. More than half the automobiles are bought by people with less-than-average incomes.

Because of Drake, the innovator, today we live in an entirely different world from that of a generation ago. We have been propelled into the space age at jet speed. I don't think we should shed nostalgic tears at the passing of what we call "the good old days", because really they were not so good as they appear in retrospect. Instead, we should seek for the central theme of evolution. We must adjust ourselves to its broad new horizons and equip ourselves and our children to meet its terrifying responsibilities. We must face up to the fact that we have long since passed the point of no return. We cannot go backward. We must go forward in the fulfillment of our evolutionary destiny.

Wisely or unwisely, America has assumed a position of world leadership. It is my own thought that if, with all our God-given material and spiritual resources, we had turned our back upon this challenge and abandoned mankind to a return to the Dark Ages, we would have been unworthy of the blessings that providence has visited upon us.

In taking the position that we have assumed in world affairs, we have inevitably found ourselves in conflict with the forces of darkness that would strip men of their freedom and dignity and make them the cringing slaves of a cold, heartless, ruthless and all-powerful centralized political bureaucracy.

In meeting this fearsome challenge, we must appraise our relative strength, not just as of today, but, more important, of tomorrow. In doing this, we must recognize that this is an age of technology. In the past, unlettered men may have become heads of state or led armies to military triumph, but, in this day of missiles, electronics and ultrasonics, we must find our real leadership of tomorrow in our colleges and universities. The campus of today is the battlefield of tomorrow.

At this very hour it is in the quietude of the laboratories and the drawing boards that tomorrow's battle is being fought. The innovators of this age must be especially prepared for their tasks.

In appraising our strength of today and tomorrow, we start with a vast treasure of material resources, but any valuation of them would be spurious and misleading if it did not take into consideration two other factors—human resources and a free, stable and solvent government. Natural resources are worthless without human resources in the form of men of courage and dedicated purpose—especially equipped to meet their respective responsibilities. And both would be futile and unproductive without free and stable government. The three elements—materials, men and government—form the tripod in which is wrapped up our individual and national destiny. Any weakness in any one leg of that tripod throws the whole into unbalance and threat of collapse.

If we are lagging in any field of competition with the forces of evil and darkness, it is in preparing the oncoming generation to meet the trials and challenges of tomorrow. It is disturbing, and of the most serious significance, to realize that Soviet Russia spends 13 percent of its gross national income on education, while we spend only 3 percent for the same purpose. There are more students enrolled in one university in Moscow than in half a dozen of our largest institutions of higher learning put together, and more books in the University of Leningrad, one of the smaller Russian libraries, than are to be found in the libraries of the University of Pennsylvania, Temple University, Penn State and the University of Pittsburgh combined.

Please do not construe these observations as a plea for an indorsement of proposed programs for vast Federal appropriations for aid to education. It may be that some degree of Federal assistance will be necessary to keep our tripod in proper balance, but fundamentally the responsibility for education lies upon your own doorstep. If it calls for higher local taxes or expansion of bonded indebtedness, it will be the cheapest insurance you ever bought. You will be insuring not only yourselves, your country, your way of life, but you will be insuring freedom for all mankind.

Let me appeal to you as Americans crusading for the most noble heritage any people ever enjoyed.

There is no more appropriate place and time than here and now to rededicate ourselves to the perpetuation of economic freedom and human liberty.

Thoughtful men recognize the indisputable fact that free enterprise is the root of our country's economic success.

If our economic system is to be safeguarded we must have a solvent Government and a sound currency. Without these two elements we cannot have real, continuing prosperity. In fact, we cannot have real national security. Deficit spending, continuing growth in the national debt, and spiraling inflation do not make for integrity of the dollar and national solvency.

In spite of what seems to be general opinion the recent great increases in Federal spending have not been for foreign aid and defense—but rather for domestic-civilian programs. There are now more than 60 programs for State and local subsidies.

When we dance we must pay the fiddler; and when we borrow we should expect to pay back the loan. While any loan is outstanding, the borrower must give up certain rights and privileges. If we borrow from the Federal Government we must give up those rights to the Government.

We have borrowed—and that borrowing is one of the reasons we have centralized power in the Federal Government until we have descended to the level of State socialism.

Gentlemen, the evils of State socialism are historically documented wherever nations have stooped to it.

We Americans must realize that the foundation of our system rests upon the fact that the people support the Government.

It is not the purpose of Government to support the people.

The whole is greater than any of the parts and the national interest must be placed ahead of local or personal gain.

That calls for sacrifice—sacrifice by all States, localities, industries, labor unions, and individuals.

I'm proud of the oil industry It has shown that it will make the necessary sacrifice for the overall good.

Our industry has never asked for or accepted a subsidy.

During World War II when other industry expansions were paid for 100 percent by the Government, the oilman dug in and paid 85 percent of his expansion costs out of his own pocket—while furnishing 65 percent of the total tonnage shipped overseas.

When Europe, dependent upon foreign oil, was threatened by the closing of the Suez Canal, who saved the day and who kept the

factories running and the people from going hungry and cold as the Kremlin would liked to have seen them and perhaps averted world war III? It was the American oil industry.

When, because of the unbalance brought on by the Suez crisis we found ourselves with a surplus of crude and products, did the oil industry run to Washington and ask the Government to buy the surplus or give them a subsidy? No, siree: The oilman, for many months, while his expenses continued at full rate, shut his wells down for 22 days out of the month—and he reduced his refinery runs to fit his demand. At the same time he reduced his prices until the only price rise he'd had in 5 years was practically wiped out.

That, gentlemen, is pulling yourself up by your economic bootstraps. That, gentlemen, is sacrifice. Sacrifice for the greatest good of the whole Nation. Let those who criticize us show such a history of sacrifice. I can defy them with confidence.

That's why I'm proud to be an oilman.

Tape Recording To Be Sent From Boulder as Greeting to Meppel

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, as one illustration of what one American city is doing to help create better understanding, I note with pleasure the following article from the Boulder Camera, on March 12, 1959:

TAPE RECORDING TO BE SENT FROM BOULDER AS GREETING TO MEPPEL

An all-Boulder tape recording, featuring some of the city's civic and cultural leaders is being made as a friendly greeting to be sent to Meppel, Boulder's sister city in the Netherlands.

The greeting is a rejoinder to one recently received from Meppel containing messages from Burgomaster and Mrs. Atonie Kleijn and several other Meppel leaders, together with music from their bands and choral clubs.

The half-hour tape-recorded program will be played over Holland radio stations, as well as in schools and civic groups.

James Ward, radio-television specialist at the University of Colorado, is in charge of the recording production which consists of messages and sound pictures of life in Boulder.

A committee has also been formed to develop the recording. Committee members are Mrs. Ethel Auger, Boulder High School United Nations Educational, Scientific, and Cultural Organization; Miss Helen Schlytern and Miss Barbara Williams, Casey Junior High UNESCO; and Mrs. Addison M. Talbott and George F. Reynolds, Boulder UNESCO Council.

KLM Royal Dutch Airlines is cooperating in the venture and will fly the tape recording, together with a large box of Boulder exhibits to Meppel. To give Meppel residents an idea of the products made in Boulder, samples of manufactured goods will be sent to the city in the Netherlands. Donations of such articles as cutlery, fishing equipment, chemicals, and Junior Achievement products can be made to any one of the committee members named above.

Various garden clubs in the Boulder area are cooperating by sending seeds and bulbs for the "Boulder Garden" which the superintendent of parks keeps growing in the central Meppel park. Some samples of the outstanding art work being done in Boulder schools will be featured, and the new "Rush to the Rockies" publicity and chamber of commerce publications about the Boulder area are being placed in the collection.

Tentative plans for the recording include a greeting from Mayor Leo Riethmayer and short talks by Boulder residents who have been to Meppel. These talks will present different phases of Boulder life and will be given by the following: Professor Reynolds, Alfred W. Beffie, Howard Higman, Mr. and Mrs. W. Post Van der Burg and Jack Cys. Ridi Stolker, a foreign student at the university, will act not only as interlocutor but will give a Dutch student's impressions of Boulder through a conversation with three other Dutch girls on the university campus.

Miss Stolker is loaning music of the Dutch national anthem and several folk songs to choral groups in the university and in the schools so that some of the singing on the tape may be in Dutch. As a sample of our own folk music, the Colorado Mountain Club is being asked to record some campfire songs and a taping of a typical square dance will be made.

The Meppel-Boulder friendly affiliation began just 9 years ago this April when Burgomaster Kleign and Mayor Perry Bartlett signed a UNESCO affiliation pact. During the last 9 years the two cities have been brought closer together through exchanges of visitors, letters, pictures, school contests, books, art exhibits, scrapbooks, garden seeds and bulbs.

Boulder's first visitor from Meppel was Mr. Ig. Veenstra, then head of the Agricultural College in Meppel, who came here in 1951. Burgomaster and Mrs. Kleijn spent 8 days in Boulder in July 1953.

The burgomaster was officially welcomed at the city hall by Mayor John D. Gillespie and was given a large golden key to the city of Boulder at a large meeting in the outdoor bandstand. He accompanied the city council on its annual tour of the Boulder mountain watershed and he and Mrs. Kleijn were driven over Trail Ridge.

The week of sightseeing and parties was climaxed by a community steak fry on the top of Flagstaff where supper was served by members of the Colorado Mountain Club.

Many Boulderites have visited Meppel including Professor Reynolds, Mr. and Mrs. Alfred W. Beffie, Mr. and Mrs. Howard Higman, Mrs. Helen Fischer, Mr. and Mrs. Earl Crockett, Francis Geck, Miss Mitja Das and Mr. and Mrs. Jack Cys.

It is hoped that the recording now being made and the box of articles representative of Boulder being assembled will further strengthen the bond between Meppel and Boulder. Suggestions of articles to be included in the box will be welcomed by Mrs. Addison M. Talbott, 717 17th Street, or Mrs. Ethel Auger, 542 Arapahoe.

Unemployment in Pennsylvania's 26th Congressional District

EXTENSION OF REMARKS
OF
HON. THOMAS E. MORGAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. MORGAN. Mr. Speaker, in the 26th Congressional District of Pennsylvania, which I represent, we have a chronic unemployment problem for some years. Chronic unemployment is usually the result of some basic economic change which affects a community's primary source of jobs. In my district the decline of the coal industry upon which the economy of a large part of the area is dependent, has been one of the chief factors in creating our unemployment problem. The situation which exists in Fayette County in my district is well described in an article from the April 10 issue of the Pittsburgh Post-Gazette. Under unanimous consent, I include the article in the Appendix of the RECORD:

DISTRICT JOB DISTRESS—ROUGH IN UNIONTOWN AREA—CLOSING OF MINES BRINGS ACUTE UNEMPLOYMENT; MEN EAGER TO WORK BUT CAN FIND NO NEW JOBS

(By Alvin Rosensweet)

UNIONTOWN, April 9.—"It don't look good. It don't look good a-tall," Joseph (Trapper) Opalko said.

Joe has worked 38 of his 54 years in the coal mines of Fayette County, mostly in Leisenring. Nos. 1 and 2 are worked out and the miners around Bute give No. 3, with its work force of about 100 men, another year.

Every day a small knot of unemployed miners hangs around the volunteer fire department hall in Bute, a mining patch about 5 miles north of Uniontown. The day before they had put out seven brush fires—without pay.

HE WAS LUCKY

Opalko was luckier than most—he got a year and half work on a construction job in Pittsburgh since he was laid off at the mine in January 1956. His unemployment compensation of $35 a week still is running and once a month he gets surplus food, butter, powdered milk, rice, and cheese.

Opalko was president of the United Mine Workers local in Bute when there was a local. There isn't any more. Depleted coal mines and mechanization have taken their toll.

"Most of the men here are on surplus food and a good many are on public assistance," Opalko said. "I had a few bonds but I used them up. I pay $20 a month on the house, but you gotta skimp on everything. I can't get my union pension till I'm 60 and I can't get social security till I'm 65."

Many of the out-of-work miners have gone to Cleveland but most have come back. Either they couldn't land a job or they worked a couple of weeks in a factory and were laid off.

"The trouble is when you move you have to get an apartment and you don't come out with anything," said Dan Gaudiano, 47, who was laid off at Leisenring No. 3 in February 1956.

One out of every four persons who can work in this area is unemployed—12,300 out of an available labor force of 47,400. Unemployment runs 25.9 percent. Most of the unemployed are coal miners, said Frank Zack, manager of the Pennsylvania State Employment Office in Uniontown.

Outside the employment office, Joe Stavish, 53, a miner all his life, lamented the situation. He was laid off January 6, 1958, at the Chartiers mine of Emerald Coal & Coke Co., in Greene County. Luckily, he said, his house in New Salem is paid up, but he bought a car a few months before he was laid off. The Chartiers mine is working, and he hopes to get back soon.

"It's been tough," Joe said. "I went through all my savings."

"Nine and one-half percent of the population of Fayette County is on public assistance," C. C. Connelly, supervisor in charge of the board of assistance, said. "Our latest figures showed 17,086 persons are dependent on public assistance. And the figures are

going up as unemployment compensation ends."

IT'S ROUGH EVERYWHERE

Across the Monongahela River at the VFW Hall in Carmichaels, Greene County, it's the day for passing out surplus food. Unemployed miners like John Bowen and Joseph E. Tasher help distribute food to the needy. At Carmichaels alone 281 persons get free food once a month for their families. Nearby, at Stringtown and at Nemacolin, others are lined up for surplus.

Bill Schifko is only 25, a big husky ex-GI, but he can't get a steady job since he was laid off in 1957. Bill worked 1 week in a Detroit cement plant, but the job ended. On and off he's made from $100 to $160 a month on a Cumberland Township road crew. Now that it's spring and there's no need for red dog for icy roads, that job is running out. His unemployment pay has ended.

"I'll really have to scrounge now," he said.

"The Government is sending $4 billion overseas, but they better do something here," said John Bowen, who had worked in the mines since he was 12 years old. Now 54, he has been laid off at the Buckeye Mine at Nemacolin since January 1957, 2 long years ago, going on 3.

"It's no good," said Bowen, who wore the blue chambray shirt and the blue overalls of a workingman. "They're getting more and more machines in the mines and 5 men can load more coal than 30 used to. We've got no children, but after I pay for insurance, coal, and food we don't pay any other bills.

"Besides, a woman gets tired seeing a man around the house all day doing nothing."

ONE IS PHILOSOPHICAL

Joe Tasher appeared philosophical about the situation.

"We've just been existing since I got laid off at Nemacolin December 14, 1957," he said.

Most of the unemployed can recall without hesitation the day they lost their jobs.

"I had a couple dollars, but it's all gone now," he said. "Lucky my car's paid for. We pay $30 a month rent and get surplus food."

At Crucible, Albert Ohler, 28, said he doesn't know what he's going to do when his unemployment checks run out.

"I've only got three more checks to go," he said. "I'm on extension now. We live with my in-laws and when I don't work, I can't pay."

Mining is about all Al's ever done he said.

"I bolted, timbered, did anything at the Crucible Mine since 1950," he said. "Then about 65 of us were laid off June 6, 1957. I've got a little pickup truck and I pick up coal and sell it now and then. I went to Cleveland three or four times but I never got any work. Besides, I'd rather stay here. I don't care for a city. I was born and raised here. My family and friends are here. All I've ever done is mine."

In the little community of Crucible, 225 families get their surplus food each month at UMW Local Hall 4731 across the way from a slag dump.

SO MANY FEWER NEEDED

"Some of the men are bitter. They say there's plenty of work," said Andy Hanko, chairman of the local's surplus food committee. Andy was laid off March 4, 1958, and went back to work August 2.

"You used to have 20 men on a unit, now you got five," he said, explaining one important reason for unemployment in the pits. "What they should do is cut Social Security to 62 years. Then some of the older men would retire and give work to the young fellows. The $100-a-month UMW pension they get at 60 isn't enough."

Andy went through the long layoff panel tacked onto the bulletin board. He reeled off the names of the men out of work—Dukate, Spollar, Barish, Maskil, Hvizdan, Palone, Haligowski.

With automation, it was possible that many would never be called back.

St Lawrence Seaway: Great Example of River Valley Development

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. EVINS. Mr. Speaker, sometime within the next 30 days, the first ship will go through the great, new St. Lawrence Seaway. Thus, the dreams of many years for the development of this great river and for direct access by oceangoing ships from the Middle West to the entire world will be realized. This is a project which will benefit the whole Nation and in which the people of the entire country may take pride. We in the Tennessee Valley area, who have experienced the value of the integrated development of a river basin are confident that the St. Lawrence River development will similarly benefit its area and the Nation. In this connection, the mgazine Friends, in its March issue, had a very brief but cogent article on this development entitled "St. Lawrence Brings Great Changes in a River Valley."

Under unanimous consent, I insert this article in the Appendix of the RECORD, as follows:

More than 400 years ago French explorer Jacques Cartier sailed a thousand miles up the St. Lawrence River in his search for a new trade route to the orient, but was halted by the formidable rapids of the upper river. Ever since then, men have dreamed of taming those rapids, to allow deepwater ships unrestricted passage to the Great Lakes. With the building of the St. Lawrence Seaway, the dream has become a reality. The river's rapids have been eliminated and its winding channels straightened. But of perhaps even greater importance than the boon it has brought to navigation, the seaway has harnessed the power of the river to provide a great new source of electricity. The huge dams that have transformed the stretches of white water into a placid lake are also providing water to spin the turbines of the second largest powerplant in the world (only Grand Coulee is larger). The seaway and power development, an international, joint effort of the Ontario Hydro-Electric Power Commission and the New York State Power Authority, will have far-reaching significance to both Canada and the United States. Already, construction has dramatically altered the face of the earth in the river valley. Thousands of acres of land have been flooded. Old towns have disappeared under the waters of the man-made lake. Modern new towns have grown almost overnight. New industry and manufacturing plants are coming to the region, to put to use the millions of kilowatts of electrical energy produced by the power project.

The St. Lawrence Seaway has strikingly reshaped the river's upper reaches, and will bring more changes in years to come. A tremendous rehnbilitation program was associated with the building of the giant power project, for an area of more than 20,000 acres was flooded to provide the required headpond. In Canada, half a dozen towns on the river bank were drowned by the rising waters behind the dams, and now ships pass over former homesites. About 6,500 people were relocated on high ground, some in their old dwellings, others in new homes; in all, 550 houses, churches, and other buildings were moved (moving and modernization were free to owners). In New York, farms and summer cottages were flooded. Many miles of railroad and highway on both sides of the river were relocated, to follow the shores of the new lake, which is dotted with little islands that once were hilltops. A shoreline park system with scenic drives is planned in the valley, and recreational facilities are being built. The development of this vacationland, together with the industrial expansion resulting from the power project, should bring new prosperity to the entire St. Lawrence region.

The Fight for Better Health

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. DAVIS of Georgia. Mr. Speaker, 12 distinguished physicians from my State met at luncheon in the Speaker's dining room here last Thursday with the Georgia delegation and with our Governor, the Honorable S. Ernest Vandiver, to discuss the Nation's sick and aged, and what the medical profession is doing about this continuing problem.

We, the members of the Georgia delegation, were made proud over the farsighted attitude of our Georgia physicians. In opening the discussion, Dr. Eustace Allen of Atlanta, chairman of the Medical Association of Georgia's National Legislative Committee, made a few remarks that reflected the group's constructive perspective.

I ask unanimous consent to insert Dr. Allen's statement into the CONGRESSIONAL RECORD and respectfully commend it to my colleagues for perusal.

Dr. Allen's statement follows:

We, the representatives of the Medical Association of Georgia, consider this an honor and a distinct pleasure. For you to give of your time to come and sit down with us and to discuss some of the mutual problems of Georgia, we are grateful. Today, health is the most prominent subject of our country. We realize that health is something that money cannot buy. Good health and good sense are two of life's greatest blessings. Sometimes health and sickness are used synonymously, and the word health has many different meanings to people under different surroundings. Any program which has to do with health or sickness has a great appeal to the public. Everyone sympathizes with those who are ill or handicapped physically or mentally. The emotional appeal is great. So great that we often decide issues on emotional grounds rather than on facts and figures. There has been sickness since the beginning of mankind. Medicine is the oldest profession. Elbert Hubbard once said that sin and ignorance are the cause of the three learned professions, ministry, law, and medicine.

We are going to have illness as long as we have sin and ignorance.

Today we the people are aroused as never before in this fight for a better health, less sickness and a stronger Nation. No nation can survive and no people can be happy without health. One of our great problems today is our aging population. The American Medical Association has set forth means and money to study the health problems of our aging population; the President of the United States has a committee studying the problem. The Senate and the House of Representatives have committees making similar studies. Exhaustive studies are essential to arrive at the proper recommendations for a solution. It seems to me it would be best to delay legislative action until these reports are in and evaluated and then we will know "whither we goeth." No stroke of the pen nor passing of a law now, or at any time in the future, is going to do away with sickness.

We are here today because we have a mutual interest in the common good of our people. Mutual confidence and cooperation are the only hope for civilized and productive relationship among ourselves and among nations. The breeding place of misunderstanding and conflict is the closed mind. I fear that is why the medical profession today is on the defense. We had a belief that if we did our job well; if we took care of the sick; if we improved medical care for the community, then our work was done. We did not realize that we should report to the public. We have not explained to the people what we are doing to improve health of the Nation and what progress we are making in the care of the aging. We failed when we did not take the people into our complete confidence. We unfortunately thought results would speak for us. Our Nation is the best medically cared for in the world. But to tell people, who are sick, that we have the best medical care in the world does not go well. They reply, "If you have the best medical care and improved health, why am I sick? All causes of illness, high cost of medical care, hospital cost, etc., erroneously are blamed on the physician.

We are here to offer our help to you, the lawmakers, and at the same time we ask you to help us by guiding us in the ways of political service and community well-being. We know we must have positive action to solve our medicoeconomic situation. We are here to cooperate and at the same time seek guidance and advice.

Again let me thank you for coming and ask you to call on us for any assistance you feel we can give.

Needed Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER PIRNIE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. PIRNIE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the April 7, 1959, edition of the Herkimer Evening Telegram.

This editorial relates to an area of concern for a great number of our senior citizens and, in my opinion, is worthy of the House:

NEEDED PROGRAM

Some insurance companies are inaugurating a program to provide health insurance for the elderly at premium levels within their means. It is to be hoped that others will find a similar undertaking desirable. Obviously, it is long overdue.

Older people in this country are facing a situation which is steadily growing worse. High taxes make it increasingly difficult for a wage earner to save any large sum of money for his old age and the situation is further complicated by high price levels, which take an even greater share of income. At the same time, hiring policies make it harder and harder for older people to continue working careers. Many companies have fixed retirement policies which take no account of ability and willingness to continue working.

Meanwhile, as people come into their later years and face the prospect of living on decreased incomes, largely social security, pensions, and what they have been able to save, they also, in most cases, lose their health insurance protection. Yet, as is evident, the chronic diseases and those which prove the costliest in terms of medical and hospital care, are most likely to strike among those past middle life.

If a husband or wife is stricken, savings may be used up in a matter of months. The only recourse is to appeal for welfare aid, a procedure which those who have always been self-supporting are extremely reluctant to do. Then, if the afflicted person finally dies, the remaining partner is often left either without income, or with only a restricted one.

The need for some improved system of dealing with such situations is obvious.

Bob Aufderheide: A Friend and a Servant of Rare Capacity

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. PORTER. Mr. Speaker, we will remember Bob Aufderheide for a long time in Oregon. Dan Sellard, of the staff of the Eugene Register-Guard, is a man who spends a lot of his spare time enjoying Oregon's wonderful forests. He knew Bob Aufderheide well. The following editorial, included here under a previous consent, was written by him. A background of Bob Aufderheide is furnished by a second editorial included here, carried by the Albany Democrat-Herald on April 14, 1959:

[From the Eugene Register-Guard, Mar. 30, 1959]

A HUMBLE MAN

Newsmen here shared with countless others the saddening thought that in Bob Aufderheide's death Saturday, the community had lost a friend and a servant of rare capacity.

Thousands of Bob's friends will no doubt reflect on the numerous times that he demonstrated his humble feeling of love for his fellow man. Our cherished memory is this:

We talked with the forest supervisor for a long afternoon while a search was on for a young forester who was lost. During the conversation, Bob would pace around and look up into the hills for a sign that the man had been found.

Such a search doesn't demand that the supervisor of a big forest leave his desk, but Bob knew his presence would be a morale boost to the searchers and to the man's young wife.

The employee had only worked for a short time, but there was real concern in Bob's eyes as he waited for the news from the woods.

When the announcement came that the man had been found, Bob said in his quiet way:

"That's fine. I hope he isn't hurt."

This same concern was reflected by Bob for the woods, the streams and the other resources in his charge.

Such was Bob Aufderheide's nature. His assignment as chief of the most productive Federal forest was the measure of his competence.

[From the Albany Democrat-Herald, Apr. 4, 1959]

HE EARNED THE TRIBUTE

Robert Aufderheide, for whom funeral services were held at Eugene Tuesday, was rightfully acclaimed as one of the Nation's outstanding public forest administrators. He died at Eugene Saturday at the age of 50. Mr. Aufderheide had devoted his entire life to forestry, preparing himself during his undergraduate years for that work, and pursuing forestry as a career following his graduation from Oregon State College.

His lifelong residence in Oregon acquainted him thoroughly with Oregon's needs and the wishes, sometimes conflicting, of its people. This background served him well in the administration of the public trusts for which he was made responsible first in the Umpqua and finally the Willamette National Forest, of which he had been supervisor since 1954. He attained the position of director of one of the country's biggest forests through a series of promotions which he had won through excellence of his service in the Rogue River, Siuslaw and Umpqua Forests as well as at the Pacific Northwest Range Experiment Station in Corvallis.

As Willamette National Forest supervisor Mr. Aufderheide's personality as well as his acquired knowledge enabled him to reconcile opposing interests as few others could have done. He was confronted with the task of satisfying demands that expendable trees be made available to commercial timber interests that play a major role in maintaining Oregon's economy, without impairing the forest's scenic and recreational values, so jealously guarded by wildlife enthusiasts. He was constantly beset by partisans of these two camps and his success in maintaining a balance between timber harvesting and conservation was phenomenal.

No man could ask greater tribute than credit for having served well his fellow man. This Robert Aufderheide did.

Lucinda Priest Praised as Conservationist

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Clarion Democrat, Clarion, Pa., of April 11, 1959:

LUCINDA PRIEST PRAISED AS CONSERVATIONIST

Clarion County people living in the vicinity of Lucinda and Leeper, and all the members of St. Joseph's Parish in Lucinda, know of the deep and constant interest of Father William Holl, St. Joseph's pastor, in the conservation of natural resources and in the abatement of stream pollution.

Few know, however, that an outstanding tribute was paid to Father Holl at the recent convention of the National Wildlife Federation in New York City—a tribute earned by Father Holl's admonitions to his own parishioners on the subject of preserving the land and its natural inheritances.

Dr. Alvin R. Grove, Jr., a member of the faculty of the Pennsylvania State University, was invited to address the convention of the National Wildlife Federation on the subject, "Organizing a Statewide Program for Clean Streams." Dr. Grove discussed many aspects and phases of stream pollution; one phase of pollution which came in for repeated notice in his address was the old bugaboo of acid mine water seepage from abandoned drift or open-pit mines.

In this connection, Dr. Grove said:

"In one area of the State, for example, a single priest—Father William F. Holl by name—taught in his parish that the land belonged to future generations as well as those holding ownership of it at the moment. As a result of this simple but fundamental teaching, the coal mined from this area was properly mined, the overburden and topsoil were replaced. Today, the surface of the earth is being farmed and the ugly scars of acid mine pollution are totally absent."

A checkup reveals that Dr. Grove's analysis of the situation was correct; lands in the Lucinda area belonging to parishioners of Father Holl were stripped, it is true; but it is equally true that many acres were restored to grade and are now attractive, productive, and not dumping loads of acid seeping into the streams in that area.

Future generations owe Father Holl, and many others like him, due gratitude. Too few people have been willing to raise their voices against the raping of the land which is the principal inheritance of those still unborn. Father Holl's parishioners at St. Joseph's, and all conservation-minded residents of Clarion County, are proud of the recognition and tribute won by the Lucinda priest.

Barber or Teacher: To Be or Not To Be

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. HUDDLESTON. Mr. Speaker, on March 27, 1959, there appeared in the Voice of the People column of the Birmingham, Ala., News, a letter written by a male schoolteacher at Banks High School in Birmingham. This letter dealt with the comparative salaries of barbers and teachers and pointed up very graphically the financial plight of many men who wish to pursue the profession of teaching our children in the public schools.

With the thought that this letter written by Mr. Eugene Sample, may be of interest to the Members of Congress, I am happy to insert same herewith in the CONGRESSIONAL RECORD:

I noticed with interest your cartoon on the editorial page of the News on March 19, 1959. This cartoon showed feet marching along with "Tom Thumb National Pay Scale" across the marching feet. Below this was a picture of a small man looking up at those marching feet with the caption "Alabama School Teachers' Salaries" in front of it. As I read that I could not help but think of the article in the morning paper the day before by Mrs. Walter Ferguson about "Schools Need Men." They both tie together so beautifully. Mrs. Ferguson quoted Mr. Edward J. Meeman, editor of the Memphis Press-Scimitar, by saying the main thing wrong with our educational system—lack of male teachers. She goes on to say, "Boys admire men; they imitate men; they crave the companionship of men." All this I agree with, unless they are older boys, and then they think of us as being a little off beam if we are schoolteachers. Why do I say this? Simply because every boy of high school age realizes how little schoolteachers are paid. They know how this compares with other salaries; and when they see us sticking to teaching, their common expression is, "He is a little nutty somewhere." We not only hear this from students, but from our wives also.

As an example of what I am talking about, I would like to cite you to this: I paid a barber working for me $2,839.12 more than the board of education paid me in 1957. After completing work for a master's degree last summer and with 7 years' experience, I still paid him $2,789.81 more in 1958 than the board of education paid me for teaching.

Let's look at this from another angle now. This barber, a real good one, went to barber college for 6 months, which cost him approximately $2,000. I went to the same barber college for 6 weeks in 1946, just after I came out of the Army. Since I had barbered for 3 years in the Army, I finished the course in 6 weeks rather than 6 months.

Now, getting back to the teaching: In order to get a master's degree, you must attend college for 5 years and pay out from $7,000 to $9,000. Since I used the barber that works for me, suppose we still use this same barber.

We will say he went to barber college for 6 months and worked the next 4½ years while I went to college getting a master's degree. He spent $2,000 for 6 months. For the next 4½ years he makes $30,000. I spend $7,000 and am in school the entire 5 years. From this you can see that from the time we both started to school, he to barber college and I to the university, until 5 years later the barber would be $35,000 better off. How, you may ask? In 5 years he spends $2,000 and 6 months in school. At $6,000 per year, which a good barber is making, this would leave him 4½ years to work. He would make $30,000, take $2,000 from this and you have $28,000 left. Since I was in school the entire time you must assume that I am minus $7,000 so we add that back to the $28,000 and you can see that the barber would be $35,000 better off 5 years after starting to school than the teacher would. This barber working for me began only 3 months after coming out of barber college. He has been with me for 3 years. This gap would become greater as the years pass. I am not saying that all barbers make that much, they don't. In fact they are not making enough compared to the hours they work. Barbers work approximately 55 hours per week and average from $90 to $110 per week. This is not enough money in today's times. You can expect the barbers to go up on the price of haircuts if everything else keeps going up. I am in favor of it myself. The big catch is that the men school teachers have no way of going up in order to get more money and they can't live on what they make as school teachers.

Of the 10 men on the faculty here there is not one that is supporting his family solely on his pay as a teacher. This is not so just at Banks High School or of Birmingham but all over the Nation. Most men are required to have a supplementary income. When is the public going to wake up to the fact that they are going to get only what they pay for?

The men who are sticking with teaching are really dedicated to teaching. The only thing wrong with this is that we don't have enough who are willing to make this sacrifice. We should not have to work at two or three jobs in order to make a decent living.

I am thankful that I own my own barber shop, which I have had for 9 years, so I can stay in teaching. I am proud to say that I am a barber and even prouder to say that I am a teacher. Yes; barbers need to make more money. When barbers decide, as a group, that they must make more money to meet today's demands they, or I should say we, get together and agree to raise prices. I have used this comparison simply to show how ridiculously low school teachers' salaries are. The advice I would get is this: "Well why don't you quit teaching school and barber then if you are dissatisfied with what they pay you." My answer is that I will continue to do both until I am able to make a living at teaching. The thing that bothers me is what is happening to the youth of our land as a result of the lack of qualified teachers, both men and women, largely due to the low salary.

EUGENE SAMPLE,
Banks High School.

A Public Works Program for a Prosperous Private Economy

EXTENSION OF REMARKS
OF
HON. CLEMENT W. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. CLEMENT W. MILLER. Mr. Speaker, the article reproduced below, though published 4 months ago, is the clearest statement indicating the imperatives of a stepped-up public works program. Basically, it reports that we cannot have a prosperous private economy if we do not repair the neglect of public works that has existed since World War II. It offers a wonderful antidote to those who would consign us to regressive and stagnate policies:

[From Reporter magazine, Jan. 18, 1959]

THE SHAM BATTLE OVER SPENDING

(By David Demarest Lloyd)

The President has announced that he will devote his remaining years in the White House to a campaign against Government spending. To prove that this is not an idle threat, the directives have gone out to the departments to slash their budget estimates and the usual expenditures ceiling has been slapped on the Defense Department, throwing the procurement of military hardware into the customary turmoil and confusion. The Democratic leaders, still smarting under the President's campaign rhetoric, have announced that they are not "spenders" either, and that when the budget comes to Capitol Hill they will slash it as they have before. The stage is thus set for the great yearly spectacle of the economy drive—and this when the country is still not entirely out of the recession doldrums, the Soviets are pulling ahead of us in armament and initiative, and our unmet needs for every form of public improvement, from schools to roads, cry out for more, not less, public spending.

Only the naive, however, would conclude from all this—or even from the President's statement that he will present a balanced budget of about $77 billion—that Federal expenditure will be cut substantially. After the ceremonial struggle has been staged, the budget and the rate of spending will remain about the same. Still unanswered will be the question of whether this result is good enough for what the Nation needs. Yet it is of the greatest urgency that a full-scale debate be started on one of the most fundamental issues of our time: the formulation of an adequate, sensible, and long-range policy of public spending.

In spite of all the ritual exorcising, the Federal budget rises steadily. Its rate of increase is generally greater than the rise in the price level. The press and the higher levels of Government profess to regard this tendency with indignation, even with horror, as if it were a nervous disorder that could be cured by willpower and moral preaching.

The the Government's expenditures show a normal and relentless tendency upward may not be due to the wastefulness of public servants or to the heresies of the New Deal and of modern republicanism. If George M. Humphrey could not cut down Government spending, who can? Since 1954 the Eisenhower budget expenditures have been following the upward trend year by year, rising from $64 billion in fiscal 1955 to $79 billion in fiscal 1959.

It is a common misconception that the principal reason for this upward trend is the cost of defense. Actually, expenditures for what the Budget Bureau calls "major national security purposes," have been maintained at a relatively steady level. Starting from $13 billion in 1950, defense expenditures were boosted by the Truman defense program and the Korean war to a peak of almost $52 billion in 1953. The Eisenhower administration began to cut them in fiscal 1954 and succeeded briefly in reaching a low point of about $42 billion in 1956. These major national-security items are on the rise again, but they have not yet passed the fiscal 1954 mark of $47 billion.

The rise in prices and in the cost of soldiers and weapons that has occurred in the intervening years means that these sums will buy far less defense than in 1954. In real or dollar terms, therefore, the national-security sector of the budget has not led the upward trend. Rather, it has been the sector most exposed to economies, because it is both the largest and the least understood.

Neither is the international-aid part of the budget to blame for the general increase in Government spending. In Truman's time, international expenditures were dominated by the massive proportions of the Marshall plan and ran around $3 or $4 billion a year. Before Truman left office these expenditures, for a number of reasons, had fallen to a level lower than $800 million a year. Today they are less than a billion and a half.

WHOSE CREEPING SOCIALISM?

The truly significant increases are not in the defense and foreign-aid areas but in the rest of the budget—in the domestic functions and services of the Federal Government. In 1952 under Truman these domestic expenditures totaled $19 billion, rising to more than $21 billion in fiscal 1953. Under Eisenhower, they have continued upward, reaching $24 billion in 1956, more than $25 billion in 1958, and $31 billion in fiscal 1959.

While the military and foreign-aid expenditures of the Government have been held to roughly the same order of magnitude throughout the recent period, the domestic expenditures of the Government have risen more than 50 percent. And all this in spite of George Humphrey.

If we look at the component segments of the domestic part of the budget, we find that there is not one of them, with the exception of the veterans' program, that is not bigger now than it was in fiscal 1950. The upward trend can be seen clearly by comparing the spending figures for fiscal 1958 with the spending figures for 1954, the first fiscal year for which the Eisenhower administration was responsible. The figures for fiscal 1959 show the impact of the recession and are in most cases dramatically higher than those of 1958.

Federal expenditures for labor and welfare (which do not include trust expenditures for Social Security and unemployment benfits) rose from approximately $2.5 billion in fiscal 1954 to $3.4 billion in fiscal 1958. In fiscal 1959 they have risen another billion, a total increase of almost $2 billion during the Eisenhower years. The increase in expenditures for agriculture and agricultural resources is even more startling: From a level of about $2.5 billion in fiscal 1954, the expenditures have risen to nearly $4.5 billion 1958 and up almost $2 billion more in 1959, for a total increase of close to $4 billion. This is the second greatest percentage increase increase in any major budget item and offers eloquent evidence of the failure of Secretary Benson's agricultural program. It is interesting to recall that Charles Brannan, his predecessor, whose annual budget averaged about $1.5 billion in Truman's second term, was pilloried for the so-called Brannan plan, which, it was charged, might increase the agricultural budget as much as $2 billion.

Close on the heels of this major rate of rise in the agricultural sector is the upward spurt of expenditures under the heading Commerce and Housing, which have shot up from an abnormal low of $800 million in 1954 to a little more than $2 billion in 1958 and to almost $4 billion in 1959.

Interest on the Government debt has also increased substantially, rising from about $6.5 billion in 1954 to $7.7 billion in 1958. This is the Government's share of the cost of Humphrey's high-interest policy.

There are only two areas of the budget in which the rise has been relatively minor. The first of these is the field of natural resources, where the Republican opposition to river and waterpower development has held expenditures down to an average of about $1.5 billion a year. The other is the cost of running the agencies of the Government, which in spite of minor ups and downs has settled at the level of just under $1.7 billion in 1959, only $400 million more than it was in 1954.

BILLIONS UNDER THE RUG

These budget figures do not reveal the full extent of Government spending under Eisenhower. Items that used to be carried in the regular budget under the Truman administration have been transferred to the category of Government trust funds, where their expenditures and revenues do not show in the budget totals. The most important of the items thus swept under the rug is the highway program, which used to be listed as an outright Government expenditure from appropriated funds. In 1956, when the highway program was expanded, the gasoline excise taxes were earmarked to support it, and the whole operation was dubbed highway trust fund and lumped with the social security programs. This fund will account for more than $2.5 billion worth of expenditures in 1959 and is rapidly running out of money. Unless the President gets an increase in the gasoline taxes, Congress will have to appropriate funds for this program, and it will reappear as a large program in the regular budget.

A major expenditure that always used to distress the budget officials under the Truman administration was "Fanie Mae," otherwise known as the Federal National Mortgage Association, which by its support of the secondary mortgage market aided in the financing of billions of dollars' worth of new homes. By fiscal legerdemain this operation was also turned into a trust fund and taken out of the regular budget. Nevertheless, this expedient did not result in a reduction of budgeted expenditures in aid of housing. Even with Fanny May hidden from view, housing expenditures have risen steadily since fiscal 1954.

In comparing the Truman and Eisenhower administrations in the field of domestic spending, we therefore have to look behind the trust-fund device, and add to the Eisenhower record some $2 to $3 billion a year more than the budget figures show. This would lift our total domestic expenditures for fiscal 1959 to about $33 or $34 billion.

From the political point of view, one of the curious things about the Eisenhower administration is that it has not made a virtue out of the rising trend of domestic expenditures. Here, if ever, is the chance to outdeal the Fair Deal, to point with pride to increased expenditures for welfare, for farmers, and for housing as evidence of a Republican concern for the well-being of the people. Such political opportunism seems to go against the grain even of modern Republicanism.

Perhaps the explanation lies in the fact that the rise in these domestic sectors has taken place in spite of and not because of the intentions of the administration. Nor, for the most part, have these increases been forced upon an unwilling administration by a softhearted Congress. The most important of the increases have come about because of the automatic operation of existing laws governing Federal expenditure. Much of the increase in labor and welfare, for example, arises from the formulas fixed by law for determining the size of Federal grants-in-aid to the States for public assistance, including funds for old-age assistance, for the blind, dependent children, and disabled persons. Inevitably, the growth of population brings with it an increase in the numbers of the unfortunate, and an increase in Federal aid.

There is no way of denying the growing needs of the country for welfare expenditures, but the Eisenhower administration has been desperately trying to curtail the responsibility of the Federal Government to meet them. Elaborate and quite artificial programs have been projected for turning certain excise taxes back to the States if they will use them to absorb the Federal share of such welfare programs as vocational education and the building of sewage-treatment plants for cities. The main idea behind this kind of hocus-pocus is to get the expenditures in question out of the Federal budget. If this means waiving certain Federal revenues, well and good; it will at least appear to the uninitiated as a reduction in Federal spending. At its last session, Congress would have none of this nonsense, and the programs and revenues remain in the budget.

The appalling increase in agricultural spending is also due in part to the operation of standing legislation. Under a price-support program, the Government stands ready to absorb everything offered at the support level. Lower farm prices encourage the farmer to grow larger quantities in order to preserve his usual income. Benson, by constant reductions of the support-price levels, has driven farm prices downward and thus increased the amount of surplus offered and the amount the Government has to buy under the program. With farm prices poised for another drop in the coming year, Benson's rate of spending will probably continue its rocketlike ascent. For the Eisenhower administration the whole thing must seem

like a bad dream, particularly since the farm States are now going Democratic. To spend as much on the farms as Roosevelt spent for the entire national budget in the heyday of the New Deal and still to lose the farm vote borders on the fantastic.

The Democrats should not gloat, however. Even if Benson had never been heard of, the decline in foreign markets and the rising productivity of American agriculture would probably have pushed the expenditures of the Department of Agriculture up substantially over the last 5 to 6 years.

LET'S FACE IT

These automatic increases in Federal spending under statutory formulas are only one indication of the rising demand for Federal funds in the national economy. Bigger appropriations are constantly being called for, to help urban renewal, to clear slums, to finance housing, to purify water, to purify the air, to manage airplane traffic, to build hospitals, to finance medical research, to assist in education—in short, to alleviate the thousand and one growing pains of an expanding economy and an exploding population that is spreading from the cities out over the land, swamping the existing structures and resources of local government, and presenting problems with which the state houses cannot cope. This rising demand hammers constantly at the Executive and at Congress from all sides in ways that are politically most potent, and not even the gates of hell, not to mention mere mortals like Humphrey and Eisenhower and Byrd, can prevail against it in the long run.

The long and short of it is that the Federad government is being compelled to assist the country in its process of internal economic growth. But because the leaders of the administration disapprove of such assistance on philosophical grounds, Federal aid is unplanned, spotty, and without direction. The farmers get astronomical outpourings of funds, which bring them neither security nor stable prices, while the cities squabble over inadequate sums for renewal, and education is totally neglected except in areas near large Federal installations. Rational planning is at a discount. For example, river dams under construction are completed, but their utility is diminished by abandoning plans for supplementary units in the same river system and by turning the sites over to others for less than adequate exploitation. The same wastefulness and lack of design is apparent in the crazy-quilt pattern of protection extended to our human resources.

There is mounting evidence that the Nation needs a massive infusion of capital expenditure for normally public purposes—that the backlogs of need for such things as schools, pure water, hospitals, institutions, and public works of all kinds are now so great that they threaten the continual growth and expansion of the private economy. Business and industry, after all, depend on an underlying structure of public expenditure for everything from the education of their employees to the roads that carry them to work. It might be discovered, if the Government would settle down to face the problem instead of fighting it, that the deficiencies in these areas are now so great that only an unprecedented jump in the expenditure of Federal funds in the immediate future can restore the lagging growth rate of the economy as a whole. An annual increase in Federal spending is inevitable anyway. But apparently the annual rate of increase we have had lately is not enough to do us much good. Rather than a steady progression, there may have to be a change of magnitudes in the nature of a mutation.

Even a cursory look at the list of needs confirms this possibility. Add a billion more a year to expedite the highway program, plus half a billion for housing and urban renewal, plus at least a billion for school construction or general aid to public education, with a few hundred million for fellowships and higher education, plus 300 million (at least as lending authority) for depressed areas, plus an increase of at least 30 percent in the neglected and faltering area of natural resources, with additional amounts for the purification and expansion of the water supply. Without exhausting the roster of legislation introduced regularly at every Congress, you have a total approaching $5 billion to be added to the annual budget. And this is for domestic needs alone, taking no account of the problems of national defense or international relations.

WHERE WILL WE GET THE MONEY?

Those who urge such increased Federal spending are under obligation to clarify the scope and purposes of what they advocate and their relative priorities among various objectives. Otherwise they will perpetuate thé same inequitable and unbalanced pattern that now results from the purely negative approach of the administration. This would suit the Eisenhowers and George Humphreys, who are trying to give spending a bad name anyway, but it will not do for those who regard Federal expenditures as a necessary element in the Nation's growth.

Similarly, the upper levels of government and politics must agree on a theoretical justification of increased Federal spending. Otherwise the current doctrine that spending is an evil will be unchallenged, and the present spending muddle will persist.

The orthodox approach is to pay the increased costs out of increased revenue. This does not necessarily mean raising taxes. As the economy grows, the Government's revenue increases, even with a stationary level of tax rates. Following the great Eisenhower tax cut of 1954, which lost the Government $4 billion of revenue in the next year, the tax receipts of the Treasury thereafter shot up to a level some $4 to $6 billion higher than they were under Truman's Korean war rates, and they remained on this plateau until the recession set in.

In recent years our Federal budget has hovered around 18 percent of the gross national products. Assuming that the gross national product grows at the rate of about 5 percent a year, by 1963 it would be nearly $549 billion; and at a constant ratio of 18 percent, the Federal budget would be almost $100 billion. In other words, by the end of 1963, if we grow as we should, we shall be able to shoulder a Federal budget of $100 billion with no more trouble than we now shoulder one of $75 billion. This would allow an annual increase in the Federal budget of $5 billion without raising taxes.

To carry out this projection we have to make it a goal of our public policy to increase our output by 5 percent a year. We are not doing so well now—indeed the increase has reached or exceeded 5 percent in only two of the Eisenhower years—but we have grown at the rate of 5 percent or better in the past, and the experts agree that we can do it in the future.

In the immediate future, however, we may need to increase expenditures more than $5 billion a year in order to remedy the neglect of past years and to meet the pressing needs of the cold war. Assuming that we grow at an annual rate of 5 percent or better, we shall probably come out all right, but meanwhile we must either increase taxes savagely or increase the national debt.

The idea of an increasing national debt incites even more horror than the idea of spending. But our highly orthodox Republican administration has increased the national debt during 1958 by some $12 billion. Might it not be better to plan, deliberately, to raise the national debt a few billion dollars every year for a few years, as a means of getting what we need, than to be compelled by circumstances beyond our control to lift it $12 billion in 1 year, without getting anything from it beyond a reprieve from economic catastrophe?

When is the national debt too big? Nobody really knows. We now have the biggest one in our history—some $280-odd billions of it—but we also have the biggest national economy in our history. Some people contend that the national debt is too big when its servicing imposes too great a burden on the taxpayers. But the aggregate interest cost of the debt is not tied to its size. From 1955 through 1957 the size of the debt declined by nearly $4 billion, but the interest bill rose by nearly $1 billion.

Perhaps the size of the debt has some optimum relationship to the size of the economy, but it is hard to tell from experience what this should be. In 1940, after the depression, the national debt was equivalent to 40 percent of the gross national product. In 1946, at the end of the war, it was 129 percent of the gross national product, and still we did not come apart at the seams.

In 1950, at the start of the Korean conflict, the national debt was equivalent to 90 percent of the gross national product, and in 1954 the ratio had declined further, to 74 percent. By 1957, although the dollar volume of the debt was higher than in 1950, the ratio was down to 62 percent. Proportionately to our economic activity and output, the national debt has been declining, although public discussion has taken little note of the fact.

WHO IS TO BE MASTER?

It is universally agreed that the national debt has a bearing on inflation and deflation, but nothing in the statistics proves that there is a direct relationship between prices and the size of the debt. In the depression years 1930–35 the debt doubled, but consumer prices continued to fall. In the war years, the debt quintupled in size, but consumer prices inched upward only by degrees. The great jump in prices took place in the years 1946–50, after OPA had been jettisoned, when the debt was being reduced. In the years 1955 through 1957, the debt was reduced by $4 billion, but prices rose six points on the consumer index scale. It is laboring the obvious to insist that it is not the size of the debt but its management that affects prices.

Only part of the debt is where it can affect the supply of money and credit. Some 30 billions of Government bonds are held by the Government itself, in the Social Security and other trust accounts. Another large segment is held as long-term investment. The remainder is left for the banks and the Federal Reserve System to play with as part of the mechanism for regulating the volume of money. The Federal Reserve has a broad range of powers to manage the money supply and the sale of bonds. It may be harder to avoid damage to the public interest now, at a time of relatively full employment, than it was when the economy was depressed or when it was harnessed to the needs of the war. But if the country has to enlarge its debt in order to fight the cold war and continue its economic growth, the Federal Reserve and the Treasury ought to be able to find ways of doing it. It's just a question of who is to be master—the national interest or the banking system.

In any case, the quantity of money and credit seems to have very little to do these days with the rise in prices. Squeeze the supply of money and raise interest rates, but prices still do not go down. The only prices capable of declining these days are the prices of commodities. Other prices are estab-

lished not in terms of the market but in terms of the corporate balance sheet. Aside from the luckless farmer, the mechanisms of the economy are set to raise incomes to meet higher prices and not to bring prices down to meet incomes. In collective bargaining, in the halls of Congress, wherever wages are fixed, the argument is unanswerable that higher prices require higher wages. Against this conviction, the policy of squeezing credit is impotent; it ruins small business without affecting prices. This is the structure of our society, and it might be well to assent to it and take a fresh look at inflation control. It may be that the thing to do is not to tinker with an elaborate machine of credit, interest rates, and monetary devices, but to take up the whole question of direct controls.

Just how to prevent inflation, however, is not the question we are facing here. Suffice it to say that the size of the national debt is not a controlling factor. Federal spending is not necessarily destructive of the value of the dollar.

A NEW KIND OF NATIONAL BUDGET

Much will depend on the outcome of the great spending battle of 1959. The English-speaking nations have a way of deciding their destinies in controversies over the public purse. From the role of Parliament under the Tudors to the row over taxation without representation to the issues of high tariff and free silver, the questions of how to tax and spend have dominated the course of our history. Today we face another fateful issue. It differs from the countercyclical use of the public purse to cure deflation as expounded by Keynes. It differs from the use of government credit to win a war. Yet it partakes of both and has new elements of its own. How we decide it will determine whether we meet the Communist challenge and the new problems of our tremendously expanding economy. Theories about spending and debt inherited from our small-town past, now being vigorously expressed by the man who once was a poor boy in Abilene, will push us to the wrong conclusion. Operating against these dying folkways are the political pressures of our economic situation.

Political pressures by themselves will not necessarily guide us to the right conclusion. They will undoubtedly prevail, and change the pattern of Government spending, as they did in the early years of the New Deal—when Roosevelt's campaign commitment to economy went down before the claims of human suffering—but the results today may well be as unsatisfactory as they were then. Not even Keynes' theoretical justification of deficit spending was sufficient to persuade the Roosevelt administration to spend enough and in the right places to reverse the deflation. Today we have no Keynes to provide us with a theoretical justification of deficit spending for necessary public services in a time of manageable unemployment. Even our best economists are still thinking of Government spending as an antideflationary spigot to be turned on and off as the economic tides rise and fall. The budget figures show that this concept is outdated, that spending will go up no matter what we do. But unless we know what we are doing, the present disorder and waste will also continue.

To bring all the needs of the country into one focus—our defense and international needs, our needs for public improvements and public services, and the needs of our private economy as well—we must work out a concept of a national economic budget. Such a budget should not be limited to a fiscal or calendar year, but should extend over a sufficient period of time—say 10 or 15 years—to enable us to bring within its sights the accomplishment of some of our major national and international goals. And in framing such a plan, we must face boldly and honestly the question of whether controls—controls over certain prices and certain wage agreements—may not be necessary to prevent inflation. They may prove not to be required, but at least we ought to find out. If some of us recoil in horror from starting along such a path, we should ask which other ways are available for our Nation's survival aside from the sustained application of forethought to public affairs.

Until Reds Renounce World Conquest Aims, Flexibility Is Dangerous

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I clude the following article by Edgar Ansel Mowrer:

Of all the tired slogans that have misled the American people since 1940, relaxing tensions is probably the most deceptive.

Now get me right: nobody basically wishes to see tensions relaxed more than this writer. For tensions in a world of H-bombs are just too dangerous to be harbored an hour longer than is necessary. I therefore sympathize with many influential Americans, such as Senators FULBRIGHT, MANSFIELD, and HUMPHREY, who harp on relaxing tensions in each of their many public appearances.

Even my old friend Elmo Roper, with so many of whose political aims I am in complete sympathy, blemished an admirable speech last month to the League of Women Voters in Baltimore, by proposing the twin aims of greater flexibility and relaxing tensions.

To me—under present circumstances—flexibility is just a new word for the discredited appeasement. And relaxing tensions is a misleading and a harmful slogan. It encourages a large number of people to believe that it is feasible.

All we need, according to these people, is a little good will and a readiness to meet the Russians halfway, and tensions holding a dread threat of war will relax or go away.

RUSSIA AT FAULT

This, to me, is hogwash. And the reason is clear to anyone who carefully examines the nature of existing tensions.

These, without the shadow of a doubt, center overwhelmingly in the Kremlin's past conduct and present intentions. The overwhelming cause of the cold war is simply (1) Moscow's insistence on keeping its paw on restless captive peoples; and (2) its efforts to expand its captive area, if possible to the whole world.

All other world tensions—the dispute between India and Pakistan, between Israel and the Arabs, between Castro of Cuba and Trujillo, of the Dominican Republic—are secondary and contain no real danger of a world war.

The real tensions spring from Moscow's insistence on ousting the West from West Berlin; on its brutal suppression of the Hungarian revolt; in Red China's frantic insistence in mastering the Tibetans and reducing the Dalai Lama to another Red stooge like his colleague the puppet Panchen Lama. For the West, short of surrender, is bound to seek to stay where it is, and the unwilling captive peoples will never—I repeat, never—relax their efforts to become free by any conceivable method. Nor should we in the West—unless we are ready to renounce our history and beliefs—ask or expect them to do so.

Now at one time or another, as Roper stated, changes in the Communist countries may (or may not) bring about a change in communism's ambitions. But until they do, or until the West, by accepting the cold war and playing to win, demonstrates communism can never spread further without starting a major war, any relaxing of tension implies the surrender or retreat of the West.

Therefore, thus who advocate relaxation under present circumstances are, whether they know it or not, assisting the advance of communism by encouraging Moscow and Peiping to believe they can press forward with impunity and by weakening the West's will to resist. For it is not possible for a free people at the same time to expect relaxation and to maintain a proper posture for successful defense.

CHIEF ASSET

Since this is the case, the West, far from negotiating any modification at Berlin that will make that city less objectionable to Moscow, should hang onto it at all costs. For West Berlin is one of our chief assets in the cold war, as nuclear arms in West Germany's hands will soon be another.

The Kremlin does not like either. Must we for that reason rush to mollify those whose aim is our destruction? Do we lack the guts to accept the Kremlin's challenge wherever it is made? Are we afraid to take the risk of war to defend our ideals, our friends, and our very existence? If so—as some are showing—the sooner we surrender the better for then communism will take us over physically intact.

But if, as I believe, most Americans are not ready for surrender to tyranny no matter what the threat, then those who now advocate relaxing tensions had better take another look, realize just why this is not possible today without weakening the West, and shift their emphasis from the preservation of peace to the defense of free men and women.

Poison in Your Water—No. 61

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. DINGELL. Mr. Speaker, one of the foulest streams in the United States is the Missouri River, and to keep current the picture of that river as one of the most polluted in the United States, I insert into the Appendix of the CONGRESSIONAL RECORD an article from the Omaha, Nebr., Evening World-Herald of March 25, 1959, setting forth the nature of the water pollution and the bacteria count in the Missouri River near Sioux City, Iowa. The article is as follows:

POLLUTION 15 TIMES LEVELS AT SWIM POOL—EXPERT TELLS OF RIVER SAMPLING AT OMAHA

(By Gabe Parks)

SIOUX CITY, IOWA.—Pollution of Missouri River water reaching Omaha is 15 times stronger than the accepted health standards for swimming.

The contamination is nearly three times greater than the level recommended for sources for municipal use.

This was testified Wednesday by F. W. Kitterall, Cincinnati, Ohio, sanitation expert for the U.S. Public Health Service, at a Federal water pollution hearing.

FOURTEEN-MAN TEAM

Mr. Kitterall supervised a 14-man team of engineers, biologists, chemists, and bacteriologists which studied the Missouri River between Gavins Point, S. Dak., and Omaha last August and September.

He said the coliform bacteria count at the Mormon Bridge—just above the metropolitan utilities district water intake—averaged 14,800 per 100 milliliters. The standard for swimming, he said, is 1,000; for other recreational purposes and for drinking water supply, 5,000.

Mr. Kitterell also said that during a 2-day period beginning August 28, the Mormon Bridge count averaged 19,500.

AROUND THE CLOCK

He said samples were taken around the clock at 2-hour intervals. The study showed the count was higher at night than during the day. This was due primarily to the regular fluctuation of the sewage-discharge cycle in Sioux City.

He pointed out that metropolitan utility district takes its river samples routinely each morning at 8 o'clock. He did not quote any metropolitan utility district figures, but said they would be higher if taken at night.

Mr. Kittrell said an estimated 85 percent of the bacterial contamination at Omaha originated in Sioux City.

HEALTH HAZARD

A color picture of grease and other materials scraped from the intake of the Omaha water plant was introduced as evidence.

In response to a question from a Government attorney, Mr. Kittrell said river pollution at Omaha constitutes a health hazard.

But neither he nor other Government experts testified that Omaha's drinking water was unsafe after treatment.

They said the high degree of pollution in river water raised the risk that some bacteria might survive the treatment.

MUST PROVE THREAT

The hearing is part of the Federal attempt to compel Sioux City to build sewer treatment facilities which would cost an estimated $7 million to $12 million.

To force the construction, attorneys from the Public Health Service must prove that the health and welfare of persons living along the Missouri River is endangered.

Charles M. Brinton, Longtime Courier Publisher, Dies

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. ULLMAN. Mr. Speaker, a great pioneer journalist passed away in Baker, Oreg., recently. Charles Mackay Brinton entered the printing trade in 1898 and published weekly newspapers in various communities in the West for 60 years. He was a dear friend of mine, a wonderful man, and a fine American.

The following article from the Baker Record Courier touches briefly on the highlights of his journalistic career. I know that my colleagues will find it of inspiration to them:

CHARLES M. BRINTON, LONGTIME COURIER PUBLISHER, DIES—RETIRED IN 1958 AFTER 60-YEAR CAREER

Death came Wednesday morning in St. Elizabeth Hospital to Charles Mackay Brinton, 78, for 60 years a printer and weekly newspaper publisher, 30 of those years as publisher of the Record-Courier and its original Haines Record.

Mr. Brinton, who had retired only last year, had been quite ill since October, his condition becoming weaker Friday when he entered the hospital and he passed away without waking from his sleep Wednesday morning.

His death ended a journalistic career that spanned in its rural field some of the most unique decades in history—pioneering in the severe prairie territory, the introduction of machine typesetting and power printing presses, the political, social and economic and production problems of two World Wars, the economic upheaval of the great depression, the advent of the auto, the airplane and the space age and their impacts upon rural America.

Born November 1, 1880, near Hancock in the backwoods of northern Michigan he was taken by his father and mother, Marshall and Rosemond Brinton, to the raw prairie homestead of Dakota territory which later became Wells County, N. Dak., near Sykeston. Here he weather the rigors of frontier agriculture, herding sheep as a boy, graduating from formal education at grade five, later in his youth to take a business education at Fargo.

SIXTY YEARS ACTIVE

He entered the printing trade April 1, 1898, and was associated for nearly 20 years, most of the time as publisher, with the Free Press at Fessenden, N. Dak. During the same time he either founded or had interests in the Beech Chronicle, Belfield Times, and a paper at Bismarck.

He was married September 14, 1909, to Miss Elizabeth Rose Mueller near Gary, Minn. The couple spent a little over a year at Arco, Idaho, where they had acquired the Advertiser, a weekly, at that place prior to the advent of major southern Idaho reclamation. They returned to Fessenden where they operated the Free Press till about 1921.

At various times he had served as manager of the county fair there, had been mayor of Fessenden and chairmanned the World War I liberty loans county drives. He never sought political office, was an active Republican till about 1930, but since then a Democrat.

Coming west he was interested in the Kevin Sun and Shelby Promoter in Montana, published the Browning Review for its owner 1 year and in 1924 started the Columbia Courier at Marcus, Wash., discontinuing it in 1927.

CAME HERE IN 1928

He purchased the North Powder News and Haines Record in 1928 with printing plant at North Powder, the family residing at Haines. The plant was moved to Baker in 1934 where the Record absorbed the Courier that year, the News in 1938 and the Eastern Oregon News in 1941. A son, Byron C. Brinton, became associated as Record-Courier editor in 1934 and the father and son formed a partnership in 1937. This continued until Charles M. retired in 1958, when the son assumed the publisher role also.

Surviving Mr. Brinton are his widow of 2333 Court Avenue, and nine children: Gordon M., Seattle; Byron C., Baker; Adria F. Ingram, Haines; Dr. James E. Brinton, Los Altos, Calif.; Ardis M. Cousins, Paso Robles, Calif.; Dr. T. F. Brinton and Dr. Donald M. Brinton, Eugene; Elizabeth DeShetler, Toledo, Ohio; and Thomas W. Brinton, Baker. Also surviving are three brothers, Horace, a half-brother of West Chester, Pa.; Wells of Los Angeles; and Donald of Independence, Calif.; four sisters, Mrs. Rosebud Hunt, Coeur d'Alene, Idaho; Mrs. Claribel Glassco, Arcadia, Calif.; Miss Florence Brinton, Montrose, Calif.; and Mrs. Mary E. Roberson of Corvalis; also by 24 grandchildren.

Services for Mr. Brinton will be conducted Saturday at 10 a.m. from the West & Co. chapel with the Reverend John Urey of the Presbyterian Church officiating. Interment will be in Mount Hope Cemetery.

In lieu of flowers, friends may make a contribution to the North Powder Community Church building fund, the family said.

All of the children had visited their home in recent months, Dr. Brinton came up from Stanford University and Elizabeth came out again from Toledo the first of the week.

The New Elite: Should Boston Firemen and Policemen Have Rentals, Subsidized by Occupying Public Housing Projects?

EXTENSION OF REMARKS

OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. FISHER. Mr. Speaker, is public housing designed to take care of low-income, needy people—the unfortunates who have been displaced because of a slum clearance project or other governmental action?

Are occupants of public housing projects those who because of conditions beyond their control proper subjects of public welfare programs?

Is it proper that the general public should be called upon to contribute to the payment of rentals for those who are financially able to pay their own way? Just where is the line to be drawn on who should be eligible to occupy public housing and receive this public bounty in the form of subsidized rentals?

Public housing serves a proper and useful purpose if it is restricted to those who have been displaced from their homes by slum clearance or other governmental action and those who have low incomes and are proper subjects of public assistance.

Unless confined to thos properly recognized public welfare functions, public housing becomes socialized housing, and the question is raised whether the public should be expected to help pay the rent bills for those who are not legitimate welfare cases and who are financially able to pay their own way without government help.

Our attention is often called to instance where the legitimate public housing functions are abused and perverted by allowing tenants who make several thousand dollars anunually to occupy such housing and thereby have their rentals subsidized by the public. Surely the most ardent advocates of public housing will not countenance that sort of thing.

That problem is well illustrated by an article which appeared in the Boston Herald on April 13, 1959, entitled "The New Elite," as follows:

THE NEW ELITE

Last fall, in a referendum subverting Mayor Hynes' right to determine appropriate municipal pay scales, Boston firemen won pay

raises ranging from $790 to $1,050. Identical increases were subsequently extended to the police in order to reestablish the traditional equality of pay scales as between the two protective departments.

Now, the Boston Housing Authority is seeking to raise the income ceilings for continued occupancy in State-aided housing projects so that 353 families of Boston police and firemen will not be evicted because of the increased income gained through the referendum.

A better instance of having one's cake and eating it, too, could hardly be imagined.

Public housing, designed for persons of low income, must be converted to middle-income or near-middle-income status because the firemen and policemen have advanced to that status.

The Boston Housing Authority says rents will be increased for these 353 families, although it hasn't said how much. But even if these increases are commensurate with the fire and police pay raise, the continued occupancy of public housing by these families automatically bars as many low-income families from entry into the projects.

Will the Boston Housing Authority state how many low-income families must stay in shabby tenements so that the fire and police families may remain in public housing?

May we not legitimately ask whether we are on the way, here in Boston, to the establishment of a new elite—a special class of drones for whom those without influence labor unremittingly?

The Faith of Lincoln

EXTENSION OF REMARKS
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. DENTON. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I should like to include an address by Dr. Roy T. Combs, chairman, Indiana State Lincoln Sesquicentennial Commission, and to make other brief observations, concerning the Lincoln Sesquicentennial Sabbath event held yesterday afternoon in Ford's Theater (Lincoln Museum) here in Washington, D.C. The event marked the 94th anniversary of the assassination of President Abraham Lincoln in that theater on April 14, 1865.

Mr. David C. Means, of the Library of Congress, presided, and the invocation and benediction were said by the Walter Reed Hospital chaplain, Chaplain James W. Miller. Among those present was Mr. John E. Allen, assistant executive director, National Lincoln Sesquicentennial Commission, of which I have the honor of being a member. Special music was provided by the chorus of the Foundry Church Choir, under the direction of Mr. Justin Lawrie. Mrs. Leo L. Pollack and Mr. Robert Barks—the sculptor—both of New York City, presented a new bronze head of Lincoln, "The Gettysburg Lincoln," to the museum. Dr. Combs' address was well received, was inspirational and spiritual in tone. His subject was "The Faith of Lincoln."

Dr. Combs has just completed arrangements, along with the Indiana special events chairman, Mr. William A. Koch, of Evansville, for the historic Lincoln sesquicentennial program taking place May 16 to 17 at Lincoln City and nearby Santa Claus land. Senator JOHN SHERMAN COOPER, of Kentucky, chairman of the National Commission, will deliver the main address. These areas are included in my home congressional district, the eighth, and we in southern Indiana are proud of the fact that the Lincolns lived there nearly 14 years. The future President spent his formative years there, from 7 to 21. There, as he said, I "grew up." Dr. Combs' address is commended to the Members of the Congress and to the Nation for careful reading. It was as follows:

THE FAITH OF LINCOLN

Ninety-four years ago Tuesday, April 14, on this very spot Abraham Lincoln was felled by the bullet of an assassin, the day also being Good Friday. It was on this Good Friday that Christ the Savior was crucified on the cross for the sins of the world. Abraham Lincoln, devoted to the teachings and principles of Christ and Almighty God passed into eternity. In his early childhood he was taught the Scriptures by his mother Nancy Hanks Lincoln. She said to him: "I am going away and shall not return. Be a good boy. Live as I have taugh you. Love your Heavenly Father and keep his commandments." This he did throughout his entire life. In his speeches, state papers, and recorded conversations we find that he quoted 22 chapters of the 39 books of the Old Testament. Is it any wonder that some 6,000 books and pamphlets have been written about Mr. Lincoln. There are more books about him than on any other subject with the exception of the Bible. "It requires the most gracious pages of world history to record what one American achieved," said William McKinley.

Lincoln, whose life became the pattern for the common man. Lincoln, who opened the doors of opportunity to the races of man. Lincoln, man of God, whose close communion with the Creator inspired the world. He searched the Scriptures, thoughtfully, prayerfully, and with discrimination. This man of destiny found his armor and courage for life's stern battle in Christ the solid rock. Lincoln, compassionate, considerate, sympathetic, was warmly portrayed by an incident occurring when he was a young lawyer in Springfield, Ill. A Captain Green tells of accompanying Lincoln to the country farm home to make a will for an aging woman. Arriving, the woman was found to be near the end. Gently, Lincoln drew the document and after its signing the woman turned and said to Lincoln with a smile: "I am thankful I have made preparation for the other life I am so soon to enter. Many years ago I sought and found Christ as my Savior. He has been my Comforter through the years." Lincoln bent toward her and said: "To have faith in Christ is wise. You are to be congratulated in passing through life so usefully into the life beyond so hopefully." She said: "Mr. Lincoln, won't you read out of the Bible?" He beban reciting from memory the 23d Psalm, laying emphasis upon: "Tho I walk through the valley of the shadow of death, I will fear no evil, for Thou art with me; for Thy rod and Thy staff, they comfort me." Passing on to the 14th chapter of John: "Let not your heart be troubled. I believe in God, believe also in me." Then he spoke with tenderness and pathos, the last stanza of "Rock of Ages.":

"While I draw this fleeting breath,
When mine eyes shall close in death,
When I rise to world unknown,
See Thee on Thy judgment throne,
Rock of Ages, cleft for me,
Let me hide myself in Thee."

Most biographers believe that two great passages from the Bible best exemplified Lincoln: "In all Thy ways acknowledge Him and He will direct Thy paths," and "Thou shall keep him in perfect peace, whose mind is stayed on Thee."

President William McKinley told of the battleflag sent to President Lincoln at Springfield, Ill., on February 11, 1861, with the inscription of the first chapter of Joshua: "Have I not commended thee to be strong and of good courage? Be not afraid, neither be thou dismayed, for the Lord thy God is with thee, whithersoever thou goest. There shall not any man be able to stand before thee, all the days of thy life. As I was with Moses, so shall I be with thou." And then, a verse from Lincoln's favorite poem;

"Oh! Why should the spirit of mortal be proud?
Like a swift-fleeing meteor, a fast-flying cloud,
A flash of the lightning, a break of the wave,
He passeth from life to his rest in the grave."

But Jesus had his Judas and his Pilate; Lincoln his McClellan and his Booth.

Mr. Lincoln said: "I am profitably engaged in reading the Bible. Take all of it that you can upon reason and the balance upon faith and you will live and die a better man." And on another occasion he said: "God bless the churches. Bless whomsoever gave us the churches."

It has been my privilege to talk with Billy Graham, the great evangelist, on several occasions, and knowing of my interest in Lincoln he gave me this startling news: That in his world travels, that world leaders said to him that, "You are from America, the land of Abraham Lincoln. Had we a Lincoln today, our world in all probability would not be in the condition it is in."

Referring to the Bible, Lincoln has said to a group of devoted colored people: "This Great Book is the best gift God has given to men. All that the Savior gave the world was communicated through this Book." If our world is to survive the trouble crisis now confronting us, we must first turn to Christ and Almighty God, the liberator of all men.

New Lincolns must rise, new Lincolns of destiny. New Lincolns of statesmanship. New Lincolns with freedom's challenge. New Lincolns with sublime faith in Christ; with wisdom from God's word; with obedience to His perfect will. New Lincolns, to give patterns for the common man. New Lincolns, to open doors of opportunity to the races of men. New Lincolns to humbly walk with God, giving faith and courage to nations of the world.

"Lives of great men all remind us
We can make our lives sublime
And, departing, leave behind us
Footprints on the sands of time."

Thank you very much for your kind and thoughtful attention.

MEMORIAL OBSERVANCE OF THE 94TH ANNIVERSARY OF THE ASSASSINATION OF ABRAHAM LINCOLN, LINCOLN MUSEUM (FORD'S THEATER), SUNDAY, APRIL 19, 1959, 2:30 P.M.

Invocation by Chaplain James W. Miller, Post Chaplain, Walter Reed Hospital.

Remarks by the chairman, Dr. David C. Mearns, Chief, Manuscript Division, Library of Congress.

Special music, Mr. Justin Lawrie.

Presentation of a new bronze head of Lincoln, "The Gettysburg Lincoln," by Robert Berks, by Mrs. Leo L. Pollak.

Introduction of the speaker by Dr. David C. Mearns.

Address: "The Faith of Lincoln," by Hon. Roy T. Combs, chairman, Indiana Lincoln Sesquicentennial Commission, and president, Indiana Lincoln Foundation.

Benediction, Chaplain James W. Miller.

Under the sponsorship of the Lincoln Sesquicentennial Commission and the Lincoln Group of the District of Columbia.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of April 18, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas, April 18, 1959)

Cherry blossoms amid balmy weather, snow, and bright 80-degree sunshine, in that order, make a strange week—but that's spring in Washington. Visitors are everywhere, enjoying sightseeing. Republican women from Dallas, Tex., and the Nation are here, holding their annual conference. It's a compliment to Congressmen to have visitors from home who will take the time to observe the legislative process. A Congressman's job would be better understood if constituents could see the committee work, where hearings are held and legislation fashioned. Then, the floor work in the House, and finally the endless office routine of correspondence over the problems of constituents. Frequently, all activities are simultaneous.

The Federal Government has grown so large in recent years it is now likely that legislation suffers from a lack of study by the Congressmen, who are besieged with countless other duties. Worse yet, this fact will go unrecognized so that Government getting out of hand will not be blamed on the right cause, namely, too little time to do too many things. Other charges will be made, and more legislation devised to correct legislation. Meanwhile, the water is muddied further by political parties that choose up sides with too hasty study of the facts. Only as a result of careful study of alternatives can the successful solutions to today's problems be found. Often, the obvious is most difficult to see. (Item: A Member sent a package of sightsavers made in his district to each Congressman saying, "We are entering that period of the session when budget figures will be flying fast and furiously. I trust these will assist you in seeing the figures more clearly.")

The military construction bill totaled $1,251 million for defense construction, $131 million of which is outside the United States and $548 million approximately is classified (secret). The bill includes such items as operational and training facilities, maintenance, research and development and test, hospital and medical facilities, housing, utilities and real estate. Texas' part is $28 million, including $348,000 for Dallas' Naval Air Station and $64,000 for the Army Reserve Center.

The military is big business in this Nation, even in this relatively small construction end. In fact, defense expenditures are so great and so integral a part of this Nation's economy, I wonder what would happen if Russia actually wanted peace, and we were suddenly faced with disarmament and demilitarizing. Could a nation of free people and business rooted in free enterprise survive competitively, as compared to the regimented societies of totalitarian states where people can be ordered about? Here's one to think about.

The Bob Taft Memorial Carillon Tower symbolizes the side of America that everyone can cherish and in remembering try to emulate, thanking God for the opportunity and freedom to do so. At the dedication these qualities came to the forefront, and refreshingly, without apology. Bob Taft laid down principles and then followed them, even when odds were great, when pressures against him were almost unbearable. Ambition and power were sacrificed when he relinquished seniority privileges to join another committee to write a labor law, which he reasoned then was the Nation's great need. Conscience was his guide, not political popularity. And when it came time to die, knowing this in advance, he met this without missing a stride. As he told Herbert Hoover, who urged him to go to the hospital, "My friend, you know what is the matter with me. I am going to die with my boots on." Here's American manhood at its best. As Mr. Hoover said, "In the belfry of this monument there is a magnificent carillon. When these great bells ring out, it will be a summons to integrity and courage." Congressmen should hear and heed these bells. Bob Taft's memory will help all Americans.

Our Secretary of State, John Foster Dulles, was resoundingly praised in the House when his retirement from office was announced. I wondered why he couldn't have received some of this praise earlier when instead his critics were denouncing him, chiefly for his unyielding firmness toward Russia. Like Taft, he may be appreciated more in the future, when those who counseled him to give in to Russia are long forgotten.

Why are so many of our greatest and strongest men removed from the scene when they are so badly needed? Lincoln, Taft, Senate Chaplain Peter Marshall, to name only three of the many. An even heavier load is distributed among those who remain. In this world we have a big job to do for ourselves, our children, and future generations. To this task we had better dedicate ourselves.

Remembering Taft's beliefs in the role of Federal Government would be so helpful today. For example: "This was the way America was built up. The only way to resume progress is to assure people again that Government will not interfere with their normal and reasonable efforts to make a living; that Government will not take away from them the profit which they make; that reasonable success will receive the recognition it deserves."

Dr. Warren Tracy and Coe College Library

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. WOLF. Mr. Speaker, as the National Library Week draws to a close, I would like to salute the Stewart Memorial Library, which is a part of Coe College, one of the truly fine liberal arts colleges in my district.

The library, a gift of the late Col. Robert W. Stewart, has recently undergone a facility expansion and physical improvement program. The program, which amounted to $37,763, includes a new lighting system, new stacks and study areas, and new draperies. Other improvements for the library include a microfilm and microcard reader and a verifax photo copier.

This fine progress in the Coe College Library can be attributed to the untiring work of Dr. Warren Tracy, and his fine staff. The staff includes Mrs. Warren Tracy, reference librarian; Mrs. Fred C. Fisher, Jr., and Mrs. Freda Chambers, circulation librarians; Mrs. Donald Stonemen, cataloger, and part-time student workers.

Dr. Tracy, who is now in his fifth year as head librarian, has done a remarkable job of rebuilding the library. With a few grants, and many long hours of work by Dr. Tracy, the library collection now includes 65,000 volumes and 280 periodicals—some dating before the 1900's. Under his leadership exhibits of wider cultural and artistic scope are going to be sponsored by the library similar to the current one; the Gertrude Stein exhibit.

It must be remembered that the universities with their large libraries are not fully responsible for the cultural growth of a city. But rather it is the small liberal arts college libraries, with their small staffs, that have taken the cultural lead in the cities. These staffs, such as the one Dr. Tracy heads, have made the growth of their libraries a very personal one in which the entire city has benefited.

It is indeed an honor to give particular recognition to Dr. Warren Tracy and Coe College for their fine contribution to the liberal arts college library and to their city of Cedar Rapids.

Should Your Child Go Into the Foreign Service?

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. BOSCH. Mr. Speaker, my colleagues are familiar with my interest in the Foreign Service of the United States through my bill, H.R. 1232, to create a Foreign Service Academy. I believe that public sentiment in favor of this legislation will increase as the people become more aware of the Foreign Service and its work.

Along this line, I was very pleased to receive today an advance copy of a public service advertisment entitled "Should Your Child Go Into the Foreign Service?" which the New York Life Insurance Co. is sponsoring.

Under leave to extend my remarks, I include the aforementioned advertisement:

SHOULD YOUR CHILD GO INTO THE FOREIGN SERVICE?

(By Loy W. Henderson Deputy Under Secretary of State as told to Donald Robinson)

There is a bronze plaque in the lobby of the Department of State Building in Washington, D.C. On it are engraved the names of 71 members of the U.S. Foreign Service "who, while on active duty, lost their lives under heroic or tragic circumstances." The first name is that of William Palfrey—"lost at sea, 1780." The last is that of a U.S. consul, David LeBreton, Jr., who "drowned saving lines—Tunis, 1953."

For more than 180 years, the men and women of the Foreign Service have stood ready to sacrifice their interests, their comforts and their lives for the United States. They have stuck to their posts in the face of earthquakes, floods, revolutions and wars. They have carried on regardless of cholera epidemic and worse.

Duty is a watchword with them. A State Department courier who was aboard a plane that crashed in flames near Vienna in October 1955, didn't think about his frightful injuries and burns. In spite of the excruciating pain he was in, he declined all medical care until he'd delivered his papers into safe hands.

They are dedicated people, the members of the U.S. Foreign Service.

In all, there are 8,025 men and women in the Service now, and they can rightly be called America's first line of defense. Upon them can depend the issues of war and peace.

ROLE IN FOREIGN POLICY

The Foreign Service must, first of all, protect American interests abroad. It has the job of promoting those interests by demonstrating their mutuality with those of other nations. In short, to further and improve the relations of the United States with other countries in every possible way.

The Foreign Service must explain to other governments what the policy of the United States is, and where possible, persuade them to cooperate with us in our constant struggle to win peace, prosperity and freedom for all the world. In addition, the Service must do everything in its power to assist American citizens in their legitimate activities abroad.

Today, members of the Foreign Service serve at 286 posts in 89 countries, with the U.S. delegation to the United Nations in New York, and in the Department of State in Washington.

The Foreign Service people on detail in Washington help plan our foreign policy and direct its day-to-day workings. They maintain liaison with other governmental agencies and handle contacts with the thousands of foreign diplomats stationed in America.

Abroad, our Foreign Service men and women have duties that are ultravaried. Diplomatic negotiations, for one thing.

Right now, Foreign Service experts are negotiating with foreign governments on matters ranging from the regulations under which American business men may operate, to the exchange of scientific know-how among nations, to the proper steps that should be taken to protect the free world against the threat of Soviet imperialism.

Another big assignment the Service has is gathering information. An election in a Latin American country or a revolution in the Middle East can change the course of history. The Foreign Service man on the scene must report the facts, and his analysis of them, fast, fully and without pulling any punches.

Most of all, the Foreign Service people abroad must, insofar as they can, earn the confidence of the governments of the countries they're in. That's how good international relations grow.

SERVING AMERICANS ABROAD

And all this is merely part of the Foreign Service's role. If an American citizen runs into trouble with the police, the Foreign Service sees that he gets legal counsel and a fair trial. If a tourist becomes ill, the Foreign Service finds him a doctor.

Twenty-four hours a day, the Foreign Service is on duty, prepared to assist Americans in need. A band of American missionaries who were caught in bloody rioting that swept through a Middle Eastern country recently can bear witness to that.

A Foreign Service officer drove 50 miles through the crazed mobs to rescue these missionaries. He got them out just as the rioters were setting fire to their house—with them in it.

When they are detailed as consuls, Foreign Service officers issue or renew passports for Americans abroad. They did it for over 200,000 people last year alone. They register the birth of children born to American parents abroad so they can establish their rights to U.S. citizenship. Theirs also is the complete responsibility for issing, or denying, visas to foreigners coming to the United States as visitors or as immigrants with all their perplexing problems.

ADVANTAGES AND DISADVANTAGES

Overall, the satisfactions of a Foreign Service career are superb. You travel the world, you meet many kinds of fascinating pople, you constantly are broadening yourself.

You are on the inside of history in the making, and you often have a chance to help shape that history. I well remember the thrill that we in the Foreign Service had in 1947 when the President and Congress accepted our recommendations to support Greece and Turkey against Communist aggression.

It was the first time the United States had ever undertaken such a massive program in peacetime, and it saved both those nations from Kremlin domination.

The greatest satisfaction of all, of course, is the realization that you are helping your country and advancing the principles on which our national and international life is based. Especially is this so today. At a moment when humanity is at the crossroads, Foreign Service people are in a position to help guide it along the path of peace and freedom.

But the Foreign Service is no place for people who want a soft, easy existence. It is a career exclusively for young men and women who are willing to toil endless hours—and undergo hardships, inconveniences and, if need be, danger for their country's sake.

Let me say this. There are strong disadvantages to a career in the Foreign Service. It offers little opportunity to fame; good diplomats do their best work away from the public eye. It is a round-the-clock job. A diplomat is never off duty. And sometimes his duties can be pedestrian.

There are many rigors. Foreign Service people have no permanent home. Every 3 years, they are likely to be transferred. Frequently, it is to isolated posts where sanitary housing is impossible to find, disease is rampant, the climate extremely hot or freezing cold. It can be very hard on a man's wife and children. I know.

On occasion, there are bitter frustrations. You can propose action which you are certain is wise both from the standpoint of the United States and the country in which you are serving. But, other factors, from the global viewpoint of Washington, may be overriding and your recommendations may not be accepted. This, if you let it, can hurt.

OPPORTUNITIES, SALARIES, AND ADVANCEMENT

The Foreign Service is now divided into three branches. First is the Foreign Service Officer Corps, the professional career organization which represents the backbone of our Government activities in the international field. It is a carefully selected group that is tough to get into and tougher to stay in. It numbers about 3,500 of whom more than 330 are women.

Then there is the Foreign Service Reserve. It consists of specialists, persons with particular qualifications that are required by the Service, a highly specialized knowledge of atomic energy, say, or of Soviet agriculture. These specialists are appointed for periods of 2 to 5 years; we have approximately 800 of them.

Finally, there is the Foreign Service Staff Corps. It includes typists, stenographers, code clerks, and other technical and administrative employees. They are also selected with special care. Some of them eventually qualify for the Officer Corps. Over half are women.

Advancement is strictly on merit. Every Foreign Service officer is rated regularly by an impartial selection board, and the better ones are promoted. These promotions go right to the top. Nearly two-thirds of ambassadors and ministers have come up through the ranks.

Applicants for the Foreign Service Officer Corps must be American citizens from 20 to 31 years of age and should have records of impeccable loyalty and discretion. (Each gets a thorough background investigation.) They take a written examination that lasts a solid day and encompasses the use of the English language, the applicant's capacity for interpreting both tabular and quantitative data, his general knowledge of world history, politics, economics, and other subjects. Fluency in a world language, while not an examination requirement, must be attained before an officer can advance in the Service.

An applicant who passes the written examination then takes an "oral." For 90 minutes he appears before a three-man panel that weighs his personality, his judgment, his aptitude at defending his own views and his true motives for joining the Service.

These examinations are exacting. Of 3,959 who took a recent examination, only the 676 finest passed.

The salary of a Foreign Service Officer usually starts at $5,225 and it rises to $27,500 in the case of ambassadors at more important posts. Reserve officers have the same pay scale. Salaries for the Staff Corps begin at $3,730 and go in certain specialties to $13,160. All three branches receive allowances to help cover the extra expenses incurred in living abroad.

TRAITS AND EDUCATION NEEDED

To prepare for a career as a Foreign Service Officer, I would urge a broad liberal arts education with emphasis on history, science, economics, the literature of all nations, and modern languages.

Although a college degree is not demanded, it is virtually essential. We want the Foreign Service to be a cross-section of America, with representatives in it of all geographical areas, as well as of all races, religions and social backgrounds. For instance, from a sampling of 380 junior Foreign Service Officers on the rolls as of May 1958, 140 educational institutions can be cited as Alma Maters.

Opportunities for women are exactly the same as for men. One of our most noted ambassadors today is a woman who made her way up through the ranks.

The standards in the Staff Corps are also high. Most applicants have to pass examinations in their respective fields.

What traits should you look for if your son or daughter is considering a Foreign Service career? Let me tell right off what we don't want—snobs, arrogant people, or self-righteous people. The traits we do

think a boy or girl should have are: (1) First of all—complete integrity; (2) a pleasant, outgoing personality; (3) a sensitivity in dealing with persons of different races, religions, cultures, and ideologies; (4) an open, curious mind; (5) quick thinking and good judgment in a crisis; (6) a genuine concern with international affairs; (7) sound scholarship. This especially, because the process of learning is never-ending in the Foreign Service. A diplomat must always keep abreast of the latest developments and trends at home and abroad.

And there is one more thing—robust health. You have to pass a stringent physical examination before you can be appointed.

It is now 37 years that I have been in the Foreign Service and I'm grateful for every one of them. It is a gratification to me that my efforts in life have been devoted not to increasing my wealth and prestige, but to helping my country and the ideals for which my country stands and upon which our civilization rests.

If your child joins the Foreign Service, he can have that splendid feeling, too.

Inflation: Middle Class Catches It

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, I include an article from the Salt Lake Tribune, published in Salt Lake City, Utah, and dated April 13, 1959. The article was written by Paul Ress, Chicago Tribune writer, and captioned "Inflation: Middle Class Catches It."

Mr. Speaker, on March 10 of this year I called to the attention of this body facts pertaining to the budget, the national debt and inflation. At that time I remarked that the Government was having trouble borrowing money, even though it had, in some cases, more than doubled the interest rate it was offering, due to the fear of our people of inflation. I pointed out that, rather than put money in supposedly safe Government bonds, people, during inflationary periods, are more prone to invest in common stocks and real estate, hoping the values thereof would keep pace with the inflation.

Mr. Ress' article, dealing with inflation in France, more than bears out my contention. Mr. Ress points to one French investor who put his money in French Government bonds and saw a $20 investment shrink in value to 22 cents. Meanwhile, another investor—one who had put his money in real estate—saw a $4 investment increase to $5.

Mr. Speaker, it could happen here. Should we continue our present course of wild spending for every crackpot socialistic scheme that comes down the road, we could very easily find ourselves in the same financial predicament.

According to the Bureau of Labor Statistics Index our dollar has dropped in value from 100 cents in 1939 to 48 cents in 1959. Where do we stop? Do we continue our spending spree until our dollar is worth less than 1 penny?

Mr. Speaker, I suggest that we take immediate stock of ourselves and our situation. I suggest that we call a halt to this unnecessary spending and operate as a responsible legislative body—a legislative body responsible to ourselves, our constituents and posterity.

The article follows:

INFLATION: MIDDLE CLASS CATCHES IT

(EDITOR'S NOTE.—Inflation has proved damaging in many countries. In a series of stories, the Chicago Tribune Press Service correspondents in France, Germany, and Italy tell of the effects in those countries. Additional stories will tell of the effects of inflation in the United States.)

(By Paul Ress)

PARIS, April 12.—France suffers from a chronic disease—inflation—and a galloping malady it is, too.

To make matters worse, the country is in the throes of a recession.

Overtime hours, on which poorly paid factory laborers depend to make ends meet, have been sharply cut. Prices in the last 18 months have risen officially 10 percent, in reality 15 percent.

As a former conservative premier, Paul Reynaud, put it, "When wages climb up the staircase, prices take the elevator."

Storeowners have not been hit so badly as other members of the middle class, the most numerous in the country.

Take the case of the thrifty man who bought Government bonds with his savings between World Wars to live on in his old age and has been ruined by inflation.

Roger LeFevre was wounded at Verdun in World War I. Demobilized, he went back to his job of traveling salesman for a soapsuds firm. In the twenties, he put his savings into 3-percent Government bonds. He bought them for 100 francs, or $20 apiece.

"Do you realize what my bonds are quoted at on the stock exchange today?" asked LeFevre, 69.

"Exactly 102 francs, and I mean 102 of these devaluated 1959 francs. Just 22 cents."

As LeFevre says, purchasing power does not lie.

"With my 100 francs in 1922," he said, "I could buy a good readymade suit of clothes. With 100 francs now I can buy 18 cigarettes, not even a full pack of the cheapest brand."

A retired army officer, Charles Armentiere, a tall, blond Fleming from northern France, was more farseeing.

While he was fighting colonial wars in Syria and Indochina, he invested in real estate and gold.

"I bought a piece of property at Viroflay, near Versailles, in 1927. It cost me 20 francs, or $4 for a square meter (10.7 square feet). The land is worth 2,500 francs, or $5, a square meter, now. I haven't gained much, but my investment has not been lost through monetary inflation. As for my gold, those ingots are more solid now than the Rock of Gibraltar."

Men like Colonel Armentiere hedged against inflation by placing their eggs in several baskets and especially by showing no confidence in the government for which they were working or fighting.

Less fortunate citizens, such as the traveling salesman LeFevre, who trusted in his government's word and financial stability, are living on their relatives or scratching out an existence with meager handouts from the state.

Physicians and lawyers continue to thrive, but salesmen and small businessmen feel the pinch, the common people of France are not menaced by a wave of misery, but a feeling of anguish about the future fills their hearts.

"When times are bad, my business booms," said a butcher, Michel LeBlanc.

LeBlanc sells horsemeat, not beef.

Unlike Americans, the French do not turn up their noses at the thought of eating horsemeat. They like it.

But the popularity of horsemeat and LeBlanc's prosperity in these inflationary days result mostly from the low price of the meat.

"I sell a pound of chopped horsemeat for 40 cents and my best cut of horse steak costs 90 cents a pound," said LeBlanc. "You have to pay $1.60 a pound for beef filet. Not many Frenchmen can afford to pay that, and so they line up in my shop for horsemeat."

Mme. Eugenie Simonnet, who owns a grocery next door to LeBlanc's shop, heard him talking.

"Your business may be good, but mine has been getting worse every month for over a year," she said. "My customers have less to spend. I have had to increase my prices, and that, too, slows business.

"See that sign on the wall?"

She was pointing to a plaque warning that the grocery does not give credit. Every good store posts that sign prominently. French shopkeepers have an ingrained hostility to the idea of extending credit even to a good customer. But Madame Simonnet lamented:

"Now I have got to grant credit to my customers or I'd have no business at all."

It Isn't Funny Any More

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. JENSEN. Mr. Speaker, on April 13, 1959, I inserted in the CONGRESSIONAL RECORD a letter I received from Westinghouse, who recently lost an order for a huge generator for the Tennessee Valley Authority.

General Electric and Westinghouse were underbid to the tune of about 33⅓ percent by a foreign manufacturer.

Ever since our protective tariff walls were shattered, automobiles, building materials, and commodities of most every nature have been pouring into the United States from foreign manufacturers—to the end that it is not funny any more.

Mr. Speaker, one of these fine days, and soon, our own economic condition will force us to think seriously about Americans for a change. The wage earner, the businessman, and the farmer, all have a big stake in this problem.

Please read the following from the American Lumberman:

IT ISN'T FUNNY ANY MORE[1]

Shortly after the war, a few foreign cars started to trickle into the country. Women thought they were cute and the men ad-admired them for other reasons, which Detroit is still trying to analyze.

Only 7,542 foreign cars were imported in 1949, hardly enough to cause a ripple in the Detroit flood. Last year the figure skyrocketed to 383,000 cars and imports exceeded

[1] This editorial is from a four-page article, "Is it Smart to Sell Imports?" in American Lumberman, Apr. 13, 1959.

exports for the first time in automotive history.

Foreign car sales in this country gained 91.5 percent last year while sales of American-made cars declined 26.6 percent. Another 35 percent sales boost is predicted in foreign car sales this year.

The ripple of 1949 has developed into a merchandising storm that has led domestic auto manufacturers to rush competitive small cars into production.

What began as fresh material for the cartoonist and jokester has developed into a competitive threat of no laughing matter.

Many building materials—nails, glass, plywood, small tools, hardboard, and hardware—have followed the same pattern with grave consequences in prospect for the American manufacturer and possibly the dealer.

In 1951, Japan sold 1.5 percent of the American hardwood plywood market; last year, they sold 40 percent in this market. Imports from Japan alone equaled 87 percent of the total domestic output, says the Hardwood Plywood Institute. Imports of hardboard increased 446.2 percent in 1957, according to testimony before the House Ways and Means Committee. In just 1 month, February of this year, 825 cases of mechanics' tools arrived from England, Germany, Japan, Italy, and Finland.

What is the result?

Some manufacturers have frankly cut the quality of some lines of merchandise to meet foreign competition—and lost; others have turned to specialty items that are less competitive; still others have made arrangements to produce certain items abroad for sale in this country at a price.

Some have tried to meet the challenge with better packaging and improved point-of-sale helps. But many manufacturers admit that imports have caused a problem, critical in some cases, that you can help solve.

"Few dealers seem to realize the serious threat they are creating by handling foreign-made products," remarked Thomas B. Andrews, sales manager, Southern Screw Co. "If the trend continues, within 5 years this country will have the greatest unemployment problem in history."

There is no quarrel with fine, quality merchandise from abroad. The hand craftsmanship of European artisans found in knobs, pulls, and escutcheons is unequaled here, domestic hardware manufacturers readily admit. This is high-class merchandise at a high price in contrast to many of today's imports, which are low quality at a low price.

What is happening in building materials is just a small part of the overall import picture. As one sales manager pointed out, it will take a united front up and down the line, with pressure for quotas and heavier duties, to stem the tide.

Caught between an appeal to "buy-and-sell American" and a need to meet competition, the dealer who cares to think about it faces a neat dilemma: What happens when the profit motive collides with patriotism?

J. H. Walsh, merchandising manager for the Lufkin Rule Co., has an answer:

"Our research indicates that the sale of cheaper foreign items does nothing more than cut down on the total sales of profits of those dealers handling these items. Lower prices do not by themselves increase the total market unless the quality is equal to the higher-priced item."

Your decision to sell or reject imports counts just as surely as your vote—or failure to vote—at the polls.

THE EDITORS.

U.S.S. "Bryce Canyon": U.S. Good Will

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. HOSMER. Mr. Speaker, one of the most effective instruments for creating good will abroad for the United States of America has come to be the officers and men of the U.S. Navy. Wherever they travel the wearers of our naval uniform regard gaining respect and friendship for our country as important a part of the duty to which they have devoted themselves as manning and fighting their ships if ever needs be.

Officers and men of the U.S.S. *Bryce Canyon*, homeported at Long Beach, Calif., and now serving in the Philippines, are typical of Americans in uniform doubling as people-to-people ambassadors of goodwill.

Recently, within little more than a week's period, several fine gestures of friendship to the people of the Philippines were signalled from the *Bryce Canyon*.

The ship established a $500 scholarship trust fund to provide a young Filipino of Olongapo with a year's instruction at the Feati Institute of Technology in Manila.

In announcing the scholarship, Capt. E. H. Steinmetz, USN, commanding officer of the destroyer tender, said:

Our officers and men raised the funds to provide an opportunity for a particularly deserving young man of Olongapo to further his education in the industrial arts field. The young man to be selected must have a demonstrated aptitude and capability for training in the industrial arts, must be of excellent character and moral integrity, must be financially unable to continue his education without assistance and must not be directly related to any active or retired U.S. Armed Forces personnel.

The *Bryce Canyon* spends most of her time in port at Subic Bay—

Captain Steinmetz explained—

and in appreciation of the very good relations we enjoy with the Philippine citizens of Olongapo we wanted to offer some needy young man with ability the chance to go to college. We wanted to demonstrate our thanks to his townspeople for their many kindnesses to us.

Just a few days earlier 11 officers and men of the *Bryce Canyon* had gone ashore on a mission of mercy. A 38-year-old woman lay dying in the Olongapo Hospital suffering from severe anemia, jaundice, and a severe gall bladder condition. The hospital had no blood bank and only a limited blood supply. The woman required a pint of blood a day if she was to live.

No call went out, no one requested any blood, but the word leaked back to the *Bryce Canyon* that someone needed help. True to their ship's motto, "Always ready," the crewmen literally rushed to the hospital and gave 11 healthy pints of blood.

Grateful for the blood donations, the doctors served, to the surprise and pleasure of the donors, two rounds of local Philippine Island beer stating: "Beer is the best medicine for rebuilding the red blood corpuscles."

The woman's condition is still uncertain, but the Filipino doctors believe she will live, and the men of the *Bryce Canyon* have given their stamp of approval to Filipino blood-building techniques.

This act, in its turn, was preceded only a few days by a visit of several officers and men of the *Bryce Canyon* to a nearby pigmy village to donate over 150 pounds of food to its people.

The pigmies, called Negritos in the Philippines, are a very poor people and make their livelihood selling bows and arrows as souvenirs in the town of Olongapo. In the days of old they were a savage headhunting tribe but civilization has slowly caught up with and passed them. They live in the hills near the Subic Bay Naval Base, in bamboo huts.

Among the food given the pigmies was dry milk. This was the first time the pigmies had seen milk of such a dry consistency but after shown how to mix the milk they expressed their amazement and gratitude for the food.

Meanwhile, being constructed aboard the *Bryce Canyon* is a giant flagpole for the Philippine Boy Scout camp at Manila, which will be the site of the World Boy Scout Jamboree beginning July 17.

These are but examples of the kind spirit of America exhibited by the many ships and many men of the U.S. Navy in many lands throughout the world. To them all, a grateful Nation says, "Well done, U.S. Navy."

Foreign Aid and the Bolivian Mess

EXTENSION OF REMARKS
OF
HON. DENVER D. HARGIS
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. HARGIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I offer a timely editorial recently penned by Mr. Larry W. Marcellus, who publishes the Fredonia Daily Herald in my home district. I believe Mr. Marcellus' pungent comments deserve the serious attention of this body. I believe they are typical of the growing Midwestern trend toward sharp criticism of present foreign aid policies and the appalling record of wasteful mismanagement chronicled to date:

A shining example of why we don't enjoy a tax decrease comes from South America—Bolivia.

In that tin-producing country, the wage earner really enjoys life. There is a law down there that makes it practically impossible

for any firm to lay an employee off or fire him. Firms have people on their payrolls who turn up only on payday to pick up their salary. Only they know what they do the rest of the week. These companies are, of course, heading straight for brankruptcy. Reports have it that only about 12 percent of the employed earn their wages.

Why all the concessions to the workingman? He was instrumental in getting the present administration into power, and at the expense of the country and industry, the administration is bending over backward to present the wage earner utopia on a silver platter. The country is operating in the red deeper and deeper each month.

This Bolivian situation is of interest to us in the United States because we furnish that Government with about one-third of their national budget according to the Wall Street Journal. We pour good money after bad into a country that has a tremendous flair for mismanaging funds. Apparently there is no bottom to the hole the American taxpayer is trying to fill.

We feel this is indicative of a lot of our foreign aid spending. As was noted in this column yesterday, England is doing a pretty good job of paying back the money we have loaned them. There are a few others who have or are paying back loans, but they are few.

We speak of Bolivia mismanaging funds, but we wonder whether or not we have too many cooks for the stew in Washington. Too many people to pass the buck when a complaint rolls around. We feel we would be better off if we took a few cooks away from the stew pot of foreign aid and limit the responsibility. We might just find it profitable for John Q. Taxpayer. After all, he's the guy who has to foot the bill for the whole affair, and he deserves an even break.

City Grows 900 Percent in 9 Years

EXTENSION OF REMARKS
OF
HON. GEORGE A. KASEM
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. KASEM. Mr. Speaker, I feel that the article below on West Covina, Calif., which is wholly within my district, and includes my home, clearly represents and illustrates the growth we are experiencing. The article, written by Mr. Kimmis Hendrick, appeared in the April 11, 1959, edition of the Christian Science Monitor.

The article points out how in an area with a high growth rate such as this, tax revenue from local sources cannot adequately keep up with the needs for education of the children, and the children will not wait. They keep right on getting older, whether we are able to give them adequate schools immediately or not.

The article follows:

CITY GROWS 900 PERCENT IN 9 YEARS

(By Kimmis Hendrick)

WEST COVINA, CALIF.—The most amazing thing about West Covina's growth is the way most people take it for granted.

They whiz through West Covina on the freeway, turning off maybe at Eastland Shopping Center, one of the city's three major shopping centers, without ever giving a thought to the possibility that this is the fastest growing city in the United States.

California is full of such places. Fields of orange groves yesterday. Cities today.

FREEWAYS SET OFF BOOM

But there's nothing quite like West Covina. It had only 4,499 people in 1950. It has close to 50,000 now. (A figure given for January 1, 1959, is 47,023.)

The real reason this spectacular increase draws fairly little attention is that it has all occurred since the last census. West Covina just isn't on the books as a city. So far as the records go, it could still be the pretty little place some orange ranchers incorporated back in 1923—the postcard kind of place with snow-tipped mountains for backdrop and blossoming trees in the foreground.

What caused the change?

Basically, the California boom itself. Explain that, and you understand West Covina. But the catalyst here was the new San Bernardino Freeway, which links San Gabriel Valley with Los Angeles and practically bisects this city in the process.

When the war ended in Korea and GI's were looking for fine homes, here was a place with enough land so developers could put up $20,000 houses for $14,000. Easing of FHA loan requirements helped.

West Covina mushroomed like some magic city in an animated cartoon moving picture. It became the archetype of California suburbia. Young, chockful of children. Brimming with future. Comfort for all kinds of people—wage earners, professional men, working wives. West Covina's average family income of $8,000 a year represents industry and commerce, teaching, public relations, the law—just about everything.

Here comes to focus one of the most typical facets of the California boom—the classlessness of society. Karl Marx missed the point. In the industrial revolution as it culminated in California's astonishing growth, everybody emerged as a real or a potential capitalist.

If West Covina folks were to stage a revolt of any kind, it would be against high taxes. This revolt is in the making. The rate here is extremely high, but it's due to the fact that there are so many youngsters that the city has had to build a big school system practically from scratch.

What is happening here, however, doesn't sound like the rumblings of coming rebellion. It sounds like the enthusiasm of developing civic pride.

In much of California's rapid growth, a missing ingredient has been community feeling. How do you get it when everybody is a newcomer? Loyalties stay in Indiana and Oklahoma. Los Angeles furnishes the exaggerated example—so spread out and so new, with enterprising citizens often too enterprising to be civic minded, that the question of city pride is still an open one.

Even 2 years ago it couldn't have been said of West Covina that there were signs of cohesive city thinking.

People hadn't settled here to shoulder burdens. They had come here because this was the country. It was spacious, beautiful.

But they could not neglect their children. Children meant schools. Schools meant taxes. Taxes meant public concern.

BUILDING FOR TEENS

One sign of the way things are going is the West Covina Teen Kan Teen Foundation, Inc. Sparked by a local industrialist, the project is putting up a youth center to be run by the teenagers themselves. The $50,000 structure, planned for completion this year, will be paid for by donations, owned by the city, and operated as a growing-by-leaps-and-bounds evidence of the community's care for its boys and girls.

Then there is the new vigor of the West Covina Chamber of Commerce, not only in rousing people here to the city's opportunities, but in beginning to tell the story nationally that this is a growing market of substantial importance to American enterprise.

Politically, things are changing. The days when land-development interests controlled the city council are giving way to broader representation. "There is a strong growth toward good government," one prominent citizen remarked.

Problems? Smog is one of them. It rolls this way from Los Angeles as inexorably as the heavy freeway traffic. By the same token, West Covina people realize that they are partly responsible. It is beginning to be said here, as in other cities around, that the job now is to begin to speak up, loudly and insistently, to demand and support remedial measures.

Soviet Stand on Germany

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. BOSCH. Mr. Speaker, with each passing day, I wonder how long we can continue to deal with a nation that heaps one lie on top of another, year in and year out. I, of course, refer to Soviet Russia.

Under leave to extend my remarks, I include a letter which appeared in the New York Times of April 18, 1959, which gives proof of another lie uttered by Nikita Khrushchev when he stated on March 7, 1959, that the Soviet Union had always been for a united Germany:

SOVIET STAND ON GERMANY—KHRUSHCHEV REMARK ON UNIFICATION DECLARED CONTRADICTED BY RECORD

To the EDITOR OF THE NEW YORK TIMES:

The New York Times of March 28 carried an interesting report from its Moscow correspondent Osgood Caruthers. He reported a speech Mr. Khrushchev had made on March 7 at Leipzig which was kept secret by the Soviet Government until March 27, when it was made public in Moscow.

In his Leipzig speech, Mr. Khrushchev declared that the Soviet Union had "always been for a united Germany." Mr. Khrushchev also asserted that the Soviet Government and especially Stalin had "persistently and consistently" advocated the idea of German unity.

Mr. Khrushchev knows how short the memory of the people is or he would never have made this statement, which I consider the most blatant lie he has ever told an audience. What is really astonishing is not the fact that he lied to the completely uninformed people of Soviet-controlled Germany, but that he dared release the lie to the free world, which knows better.

What are the facts? What does the record show? Did Stalin really persistently and consistently advocate the idea of German unity?

SECRETARY EDEN'S REPORT

Sir Winston Churchill in the third volume of his history of the Second World War reproduces on page 628 a report from his then Foreign Secretary, Anthony Eden, dated January 5, 1942. I quote:

"At my first conversation with M. Stalin and M. Molotov on December 16 (1941), M. Stalin set out in some detail what he considered should be the postwar territorial

frontiers in Europe, and in particular his ideas regarding the treatment of Germany. He proposed the restoration of Austria as an independent state, the detachment of the Rhineland from Prussia as an independent state or a protectorate and, possibly, the constitution of an independent state of Bavaria. He also proposed that East Prussia should be transferred to Poland."

In 1955 the Department of State published the Yalta papers, a documentary volume of 1,032 pages which obviously too few people have ever read.

Let me quote from the Bohlen minutes of the second plenary meeting, February 5, 1945, 4 p.m., Livadia Palace. (Present: Roosevelt, Churchill, Stalin):

"Marshal Stalin said that in the discussion of Germany he would like to include the following points:

"(1) The question of the dismemberment of Germany. * * * Marshal Stalin inquired whether the three Allies should bring up dismemberment at the time of the presentation of the terms of unconditional surrender. In fact, he added, would it not be wise to add a clause to these terms saying that Germany would be dismembered without going into any details?"

May I express the hope that our Voice of America and other propaganda media made ample use of these facts, giving the lie to Mr. Khrushchev?

JULIUS EPSTEIN.

International Aspects of Education

EXTENSION OF REMARKS
OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. HUDDLESTON. Mr. Speaker, in the March 12 issue of the County Herald, the journal of the Jefferson County (Ala.) Teachers Association, there was published an article which I prepared for this periodical entitled "International Aspects of Education." With the thought that the article might be of interest to the Members of Congress, I am pleased to insert same herewith in the CONGRESSIONAL RECORD:

INTERNATIONAL ASPECTS OF EDUCATION

We tend, so very often, to think about education in terms of the local viewpoint only. When education is mentioned our thoughts run straight to underpaid teachers, to crowded classrooms, to inadequate counseling and guidance for students, to the current American debate between the progressive educationists and the neoorthodox three R's supporters, and the question of whether Johnny and Janie can read. It is all well and good that we should indeed think first in terms of local education, for it is, obviously, on the local front that our efforts in behalf of better educational systems and methods and facilities have the most effect. Or I should say, it is on the city and county and State educational levels that we can most readily tell whether our efforts are having any effect whatsoever.

In any case, it is natural to consider education to be an immediate and intimate concern. What subject is there that receives more comment in the discussion of local affairs than this? Indeed, all of us talk about education and its needs, many of us worry about the problem, and a lot of us even try to do something about it.

Nevertheless, even if it is well and good and natural to think on education from the standpoint of what it means to Birmingham or Graysville or Shades Mountain, to Jefferson or Lamar or Baldwin Counties, or to the State of Alabama, I think we are detracting from the significance of the word if we do not extend our concept and consideration of education to an international scope.

How trite it must seem to you to read that your Congressman says that "the world is growing smaller each day" and that "today's foreigners are tomorrow's neighbors." And yet, how true. Is there anyone who has failed to be awed by the fact that jet planes and, more frightening, intercontinental ballistic missiles have stretched the meaning of "proximity" to include the entire world; distance is now so relative a term that it is measured in minutes and hours and only very rarely still in miles.

"Fly to Atlanta in 31 minutes," invites a local airline office. By the time most of you straighten up your desks at the end of the day, gather up your papers to grade and that complicated old Register to work on, and finally arrive home, the business executive who left Birmingham by plane at 3 p.m. is halfway to Washington. And on Saturday, if you are able to indulge yourselves and sleep 'til noon, do you realiez that the tourist who boarded the jet airliner in New York at 6:30 a.m.—the time you ordinarily have to get up—is now almost able to see the West England shore?

In saying that the world is becoming evermore smaller, we actually should be able to mean that our own private worlds are being enlarged. This brings us rather abruptly to one of the main points I am trying to make: education, as we look at it in and from Alabama, is, like travel, today necessarily considered universal in breadth. What we are doing in our local schools should not be automatically divorced from what the rest of the world is attempting to do in and through its educational institutions.

And yet there arises at this point a rather stinging question. If science and research and advanced knowledge—if education, in its broadest sense—have brought the nations of the world so close together, in the connotation that distance barriers have been broken down, what have science and technical skills and general education done to bring those human beings affected by this collapse of isolating geographical boundaries closer together from a different and more important standpoint?

How ironic it is that in an age when it is proclaimed that the moon is shortly to be visited by man, said man cannot seem to bridge the cultural gap between himself and people of the next hemisphere. How ironic that in an age when the suggestion that we may soon have to deal with Martians is not always made jestingly, Americans cannot not only not deal successfully and peacefully with the Russians who are their earthly enemies, but cannot even understand and deal with their longtime friends and neighbors in Latin America without great difficulty and many unnecessary misunderstandings.

I now proceed to answer part of that stinging question of what is being done in the field of education to narrow the cultural distances that still cause us to be in large measure intellectually confined to our own backyards. I will attempt to give only part of the answer because there is another part, even the most vital part, of the question that you yourselves must provide the answer to, and that is this: whatever we have done and are doing educationally to bring mankind on earth closer together in understanding and mutual appreciation, is it the right thing and have we done enough of it?

Perhaps my giving one answer to the question will enable you to consider more intelligently what your completing answer shall be. It is my hope that this is the case.

What America has done in international education is, quite naturally, largely synonymous with what the U.S. Government has done. By far the largest programs of international educational exchange are supported, totally or in part, by the Federal Government. But as these programs are based on the approval and support of the electorate, the Government's efforts in this field can, without stretching the point excessively, be equated with the efforts of the American people.

It was in connection with President Roosevelt's good neighbor policy with Latin America that the U.S. Government made its first significant commitment in the field of international education. A year after the Convention for the Promotion of Inter-American Cultural Relations had met in Buenos Aires in 1936, the Congress of the United States gave statutory authority for a broad program of exchange of persons betwen the United States and other American Republics to the end of extending scientific, technical, and general cultural relations with these countries.

The Second World War interrupted continuing development of such programs. It was that war, however, which was surely the most singularly shocking factor in our final realization that international cultural and educational exchanges were vitally necessary if peace was to prevail, however shakily, in the world. Thus it was that at the end of the war the U.S. Congress overwhelmingly approved a measure introduced by Senator WILLIAM FULBRIGHT, of Arkansas, to use some of the currencies and credits of other countries acquired by the United States through the sale of surplus property abroad for educational purposes. Two years later, in 1948, the United States Informational and Educational Exchange Act (often called the Smith-Mundt Act) authorized a worldwide program of broad purposes. Its intent was to "enable the Government of the United States to promote a better understanding of the United States in other countries, and to increase the mutual understanding between the people of the United States and the people of other countries," by providing for "an educational service to cooperate with other nations in (a) the interchange of persons, knowledge, and skills; (b) the rendering of technical and other services; and (c) the interchange of developments in the field of education, the arts, and sciences."

In addition, several other acts of Congress have provided for particular and distinctive educational exchanges with specific countries; such agreements exist with Finland and India, for example.

Aside from the international educational exchange programs which are operated mainly under the Fulbright and Smith-Mundt Acts by the Department of State, there are two other principal programs that relate to higher education. One is the program of educational activities of the International Cooperation Administration (ICA) which includes mainly the technical cooperation program authorized by the Mutual Security Act of 1954. The other is the basic program of the U.S. Information Agency (USIA) which is largerly educational in nature and includes distinctly educational pursuits and aids.

There are some programs of international exchange on the secondary school level that are partially supported by the Government and I shall shortly deal with them and raise the question of whether they should receive extended support.

To summarize briefly the differences between the main programs related to higher education in general, the primary objective of the Smith-Mundt and the Fulbright programs is to increase international understanding to understanding abroad of the

United States, its culture, and its foreign policy. This is done by sending American grantees abroad and bringing foreign nationals to this country, keeping this prime objective in mind. The specific educational or technical activities of the individuals involved in this program are of secondary interest.

In the ICA program, in contrast, the primary objective is to increase some specific technical competence abroad with specific ICA-sponsored projects. For example, prior to the building of a dam in Iran using joint American and Iranian funds, U.S. technicians are selected and sent overseas and/or Iranian engineers are brought to this country with the objective of accomplishing a particular technical-educational aim relative to the project.

The USIA has a multipurposed and broad-ranged field of activity. Through their offices located in principal foreign cities, they disseminate general information about the United States to anyone who requests it. Aside from sponsoring regular programs, such as providing public libraries where foreigners can obtain copies of every important American literary work, the USIA cooperates with American teacher-grantees by providing them background information for lectures, films on various aspects of our country, and such free souvenirs as maps of the United States to be distributed. They are also called upon to provide similar information to such study groups, civic organizations, and particular individuals as request them in those areas where there are offices of the Agency. There is no doubt that the USIA activity of supplying millions of dollars worth of American texts to foreign universities and secondary schools markedly affects instruction in these educational institutions, and this is particularly true in the underdeveloped countries.

Under the Fulbright Act of 1946, particular bilateral arrangements were authorized between the United States and individual nations. Made through the executive branch of the Government, these agreements provide for the exchange of persons for educational purposes. By the present time, 39 countries have concluded agreements with the United States to participate in this program. This program also permits granting of scholarships to foreign nationals to study in American-sponsored schools abroad. In the first year of its implemented existence (1948), the act saw an exchange of some 237 persons. This number has increased steadily, with the increased number of bilateral agreements involved, until by 1957 there were some 6,000 participants in the program that year. About one-third of these were Americans who went abroad to study at the university or graduate level, to teach on secondary or university level, to engage in particular research projects, to act as consultants to foreign governments or organizations, or to lecture before general audiences on topics of current interest. The remaining two-thirds of the participants were foreign nationals who engaged generally in the same type activities in this country.

Under the Smith-Mundt Act, which calls for exchange of persons for the same type purpose but promotes more specifically programs sponsored by academic institutions, libraries, nonprofit organizations, and business and industrial organizations, the number of persons participating each year has also grown to about 6,000 in the past few years. Under both the Smith-Mundt Act and the Fulbright Act, over 50,000 persons have participated in this international educational exchange.

The total cost of the two programs has grown to almost $25 million per annum, but it is well to remember that this is in large measure provided by what amounts to interest on wartime loans to foreign nations and by the sale of surplus property in foreign countries claimed by the United States as partial payment of debts owed to our Government by those countries.

There are several other programs carried on by the Government that should be mentioned. One of these is the cultural presentations staff, established by Congress in 1954 at the request of the President, which has undertaken a program to assist cultural and athletic groups with foreign tours. This proved to be such a successful venture that 2 years after the program was set up by Congress on an emergency basis, it was made into a continuing activity by that body in an act approved August 1, 1956. Under the auspices of this program, over 2,500 American artists and athletes have performed in over 90 foreign countries.

This activity, along with special ones like our presentations at the recent World's Fair at Brussels, may not in the strictest sense deal with education. But it does, after all, educate those who view the presentations, of whatever nature, in the ways of American culture and tradition, and does so in a manner that perhaps cannot be equaled in any other way.

One of the most recent developments in the area of educational and cultural exchanges was the recent agreement between our Government and the U.S.S.R. to swap movies, radio, and television broadcasts, and magazines as well as exchange professors and graduate students for a period of 2 years, beginning in January 1958. Other exchanges are to take place between athletic teams and outstanding entertainment groups and artists. The most significant venture on the part of the United States under this agreement is the upcoming merchandise fair our Government is sponsoring in Moscow to show off our outstanding peaceable commodities, commonplace to us but which the average Russian will surely look on in wonder. Who can doubt whether this will make for good propaganda for our Nation in Russia?

In other areas of student exchange outside the Fulbright and Smith-Mundt Acts, the State Department also makes a contribution. Each year for the past several years, the Department has given grants-in-aid to such groups as the American Field Service. This is the largest of 5 privately sponsored organizations that promotes the exchange of students on the high school level. It is this program which perhaps presents the most interesting aspect of international education to you, for foreign exchange students are currently placed in several schools in Birmingham, Jefferson County, and Alabama. Perhaps you know first hand how very much one student from Norway or France or Germany can do to increase your students' interest in that country and to increase even community interest in learning about social and educational practices of foreign countries. Even a spark of such interest, when kindled by an interesting personality in the form of an exchange student, can result in solid friendships and greater mutual appreciation.

And I think I should mention that even a more important result of having exchange students in our high schools is that our young Americans take another look at our own culture and our own institutions in order better to answer the questions put to them by the "foreigner"; they know that for him it is not just an academic question, as is the case when a teacher poses it and already knows the book answer, but an innocent and sincere one that demands a thoughtful reply.

This program of high school student exchanges reached a number of 1,500 participants in 1958. They came from 38 countries. The Government subsidy of this program, in the form of grants-in-aid from the Department of State amounted to $125,000 in that year, a very small sum compared to the amounts spent in connection with exchanges on the university and higher educational levels. I wonder if it is your experience that this program is sufficently worthwhile to be enlarged and to receive greater Government support?

To refer again to the program affecting higher education, a recent survey was made by the U.S. Advisory Commission of Educational Exchange of the views of college presidents whose institutions were involved in student and teacher international exchanges. These men indicated their belief that the program has benefited higher education in several particular ways. One was that the caliber of the foreign scholarship winners to the United States was so superior that it enabled admissions officers to set up proper criteria for admitting other foreign students who wish to study independently. Another was that foreign students make important contributions to academic and community life especially through the interpretation of their cultures to the American people. They further said that presence of foreign students on the campus stimulates among the student body and faculty an increased interest in foreign affairs, and this is particularly true as regards those individuals who do not specialize in foreign languages or international affairs.

That the effect of those who have studied or taught abroad is beneficial to the institution to which an individual returns in the United States is, I think, almost universally true. There can be no question that foreign study is an immense boon to language teachers.

And finally, in most instances, those Americans who go abroad to teach, study, lecture, or engage in research, are generally successful in presenting the American way of life, the American culture, and the American viewpoint.

It will perhaps be of particular interest to you to have the report of a friend of mine recently returned from a year's study in Europe that even regional American cultures and traditions are appreciated by the European student of America. He states that one of the most popular courses taught at the University of Strasbourg, by an American Fulbright professor of English, was on the works of Mark Twain. Thus a greater understanding of America and Americans was gained by analyzing a particular region during a particular period. This should be reassuring to those of us who are concerned lest our friends across the seas think of us in terms of Brooklyn accents and Hollywood riches.

There have, of course, been areas of dissatisfaction with these programs. Foreign students complain sometimes that they have not been able to get the type of education for which they came here. Some have manifested a general inability to adjust appropriately to the American system of education which differs so widely from their own. Likewise, Americans gone abroad to study or teach often find that language barriers and local social customs sometimes make it extremely difficult to become sufficiently acquainted with the local populace to do any educating along the general lines proposed as the main point of the program, that is, the familiarization of foreign friends with the American culture and viewpoint.

One of these difficulties, it might be mentioned here, is the result of our all too meager emphasis on foreign languages in secondary and higher education. It is to be hoped this situation will shortly be ameliorated.

Such then is the general picture of the program of international education currently being carried on by the U.S. Government. It is not by any means the complete picture, but perhaps it will suffice to stir your thoughts and inquiries on the subject. I insist again that it is indeed important that you and I, along with those who are perhaps

not so intimately connected with education, do take time to consider the subject from an international viewpoint.

Those who are today's students are tomorrow's teachers of men; and if there is a student or a potential student in any part of the world who is today denied access to the light of truth, it may well be he who helps bring darkness on the world tomorrow.

What the Recognition of East Germany Would Mean

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. COHELAN. Mr. Speaker, next month formal negotiations on Berlin and on the whole of Germany will begin. I am distressed that there is, as recent surveys have shown, so little understanding of the many and complex elements of this problem. For this reason, I ask that an unusually clear and thorough article by Arthur J. Olsen which appeared in the New York Times, April 19, be reprinted in the RECORD where it will be available for both Members of Congress and interested citizens.

The article follows:

WHAT THE RECOGNITION OF EAST GERMANY WOULD MEAN

(By Arthur J. Olsen)

BONN, GERMANY, April 18.—The cancellation by Nikita S. Khrushchev of his May 27 deadline and his agreement to negotiate on Berlin have obscured the hard fact that the Western allies will be negotiating with the Soviet Union in the coming months under duress.

The Soviet Union demanded last November 27 that the four-power occupation of Berlin be ended and that the Western sectors be turned into a demilitarized free city. This should be accomplished within 6 months, the Soviet note said.

The United States, Britain, and France, whose presence alone sustains 2,200,000 West Berliners against implacable Communist pressure, snapped back that they would not negotiate under duress.

Premier Khrushchev has since backed off from his most arrogant demand, the time ultimatum. Thus the West was able to accept negotiation of the Berlin problem, with the meeting of foreign ministers in Geneva on May 11 to be the first round.

ZERO HOUR

Although the Western allies were able to preserve their self-respect they could not wipe out the realities of the Berlin situation. The clock is still ticking toward the zero hour when Mr. Khrushchev will act to change the status of West Berlin to his liking. What is not known in the West—and very likely not even in the Kremlin—is the calendar date on which zero hour may fall.

During his visit to East Germany last month the Soviet Premier laid out the procedures he proposes to follow if the West refuses to accept a reasonable solution of the Berlin crisis.

The Soviet Union is determined to give Germany a peace treaty that would "settle the remnants of the war," he said. If the West will not go along, and if the West Germany Republic refuses to sign the proposed Soviet treaty, then the pact will be made with the Communist East German regime alone.

The Soviet treaty draft recognizes the German Democratic Republic as a sovereign state with unlimited authority over its territory. Existing limitations on the territorial sovereignty of the East German state would fall away. The exception would be the free city of West Berlin, which the German Democratic Republic would recognize even though it formally claims all Berlin as part of its territory.

This is the heart of the Soviet challenge to the Western presence in Berlin.

SOVIET RESPONSIBILITY

The Soviet Union now holds itself to be, along with the three Western occupation powers, the ultimate authority in Greater Berlin. And it accepts a responsibility to provide the Western powers with access to their sectors of the city by road, rail, air and waterway.

If the Soviet Union made a separate treaty with its East German satellite, it could—and Mr. Khrushchev has promised it would—turn over that responsibility to the East Germans.

In a practical sense this would probably be effected simply by the withdrawal of Soviet control personnel at various checkpoints on the transzonal travel routes. One day there would be only the green-uniformed East German frontier police to stamp documents, check cargoes and wave travelers along their way.

Only in the air corridors, which leap over Soviet or East German control points, would it be difficult to translate a political decision into flesh and blood reality.

AIR CONTROL

East German officials have hinted at a solution of their potential air control problem. They would demand that aircraft making the flight between West Germany and Berlin make an interim stop at Madgeburg 40 miles inside the Soviet zone frontier. There East German sovereignty would be exercised by a check of passengers and cargo moving in or out of West Berlin, an enclave which would still be beyond their reach.

For most West Germans and persons other than allied government personnel, the change in regime would not make an immediate difference. All nonofficial traffic to and from West Berlin has been controlled by East German personnel for the past 10 years.

There would be one drastic change, however, if the East Germans managed to secure control of air traffic. Nearly 3,000 refugees, persons technically guilty of crime, complete their escape from East Germany by air every week. Moreover, thousands of West Germans—those on the Communist "wanted" list—would be deprived of their only secure means of entering or leaving Berlin.

At the moment the East German policemen stepped into the Soviet's huts perched at all zonal crossing points the United States, British, and French Governments would reach the hour of decision.

They could ignore the change and meet force with force if necessary. They could bow to the threat of force and fall back on a new airlift—assuming Soviet fighters let planes come through—while the issue was submitted to diplomacy.

Or they could instruct their official personnel to submit themselves and their vehicles to East German surveillance.

But this decision would mean de facto recognition of a sovereign East German state. When disputes arose over interpretations of access rules, Western plenipotentiaries would have to sit down with East German officials and negotiate a solution as equal parties.

If the Western allies chose to disregard the sweeping political consequences of recognizing the East German regime, they might be able to negotiate agreements for more or less unhindered access. This would be a dubious attempt because the East Germans have already declared such commodities as explosive and "propaganda materials" to be unacceptable in interzonal traffic.

Such an agreement would postpone but not avoid an eventual showdown on the road to Berlin. The Communist aim is to drive Western forces out of the city. The peace treaty which the Soviets and East Germans would sign would make those forces' continued presence, in the Communist view, illegal.

It is possible, but unlikely, that the Communist powers would seek to correct that allegedly illegal situation by expelling Allied garrisons by force of arms. Western experts believe a policy of slow strangulation would be adopted, conceivably taking years to execute.

The Communists could use control of access routes gradually to cripple Allied communications and obtain control of the West Berlin economy. Vital shipments of industrial goods from the West could be held up on pretexts. The products of West Berlin's big electrical industry could be barred from export as "war materials." Food supplies from the West could be rejected as "unsanitary."

There might never have to be another Berlin blockade to achieve the Soviet objectives. The day might come when the suffering population of West Berlin would ask Western garrisons to depart. Coexistence on East German terms or even total capitulation to Communist pressure would look preferable to slow strangulation.

Long before this melancholy moment the political consequences of the recognition of East Germany would be apparent. In the simplest terms the West would have recognized a permanent Soviet hegemony in Eastern Europe.

The West would have to fashion a new European policy in which many of the present anathemas, such as the confederation of the two German states and military disengagement predicated on a neutralized Germany, would lose their point.

West Germany's firm adherence to the Western camp would be subjected to searching questioning within the country. The satellite populations would have to find other reasons than the United States' encouragement to maintain their rearguard resistance to communization.

Perhaps the great powers could fashion an acceptable new order in Europe after abandonment of the Western policy which has stood since the Potsdam meeting in 1945. Perhaps the Western alliance would crumble, as Chancellor Konrad Adenauer says it would, following capitulation on Berlin.

Certainly there would follow a profound and unforseeable change in Europe. This is the measure of the duress under which Western statesmen will labor as they sit down at the negotiating table in Geneva.

Vital Importance of Informational Media Guarantee Problem

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include a statement by Curtis G. Benjamin, president of the American Book Publishers Council, that I hope will be read by my colleagues who may not be fully informed as to the vital importance

of our informational media guarantee program. The statement follows:

ONE BATTLE WE'RE LOSING AND WHY

(A statement by Curtis G. Benjamin, president, American Book Publishers Council, president, McGraw-Hill Book Co., Inc.)

A country's primary export is its knowledge. Books are primary vehicles of knowledge. That is why books are in the vanguard of the export trade of all the great exporting nations of the world.

The Russians know this. In 1957, the U.S.S.R. printed 30 million books exclusively for export, many in English, and all in the languages of the non-Communist world.[1] In the languages of the Near East alone, they printed and distributed 413,600 books in 1957, as compared with 166,415 in 1956.[2] Russian textbooks on engineering are to be published in India in English under a technical aid agreement between the U.S.S.R. and India signed in Moscow on December 13, 1958—another example of the many international publishing activities directed from Moscow.

The Soviet book export program started seriously about a decade ago. Recently the Russians have started a world trade drive. For them, as for others in the past, books are proving the forerunners of trade. Books are the advance guard of the Soviet economic challenge because, in selling, as every good salesman knows, the first thing a man has to sell is his ideas. It is the same with nations.

Two of the leading exporting nations of the Western World—Britain and West Germany—have proved this principle in their recent history. German book exports in 1938 were $3,700,000, a total attained with the help of a government subsidy which enabled German publishers to sell their books abroad at 25 percent below domestic prices.[3] In 1958, book exports from West Germany alone were $20,500,000.

Britain, which lives by export, has traditionally exported more of its book production than any other nation. Today it exports one book in every two produced. The British have a favorite dictum: "Trade follows the book." They have proved its accuracy.

Where does the United States stand in this race—a race, as it seems, for markets, but underlying that, a race for men's minds? The United States stand poorly. Excluding sales to Canada, only 5 percent (as compared with Britain's 50 percent) of the U.S. book production is exported. This means about $35 million, as compared with West Germany's $20,500,000. It means roughly 20 million books, as compared with the U.S.S.R.'s 30 million.

Soviet Russia is thus exporting about one-and-a-half times as many books as the United States today. Plainly, the export of American books is only a fraction of what it could be and should be. Why?

In expanding book exports, the American publishing industry faces two obstacles which it cannot overcome unaided. One is the comparatively high cost of producing a book in the United States; the other is the shortage of dollar exchange in many countries. The Russians have neither of these problems to solve. Soviet publishing is state-subsidized and exported books are sold for nominal sums paid in the currencies of the importers.

Even in the face of these two severe limitations, U.S. book exports have grown dramatically in the past decade, from approximately $11 million in 1946 to last year's $35 million (both figures excluding Canada). Within its resources, the American publishing industry is playing its part by vigorous cultivation of the overseas markets for books. Several textbook publishers have begun to reprint important textbooks in English in Asia at one-half to one-third of their U.S. costs, thus bringing them within reach of the mass student market in Asian countries. The American paperback has become a symbol of low cost in those countries which have dollars to spend on book imports. But the demand among the key people in other countries for serious technical, scientific, educational, and professional books requires durable, hard-bound and—in terms of the world's average purchasing power—expensive editions which are not needed in the very large quantities that make low-priced paperbacks possible.

The U.S. Government has shown itself not unaware of the national importance of the export of books.

To alleviate the problem of cost, the U.S. Information Agency and the International Cooperation Administration have supplemented commercial sales by placing books in libraries overseas, by donating books to educational institutions and by presenting books to key individuals in the industry and governments of the developing countries of the world. But these programs are small in relation to the need.

To alleviate the problem of exchange, the U.S. Information Agency has administered, since 1949, the informational media guranty (IMG) program. This has enabled publishers of books judged to be worthy of the American way of life to sell their books, for local currency, in countries such as the Philippines, Formosa, Vietnam, Burma, Indonesia, Pakistan, Turkey, Israel, Poland, Yugoslavia, Spain, or Chile, which would otherwise have been unable to buy books because of shortage of exchange.

The IFG program is not a giveaway. Publishers have to sell their books and customers overseas have to want them enough to buy them. IMG merely guarantees that the exporting publisher receives in dollars the payments he collects from his customers in their currency. IMG costs very little in terms of our total foreign military and economic aid and accomplishes much. In 10 years it has enabled the sale of $150 million worth of books, magazines and films to countries of key economic and strategic importance, at a cost of $10 million.

Yet while our defense budget, in a cold war which everyone knows is primarily a battle for men's minds, is freely voted billions of dollars, the budgetarily obscure and modest IMG program has been slashed for the fiscal year 1958–59 and faces another reduction for 1959–60.

The first cut took place last August, when Congress reduced a requested appropriation from $7 million to $2½ million. This money was needed to restore the revolving fund on which IMG operates and which, due to unavoidable loss on the resale of exchange by the U.S. Information Agency in the past 10 years, has shrunk from its original $28 million to $8 million, plus another $10 million in inconvertible currencies.

The result of this cut is that some countries, whose friendship and understanding we seek today and with whom we shall seek to build a trading partnership in future, cannot obtain American books up to the level of their need. There are countries today where schoolteachers, college professors, students, engineers, doctors, businessmen, scholars—book users of every description—need American books and cannot get them. The loss is not only theirs. It is that of the United States to the extent that this country values its influence in the world and believes that this influence is a force for good.

We believe that the frustrations of book exporting are more than a problem for the export departments of American publishers to solve. They are, or should be, a matter of vital concern to all American citizens. Trade is but the visible and outward sign of that which follows the book. The international exchange of books leads directly to a better world understanding, and thus to peace. Books are a country's most basic commodity. Nothing unites the causes of culture and commerce so effectively. A book costs less, lasts longer and penetrates more deeply than any other means of communicating ideas.

The real battlefields of the cold war are not in the missile bases alone. They are in Nigeria, where a professor is setting up a curriculum for a new college. They are in Brazil, where a businessman is wrestling with a personnel problem. They are in Burma, where idealistic young officials are striving to master the principles of public administration. They are in Japan, where a salesman is trying to prove the principles of free enterprise in his daily life. They are in Poland, where a distinguished scholar finds hope in the researches of his colleagues of the West. They are in Indonesia, where 10 students are sharing a dog-eared textbook. They are in the minds of men in every country in the world. Men with problems turn to books. They can turn only to the books that are available.

We appeal to Congress to restore the IMG program to a level which will insure that any country willing to sign an agreement to buy American books, at their full price, with its own currency, should be permitted to do so.

We appeal to Congress to equip the appropriate agencies of the Government to make more books available at low cost or as outright gifts to individuals and institutions in Asia, Africa, and South America who desire and deserve them.

This needed action on the part of Congress involves relatively small expenditure of Federal funds. What American taxpayer would grudge a fraction of a cent of his dollar to place a good book in the hands of a man who needs it? Without it, this is one battle that we shall continue to lose.

Nixon Concentrates on Issues

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Evening Star, Washington, D.C., Friday, April 17, 1959:

NIXON CONCENTRATES ON ISSUES—VICE PRESIDENT SEEN NOW EMPLOYING CALM REASON ON NATION'S PROBLEMS

(By William S. White)

Vice President RICHARD M. NIXON has put away one weapon—his old mastery of producing useful headlines built upon intense controversy within the Nation. He is now brilliantly employing another and a softer tactic, in new circumstances.

He is progressively drawing favorable attention by persuasion and calm reasonableness, where he used to demand it by loud threshing about on the national scene. He is a world away from the NIXON who, only short months ago, led a hotly partisan GOP congressional campaign because this seemed the only possible way to stir the Republican sluggards.

There will be here, however, no nonsense about "new NIXONS" and "old NIXONS." A golfer is not a new golfer if on the 14th hole the lay of the land and of his ball requires him to put the iron back in the back and begin a series of spoon shots.

To watch Mr. NIXON these days, approve him or disapprove him, is to watch a truly virtuoso political performance. The fact that his antennae to public moods and changing public attitudes are extraordinarily sensitive has, of course, long been obvious. What is now striking is the way in which Mr. NIXON—who is, underneath, a curiously lonely and one-man operator—is using those fabulous antennae to master his great problem for 1960.

On all form, on such "gut" facts as his present control of much of the regular GOP organization, he is the distinct favorite for the 1960 presidential nomination. No one, however, is more acutely aware than is Mr. NIXON that Gov. Nelson Rockefeller of New York already poses a real threat and might offer a massive threat before convention time.

The Vice President's vulnerability lies in this: He came up strictly via the route of controversy and the soundest single objection to him is fear he might be a divisive force in the White House. To be thought of as that kind of symbol is to some degree always harmful to a presidential contender. To be seen in that light in 1960, in a perilous world, probably would be fatal to him.

Thus, given this as his basic potential weakness, what is he doing to strengthen his position? He is presenting himself as an evermellowing public figure, and he is doing a good job of it. He is staying out of the partisan fighting that used to occupy him almost endlessly. He is equally staying out of such infighting as there is among the Republicans—who, unlike the Democrats, never forget that their true antagonists are not each other but rather the opposition party.

He is accepting only a very few speaking engagements, and of those all are in markedly high-level, and preferably even academic, surroundings. He is speaking of big matters like the world court; his tone is much the tone of a man who is already President and more interested in a country than in a party. He is saying generous things, even about the Democrats.

These things are meant, for Mr. NIXON, whatever his faults, has no phoniness in him. But they are the kind of remarks he never would have uttered until Mr. Rockefeller began to breath genially down his neck. For the Vice President, until lately, has been, by circumstances, in the rock-'em, sock-'em school of politics. One of his old models in this actually was a man not overfond of him—Harry S. Truman.

But Mr. Nixon now follows the basic techniques, not of Mr. Truman, but of Franklin D. Roosevelt. Mr. Roosevelt maintained power largely by tying himself close to great all-national issues. This, and not merely his famous personality, enabled him to sustain a quite illogical coalition between conservative Southern planters and Detroit auto workers.

Mr. NIXON, in sum, is becoming what he always would have preferred to be, an issue politician as distinguished from a personality politician. His improving place in the polls is probably thus explained.

He has decided that the public is already a bit tired of the old faces—including NIXON'S. And he knows that in any personality contest with Nelson Rockefeller he would be fighting in the wrong field. He is, therefore, moving to force Governor Rockefeller to engage him in quite another field—the field of largely impersonal issues.

The odds are at least even that before it is over Mr. Rockefeller will find himself playing in Mr. NIXON'S ballpark.

Address by Dr. Alvin J. Carlson

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. SCHENCK. Mr. Speaker, the Medical Society of Montgomery County, Ohio, has long been regarded as an outstanding and active professional organization with many forward looking ideas. The members and officers of the Montgomery County Medical Society have always taken a very active interest in all civic matters in our area, throughout the State of Ohio, and the Nation. They have also always used great care in the selection of their members in the various elective offices of their society. Those elected to serve during 1959 are no exception.

Frequently we have heard it said that medical societies have exercised considerable reluctance to consider or approve legislative proposals which in any way seem to infringe upon what some have referred to as their selfish professional interest. Some have said that these medical societies have always been against such legislative proposals and have not been willing to suggest a program they, as professional men and women, could and would support.

Dr. Alvin J. Carlson, M.D., is president of the Montgomery County, Ohio, Medical Society this year. His inaugural address, on January 9, 1959, discusses many questions confronting the medical profession and makes some very pertinent observations on these socioeconomic problems.

In the hope that Dr. Carlson's address will prove both informative and helpful to Members of the Congress and will also be illustrative of the well considered views of at least the president of one important medical society. I ask under unanimous consent, that Dr. Carlson's address be made a part of the CONGRESSIONAL RECORD.

The address follows:

INAUGURAL ADDRESS BY A. J. CARLSON, M.D., JANUARY 9, 1959

My secretary has told me, in answer to my question as to why I have been elected president of the county medical society, that it is "easier to control a fractious horse when you have the bit in his mouth, than when when he is loose in the field." Be that as it may, I am cognizant of the honor and responsibility.

I am sorry that my father could not have lived to be here this evening. If he had, he would have said "Vel, Al, now that you are president, vot are you going to do?" This question has been ringing in my ears for the past several months. In the end I decided to do just what he would have done, and that is to voice my opinion as to the major problems confronting organized medicine and to say how I think we should deal with them.

A year ago my predecessor, Dr. Black, was worried about the possibility that I might have to preside over the wake of the medical society. I have always had a weak spot in my heart for the idea of wakes, though I have never attended one. However, death is the one major requisite for a wake and the medical society is far from dead.

Dr. Black's concern, of course, was in regard to the prospect of socialized medicine. I have never lived under a system of fully socialized medicine, but I, along with most of the rest of the practitioners of today, assume it is bad. This may or may not be a warranted assumption. Further, as I see it, it may be inevitable.

If we consider that socialized medicine is not a good system, and is not inevitable, then we, in organized medicine, are committed to fight it. To do this requires a positive program of study on the shortcomings of our present system, and a positive program toward the alleviation of these shortcomings, because herein lies the major impetus for a change in systems, in my opinion.

It was poor and shortsighted practices on the part of capital and management that gave the impetus to the formation of labor unions. It is probable that poor and shortsighted practices by labor unions will result in other major changes in this field. I hope it will not be because of poor and shortsighted practices by organized medicine that socialized medicine will take over.

Medicine, under the private practice system, with the help of the basic scientists and the public health men, has made the United States one of the healthiest countries in the world. This is because through the years changes have been made in materia medica, methods and techniques. Organized medicine, during this time, has been responsible for some of the changes and has dragged its feet on others.

The horse and buggy type of medicine is gone and in its place is a highly specialized, highly technical, hospital dependent type of practice. This has resulted in a lowering of infant mortality and an increase in average lifespan in this country that equals the best in the world. On the face of it one might think that these facts would be enough argument against changing the system, and many so think.

For my part, however, it seems that this very progress has brought with it problems equal to, or more difficult of reasonable solution, than those with which we started. First, the progress mentioned has resulted in an increase cost of good medical care, quite apart from inflation, that takes it out of the common man's budget. Second, the major effect of this progress has been to change the ratio between births and deaths with the end result that population in general is burgeoning and the ration of people over 65 to the rest of the population is becoming a major socioeconomic and health problem.

In the past the medical armamentarium consisted of poultices, potions, cupping, bleeding and probing, and pregnant women were delivered in the home. This resulted in the death of many patients, mothers and babies, but was relatively cheap. Nowadays we have at our disposal life-saving drugs of so many different types, and new ones are being developed so frequently that a medical textbook is, for practical purposes, out of date when it is printed. These drugs occupy hours of the pharmacists' time to stock and catalog and distribute, and they occupy hours of the nurses' time to administer and record. So much so that the old fashioned patient care by registered nurses must be turned over to a new group, the practical nurses.

Nowadays we have hospitals piped for oxygen, and suction systems; they are wired for radio and recorded music in every room—even elevators and halls. Laboratory and other studies available as aids to the physician are numerous and highly complicated. They require expensive machines and instruments and scientists to run them.

With the use of advanced surgical and medical techniques, advanced medical anesthesiology, and blood banks, bone banks, artery banks, heart-lung pumps, artificial kidneys, etc., we keep people alive today who wouldn't have had a chance in the past.

We literally bring people back from death and we keep people alive who have demonstrated a strong desire to die. All of these achievements and the wherewithal it takes to achieve them are considered good and I am not the one to argue this point, but I do wish to emphasize the expense involved.

We keep people alive very frequently to the age of 70 and 80 and over. Some are vigorous and active and some are mentally or physically crippled. Even if they are vigorous we retire them at 65 with or without pensions. The domiciliary and health care of those older people who are mentally, physically, or financially crippled is a monumental and poorly answered problem now, and what will it be when and if we solve the problem of cancer and degenerative vascular disease?

We have evolved a health and longevity climate in this country that everybody loves and feels he is entitled to the benefits of. We must now in some positive way work out the means for this enjoyment on a private practice basis or people will get it by means which are onerous to us. It is not enough to cry out against something, to ridicule or belittle. Some better solution must be offered.

The record of doctors and of organized medicine in the field of socioeconomic problems relating to health is somewhat spotty. Voluntary prepayment health insurance plans were once decried by spokesmen of the AMA and now we are hanging on voluntary health insurance coat tails to save us from socialized medicine. Doctors cry out against hospital costs and preach efficiency, little realizing that they themselves have created these costs, and as a group could be more efficient.

Organized medicine has opposed third party and closed panel medicine, which has been proposed or instituted by both labor and management for efficiency purposes, because it disturbs the right of the patient to choose his own physician. There is strong opposition among doctors to voluntary service type insurance contracts because it disturbs the right of the physician to set his own fee.

Government attempts to insure medical and hospital care for the over 65 age group are opposed on the basis that it is an entering wedge for socialized medicine. This entering wedge, however, was inserted years ago, and we have not come up with a satisfactory or reasonable counterproposal.

I, for one, am not willing to believe that management, labor and government are proposing or instituting these programs because they wish to change the basic system of medical practice per se, out of spite, so to speak. They are simply trying to get good medical care to their constituents on a more efficient or economical basis. If their solutions are anathema to us then we are obligated to propose methods of achieving the same result on terms that are satisfactory to us. This will not be easy and in my opinion cannot be done by clinging to the status quo. Changes must be made—changes commensurate with the change from horse-and-buggy medicine to the type practiced today.

Voluntary, nonprofit, health insurance, organized medicine's sheet anchor in these stormy seas, is having a tough go of it. It cannot pay the ever increasing cost of today's medical care without raising premiums. This has been done and must be done again until the average person will not be able to pay the premiums. When this happens on any significant scale, private practice as we know it will disappear.

The foregoing brief analysis contains the gist of what I consider to be the major problems facing medicine today in our society and I submit that doctors and organized medicine must be active participants in their solution, rather than bleacher spectators. We must not merely view with alarm.

What then, can the Montgomery County Medical Society propose as a positive program to save private practice of medicine? The following suggestions are made because I believe in the private practice system and would hate to see it fail. They are not all original with me and I am sure they are not the only ones that could be made. They deal with many aspects of the problem and there is much overlapping. The first group has to do with attempts to lower the cost of medical care so that voluntary health insurance can survive, and so that more individuals will be able to pay for their own care.

First, there must be closer liaison between hospital administration, hospital staffs, insurance companies and the medical society on the local level. In Dayton this could be worked out through the now-existing hospital council. In this group the following possibilities would be studied, discussed, and implemented:

I. An ending of domiciliary care in general hospitals. This insurance breaking situation exists for reasons too numerous to mention here, and we all know it. Basically there are reasons related to patients' and relatives' desires, to hospital administration habits and to doctors' convenience.

Patient and relative desires for hospitalization may be cut down by using a form of deductible insurance that requires an initial cash payment by the patient; by having more and better medical coverage of more and better convalescent, rest, and nursing homes; and by having some insurance coverage of a reasonable amount of nonhospital diagnostic workup. Here, also, more home care by doctors of all specialties and the performance of more minor surgery in offices would help.

General hospitals operate full time on the basis of at the most a 6-day week and in some departments less. Hospital charges which must be paid by insurance companies or individuals go on 7 days per week. This results in many expensive, wasted hospital days which could be ended by having hospital diagnostic and treatment services available every day on something more than an emergency basis.

Domiciliary care results from patients having to wait in hospitals because surgery time is not available or because a particular time is not suitable to the surgeon or the referring physician. Real cooperative effort could alleviate this situation. Bacteria, viruses, and cancer cells do not know about Sundays and holidays, and they never heard of the 40-hour week. In their ignorance they work most all the time. Perhaps we should reorganize our defense.

Prehospital consultation in the office and in the home would eliminate many wasted hospital days as recently demonstrated in Allentown, Pa. There are, I am sure, many other areas where this particular type of unnecessary expense to insurance companies and individuals could be reduced significantly.

II. Other subjects which could be explored by representatives of medicine, insurance companies, and hosiptal administrators, I will mention more briefly to save time. But they are items which, if successfully solved, would reduce the cost of medical care.

(a) Study, emphasize, and extend the practice of dividing hospitals into areas of intensive, routine, and ambulatory care. In this way we could save by economically using our present insufficient supply of nurses, as well as by not having to have entire hospitals fitted with very expensive gadgets meant primarily for intensive care.

(b) A thorough-going objective analysis of the economy and efficiency of the installation of highly expensive, highly technical, and only occasionally used equipment in more than one hospital in the area. I refer here to diagnostic and treatment setups used only on a part-time basis and I wonder if the case load to be expected will justify the large expenditure. Analysis and action in this area is to me indicated nationally as well as locally.

(c) The group mentioned above could study the possible saving to be had by popularizing the use by doctors of generic, instead of brand names, for drugs. Economies in inventory and distribution could be had in hospital and other pharmacies by this method. In addition some encouragement could be given to pharmaceutical houses to reduce the extensive and expensive advertising which is mailed to doctors. It is possible that this might reduce the cost of drugs.

(d) A study of our present methods for nurses training and graduate nurse utilization might reveal that savings could be made here. I have in mind the waste expensive specialized training which results when a great number of registered nurses end up as doctors' secretaries or receptionists or who soon become married and leave nursing altogether. Exploration in this field might easily reduce costs.

(e) Finally, in the light of the aforementioned studies, it may appear that more efficient use of the general hospital beds we have would obviate the necessity of building more general hospitals at this time, or in the near future.

III. Still another possibly verboten region in which doctors, by themselves, could reduce the cost of medical care would be in reducing the amount of unnecessary medical and surgical treatment. This would involve a certain amount of doctor self-education and self-policing, as well as education of the public, that it is not necessarily true that a given ache requires a pill, a given droop an operation.

In capsule form there are my ideas on how to combat the ever-rising cost of medical care and any progress we make in this direction will make socialized medicine a more remote possibility. Now, may I direct your attention to another somewhat less specific area where medical society activity should be expanded.

To the extent that doctors and organized medicine take the credit for the marvelous advances in health and longevity enjoyed in this country, they must also accept the responsibility for the problems their advances have created. Pre-eminent among these are the problems of the decreasing ratio of deaths to births, per se, and the specific problems of the over 65-age group, which are many and varied.

To deal with these entities it seems to me we must have more and closer liaison with public health and public welfare agencies. We must have more effective doctor and Montgomery County Medical Society participation in discussion, education and promotion on subjects such as rest and nursing homes, rehabilitation, job placement, recreation, etc., for the aged. Assuredly this participation is not foreign to doctors, but I believe immensely stepped-up action is indicated. More effective promotion of proven public health projects is to me also a logical function of the medical society.

As doctors and as organized medicine, we must eventually go further than this, and I realize it is a touchy subject. To me it is obvious that as the age old controls on human population are being broken down, one after the other, we will eventually end up with uncontrolled population growth. Unless we substitute some other type of control humans will constitute a cancer of the earth as recently expressed by Julian Huxley. The warning signs are with us now in the form

of ever-increasing wasted resources, pollution of water, earth and air, and in the desecration of areas of natural beauty. They can be seen, also in the accelerated conversion of more and more productive land to housing and for industry and transportation.

In each individual's lifetime perhaps little change is noticed, but if we are interested in what kind of a country and world we present to our grandchildren and to their grandchildren, we will start mobilizing on these problems. I do not know how to institute population control, but I feel an answer can and must be found, and organized medicine as an informed non-sectarian group must have a major part in this solution.

To conclude, I have tried to present what I consider to be the major problems confronting us as doctors, as organized medicine and as citizens and I have indicated what I think should be our course. I may be wrong on all counts, but I have tried to be sincere and forthright. To implement any of these thoughts and ideas the work and support of the great majority of the society will be required. To me a medical society of this type is not primarily a scientific organization, but should act as a sounding board for medical opinion on community problems related to health and medical care. To do this adequately more active participation in discussion in this field is needed from every member. The program of society meetings this year has been molded along these lines and I hope you come to each meeting and express your ideas and opinions.

Secretary Herter's Task

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. DEROUNIAN. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial which appeared in the New York Herald Tribune this morning:

HERTER IS URGED TO FOLLOW DULLES' MORAL PRINCIPLES

(By David Lawrence)

WASHINGTON, April 19.—Christian Archibald Herter will be an effective Secretary of State as long as he sticks to the moral principles in world affairs that have guided John Foster Dulles. The moment he succumbs to the insidious tactics of appeasement carried on by various advisers, some of them inside the Government itself and some in the Senate Foreign Relations Committee, the advice he can give President Eisenhower will become less and less valuable.

It is an open secret that the enemies of Mr. Dulles are among those happy over the selection of Christian Herter. They are mistaken in their assumptions, but they believe anybody is bound to be more flexible in their direction than was the outgoing Secretary.

The story of the drive to oust Mr. Dulles is important for the American people to know. It has been carried on for the last 3 years by certain members of the press in Washington, New York, and London and in other European capitals.

The first piece of fiction given wide currency in the press dispatches was that Mr. Dulles played the game alone—that nobody else in the Department of State ever knew what his policies were or were likely to be. This was a species of mischievous gossip which originated with disgruntled partisans—a few foreign service officers whose ideas were not accepted. They fed hostile propaganda to certain press representatives.

But the simple truth is that Secretary Dulles did hold a staff conference every day that he was at his office. Sometimes they lasted the better part of the morning. At least 15 individuals, including all the Deputy Secretaries and assistants and heads of divisions, attended. They were always asked to express their views. Often in their presence the Secretary would pick up the telephone and report to the President on the trend of the discussion. There was always a planning conference before the Secretary left on a trip.

HAD RIGID VIEWPOINT

It is a sweeping misrepresentation to say that John Foster Dulles was a one-man operator and had no regard for teamwork. This was so often repeated that it was accepted even by some disinterested writers. They were misled, too, by the fact that Mr. Dulles relied largerly on his own knowledge of foreign affairs accumulated over a 40-year period, which none of his conferees possessed. He is, of course, a subjective personality and has none of the extrovert in his manner. Hence, in the hearings on Capitol Hill, he was looked upon as a stern individual with a rigid viewpoint. His conferences with foreign diplomats tended to be formal and austere. But this so-called rigidity was to his credit. For he didn't bend with the wind or yield to the pressures of expediency that came from the peace-at-any-price side. He thought only of his country's future—not of personal aggrandizement or applause or popularity.

Mr. Dulles gave to the press more information on foreign policy than any one who ever occupied the post of Secretary of State. He held lengthy press conferences both in this country and when he was broad. He answered all manner of questions. Indeed, he was some times accused of talking too much.

PRECISE IN COMMENTS

Diplomats abroad occasionally resented his comments as cabled across the ocean in brief and fragmentary dispatches in the press. European governments then had to be told to get the full text to see that he didn't say what he had been reported to have said. His legal training caused him to be precise and to respect the precedents of international law.

Christian Herter, on the other hand, got his training in politics. He ran for Congress and was elected five times. He was twice elected Governor of Massachusetts. He has, therefore, a skill and experience in dealing with the public and the press which will redound to his advantage.

How much perspicacity has the new Secretary? Will he be able to see through the propaganda distortions and the crafty statements made to him during the course of diplomatic conversations? It must be remembered that Mr. Herter was recommended by Mr. Dulles for the post of Under Secretary, with the knowledge that it would be training for the promotion if the Secretary retired. The latter definitely planned to resign on reaching his 70th birthday, but President Eisenhower wouldn't let him go at the time. It was Chris Herter who, it was tactitly understood all along, would be the next Secretary of State.

EISENHOWER SMEARED

Mr. Eisenhower has a great deal more background on foreign policy and more knowledge of world affairs today than a sniping press credits him with. The critics have been trying to picture Ike all along as a "sick man" and as a "puppet of Dulles" or a "part-time President." This type of smear has been appearing regularly in the European papers, and most of the correspondents here for foreign newspapers have fallen for it.

Back of all this is a drive to bring about a deal with Moscow—it's the same naivete that has misled profession diplomats in Europe before. It's a most dangerous type of pressure that could easily throw the Western alliance out of balance and give a misculating Khrushchev his chance to emulate Hitler. The new Secretary of State will find out who are his friends and who are his opponents the moment he shows himself aware not only of the Communist game but of the wiles of those in the West, inside and outside government, who unwittingly play the Communist game.

Address by Secretary of Labor John J. Gilhooley

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 15, 1959

Mr. DORN of New York. Mr. Speaker, I should like to call to the attention of my colleagues the address by Assistant Secretary of Labor John J. Gilhooley before the Catholic Men's League of the New York Naval Shipyard, grand ballroom, Waldorf-Astoria Hotel, New York, N.Y.; April 5, 1959:

In one of the local newspapers here, the New York Sunday News, there is a feature of the magazine section that has caught my attention from time to time. I am certain that many of you are familiar with it, and perhaps you find it as interesting as I do. It is called, I believe, New York's Changing Scene, and consists usually of two photographs, set one above the other. In the top picture we are given a view of a certain street in New York—41st Street, perhaps, and Second Avenue—as it looked a generation or two ago. In the second photograph, there is pictured the same location as it looks now, some 50 or 60 years later. One is always struck by the alteration—the changes—that have taken place in the area over the years, and there is pleasure in examining closely the two pictures to note the exact features that have passed with the tide of time, and the things that have remained.

I have often wondered why there is pleasure in such a practice as this, and have come to believe that the past holds great interest for us, at least partially because the pace of the world we live in seldom allows us to look back, constantly urges us forward, whipping us through our lives with headlong speed—so quickly, in fact, that often changes are upon us and beyond us before we can realize that what was once so familiar is now almost as though it had never existed. Thus, the interest of the newspaper feature is at least partly involved with the pleasure of seeing, once again, the long-forgotten, or the half-remembered.

I have said that in our time we are pushed—relentlessly—through the present moment and onward always. Our eyes seem to have time only for the track ahead. Our machines whirl always faster, faster, and we, inside them, are caught up. Our age, in short, when it is not bent on power, concentrates on speed. And you and I, men of the 20th century, must, at least unconsciously, accustom ourselves to this outward pace.

For it is not only our machines which mirror the speed of our existence, but every area of our lives. The world we were all born into is, in one sense, the old world yet—but changed it is, gentlemen, from what it was a few short years ago. To illustrate, let us adopt the technique of the New York

Sunday News feature, and with Hamlet, look first on this picture, and then on that.

The first picture is the world of 1919—40 years ago. A war was just completed—a war fought to end war—and men settled back to enjoy a thousand years of peace. Americans returned to their homeland, took up their lives, married, and looked forward to raising children to live well and do mightily under the banner of freedom they had sustained. Communism was a vague, distant, seemingly temporary disturbance in one of those vast unknown areas of the world—the howl of a wolfpack lost on the Arctic wastes; piercing, but far off and barely discernible in the pleasant summer days of 1919. Europe was remote; Russia, at the extreme edge of Europe, and Asia, except for slow, leisurely ships, was as inaccessible and distant almost as it had been to veterans of another war in 1865.

Look now on the other picture: April 1959. There is no man here who needs the scene drawn. Europe today is next door; Russia, a few houses down the street; Asia, around the corner. The wolf has howled on our own block, and, even more significantly perhaps, has been detected traveling in packs in the Asian and African areas around the corner. Those young boys, sons of the men of that summer in 1919, have had themselves to go out and fight two more wars to end war, and are themselves today hoping for their own sons the thousand years of peace their fathers long ago thought they had bought with their sacrifice.

What now threatens that dream? Many, many things, some large, some small. But we are all agreed, I think, that it is the wolf of Communist subversion, Communist imperialism, which more nearly threatens our children in the streets—that we must deal with these problems, and we must deal with them effectively.

Now we can only deal with the wolf if we deal both with the problem of the wolf outside our very houses, and also with the wolves who threaten the lives of our neighbors around the corner, for wolves are mobile, are they not? and the wolf who is out of sight today may be joined tomorrow with many of his fellows right outside the door.

Now what have we been doing about our global wolves, the Communists?

At home—that is, in the street outside our own house—it seems to me that we have done well. We have recognized that there were—and are—Communist conspirators, we have met them, and, let us not deceive ourselves, we are well on our way toward routing them. But, President Eisenhower is fond of quoting the motto he, himself, chose for NATO: "Eternal vigilance is the price of liberty." And we would be foolish, indeed, if, despite our past victories, we did not keep a watcher at the window as sentry against other wolves at home. And, gentlemen, our sentinel is one of the ablest men we could have—Mr. John Edgar Hoover, of the Federal Bureau of Investigation. Under his leadership America will stand secure at home and resolute in the protection of her children's liberty.

Therefore, in one sector we are doing the job. What of the other sectors? What of the areas around the corner in this shrinking world: Europe, Asia, Africa? Or need we really worry about them? Shall we assume that they will do what we have done, i.e., strengthen their own internal security (as we did)? Why, some may ask, need we be concerned with their problems at all?

This brings us to the central question of American foreign policy today: Do we guard effectively and successfully against the wolves at home, and yet leave the same breed of wolf free to roam the neighborhood? And with jets and H-bombs today's world is all one neighborhood. Or do we help to police the neighborhood, partly because that is a decent way to behave toward your neighbors, and partly because that is the way, the only way in today's close-coupled world, to be really sure that our own homes, our children, are fully and permanently protected.

There are these two alternatives: Either we help our neighbors or we do not. If we do not, we know—deep down we know—that it will not be long before the wolves strike—directly or indirectly—and we know how ill-equipped some of them are to repel the attack. If we do not help them—if we accept this alternative—then we must be prepared to live with a world of wolves. What happens then when we—or our children—go out into the streets?

What is to be done? The answer to this is written boldly in the history of the last dozen years. We have adopted the strategy of forward defense. We placed our first line of defense on the frontiers of freedom. The alternative would have been to make the first line the last ditch—our own shores. We wisely heeded advice such as Gen. Douglas MacArthur gave when he declared the problem is global, and that the problems of one sector of the world must be seen in the light of the problems of other sectors.

You have watched NATO and the Marshall plan save Europe, the richest prize that Stalin ever tried for. Western Europe holds the balance of world industrial power. As long as Western Europe is on the side of the free world, the balance is heavily with us. But if Western Europe should ever go behind the curtain, the balance of industrial power would swing to communism. With the protection and the support of America and her allies, Western Germany has become a bone in the throat of the Communist wolf—at least that is how the head of the pack—Khrushchev—seems to view her.

You have seen aggression checked in Korea, Indochina, and twice on the Strait of Taiwan. You have seen firm action by American and British forces protect the sovereignty of free countries in the Middle East. Eleven years ago the airlift frustrated a Stalinist powerplay for Berlin. Now Mr. Khrushchev is making another play, and President Eisenhower has made our stand plain. We will talk any time about anything, if it will help the cause of a just and honorable peace, but we will not be bullied. We will not be shoved around by anybody, anywhere.

As I say, we made our choice a dozen years ago to adopt a strategy of forward defense—the only alternative to turning the rest of the world over to the Russians. We have stuck by that choice, at the cost of blood and treasure, to be sure, but have thereby checked the outward thrust of communism. We have kept the wolf within his lair.

Because of the firmness of the stand of America and its free world allies, the old Stalinist policies of direct aggression and pressure did not pay off, so the Russians changed their tune. In place of aggressive efforts in Europe and the Far East, they swung their focus toward the developing areas of the world, to the Near East, South Asia, and more recently, Africa and South America.

South America is our neighbor, a land of rapid growth and rich potential. Africa is a tremendous storehouse of untapped resources of every sort. The Middle East holds the oil supply for Europe, without which Europe's prosperity and ability to defend herself would wither away and vanish. South Asia contains both natural resources and people in huge supply. It is the counterbalance to Red China, valuable on the side of freedom, dangerous to us if ever enslaved.

But the Soviet effort toward these developing areas has not been primarily military—they know the other free nations would not stand aside and let them get away with that—but economic and political—they are trying to move in under our guard. It is the old aggressiveness cloaked in a new form—the wolf in sheep's clothing— but we are not deceived.

As Americans with courage and firmness proved equal to the brutal challenge of Joseph Stalin, so we are willing, and with God's help, able to recognize and frustrate the maneuverings of the wily Khrushchev, and his crafty sidekick, Mikoyan.

Our response to the present challenge must continue to have a military side: we must keep our own guard up. For as Sir Winston Churchill, for one, has said, the major deterrent to war in the past has been American striking power. We must have the planes and missiles, the submarines and warheads to check a small attack, or to punish devastatingly a large one. We have both the capacity and determination to keep our military guard high, and I know that you would want us to keep it high. But we must help our neighbors to keep their military guard high, too, for in guarding themselves they help guard us. Therefore, we have set up a system of defense alliances with 42 free nations, and we carry on a program of military assistance which helps them to support the arms which defend us all.

President Eisenhower summed up the importance of military assistance when he said:

"Dollar for dollar, our expenditures * * * will buy more security than far greater additional expenditures for our own forces. * * * Without the strength of our allies our Nation would be turned into an armed camp, and our people subjected to a heavy draft and an annual cost or many billions of dollars above our present military budget."

As to the urgency of the economic challenge, we don't have to do any guessing, we can listen to the words of Nikita Khrushchev himself. This is what he said:

"Economics is the main field in which the peaceful competition of socialism and capitalism is taking place, and we are interested in winning this competition in a historically brief period of time."

You couldn't ask for a much plainer announcement than that.

Gen. Douglas MacArthur years ago put his finger on the basic problem, the big danger in these developing areas when he said that in Asia what the people want most urgently is a little more food, a roof over their heads, adequate clothes on their backs. The Asians must have these before they can turn their eyes and their energies to the defense of freedom. For gentlemen, you cannot eat fredom—nor is the freedom to starve one of the freedoms men will fight for.

That is why the U.S. Government has instituted a program of economic as well as military assistance to these vital areas which are now a prime target for the aggressive ambitions of the Communist conspiracy. Unless the developing nations of the world can make progress toward economic betterment, industrialization and a better life, they will not be able to resist the penetrations and pressures of the agents of Communist imperialism. Therefore, we seek to help them stamp out disease—improve their farms—show them the way to develop industry and commerce, in order that their countries may enjoy the political stability essential to maintaining their independence.

Without such a program of economic development the free world cannot meet the Communist challenge, and all our military dollars will have been spent in vain.

Now you and I do not believe in giveaway programs or "the dole," either at home or abroad. We believe the Lord helps those who help themselves. We know that a giveaway program in the end does not help men—it turns them into parasites.

That is why, in rendering assistance, either military or economic, to these other lands

we make it a point to stress self-help and initiative—the virtues that built a great America, and will keep her great. Except in unusual cases—those where countries are most gravely and directly threatened by communism—the amount contributed by the local people themselves to their defense and development is far greater than the total of all outside assistance.

From time to time we hear criticism of the mutual security program—as the program of military and economic assistance is called—on the grounds that some mistakes have been made in it.

Have there been mistakes? There have. Vice President NIXON put it this way:

"I recognize that there has been waste and inefficiency in our (aid) * * * programs. * * *I have been very critical of that waste and inefficiency. This is a new field for Americans—mistakes are inevitable. We should subject these programs to searching criticism, but for the purpose of improving them rather than to destroy them."

Reasonable men must, I think, agree fully with the Vice President. For in terms of our discussion here, if, in firing at the wolf we find the bullets inadequate, we do not throw away the rifle. We find the proper bullets.

This job is slow, costly, unrelenting in its demands. Its effects are seldom publicized, but when they do come to the surface, we see the kind of brilliant result that can be witnessed today in West Germany.

To repeat: we have done and are doing the job at home. Apart from that task, our weapons are twofold: military assistance and economic assistance. The military program is a holding operation: the economic programs are today the central battleground in the cold war. If we lose that sector, we lose Asia, then Africa, then South America. And then there would be too many wolves for us to fight alone. In short, unless we do this job, the wolves will win, while our bullets rust in our rifles.

Now it is true that the maintenance of all our defense and aid programs taken together does demand sacrifices on the part of our people. But you and I were born free men: free by God's intention as men; free, by God's grace, as Americans.

Will it be said of us in the years to come that we were too weak, too complacent, too selfish, too flabby, to meet the dangers and difficulties of life as free men—that we had neither the brains to understand the threat, nor the human resources, the will to sacrifice needed to meet the challenge?

Will it be said of us—and who will say it but our sons—will it be said of us that we lacked the moral fiber to do what the crises of our time demanded, that we lacked the fortitude, the charity of Christian men?

I do not think so. I think our answer will be that of Father John LaFarge in his recent book called "The American Amen."

Amen: So be it.

"Thus, if sacrifice is demanded of us, amen.

"If other men depend upon us, amen.

"If the wolves put their challenges on this level, and dare us to match—indeed defeat them here—amen.

"A quiet, firm, confident, American amen."

Gentlemen, I am grateful for the opportunity you have given me to share my thoughts with you on one of the major problems of our time. For just as the Soviet challenge is made directly to men like ourselves—individually so, too, it is here that we shall beat them. We shall beat them where they boast themselves strongest—among the workingmen of a country. For workingmen are the backbone of our country.

And—this final unchanging picture I would leave with you—when the wolves try to bend America's backbone, they shall find that here is a vertebrae that will not now—nor ever—break.

Lewis Strauss, Foe of Communism

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. DEROUNIAN. Mr. Speaker, David Lawrence has written a most pertinent editorial on the confirmation of Lewis Strauss as Secretary of Commerce, which appeared in the New York Herald Tribune on April 16. Under leave to extend my remarks I include it in the Appendix of the RECORD for the benefit of my colleagues:

VICTORY FOR REDS IS SEEN IF SENATE REJECTS STRAUSS

(By David Lawrence)

WASHINGTON, April 15.—Communists could gain a big victory in the U.S. Senate if the nomination of Lewis Strauss to be Secretary of Commerce is denied confirmation.

Apparently there is a movement to punish Mr. Strauss not only because he prevented America from abandoning the development of the hydrogen bomb during the Truman administration but because he had the temerity to carry on the fight later which led to the denial of security clearance to J. Robert Oppenheimer, the noted scientist who had advocated delay.

Many who are participating in the movement are unwittingly playing the Communist game. Renewal of antagonism to Mr. Strauss because of his part in attacking security risks in scientific circles was noted this week. In a news article by Edward Gamarekian, a staff reporter of the Washington Post and Times Herald, it is stated that petitions began to be circulated last week protesting the selection of Mr. Strauss as a speaker at the meeting and banquet of the American Physical Society on May 1 in Washington. These petitions were circulated at Cornell University, Columbia University, the Argonne National Laboratory at Lemont, Ill., and the Brookhaven National Laboratory in Upton, Long Island, as well as in the Boston area.

The petition stated that the invitation to Admiral Strauss to speak "gives the public impression that Admiral Strauss has the backing and respect of the scientific community" and that it would be "unfortunate" if the invitation were "construed as American Physical Society support of Admiral Strauss and his attempts to obtain Senate confirmattion of his appointment as Secretary of Commerce."

BASIS OF PROTEST

The newspaper article then goes on to say:

"The individuals who sparked the protest at the Argonne National Laboratory said they objected to Strauss because he had 'deliberately misled every one on such matters as fallout, clean weapons, and weapon testing,' and because he had 'used security regulations as an instrument of political power, particularly in the Oppenheimer case'."

Whatever Admiral Strauss ever said publicly on the subject of weapon tests was based upon the advice of noted scientists known to be loyal to the Government of the United States. Naturally there are differences of opinion among scientists, and in recent years there has been a tendency to exaggerate the ill effects of fallout from bomb tests. But, in any event, those who held the view that there was no present danger in the way the tests were being conducted had as much right to their viewpoint as the critics.

It is regrettable that the Oppenheimer case has to be dragged in once more, but some of the critics of Admiral Strauss evidently want it that way. Their assumption is that the Senators have not read the record in that tragic episode and that the American people are unfamiliar with Oppenheimer's many financial contributions to Communist causes in the past. There is the puzzling fact—which was brought out in the official record—that Oppenheimer continued his regular contributions to Communist organizations even after Stalin took Hitler unto his bosom in the first year of World War II.

OPPENHEIMER LIE RECALLED

Most damaging, however, was Oppenheimer's lie to American Military Intelligence officers who wanted to know the details of a visit by a Russian agent who sought to get secrets from Oppenheimer while he was in charge of the Government's atomic laboratory. It is true that after several months Oppenheimer confessed that he had lied, but this was only after the American Government had established in other ways the case against the Russian.

Usually when a Cabinet officer is up for confirmation by the Senate there is the customary inquiry as to his views on public questions. The feeling has always been that the President has a right to choose Cabinet officers sympathetic to his own policies, irrespective of the views of the political opposition. So it seems strange that any extraneous issues should be interjected into the Strauss case. It is a mystery, too, why there is a protracted delay in the Senate in acting on the Strauss appointment. It looks like an attempt to block it by delay till the end of the present session, when, if not confirmed, the nomination expires.

OTHER OBJECTORS

There are some Senators active in the fight against the confirmation of Mr. Strauss who have their own antipathies—such as are involved in the controversy over Government control of the public utility industry—all of which are unrelated to the friction among the scientists. Some of the scientists, on the other hand, have subtle ways of exerting pressure on the Government and on Congress itself. One of the most active of the scientists on the propaganda front was never called before a certain committee for an investigation of his connections with Communist-front organizations, and the rumors on Capitol Hill are that some Democrats of prominence helped to suppress the inquiry that was planned.

The Communists will be happy if they can just "get Strauss." It is doubtful whether the Senators are aware of the true nature of the underground battle being waged against a loyal American whose courage enabled America to develop the hydrogen bomb as a factor in its deterrent force against the Soviet Union.

State Taxation of Nonresidents

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include

the following statement which I made before the Senate subcommittee conducting hearings on the problems of State taxation of nonresidents:

STATEMENT OF CONGRESSMAN RODINO ON SENATE JOINT RESOLUTIONS 29 AND 67 RELATING TO CONSTITUTIONAL AMENDMENTS ON STATE TAXATION OF NONRESIDENTS

Mr. Chairman, I wish to thank the subcommittee for permitting me to make this statement concerning the problems covered by Senate Joint Resolutions 29 and 67 prohibiting or limiting the States in the taxing of incomes of nonresidents. Being a Representative in Congress from New Jersey, I am intimately and deeply concerned with this taxing problem. My own feeling in the matter results from the present discriminatory practice of New York in its taxation of New Jersey residents.

As you doubtless will recall, the legislature of New Jersey in 1957 adopted a resolution, Senate Concurrent Resolution 40, petitioning the Congress of the United States to adopt a constitutional amendment which would prohibit States from taxing the income of nonresidents. As a result of that petition, I sponsored in the 85th Congress House Joint Resolution 497. Simultaneously 12 bills similar to my own were introduced in Congress, principally from Members representing districts in the States of New Jersey and Connecticut. About a month after the legislature of New Jersey petitioned Congress, the State of Connecticut also petitioned the Congress (S.J. Res. 9) asking that the Congress convene a Constitutional Convention for the purpose of amending the Constitution to prohibit States from taxing the income of nonresidents.

At my request, the chairman of the House Committee on the Judiciary caused a preliminary study to be made of the issues involved in this problem. A memorandum, containing the arguments pro and con, was prepared by one of the counsel of the House Committee on the Judiciary in collaboration with the American Law Section of the Library of Congress, and dated February 13, 1958—a year and 2 months ago—which I wish to submit for the subcommittee's record. (Document attached to end of statement.)

To my mind, the most effective way to deal with this problem of discriminatory taxation is a constitutional amendment eliminating the power. However, such a solution would be most difficult to accomplish since 31 States presently tax the in-State incomes of nonresidents and the membership of Congress from those States would be reluctant to go along with such legislation. In addition, the approach would require a two-thirds vote of each House of Congress aand ratification by the legislatures of three-fourths of the States. It is unlikely that the taxing States would ratify the proposed change.

Perhaps it is appropriate at this point to mention that the major concern of the 31 taxing States has not been whether nonresidents should be exempted or given equitable tax deductions but rather how best to protect their own residents from double taxation on out-of-State income.

The authority of a State to impose a taxation on income earned within the State by a nonresident was declared over 40 years ago by the decisions in *Shaffer* v. *Carter* (252 U.S. 37 (1920)) and *Travis* v. *Yale and Towne Mfg. Co.* (252 U.S. 60 (1920)).

Last year, after the preliminary studies were made, it seemed wiser, in view of the obstacles presented by the Constitutional amendment approach, to intensify efforts at the State level for the negotiation with New York for more equitable tax treatment of New Jersey residents.

Presently, a resident of New York may deduct from gross income such items as municipal taxes on his residence property, sales taxes, mortgage and personal loans, medical expenses within specified limits, premiums on hospitalization insurance, and gifts for charitable, religious and benovelent purposes.

A nonresident on the other hand may deduct from his taxable gross income in New York only an amount equal to 10 percent of such gross income or $500 whichever is less. While he may itemize his deductions, he may claim only those expenditures incurred in the production of income in New York, and such items as gifts to charitable, religious and benevolent corporations, if organized or operated under the laws of New York.

From an equitable point it seems to many of us that the nonresident taxpayer should be permitted to claim as deductions not only those expenses incurred arising in New York but also, on an apportionment basis, those deductions ordinarily allowed resident taxpayers.

In an effort to broaden deductions conferences were held among Governors Meyner of New Jersey, Harriman of New York, and Ribicoff of Connecticut.

Among other things, a Commission on Out-of-State Taxation of New Jersey Residents was created under Senate Concurrent Resolution 25 (1957) by the New Jersey Legislatures. Also, a study was made by Mr. Theodore Tannenwald, Jr. for Governor Harriman of New York in which he recommended enlarging certain deductions for out-of-State residents who must pay New York State taxes on personal income.

As disclosed in the newspapers of recent dates, New York did revise its tax laws but the only gain nonresidents received is a change in the flat sum they may claim in lieu of itemized deductions. Under New York's new law, this is raised from $500 to $1,000. The revision will not change the fact that the nonresident will pay considerably more tax than the resident with the same income, despite the fact that the nonresident is ineligible for many of that State's services.

According to latest figures, over 137,000 New Jersey residents working in New York are paying more than $20 million yearly to New York; Connecticut residents pay over 8 million.

When the 86th Congress convened in January, I reintroduced my bills. They are now designated House Joint Resolution 68 and H.R. 4174. House Joint Resolution 68 calls for a constitutional amendment; H.R. 4174 an interstate compact. To date, five methods have been suggested for dealing with the problem:

1. Constitutional amendment proposed by Congress, prohibiting State taxation of nonresident incomes.

2. Constitutional convention to prohibit State taxation of nonresident incomes.

3. An interstate compact permitting uniform tax treatment of all nonresidents through State agreement.

4. A national or uniform reciprocal law not to discriminate between residents and nonresidents in the levying and collection of taxes.

5. Federal preemption through the interstate commerce clause.

The first method enumerated above is the subject matter of the bills now before the subcommittee.

The State of Connecticut has asked for a constitutional convention under the second method of approach. This ostensibly could take the matter out of the hands of Congress and place it before a convention. However, there has not been a constitutional convention in the 169 years of our existence and, besides, 33 States must ask for it before one is in order.

So far as I know, the interstate compact approach was first suggested on June 3, 1958, at a hearing in Trenton, N.J., before the Commission on Out of State Taxation of New Jersey residents. In substance, the compact would grant the States the power to enter into agreements looking toward uniform tax treatment of nonresidents. It may be argued by some that such an approach is unnecessary since the States now have the power to enter into such agreements. While this is doubtless true, I nonetheless feel that a compact arrangement could have salutary effect because it would permit the States to make binding agreements containing penalty and other provisions. In the event of a breach of the agreement by one of the participating States remedies, if it were so provided in the agreement, could be brought in our courts.

The fourth suggested approach concerns a national uniform law. As you know, we have many laws which are not Federal laws in the sense that they are enacted by Congress but are nevertheless national in scope in that they can affect all of the several States. Some of these laws are the Uniform Negotiable Instruments Act, the uniform extradition laws, and the uniform reciprocal enforcement of support laws. These laws come about by the drafting of so-called model acts which contain standard provisions and which are submitted to the States for adoption by the State legislatures and, of course, are binding on all States which adopt them. In the past such laws have been drafted by the Council of State Governments and by the American Law Institute. Certainly, it is within the realm of possibility that these organizations working singly or in conjunction with each other, and with agencies of the Federal Government and/or the Congress, could promulgate a model act for uniform tax treatment of nonresidents with strong enforcement provisions so that the States would be required to give full credence to its provisions.

The fifth suggestion, and one which in my opinion offers the best approach, is a Federal preemption law. Congress has plenary powers over interstate commerce. In some areas it exercises exclusive and absolute control; in others it shares concurrent jurisdiction with the States, and in still other areas it permits the States to occupy the field alone. It is my understanding that Congress under its interstate commerce power could deny to the States the right to tax the incomes of nonresidents where the organizations that employ them are engaged, either in whole or in part, in interstate commerce. It may be that the States should be denied this power of taxation absolutely. It may be that they should be denied it only in certain areas. I feel that this preemption approach merits serious study, looking toward Federal legislation which would restrict the States in this area of taxation so as to guarantee to nonresidents fair and equitable treatment.

As you know, the Supreme Court recently handed down a decision holding, in line with its decision some 40 years earlier, that States may tax the incomes of foreign corporations on activities within the taxing State which are exclusively in furtherance of interstate commerce. (*Northwestern States Portland Cement Co.* v. *Minnesota.*) I have been advised that the Senate Small Business Committee and the House Committee on the Judiciary, among others, have this decision under study.

Mr. Chairman, this problem is not confined to New York, New Jersey, or Connecticut or to any one region of the United States but is national in scope and effect. It affects all 49 States. It affects not only Minnesota in the northwestern part of our country, but it affects Georgia in the South. In recent months, newspapers have carried accounts of difficulties between Maryland and Virginia; Idaho and North Dakota have a similar problem. Pennsylvania and Delaware, as well as New Jersey and the city of

Philadelphia, are also engaged in controversy concerning the taxation of nonresidents.

Mr. Chairman, the unfair and discriminatory actions now being imposed upon some of our citizens simply because their employment requires them to cross State lines must cease. If the States are unwilling to work the problem out at the State level through agreements, compacts, uniform laws, or otherwise, then the Federal Government, through its powers of preemption or by constitutional amendment, should bring about that which the States refuse or are incapable of accomplishing.

ARGUMENTS PRO AND CON ON PROPOSED CONSTITUTIONAL AMENDMENT TO PROHIBIT STATES FROM LEVYING INCOME TAXES ON NONRESIDENTS (H.J. RES. 497, 85TH CONG.)

PRO

In legal theory the income tax is considered to be a levy against the person, not against property or the process which creates the income. (Taxes (1955) 33: 375.) Being a personal tax it should be levied by the State of residence which provides protection and services to its inhabitants and to their property.

It is incorrect to contend that the nonresident receives the same benefits from the taxing State as do residents thereof. The nonresident does not avail himself of schools, hospitals, and kindred services that are afforded in the taxing State.

To require a nonresident to pay a contribution toward the expenses of a State in which he happens to earn money is to require him to pay something which in public policy and according to right and justice he does not owe.

It is also contrary to the theory of State income tax that a tax should be levied on nonresidents in respect of any income they derive from property owned or business conducted in the State which imposes said tax. The tax is justified as a payment for personal benefits which residents of a State derive from the government under which they are domiciled, and should not apply to nonresidents, who must be presumed to be taxed (and are taxed through various other forms of taxation) for such benefits in the State where they live. Any attempt to impose the tax upon income received by nonresidents from property situated, or business carried on, within the State changes the character of the tax and converts it into a payment, not for personal benefits derived by residents, but for benefits of a totally different nature such as business benefits, etc. These objections are not to be interpreted as meaning that a State cannot levy a tax for such benefits, but merely that it should not do so in the form of a personal income tax.

The contributions and services rendered by a multitude of nonresidents to the general business prosperity and productiveness of a State seeking to impose the income tax largely outweigh an expenses of police protection afforded by the latter State.

Only by adoption of a constitutional amendment will it be possible to end once and for all the inequities which result when the taxing State denies to nonresidents the same measure of deductions as it accords to residents. Litigation to remove this inequity having been unsuccessful, the proposed amendment alone can be depended upon to effect a much-needed reform (*Charles Goodwin, Jr.* v. *New York State Tax Commission* ((1955) 146 NYS 2d 172; (1956) 1. N.Y. 2d 680; appeal dismissed (1956) 352 U.S. 805)).

Thus a nonresident earning the same salary as a resident is denied the privilege extended to the latter of claiming deductions for sums contributed to his church, for taxes paid on his residence, for medical expenses or for premiums paid for hospitalization insurance, for interest accruing on mortgages or other evidences of indebtedness, or for capital losses incurred. The nonresident cannot take deductions for any of these outlays for the reason that they do not represent expenditures incurred in the taxing State or borne as part of the cost of earning income therein. As a consequence, a nonresident whose only source of income is his salary earned in the taxing State is compelled to pay a higher tax thereon than a resident of said State receiving the same amount of income.

The need for the proposed amendment is not avoided by suggesting that inequities resulting from the taxation of nonresidents can be eliminated by the uniform levy by all States of income taxes applicable to incomes of both nonresidents and residents. States whose citizens are unjustly treated by the tax laws of neighboring States are under no obligation to submit to dictation by the latter and to emulate the latter in the matter of tax legislation. Moreover, discrimination inflicted upon nonresidents by one State is not to be corrected by the adoption of retaliatory legislation by other States.

Justification of the proposed amendment is not refuted by contending that discriminatory State taxation of the income of nonresidents has been judicially sustained for almost 40 years. The Supreme Court expressed its approval of such practice at a time when State income taxes virtually were a rarity. Upon reconsideration of such discriminatory taxation today, the Court might well be expected to reach a result in harmony with the spirit of the proposed amendment.

By refusing to grant to nonresidents the same measure of deductions which they extend to their own inhabitants the States levying taxes on personal income in effect are erecting discriminatory barriers to the free movement of citizens across State lines which the framers of the Constitution sought to guarantee through the privileges and immunities clause of article 4 of the Constitution. Through discrimination in the measure of deductions, taxing States are making it impossible for out-of-State workers to obtain employment on the same terms of net remuneration as are available to their residents.

CON

Inasmuch as virtually all of the 31 States levying income taxes extend the same to nonresidents, the only beneficiaries of the proposed amendment will be the nonresidents from the minority of States which levy no taxes on personal income. No comparable benefit will accrue to residents of income tax States who work and earn their living in States levying no income tax; for such residents are taxed by the State of their domicile on their entire income from whatever source received.

The proposed amendment is contrary to the spirit of the privileges and immunities clause of article 4 of the Constitution; for it would confer on nonresident employees most of the privileges of residents but exempt them from obligations borne by the latter.

Nonresidents who enjoy the advantages of employment and the receipt of income within a State are morally as well as legally obligated to pay a quid pro quo in the form of a tax on income earned in such State.

In subjecting nonresidents to income taxes the States are applying the same rule as is contained in the Federal income tax law pursuant to which nonresident aliens and foreigners are taxed on income from sources within the United States.

The proposed amendment would adversely affect those States which, by reason of being highly industrialized or constituting financial centers, serve as a source of livelihood for thousands of out-of-State commuters.

Inasmuch as the principal grievance assigned in support of the proposed amendment arises not out of the levy of an income tax on nonresidents but from alleged inequities in the deductions available respectively to residents and nonresidents, it is clear that the remedy sought to be invoked is in excess of that required. Mere amendment of State income tax legislation is primarily needed and this can be achieved through negotiations at the State level, rather than by utilization of the difficult to obtain process of constitutional amendment.

Thus defenses offered in support of this amendment would be eliminated if States taxing the income of nonresidents would permit the latter to claim deductions in the same ratio as their income received in the taxing State bears to their total income received from all sources. Under this statutory change, nonresidents earning their entire income in the taxing State would be eligible to claim all of the deductions hitherto extended only to residents. Moreover, it has been estimated that the States effecting such amendment of their income tax laws would suffer no appreciable loss of revenue.

The taxing States do not levy, as they do in the case of their own residents, on the entire income of nonresidents. It is, therefore, entirely appropriate and equitable for these States to withhold from nonresidents the same measure of deductions as are accorded to residents. The validity of this distinction in the measure of deductions granted has been upheld by the courts (*Chas. Goodwin, Jr.* v. *New York State Tax Commission* ((1955) 146 N.Y.S. 2d 172; (1956) 1 N.Y. 2d 680; appeals dismissed (1956) 352 U.S. 805)).

If State A imposes no tax on the income of its own residents, why should the latter, who carry on their business or earn their livelihood in State B in competition with citizens of State B, be exempt from taxation on income by State B? To erect such exemption into a general rule would result not only to the disadvantage of citizens of State B but would encourage every citizen of State B who desired to excape taxes to transfer his legal residence to a country home in State A.

Irrespective of his place of domicile the owner of income-producing property or the recipient of income within a State has the right to call upon the government of that State for protection of his rights. Accordingly, he is under a corresponding obligation to pay taxes, including income taxes, to defray the cost of such protection.

In seeking to recover revenues lost by adoption of the proposed amendment States might be encouraged to levy novel taxes on business establishments which would have the effect of discouraging them from hiring out-of-State employees.

Of the 31 States levying taxes on personal income all but 2 grant their residents a credit for taxes levied on them as nonresidents by other States. Hence the burden alleged to be produced by multiple taxation is grossly exaggerated.

For almost 40 years collection of State income taxes from nonresidents has been sustained as constitutional (*Travis* v. *Yale and Towne Mfg. Co.* (1920) 252 U.S. 60)). The proposed amendment thus would overturn a mode of taxation that has met the test of time.

Discrimination in the Labor Market

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. CURTIS of Missouri. Mr. Speaker, the following clipping, "Mitchell Says Discrimination Will Lead to Labor

Shortage," appeared in the St. Louis Post-Dispatch of April 15, 1959. The following day there appeared in the same newspaper an editorial "Secretary Mitchell's Good Cause."

Booker T. Washington placed primary emphasis on raising the economic status of his race feeling, I believe, that by doing this there lay the best opportunity for raising its entire social status.

It has been a source of real concern to me that Jim Crowism in the labor field has been soft-pedaled by some of loudest proclaimers of the need for a better social status for our minority groups. I think more emphasis needs to be directed here.

I commend Secretary of Labor Mitchell for his efforts. I am pleased that St. Louis was chosen as one of the first cities in which to establish an advisory council to help the President's Committee on Equal Job Opportunities in Government Contracts. The eight St. Louisans named on this Committee are all outstanding citizens. A good job should be the result. I commend the St. Louis Post-Dispatch for the space given to one news article and the fine editorial comment.

There is more room for improvement in the area of equal job opportunities in the St. Louis area than in many of the cities in the Deep South. Management, labor, Goverment, and private citizens have a big and important job to do both from a human and social standpoint as well as from the standpoint of good economics.

The articles follow:

[From the St. Louis Post-Dispatch, Apr. 15, 1959]

MITCHELL SAYS DISCRIMINATION WILL LEAD TO LABOR SHORTAGE—LABOR SECRETARY SPEAKS HERE—CITES WASTE CAUSED BY REJECTION OF MINORITIES, OLDER WORKERS

The United States faces a critical manpower shortage unless employers stop discriminatory policies that waste a large part of the potential work force, Secretary of Labor James P. Mitchell warned here today.

Mitchell, Vice Chairman of the President's Committee on Government Contracts, spoke at a luncheon sponsored by labor and management at Hotel Sheraton-Jefferson.

He called for a halt on limitations that have been imposed by employers on minority groups, older workers and women. He asked that employees be given training that will permit them to keep up with the industrial age.

MUST ADJUST POLICIES

The employer, Mitchell said, will have to adjust his personnel policies to the changing nature of the work force, just as the worker must be prepared to adjust his skills to the changing nature of his employment.

Mitchell said the employer must be ready to judge each applicant—whether he is over 45 or not, whether he is colored or not—on the individual's ability and qualifications for the job.

"And after he opens premium jobs to minority-group workers, he is going to have to be ready to give them the same kind of training and opportunity that he often reserved in former times for the white male under 45 years of age."

Displaying charts as he discussed the future in terms of production and manpower, Mitchell said the population of the United States was expected to exceed 194 million by 1965, and will need more than $560 billion annually in goods and services.

The population in 1955 was 165 million and the 1955 production of goods and services was $391 billion, he said. The increase in national output by 1965, he pointed out, will be an astonishing 40 percent.

The labor force can be expected to reach the necessary 79 million by 1965, Mitchell said, but the question is whether they will be the highly skilled, highly trained workers that are needed. He foresaw failure unless changes were made.

NO INCREASE IN CRAFTSMEN

Mitchell said it was shocking to note that between 1951 and 1956 there was no increase in skilled craftsmen in the American labor force. Even more shocking, he said, is the lack of interest shown by young people in such occupations.

"Of the 10 million additional workers who will be in the labor force in 1965," he said, "most will be women and older workers, with the remainder being young boys between 14 and 24. There will be almost no change in the number of men in the central working ages between 25 and 44."

Mitchell said the United States was going to have to come to terms with the realities of our economic system and the ideals of our social system.

Joint sponsors of the luncheon were the Chamber of Commerce of Metropolitan St. Louis and the St. Louis Labor Council. This afternoon Mitchell was scheduled to meet with representatives of 40 St. Louis civic organizations.

OVERSEE CLAUSE

The Committee on Government Contracts was established by President Eisenhower to oversee compliance with the nondiscrimination clause in Federal contracts. Chairman is Vice President RICHARD M. NIXON.

Federal agency contract compliance officers from Southwestern States are meeting with committee members. Compliance officers are responsible for seeing to it that workers on Government contracts are not discriminated against because of race, color, creed, or national origin.

ADVISORY COUNCIL

Mitchell announced today the formation of a St. Louis Advisory Council to help the President's Committee in assuring equal job opportunities on Government contract work in the St. Louis area. He named eight members, as follows:

Howard F. Baer, president of A. S. Aloe Co.; Mrs. Irvin Bettman, Jr., civic leader; Joseph Clark, president of the St. Louis Labor Council; the Reverend John Hicks, pastor of Union Memorial Methodist Church; Morton D. May, president of May Department Stores; J. Wesley McAfee, president of Union Electric Co.; William Orthwein, vice president of McDonnell Aircraft Co.; and the Very Reverend Paul C. Reinert, S.J., president of St. Louis University.

Mitchell challenged Congress to take favorable action on Mr. Eisenhower's proposal that a Commission on Equal Job Opportunity Under Government Contracts be established with statutory authority. The present Committee was set up by Executive order.

"Equal opportunity is the will of the American people," Mitchell said. "I'll be interested in seeing what this Democratic-controlled Congress does."

At a breakfast press conference, Mitchell said the Committee had authority to cancel a Government contract if an employer failed to comply but had never done so. The Committee was set up in 1953.

"We have never had to execute a cancellation clause, and I hope we never will," he said. "We have yet to find, on sitting down, an absolute refusal to try to work something out."

"The Committee operates on the theory that its objectives can be accomplished by education and persuasion," he said. He said complaints of discrimination in the St. Louis area had been no heavier, as far as he can tell, than elsewhere.

Secretary Mitchell was asked to comment on the resignation of his fellow Cabinet member, John Foster Dulles. "He is a remarkable man," he said. "It is a great loss."

[From the St. Louis Post-Dispatch, Apr. 16, 1959]

SECRETARY MITCHELL'S GOOD CAUSE

On his St. Louis visit, Secretary of Labor Mitchell addressed himself to a subject in the field of labor relations which will receive inevitably increasing attention. This is the need for the elimination of discriminatory practices in the employment of workers.

The Labor Secretary dealt particularly with the justice of hiring workers without regard for race or color. He is Vice Chairman under Vice President NIXON of the President's Committee on Government Contracts and in the field of such contracts discrimination is most often practiced along racial lines. But he concerned himself also with discrimination based on age, on sex, and membership in minority groups. These arbitrary proscriptions against certain kinds of workers, whatever the basis, are an economic waste, as Mr. Mitchell said.

But it is more than economic waste. It is rank injustice. No one's color, any more than his national origin or his membership in a minority group, should determine where he can work or what he can do. Nor should a worker's sex continue to control employment. Fairness and simple justice require that the test be the worker's ability and capacity to do what is required.

Secretary Mitchell's antidiscrimination travels over the country, like the conferences of civic, religious, educational, and labor leaders he is assembling in Washington, are in the best of causes. They bring the American dream of equal opportunity closer to realization.

France and Fair Trade

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial showing some historical facts of French experiments in price control, from the Wall Street Journal, of April 20:

FOURTEEN CENTS

In France between 1666 and 1730—as John Chamberlain reminds us in his new book, "The Roots of Capitalism"—it took more than 2,000 pages to print the government rules established for the textile industry alone.

For breaking just those regulations governing printed calicos some 16,000 people were either executed or killed in fights with government agents.

In one area of France, on a single occasion, 77 people were sentenced to be hanged for violating various economic regulations, 58 to be broke on the wheel, 631 to be sent to the galleys.

Such were some of the fruits of mercantilism, one form of suffocating economic statism or planned economy. It was a system against which Adam Smith and others in effect rebelled by figuring out that the explosive energies of the private entrepre-

neur, once released, would be far more enrichening to a nation and its citizens than any kind of government paternalism or direction.

Now no reasonable person would contend that we have a merchantilist system in the United States today. Indeed, the economic history of this country has been a triumphant vindication of the theory that the unfettered individual is the only workable engine of affluence.

But as to the direction in which we sometimes seem to be heading, one may well wonder.

We have a farm economy directed by the Government, complete with controls; the farmer can be punished for doing perfectly normal and rational things. To take another area, how many thousand pages does it take to print all the State and Federal regulations hog-tying the railroads? Other businesses are also enmeshed in Government edicts, not least including the crazy-quilt of tax regulations.

Today in Washington there is ominous talk—and even specific bills—that could lead to direct Federal controls on wages and prices. And in California, a man has been jailed for the crime of selling bottles of Alka-Seltzer tablets 14 cents below the State fair-trade price set by the manufacturer.

This last—the application of mercantilism to the distributive system—now threatens on a national scale. The Harris bill before Congress would permit manufacturers of trade-marked products to fix the retail prices of their goods; it would apply to all such goods in interstate commerce and supersede State laws.

In short, this measure is nothing more nor less than a massive assault on price competition in the entire United States. Various Government agencies vigorously oppose it, citing such sensible and obvious points as that price-fixing contradicts the whole idea of a free economy, that the bill would boost the cost of living for consumers and handicap small businesses, and that it is in all probability unconstitutional.

To which might be added the observation that efforts of this kind violate the right of the individual to dispose of his property as he sees fit—and property rights were one of the things for which the Revolution was fought. Compounding the immorality is the fact that violators of this violation of human rights would be subject to punishment.

Yet this monstrosity, or one like it, is believed to have an excellent chance of approval by Congress. And that is the really disturbing thing—that men in this of all countries have succeeded so well in unlearning the plain lessons of history. In this fair trade thing as in so many other forms of Government regulation, they are seeking to smother the very individual energies which have made the Nation prosper.

What they seem chiefly to forget is what both early 18th century France and the man in the California jail in 1959 so clearly attest: To extinguish economic freedom is also to snuff out the fires of political liberty.

A Good Neighbor: Senator Humphrey on Latin America

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. PORTER. Mr. Speaker, at the University of Florida on April 3 of this year the distinguished Senator from Minnesota, the Honorable HUBERT H. HUMPHREY, delivered a speech on Latin America.

It is exceptional. It is a brilliant résumé of the existing problems between the governments of Latin America and the Government of the United States.

The Senator has come to grips with the central issues involved without the cliches and generalities so prevalent in discussions of Latin America.

Under a previous consent, I am including the text of Senator HUMPHREY'S statement in the appendix of the RECORD:

A NEW ERA FOR LATIN AMERICA

(Address prepared for delivery by Senator HUBERT H. HUMPHREY, of Minnesota, University of Florida, Gainesville, Fla., Friday night, April 3, 1959)

Tonight I might have selected as my topic the Berlin crisis, the troubled Middle East or the vexing problem of attempting to control the nuclear arms race. But I have chosen intead to talk about Latin America and U.S. policy toward her Latin American neighbors. Since the end of World War II we have been preoccupied with a series of crises on the periphery of the Communist empire—Greece, Berlin, Korea, Indochina, Suez, Quemoy, Lebanon, and again Berlin. In the meantime, the seemingly less precarious situation in Latin America went almost unnoticed.

It took the demonstrations against Vice President NIXON last spring to explode any remaining illusions about the state of our Latin American relations. The plain truth is that today inter-American relations are in a more critical stage than they have been at any time in the past three decades.

At this point, I would like to pause to pay tribute to the University of Florida, one of the few U.S. universities which has a well-rounded Latin American studies program. Recently, the Hispanic Foundation of the Library of Congress surveyed universities across the country to find out which ones offered Latin American studies. I am told that only eight universities fall into category I, that is, ones which offer a well-staffed, well-rounded course of study about Latin America. The University of Florida is one of these eight. Florida's awareness of the importance of inter-American understanding also has been reflected in the thoughtful and persistent efforts of Senator SMATHERS to bring attention to the realities of our foreign policy in Latin America.

We are now on the threshold of the 69th anniversary of the Organization of American States. It has long been customary at this time of the year to extol pan-American peace, solidarity, and cooperation. Such oratory now would be a gratuitous gesture. It is dangerous to perpetuate comfortable fictions about a bond that has been broken. The first prerequisite of a responsible and effective policy toward Latin America is a willingness to face the facts, however unpleasant they may be.

OUR STAKE IN LATIN AMERICA

There is no disagreement on the importance of cordial, cooperative relations with our 20 sister Republics. Everyone agrees that strategically, ICBM's notwithstanding, Latin America remains one of the key foundations of our defense shield. Politically, close and harmonious relations with the Latin American people, who now number over 180 million, add to the free world's strength in the larger issues of the cold war.

Economically, the American Republics constitute a vital ingredient in our own well-being. The area is second only to Europe as a purchaser of our exports. Twenty-five percent of all our exports go there. In 1957 this meant the sale of $560 million worth of automobiles and parts, of $445 million worth of chemicals, $135 million of medicines, $121 million of edible animal products, and so on across the board of U.S. products. Latin American purchases add up to a lot of jobs for a lot of people in the United States. At the same time, imports from south of the Rio Grande consist of many strategic minerals as well as materials essential to our peacetime industries. U.S. private investments in the area now total over $9 billion, more than in any other region of the world.

Why, then, have relations deteriorated?

CRISIS POLICY

Part of the responsibility lies in our preoccupation with Europe, the Middle East, and Asia. While attention to these vital areas is understandable, the resulting neglect of Latin America cannot be justified. The personal diplomacy of the administration has also tended in the same direction. With all decisionmaking power concentrated in Secretary Dulles, the less precarious situation in Latin America got shoved into the background until it too became a crisis. Up until the recent disturbances, I am told, Foreign Service officers working in Latin America were somehow considered to be occupying second-class positions.

TAKING LATIN AMERICA FOR GRANTED

The good-neighbor policy itself may be partly to blame for the assumption that nothing much could go wrong within our hemisphere. Latin American representatives tried to make their grievances heard through proper channels and at stated conferences. Often their warnings and protests were bitter. But the good-neighbor policy had been so successful in cementing United States-Latin American relations that long after its demise an aura of good will lingered on, hiding the grim realities underneath. The hangover from the good-neighbor policy seems to have created an impression in the United States that the Latin American republics were solidly with us, no matter what we did or did not do.

LATIN-AMERICAN REVOLUTIONS

The attitude of taking Latin America for granted is only part of the growing estrangement between the United States and Latin America. I think that our gravest error has been a misreading of the revolution gripping the region. Some people are prone to dismiss Latin American revolts as mere changes in the palace guard, while others see Communist influence in every upheaval. These stereotypes can be our undoing.

Today, the nations to the south are in the midst of an epic social revolution. We and the Communists have vied with each other in telling people the world over that they no longer have to live out their lives in hopeless misery. The peoples of Latin America took us at our word.

They want an end to semifeudal conditions in which 5 percent of the population owns 80 to 90 percent of the land; in which a handful of nationals and foreigners live in luxury while the majority live in squalor; in which disease strikes down their children, and hunger and ignorance perpetuate their slavery; in which the wealthy minority joins with the army to keep things just as they are.

Many thousands of Latin Americans have risked exile, imprisonment, torture, and death to achieve responsible governments, responsive to the needs of their people. These courageous people usually come from the classes that produce political leadership—students, union leaders, professional and business men. The rash of revolutions that toppled tyrannies in Argentina, Colombia, Venezuela, and Cuba attests to their determination to achieve freedom and bread.

THE LATIN AMERICAN IMAGE OF THE UNITED STATES

In the midst of that upheaval, which we above all other peoples should be able to understand and to sympathize with, the United States has somehow managed to appear callous and indifferent. While we have eagerly sought Latin American support to stop the spread of Communist tyranny, we have demonstrated a peculiar nonchalance toward despotisms of the home-grown variety.

In 1954 Secretary Dulles took time to fly to the ninth Inter-American Conference in Caracas to press for an inter-American declaration against Communist intervention in the Western Hemisphere. That very same year we bestowed the Legion of Merit on Pérez Jiménez then the hated dictator of Venezuela. The incredible citation reads in part:

"To H. E. Marcos Pérez Jiménez, President of the Republic of Venezuela for the exceptional nature of his outstanding accomplishments. His Excellency, as President of the Republic of Venezuela and previously, has demonstrated a spirit of friendship and cooperation with the United States. The sound economic, financial, and foreign investment policies advocated and pursued by his administration have contributed greatly to the economic well-being of his country, and to the rapid development of its tremendous resources. These policies, judiciously combined with a far reaching public works program, have remarkably improved its education, sanitation, transportation, housing, and other important basic facilities."

Shortly after our tribute to Pérez Jiménez, the Archbishop of Caracas dared to denounce the tyrant in a pastoral letter, and thousands of anguished Venezuelans hazarded their lives to get rid of the bloody oppressor upon whom we had lavished praise.

On January 10, 1958—just 13 days before unarmed men, women, and children rose heroically against the brutal Venezuelan dictatorship—the man who had been our Ambassador to Venezuela from 1951 to 1956 wrote from his new post in Turkey to the dictator's savage secret-police chief congratulating him for putting down the first abortive revolt. The letter, on Foreign Service stationery, came to light after the democratic revolution.

These incidents are, unfortunately, not isolated. Our Defense Department, in the middle of the Cuban revolt, decorated the officer who had commanded air raids against the Cuban people. We kept up a stream of armaments to Batista long after it had become apparent that he was using them against his own people, contrary to the terms of our defense agreement.

The Communists, of course, are getting a lot of mileage out of such errors. But we must face up to the fact that our own actions, not Communist propaganda, have created throughout Latin America an image of the United States as a nation selfishly engrossed in defending its own freedoms but heedless of the aspirations of others.

THE ECONOMIC SITUATION IS SERIOUS

U.S. official attitudes with regard to Latin America's economic problems have deepened the estrangement between us.

Our economic attitudes toward Latin America have created the image of the United States are arrogant, paternal, interested primarily in promoting the interests of U.S. investors, and unconcerned for the well-being of ordinary human beings. It is painful to think that the generous impulse of the United States, which first created the idea of technical assistance in Latin America in 1942, now seems so perverted.

As you know, all the American Republics, to a greater or less degree, fall into the category of underdeveloped countries. All are dependent on the expert of one, or at best a few, commodities to earn the foreign exchange to buy vital necessities and to finance economic development.

Any downswing in the world price or demand for their few exports plays havoc with their income. This uncertainty makes development planning exceedingly difficult.

With an average annual per capita income of less than $300, some areas in Latin America are hard pressed to maintain even this low living standard in the face of a rapidly growing population.

Our neighbors have not been sitting on their hands waiting for assistance. Ninety percent of the capital invested in the area is Latin America's own. The reserves accumulated from the sale of raw materials during World War II, made possible a spurt of development in the region. From 1945 to 1953 the average per capita income rose at the rate of 3.3 percent a year, and Mexico, for example, achieved a rate twice as great. After 1952, with reserves depleted and the price and demand for Latin America's principal products on the decline, the accelerated rate of development ground to a halt.

Responsible leaders in Latin America are worried. On the one hand they have populations awakened from centuries of apathy who are demanding a better deal in life. On the other hand, the ubiquitous Communists are there, dangling tempting promises before the eyes of the underprivileged. Democratic leaders in Latin America know that they must produce some tangible results, that they must provide some hope for a better future, if democratic government is to endure.

THE U.S. RESPONSE HAS BEEN AMBIGUOUS

On the question of Latin America's economic development the United States has presented an ambiguous picture. Latin Americans understood and welcomed Secretary Marshall's stirring declaration at Harvard University 12 years ago: "Our policy is directed not against any country or doctrine, but against hunger, poverty, desperation, and chaos." Hunger, poverty, desperation and chaos well described Latin American conditions. And, we encouraged the Latin Americans to look almost exclusively to us for assistance.

We then proceeded to provide billions in aid to Europe and Asia. To Latin American pleas for assistance, we replied with advice that they should look to private investments and private enterprise as the principal channel for their funds. In 1956 Senator SMATHERS proposed an amendment to the Mutual Security Act to provide a special fund for loans for Latin America for health, education and sanitation projects. This proposal met with resistance from the State Department on the grounds that private capital was doing a good enough job. I am happy to say that Congress passed the amendment in spite of State Department resistance.

The frequent reiteration that private capital would meet Latin American requirements insulted and irritated our neighbors. We Americans like our system of free enterprise. It has worked for us, although not in the simon-pure form that some people like to pretend. Latin Americans, on the other hand, have some sour memories of the robber-baron type investments, both domestic and foreign, which we ourselves have long since ceased to tolerate.

In addition to historical differences, the advice ignored the plain fact that private enterprise goes in to make a profit, and will hardly be attracted when the basic sinews of a national economy—such as roads, power and sanitation facilities—are lacking.

Moreover, overdependence in private investment results in a piecemeal approach to economic development as private funds haphazardly move into a mine here and a factory there. Latin Americans point out that in their urgent circumstances they cannot wait for the trickle-down theory to maybe work.

THE U.S. CHANGE OF HEART

It took the violent outbursts against Vice President NIXON to make us conscious of the gravity of the Latin American situation. On March 10 last the Department of State announced a change of heart, as follows:

"Not only must account be taken of the private capital and technical know-how required to create employment for those who today are underemployed or unemployed, but also of the need to create new jobs for an even larger number of workers. In addition to the expansion of industry and agriculture which this implies, very large additional amounts of public funds will be required for facilities which only governments can provide; for example, highways, sanitation facilities, hospitals, and schools."

The recognition that Latin American growing pains differ from ours and our consequent abandonment of inflexible doctrinaire principles should open the way for better inter-American understanding.

Along the new guidelines positive steps are in progress. The administration has finally announced that it will support an Inter-American Development Bank, something the Latin Americans have been urging for years and we have been resisting for years. We have agreed to consult with the Republics before making decisions which could affect their principal exports. We have indicated a willingness to take a fresh look at efforts to deal with instability and fluctuation in the commodity market. We have lent our support to the idea of regional markets within Latin America.

In short, we have recognized the magnitude of Latin America's problem and have agreed to cooperate with our neighbors in finding solutions.

A NINE-POINT PROGRAM FOR IMPROVING LATIN AMERICAN RELATIONS

Latin America, as population zooms, as industrial development spreads, and hope and impatience mingle, is going to be a cauldron of competing political ideologies. We should welcome this development, not fear it.

In no region of the world have we deeper historical traditions to build upon. It was with the Latin American Republics that we first developed the idea of regional cooperation. The bold idea of mutual cooperation to attack disease, illiteracy, and poverty was born within the inter-American family. These are the people who wept unashamedly when Franklin Delano Roosevelt died.

Today in Latin America there are many leaders who understand and admire our democratic system and want to develop something comparable in their own countries. I know of an American who, while attending the inauguration last month of the democratically elected President of Venezuela, was asked on three separate occasions by newly elected Venezuelan congressmen how they could get hold of a copy of the "Jefferson Manual of Rules for the House of Representatives."

Our traditions of individual freedom and concern for ordinary human beings were once the cornerstone of our successful Latin American policy. Now, to Latin Americans, these much admired beliefs seem to stop at the border. While we caution our neighbors about Communist activities and Communist infiltration, we appear peculiarly cold toward the Latin American yearning to achieve genuine civil liberties.

The recent steps taken by the administration to repair our tottering Latin American policy should be applauded. They are steps in the right direction, but they will not be enough if the escalator of history is going faster in the opposite direction. We must replace our massive indifference to Latin

American aspirations with massive cooperation.

The Latin American situation cries out for imaginative, long-range planning, rather than the hurried, patch-up measures after an explosion has occurred.

A coordinated program on the order of the Marshall plan would give the Latin Americans new hope of attaining bread and freedom. The possibilities of such an effort should be explored carefully, not primarily as an anti-Communist stratagem, but because it is good for Latin America and for the United States. We should not be ashamed of our humanitarian tradition. Nor should we be embarrassed if humanitarian and security objectives sometimes coincide in our national policy.

In conclusion, I should like to propose a nine-point program for improving United States-Latin American relations. I believe this program is realistic and workable and in harmony with the best interests of our country and of our 20 sister republics.

First. The United States should increase the volume of its economic aid in support of Latin American efforts to develop diversified and viable economics so they will not be dependent, as they now are, on a few commodities. Requests for loans from the Development Loan Fund and the Export-Import Bank should be dealt with expeditiously and sympathetically. We should cooperate fully with the new Inter-American Development Institution. The proposed corps of technical experts within the institute could help the smaller, inexperienced countries draw up coordinated development plans.

Second. The United States should accelerate and strengthen its program of technical assistance in agriculture, health, education, vocational training, and public administration. The time has come to recapture the original fervor of President Truman's bold new program which was widely hailed in Latin America when it was first announced a decade ago.

Third. The United States should support vigorously the current moves within Latin America to establish regional markets. The elimination of inter-American trade barriers would broaden markets for Latin American products and make low-cost manufacturing feasible, both indispensable prerequisites to diversification and economic growth.

Fourth. The United States should review its trade and tariff policies as they affect imports from Latin America. It is self-defeating for us to provide economic assistance with one hand and take it away with the other by short sighted trade restrictions. If policies designed to strengthen our trade with Latin America cause hardship to any domestic industry, the Government has a responsibility to aid those so affected. (I recently cosponsored an amendment in the Senate to the Area Redevelopment Act (S. 722) to make such aid possible, but unfortunately it did not pass the committee stage.)

Fifth. The United States should give wholehearted support to the health programs under the direction of the Pan American Sanitary Organization. Widespread disease which stalks Latin America is a tremendous economic drain as well as a human tragedy. Investment in health is perhaps the cheapest, most effective investment we can make in the future of the Western Hemisphere.

Sixth. The United States should develop a bold and imaginative program of student and cultural exchange.

We need to reexamine our methods of screening Latin American scholarship recipients. Too frequently the test has been the friendliness of the recipient toward the United States. Young Latin Americans of so-called leftist tendencies have been excluded, when they are often the very ones who would benefit most from the program.

Seventh. The U.S. press, radio, and TV. networks should give wider and better balanced news coverage of Latin American affairs. This, of course, is something our Government can do little about. But it is essential that the American people have a continuous report and interpretation of Latin American developments if they are to understand the magnitude of the problems in that region and what we are asked to support. When news of revolutions and executions dominate our newspapers, it is hard for the American taxpayer to form an understanding of the underlying realities in the 20 American republics, and of our interest in them.

Eighth. The United States should thoroughly reappraise its military assistance program in Latin America. What we have given one nation for hemispheric defense has often provoked demands by another for an equal amount of aid. Great care should be taken not to encourage this type of arms race, which Latin American governments can illafford. We should give greater attention to the coordination of military policy and strategy in the hemisphere. This might well result in a decrease in the requirements of national military establishments.

Further, our military assistance to certain dictatorial governments has raised the question of whose freedom those governments are defending. The use by Batista of U.S. supplied armaments against his own people, contrary to stipulations of our defense treaty, has greatly damaged U.S. prestige throughout Latin America. It makes little sense to speak of hemisphere defense while arming a tyrant who uses weapons to intimidate his own people.

Ninth. The United States should lend its support to the idea of regional arms control. Last year Costa Rica submitted such a plan to the Organization of American States and received nominal support from the U.S. delegation. Our Government should now press for the consideration of the Costa Rican plan or some similar project, at the eleventh inter-American conference to be held at Quito next year.

The quality of our overall policy toward Latin America will be determined not only by what we do, but by how we do it.

Unless we pursue our policies with a genuine interest in the welfare of our fellow human beings, they will do little to heal our wounded inter-American relations. The steps already taken by the Department of State, many of them complete reversals of former policy, will avail us little if they are done reluctantly and only under Latin American pressure.

We must, if we are to recapture the warm bonds of friendship which characterized the best days of the good-neighbor policy, breathe into inter-American cooperation that intangible spirit which then characterized our relations—a deep-rooted conviction that the Western Hemisphere can, indeed it must, be a New World where freedom and opportunity flourish.

Qualities Needed for the Supreme Court

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include an article from the April 10, 1959, number of the Commonweal, in which Dr. Joseph F. Meñez, associate professor of political science at Loyola University and a distinguished constituent, discusses the qualities need in a member of the Supreme Court of the United States and what constitutes judicial temperament. Professor Meñez's longer article entitled "A Brief in Defense of the Supreme Court" will shortly be published by the Northwestern Law Review. His article in the Commonweal follows:

WHOSE JUDICIAL TEMPERAMENT

(By Joseph F. Meñez)

There has hardly been a time in its history when the Supreme Court has not been in the middle of controversy, when some group or other did not want to "reform" or "curb" it. The Court today is under fire. Southerners have revolted because of the desegregation decision; Congressmen believe that the Court is exceeding the 10th amendment and encroaching, as in the Watkins case, they say, on Congress itself; anti-Communists believe the Court is "soft" on communism; the State supreme court justices recently blasted the Court for "judicially legislating"; and President Eisenhower himself has intimated that some recent decisions are hard to understand.

A good deal of the current criticism is concerned with "judicial temperament." According to the critics, the members of the Court lack it. But what does "judicial temperament" mean? What measurement does the President use in appointing a Supreme Court Justice? Is the measurement the same for the Senate in confirming him? Does the public at large, as well as special organizations as different as the American Bar Association, the American Civil Liberties Union, or the U.S. Chamber of Commerce, have a still different measurement?

A further complication is that the appointment must be judged in terms of what one expects the Court's role to be in a democratic society. Should the Court be judicially activist or nonactivist? Should it transfer the standards of the Bill of Rights—now applicable largely to the National Government—to the States as well? Should it restrict the conception of judicial review, in Justice Robert's phrase, to "the laying of the Constitution which is invoked beside the statute which is challenged * * * to decide whether the latter squares with the former" or expand it and assert with Chief Justice Earl Warren that the "beginning of justice is the capacity to generalize and make objective one's private sense of wrong?"

The Constitution does not help, since it says nothing about judicial qualifications, and what might be judicial temperament to one President, or Senate, or generation might not be to another. When, for instance, Louis D. Brandeis' name was before the Senate for confirmation, he was opposed by seven past presidents of the American Bar Association. And, heading a list of 55 distinguished Bostonians in opposition to Brandeis, President Lowell, of Harvard said: "We do not believe that Mr. Brandeis has the judicial temperament and capacity which should be required in a judge of the Supreme Court."

With the exception of his fourth appointee, Charles E. Whittaker, President Eisenhower's appointments to the Court have been harshly dealt with by the Senate Judiciary Committee. Chief Justice Earl Warren was not only accused of having insufficient legal ability to be a Chief Justice but it was suggested that he followed the Marxist line. Justice John Marshall Harlan's confirmation was shamefully delayed because of guilt by association. His grandfather (of the same name) dissented in *Plessy* v. *Ferguson* with the electrifying phrase: "Our Constitution is colorblind." Justice Harlan was attacked in addition, for being a close friend of interna-

tional groups and a political follower of Thomas E. Dewey and his henchmen.

William E. Brennan, Jr., who ascended to the High Court from New Jersey's highest court, ran into a snag when he was asked to explain what committee he had in mind in 1954 and 1955 when he denounced the "barbarism" of some of the investigative hearings. It was also necessary for him to state that his catholicism was not incompatible with his oath of office, despite the fact that he was the sixth Catholic to sit on the Court, two of whom, Taney, and White, were Chief Justices. And Potter Steward, the President's latest appointee, who has a recess appointment "on approval," is expected to meet southern opposition for his ruling on segregation as a circuit judge.

Since the practice is now firmly established that nominees to the Court attend Judiciary Committee hearings, although they have done so only since 1925, it is hoped that these hearings be dignified and fair. Certainly the committee must be chary of abusing its privileges, and it should not tolerate the scandalous politics which characterized the Warren hearings when Senator WILLIAM LANGER, of North Dakota, released unevaluated charges against Mr. Warren to the press.

It might be mentioned, also, that the practice, heavily relied upon by Mr. Eisenhower, of "clearing" the names of nominees with the American Bar Association could lead to a fatal diminution of the appointing power. The bar should, of course, be consulted, but care should be exercised so as to avoid extending it a veto power. As Father Robert Drinan, déan of the Boston College Law School, recently wrote: "The prior approval of the bar association for all judicial appointments would indeed be a treacherous idea to introduce." The bar tends to be conservative, and such a prenatal influence on the nominating power—a power that approximates senatorial courtesy—would concede too much to the bar's own conception of judicial temperament.

How much does prior judicial experience enter into this concept of judicial temperament? Judging from the charges made against Chief Justice Warren and some of the other inexperienced Justices, as well as the introduction in Congress of some proposed amendments to the Constitution spelling out what is meant by prior judicial experience, it would seem a sine qua non. And yet both in logic and practice it is not. Every judge, surely, ought to possess a decent portion of technical craftsmanship; still, a mere possession of it is not sufficient to make a man a great or even an outstanding judge. The law is not always clear, and interpreting it is not always easy. The Court does not decide cases in the same way a pharmacist prepares a remedy.

It was Justice Felix Frankfurter's studied conclusion that the relationship between prior judicial experience and judicial temperament is zero. It is noteworthy that of the 14 Chief Justices only 5 (Jay, Ellsworth, White, Taft, and Vinson) had prior judicial experience, and among the Associate Justices there is a veritable galaxy of the judicial greats similarly devoid of such experience. Would the Court have performed a greater service as a fulcrum in our constitutional system had membership required previous experience? It is unlikely. Chief Justice Taft valued such experience as a measure of judicial temperament as much as anyone, and yet, of the eight appointments he made or influenced personally, the most successful were not those with most prior experience. Similarly, Chief Justice Charles Evans Hughes, in a list of eight outstanding judges, named only two who had prior judicial training.

Though the Court is always described as being liberal or conservative, and the Justices have tended to form blocs, with one or two swingmen, it defies such neat partition. Moreover, these are not blocs in the legislative sense of uniformity of opinion following a caucus. Justices vote as individuals and are fiercely jealous of their independence. To attempt putting them into pigeonholes is risky business; risky, also, is to assume a judge will be consistent, for judges, with considerable more candor than politicians, change their minds.

Thus, Stanley Reed started out as a liberal New Dealer, became a swingman, and ultimately a conservative, while Charles Evans Hughes passed over the same road in the opposite direction. Madison, under Jefferson's prodding, appointed Joseph Story to neutralize John Marshall only to see him captured. Woodrow Wilson appointed McReynolds, who then stood for everything the President abhorred; and Jackson, as a member of the Court, reversed a position he had assumed while Attorney General. Explaining his reversal, he wrote: "If there are other ways of gracefully and good naturedly surrendering former views to a better considered position, I invoke them all."

Judicial temperament has almost as many definitions as there are commentators, but at least, in addition to the importance put on prior judicial experience and technical craftsmanship, it means that the Justice must possess, as Anthony Lewis recently suggested, disinteredness, a breadth of vision, ability to express oneself, and an awareness of tradition. Justice Frankfurter defines it as "largeness of view" in deciding the great issues before the Court. In "The Marble Palace," John Frank understands "judicial temperament" to mean, among other things, that the Justice must possess the qualities of wisdom, judgment, great energy, the quality of creativeness, and the ability to be clear and persuasive in argument.

So, too, must the judge possess courage, for, as James M. Barrie once said, "Courage is the thing. All goes if courage goes." He must also be humane and not apply the law coldbloodedly. Thus Justice Miller, concerned with substantial justice rather than technical considerations, repeatedly asserted: "If this is not due process of law it ought to be." Even if a judge combined all these qualities, however, it would not satisfy Edmond Cahn if the judge is not wholeheartedly committed to the Bill of Rights. Unless the judge, he feels, is passionately "attached to liberty, justice, and equality, at best his contribution will be mediocre. At worst, it may be dangerously corrosive. How a judge uses his personal endowments depends largely on how deeply he cares for freedom and individual dignity."

There is, in short, no primary meaning to the term "judicial temperament." It is a phrase which means pretty much what the users of it want it to mean. It describes neither ability nor promise, nor does one train to achieve it. If it involves anything at all, it involves judgment, and judgment, said Justice Frankfurter, "derives from the totality of man's nature and experience."

World Law—The Bridge Between the Danger and the Dream

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following remarks which I am scheduled to present this evening before the Wilmington, Del. chapter of the United World Federalists:

WORLD LAW—THE BRIDGE BETWEEN THE DANGER AND THE DREAM

Considering the degree and the immediacy of the danger of a thermonuclear world disaster and the apparent remoteness of peace based on world law, it might be appropriate for me to commence my remarks with the words of a hymn. You are probably acquainted with the second verse of "Turn Back O Man, Forswear Thy Foolish Ways," but let me read it to you:

"Earth might be fair and all man glad and wise,
Age after age their tragic emprise rise,
Built while they dream, and in that dreaming weep,
Would man but wake from out his haunted sleep,
Earth might be fair and all men glad and wise."

Hmyns, fellowship, prayer—all these should be utilized in the search for world peace. We remember what St. Paul preached. We know that faith needs works. We wonder, are we smart enough to survive? Is it in fact too late to avert world disaster? The cosmic clock may indeed indicate 5 minutes after 12, not before 12.

I didn't come here tonight to despair, nor did I come here to bedazzle you with the prospect of a world at peace, a peace insured by effective world law.

PRESENT POLICIES PUSH ATOMIC WAR CLOSER

I didn't come to make you wring your hands and gnash your teeth and tear your hair, although I grant that these responses may be entirely defensible in the light of our present situation and of our policies which are every day pushing us closer to atomic war and to the destruction of our civilization.

I didn't come to describe for you the social, economic, and cultural configurations of a world no longer forced to dissipate its resources in a gigantic arms race.

I did come to Wilmington from Washington to attempt to delineate more precisely the danger confronting the world today and the dream—the attainment of which means escape from this danger. I came to counsel against excesses of both despair and hope. If we have decided to climb Mt. Emerest, we do not give up before we start, nor do we start without considerable preparations, preparations which might be hastened if that summit were soon to be the only place on earth that could sustain life.

So it is with the attainment of workable world law. I want to discuss several particular preparations we can make and, I add, must make immediately.

Washington, D.C., sometimes described as a place of protocol, alcohol, and Geritol, has no monopoly on attempts to solve this problem, and certainly we can't do it without the help of Wilmington, Del., Eugene, Oreg., and people in cities and countries everywhere.

A human being is a frail thing. He can easily be killed. Most of us are reluctantly reconciled to our own personal mortality, but we are appalled at the thought that our children may not have a chance to grow up because of our progress in the arts of weapon making. We would like to figure out how to save them.

We must accurately assess the danger. Are we too alarmist? Is there a balance of terror on which we can rely? Can't we take comfort in the age-old belief that for every offensive weapon man has invented, man has soon developed an effective defense?

THE LINES GROW LONGER

The danger, unquestionably, is unprecedentedly great. We have explosives incon-

ceivably more powerful than any we ever imagined possessing. Let me illustrate. If you use a line 2 inches long to represent the explosive force of an 11,000-pound blockbuster chemical bomb, the largest we had in World War II, in order to represent on the same scale a 3-megaton hydrogen bomb—a relatively small thermonuclear device—you would have to draw a line 20 miles long.

Propulsion and guidance systems are improving rapidly. Our experts assured us more than a year ago that we now were at the stage of "nuclear plenty," which means each of three nations has more than twice or three times enough bombs to wipe out all human life. Our military men talk dispassionately about the "overkill" problem.

THREE WAYS OF TRIGGERING WAR

But just because we have them doesn't mean we'll use them, does it? Let's look at the ways an all-out war could be triggered.

First, intentionally. We have, I am told, an increasing number of military men privately advocating preventive war, their reason being that in no other way will we have a chance because of vast Soviet superiority in missiles. Of course, the Soviets are aware of this reasoning. And we realize they may decide to insure that their missiles get the head start.

Second, war could start accidentally. That is, the result of human error. Many fingers are on many triggers and those fingers belong to fallible human beings.

Third, by unauthorized action, as where, without proper authority, a custodian of a weapon decides, for reasons of insanity, venality, idealism or perhaps alcohol, to cause a thermonuclear explosion.

We have laws, customs and mechanical safeguards galore with reference to the use of small arms, but a lot of people get hurt and killed with them every day.

A single atomic explosion in these times of tension would be hard to interpret except as an aggressive act, the precursor of an all-out attack. There would be no wreckage to examine, no witnesses to question, only the necessity to judge instantly whether retaliation was in order. I submit to you that the man who had to make the decision would not be inclined to characterize any mysterious blast as anything but an attack.

Until tensions in the world can be reduced, any accidental or unauthorized explosion is likely to set in motion toward all-out war forces which cannot be stopped.

FANTASTIC SPECULATION

Do I speculate fantastically? I wish I could say I did. Let me read what the Rand Corp. said last July on this subject, this corporation being, as many of you know, in effect the private brains of our Air Force:

"It should be recognized that all-out nuclear war could start in many ways, other than by a premeditated Soviet attack. A local war might become so invested with national interests and prestige that Soviet leaders, if faced with decisive defeat, would choose to counter with an all-out attack. This danger has probably increased because Khrushchev seems less cautious than Stalin, less secure in his grasp of power, yet freer to exercise his diplomacy on a global scale. War might occur because of miscalculation of U.S. intentions; in a period of acute tension, verbal and even military indicators would be difficult to interpret, and the premium on a first strike might well tempt the USSR to launch a pre-emptive attack. War might even begin by accident, triggered by a chance release of weapons, and carried on because both sides were poised in a high state of alert for quick and nearly automatic retaliation. Finally, as just mentioned, we cannot rule out the possibility that the United States, faced with a major Soviet challenge, might sometime be forced to resist militarily, even at the risk of devastation."

Later in the same report, a note of hope, at least as to fallout, was sounded:

"To conclude: Despite many unresolved questions about long-term fallout, it seems to be a sound generalization that long-term radiation problems are a less critical threat to the survival of a population than the central short-term problem, namely, how to protect a substantial fraction of the population from the immediate disaster of a nuclear war."

However, disclosures subsequently indicate that food supplies may be far more critical because of long-term radiation, so perhaps even that vestige of comfort is denied us.

ARE WE SMART ENOUGH TO SURVIVE?

The danger is clear and deadly and immediate, yet the usual reaction, when not entirely due to ignorance, is either an indifferent fatalism or a sappy kind of optimistic incredulity. One attitude is summed up in the words, "Well there's nothing we can do about it," and the other in the words, "Things look tough all right but we'll muddle through again." These attitudes may be entirely adequate from a personal mental hygiene point of view but they are not going to help us survive.

There are many things we can do about this danger and we certainly can't count on muddling through. The question is, Are we smart enough to survive? Are we smart enough to apprehend the danger, to conceive the solution and then to proceed step by step to its fulfillment? I don't know. You don't know. We wonder. We hope. We pray.

What about the dream, the solution, a world under law? It isn't so complex nor is it in itself controversial. We don't have war among the States of our Nation—not any more. We have a Federal system. What is controversial is the feasibility of even trying to attain this sort of system for the world. The usual accusations are that those who want world law are out to weaken our position with respect to the Soviet Union and also that such a system would mean an invasion of our sovereignty with interference in local affairs.

WORLD LAW IS THE SOLUTION FOR OUR WEAPONS CRISIS

Let me now call a few witnesses in support of my proposition that world law is the solution for our weapons crisis.

The President has said so. Last August his Assistant Secretary of State for International Organization Affairs, Francis O. Wilcox, expressed administration policy in these words:

"In this nuclear age, when we are all faced with annihilation, man must continue relentlessly his eternal quest for peace. In this quest I believe that our best hope still lies in the concept of collective security and in taking what steps we can to strengthen the peace machinery of the United Nations."

Sometimes the White House and the Republicans in Congress differ, but apparently not on this point. Consider what Senator STYLES BRIDGES, head of the Republican policy committee, said on the floor of the Senate last July 23:

"But we are confronted today with the awful fact that thermonuclear devices make war a threat of total destruction of the civilized world. We face catastrophe if we allow the world to drift into another world war. We may not be able to escape war in any event, but we have a sacred duty to all mankind to try to find another way out.

"Aside from naked power politics, backed by each nation's armed strength, our only hope lies in developing the power of the community, as presently represented by the United Nations, to deal with the trouble spots that lead to war.

"The United Nations cannot control the actions of the great powers. If they are determined to make war, the United Nations will be powerless to stop them.

"But the great powers drift into war by lining up on opposite sides in the crises that occur in smaller nations. If we give the United Nations power to deal constructively with these events and conditions, we can remove many of the causes which set the great powers against each other, and thereby make world war less likely."

The Senator and I disagree on many issues, but not on this one.

HOW DO WE USE THE WORLD LAW CONCEPT?

What is the program? How do we use the concept of world law to bridge the gap between the danger of war and the dream of peace? The short and general answer is that we educate and discipline ourselves so that our executive and legislative branches proceed to carry out a vigorous public consensus demanding that we proceed to strengthen the United Nations and thus permit general massive disarmament.

The longer and more specific answer has, among others, these lines of action:

1. We must set about at once to consider strengthening the United Nations. Article 109 of the United Nations Charter provides procedures for calling a Charter Review Conference. In 1955 and again in 1957 this Conference was postponed pending more auspicious international circumstances.

The Committee on Arrangements for a United National Charter Review Conference meets this June. It is my hope that the United States at that time will urge the Committee to recommend to the United Nations General Assembly that governments establish national commissions, or instruct national bodies, to undertake studies to determine their position on charter review.

I want to read to you the text of a resolution to be introduced in the Congress this week by myself and several colleagues:

"Whereas the basic purpose of the foreign policy of the United States of America is to protect the freedom of its citizens; and

"Whereas the United States seeks freedom, peace, and prosperity for the peoples of all nations; and

"Whereas the United States has joined with other nations to pursue these goals through the United Nations; and

"Whereas enforceable law has proven to be indispensable to the attainment of these goals and to the peaceful and just settlement of disputes within all civilized communities: Now, therefore, be it

"Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that it should be United States policy to seek, through the United Nations, the development of world law to protect the freedom, peace, and just aspirations of all peoples, to provide for the peaceful settlement of international disputes, and to permit the elimination of national armaments; and be it further

"Resolved, That a copy of this resolution will be sent to the President of the United States, who is hereby requested to initiate studies at the highest level of the changes which should be made in the Charter of the United Nations or in the charters of other international organizations to further the development of world law for the purposes enumerated in this resolution; and, pursuant to this goal; be it further

"Resolved, That the United States Government should urge the United Nations Committee on Arrangements for a United Nations Charter Review Conference, when it meets in June 1959, to recommend to the United Nations General Assembly that governments establish national commissions, or instruct appropriate national bodies, to undertake studies to determine their positions on char-

ter review or revision in order to facilitate fruitful consideration of suitable measures to strengthen the United Nations Charter as an effective legislative, executive, and judicial instrument of world law when a Charter Review Conference is held."

In my opinion the very act of seeking to strengthen the United Nations would lessen tensions among nations today and reduce the likelihood of a war by design or a war triggered by an accidental or unauthorized act.

2. Proposals in the Congress and by the Vice President to increase the power of the World Court should proceed on their own and also as part of United Nations Charter revision studies. Senators HUMPHREY and MORSE, among others, propose to allow the Court to decide whether an issue is domestic or not. The Vice President wants the Court to interpret treaties so as to bind the parties. These would be gigantic steps forward away from war and toward peace.

3. The establishment of a United Nations police force, as urged by both the Congress and the President, could be done by action in the United Nations General Assembly. As presently conceived, it would be only for observation and patrol but if, as has been urged from many quarters, such as organization were used to supervise all armed forces in Berlin, its functions might well, in time, grow into something more formidable and effective.

4. Cessation of atomic testing. It was most encouraging that the Geneva talks were recently resumed. Any kind of an international inspection system would be a significant step forward. A would-be violator would have to consider the impact not only of world opinion, but the opinion of his own people.

5. Massive disarmament as proposed by Sir Philip Noel-Baker and others, on a multilateral basis and with proper safeguards of course, is possible. It is also realistic. The other evening Noel-Baker, the great authority on world disarmament, took violent exception to my using the word "dream" to describe world peace through world law. "The romanticists," he said, "are those persons who believe war can be prevented by an arms race." He went on to point out that no country can defend itself today, no matter how much it spends. You might, for a while, defend an airfield or launching site, but not the people. The cities are vulnerable, naked, defenseless. I agree with him that negotiations on a multilateral arms-limitation agreement, of great scope, ought to be begun without delay and with the utmost determination and intelligence.

6. The informing of public opinion here and elsewhere, as by discussions of the danger, the dream, and the programs by organizations like yours, and also the League of Women Voters, labor unions, churches, and schools. The monumental book "World Peace Through World Law," by Grenville Clark and Louis Sohn, should be used as the basis for profitable sessions. Unofficial international meetings should be held whenever possible to discuss these matters.

AN INFORMED PUBLIC OPINION

Our Government is based on public opinion. In these times it is more necessary than ever before that this public opinion, which elects our leaders, be informed.

No doubt you can suggest improvements on this program. Please do. I could add my own personal project of establishing a chapter in the United States Congress of the World Parliament Association. It will be called Members of Congress for World Law. I could also mention the personal security plans my able and respected friend, Ralph Lapp, the atomic publicist, has for the safety of himself and his family if they survive the first nuclear blast. They have supplies stored away in a shelter not too far out of Washington. He is neither a fatalist nor a sappy optimist, but most of us are one or both.

THE BALANCE OF TERROR

The other night, when I had the privilege of talking with Philip Noel-Baker, he ended his remarks to our small group by saying he believed that very substantial arms reductions were not only critically necessary but technically feasible in terms of effective inspection procedures.

"On the other hand," he said, "I believe that within 10 years we will all be dead and that the earth will be an incinerated relic."

The man sitting next to him, one of our highest scientific policy advisers for the administration, added without hesitation and with somber sincerity, "I believe so, too."

They may well be right. I refuse to believe that they are. It may indeed be 5 minutes after midnight; but, since we are not able to see this cosmic clock and because we want our children to have a chance to grow up, we have no honorable course but to proceed as though there was still time to save the world from becoming an "incinerated relic."

I started with a hymn and I shall end with the closing verse of "Turn Back O Man."

"Earth shall be fair, and all her people one,
Nor till that hour shall God's whole will be done.
Now, even now, once more from earth to sky
Peals forth in joy man's old undaunted cry:
'Earth shall be fair, and all her folks be one.'"

Thank you very much.

Raymond P. Harold, of Worcester, Mass.: A Model Citizen

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. DONOHUE. Mr. Speaker, last Wednesday evening, April 15, 1959, a grateful and appreciative citizenry, in my home city of Worcester, Mass., turned out a thousandfold, to join in honoring one of our most distinguished and public-spirited residents, Raymond P. Harold, president of the Worcester Federal Savings & Loan Association.

The occasion was the bestowal upon Mr. Harold, by the Worcester Advertising Club, of the Isaiah Thomas Award for distinguished community service. Mr. Harry G. Stoddard, president of the Worcester Telegram, served as toastmaster; Mr. Joseph W. Norton, president of the Worcester Advertising Club, expressed the club's tribute; His Excellency Bishop John J. Wright, now of the Pittsburgh Diocese, and recently Roman Catholic Bishop of Worcester, delivered the principal address, and Mr. Harold gave his acceptance speech.

Because the speeches at this great dinner were extraordinarily thought-provoking and inspiring, particularly the address given by Bishop Wright; and because the outline of the career of Mr. Harold presents a graphic picture of the ideal businessman leading the fight for his community progress, offering a patriotic example for all of us, I would like to include pertinent extracts from the addresses at this point. The speeches appeared in the April issue of the Worcester, Mass., Telegram.

EXTRACT FROM SPEECH OF JOSEPH W. NORTON

"Tonight," he said, "marks the 10th presentation of the Isaiah Thomas Award.

"It was the unanimous vote of the 1959 award committee, that the 10th recipient of this honor, would be none other than Raymond Harold, president of the Worcester Federal Savings & Loan Association, in order to give proper recognition for his tremendous personal effort and accomplishments which have made Worcester a better community in which to live, to do business, and to enjoy living.

"The physical representation of this award is a miniature of the printing press, which was an instrument of such great community service 150 years ago, in the hands of the early Colonial publisher, Isaiah Thomas. Cast in enduring bronze, may it serve as a lasting expression of gratitude from your fellow citizens whom you have served so well."

EXTRACT FROM BISHOP WRIGHT'S ADDRESS

It is to be hoped that the philosophy of responsibility may be more widely invoked against the philosophy of excuse in those areas of community affairs, business planning, and personal conduct where a like spirit of fatalism has replaced the ancient concept of human accountability, replaced this concept to the very great hurt of business and of communities.

There are reasons to hope that the philosophy of responsibility, whether as applied to individual citizens, to group movements, or to government itself, is beginning to emerge from a period of eclipse. For a generation or two, the philosophy of responsibility had lost much of its force, certainly in social thinking and, to a great extent, in political theory.

There had grown up a philosophy of excuse which men used to shuffle off accountability for failure, for incompetence, or for inaction in the face of complicated problems, personal or public.

The philosophy of responsibility in modern times has suffered from impersonal collectivist theories of society and of the state which have found favor during and since the last century, chiefly, of course, in the completely totalitarian regimes, but to some extent in every modern state.

PARALYZING INFLUENCE

The philosophy of excuse has had its paralyzing influence in many areas of the modern world.

Judge John Perkins spoke up in protest of this philosophy. He said he had grown tired of hearing, day after day, that the person being tried at the bar was not responsible for his own criminal actions, that the responsibility lay with his mother who had failed him, his clergyman who had failed him, his teachers who had failed him, and others who had failed to adjust to him.

CUT DOWN TO SIZE

It is good for civilization that the "philosophy of responsibility" should be reaffirmed and that the "philosophy of excuse" should be subordinated to it, cut down to size. Civilization was not achieved by any such philosophy as that of excuse, by vagueness about accountability, about duties or debts.

Mankind did not emerge from recurring periods of social decline and even savagery by any such formulae.

Civilization was achieved by the vision and determination, by the self-knowledge, self-discipline, and responsible action of single individuals and of individuals working

in groups who had not become cogs in the machinery of any blind movement, but who retained a sense of the central importance under God, of individual responsibility, individual personality.

GOOD AND BAD

What is the past? The past is a man named Adam—and it's also a man named Jesus. It's a brave man named Columbus and a nuisance named Napoleon, a bold man named Isaiah Thomas, a scholar named Woodrow Wilson, a poker player named Warren Harding, a smart Yankee named Cal Coolidge, an unreliable man named Benedict Arnold, a man of integrity named Al Smith, a devoted man named Herbert Hoover, and a million other men—good, bad, and indifferent—to whose accomplishments and to whose shortcomings we are the heirs.

The present is not quite the abstract mystery we make it seem to be. Viewed from one angle it is a wily fellow named Mikoyan, a sturdy old German named Adenauer, a brave girl named Anne Frank, or some of the less attractive girls whose names we hear from the international airport at Las Vegas.

WHAT WE OWE PEOPLE

And the future is no great mystery either. The future is a baby named Joey or a little girl named Jane—and most of your obligations and mine can be stated in terms of what we owe these people. Under the "philosophy of responsibility" our damnation may depend on the extent to which we defraud these people.

Ray Harold represents the type of Worcester businessman who lives by the philosophy of responsibility in just such human terms, by standing up to be counted, and, if need be, to be knocked down in the interests of building a better community.

A CHEAP PRICE

He may have made mistakes, may yet make others. But this is a cheap price to pay for the great achievements he has made in the community's progress. But he can be relied upon not to take refuge in the philosophy of excuse.

EXTRACT FROM SPEECH OF MR. HAROLD

GOOD POLICY

Of one thing I am certain, it is good policy for a business establishment to work diligently for the common good, for its success depends in large measure upon the success of the community in which it is located. This is the firm conviction of the banking establishment with which I am connected.

We hope to continue to be a vital part of the community and to contribute more and more to its success. I am sincerely aware that Worcester has been good and kind to me and to the financial institution which I am fortunate to direct.

STOPPING IS TRAGIC

Success is a journey, not a goal. It is entirely fitting that we should pause to mark a milestone. But to stop complacently would be tragic. Rather we must look forward even beyond the time that is allotted to each of us, and like Isaiah Thomas, build worthily for those who follow us.

The Isaiah Thomas award is a great honor. I cannot accept it for myself alone, but only as a spokesman for those whose help and loyalty to me entitle them to share it with me. Nor can I accept the honor of such an award without also accepting the challenge of doing my best to deserve it. This I promise, and for all that you have done for me I am deeply grateful.

Canada Hints of Retaliation of "Steal" of Lake Water

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Detroit, Mich., News of Friday, April 3, 1959. For the benefit of those who think that the question of water diversion will be solved by passage of the Chicago Great Lakes water diversion bill the article announces that the Canadians are contemplating diverting 3 streams, the Ogoki, Long Lac, and the Albany rivers which formerly flowed toward Hudson Bay which have been diverted into Lake Superior should the Chicago water diversion bill become law. If that is done the level of the Great Lakes will be dropped an additional 3 inches with a cost of millions per year to shipping, recreational, and other interests who use and enjoy the Great Lakes for the benefit of all the people of the United States. Diversion will be the opening of Pandora's box to release all sorts of trouble and strife. The article is as follows:

CANADA HINTS RETALIATION ON "STEAL" OF LAKE WATER

Ammunition in the fight to keep Chicago from diverting still more Great Lakes water through the city's Chicago River Canal was added by Ontario and Michigan officials last night.

Although limited to 1,500 cubic feet of water a second by a 1930 Supreme Court order, Chicago has been diverting 3,300 cubic feet through the navigation and sanitary canal, according to Paul L. Adams, Michigan's attorney general.

Frank MacDougall, deputy minister of lands and forests for Ontario, said Ontario could at any time stop its diversion of three watersheds which it has turned into the Great Lakes and which add 12,000 cubic feet a second into the huge inland water system.

These streams—the Ogoki, Long Lac, and Albany—which formerly flowed toward Hudson's Bay, have been reversed by dams and the flow directed south into Lake Superior.

"It could be diverted and sent down the Ottawa watershed in the same matter of fact way that Chicago has been doing," MacDougall said.

Such action, however, is not likely unless the Chicago water steal continues to an extent that heavily disrupts Canadian-American relations, he said.

TWICE MET VETOES

MacDougall and Adams were members of a 13-man panel which reviewed the 40-year fight with Chicago over water levels in the Great Lakes. Michigan and Wisconsin are leading a seven-State fight against further diversion which lowers the general level of the lakes. Canadian officials are equally concerned.

A bill has been entered in Congress to allow an additional 1,000 cubic feet a second flow through Chicago's canal. The bill passed the House and is under study in the Senate Public Works Committee.

Similar measures were vetoed in 1954 and 1956 by President Eisenhower.

Chicago argues that the extra water is needed for navigation and sanitary purposes.

Army engineers, Adams said, have shown that the present allotment is ample for navigation. Chicago wants the extra water to flush out the drainage canal, which has become like a cesspool, according to Michigan officials.

Adams has requested that the Supreme Court appoint a special master to study the situation and report on what should be done.

PLEA RENEWED

In a letter sent yesterday to J. Lee Rankin, Solicitor General, Adams renewed his appeal for an investigator. He noted that the Commonwealth Edison Co. has been allowed to build seven plants along the Chicago Canal and two more are planned.

These plants use water for cooling and condensation. They discharge heated water which is low in oxygen content into the sanitary canal.

With its oxidizing power weakened, the water is less able to cope with the effluents dumped into the canal by the Chicago Sanitary District, creating an even more polluted condition and bringing cries for more water from communities downstream, Adams wrote.

The meeting was sponsored by the Port of Detroit Commission, the Southeast Michigan Botanical Club, and the Detroit Audubon Society.

Governor Williams welcomed the Canadian visitors and spoke of the tremendous importance to our community of the lake levels.

J. W. Spooner, Ontario Minister of Lands and Forests, headed the Canadian delegation, along with Robert Macauley, the hydroelectric power commissioner for the province. He said that the problem will be repeated many times in the future.

SEES FUTURE GUIDE

"Therefore, it is of real importance that the answers that you select may serve as precedent for those that must follow," he said.

Mayor Miriani added his blessing to the meeting yesterday afternoon.

"The greatest threat to the freedom we enjoy and to the peace between our two countries," he said, "is the human failing to recognize that these precious possessions must be guarded and nourished at every step, at all times."

He added, "the Members of the U.S. Senate must be immediately warned that the proposed water steal is an unfriendly act to our Canadian friends and that, as such, it constitutes a threat to freedom and peace."

The Republic at the Crossroads

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. CURTIS of Missouri. Mr. Speaker, on April 2, 1959, Representative BRUCE ALGER, of Texas, made a speech in Webster Groves, Mo., "The Republic at the Crossroads." I wish to call his re-

marks to the attention of my colleagues and they are as follows:

THE REPUBLIC AT THE CROSSROADS

Those present are joined by many not present as I nostalgically review the past which this occasion prompts. This is a wonderful reunion, after 22 years, 10 months, which for me were chronologically: College 4 years; business 1½ years; military service 4½ years; business (including my own) 9 years; and Congress 4 years, a full and varied experience.

Here, in Webster, I learned my lessons. Here I acquired the foundation for the later experiences. I had wonderful youthful years, thanks to the people, schools, and environment, right here. Oddly, as I grow older this becomes more obvious and meaningful to me.

The thanks I would extend to those here, and those not here, will be through whatever effort I can put forth to justify their training, friendship, and help. Sort of in the father-son spirit, "Make the world a little better because you were there." Humbly, but with firm resolve to say thanks, exemplified perhaps by remembering Lincoln, "That we here highly resolve that these dead shall not have died in vain; that this Nation shall have a new birth of freedom; that government of, by, and for the people shall not perish from this earth." I didn't think so much of that in Webster High or in war when I sent a combat buddy's gear home to his family. But I thought of it later, and I do now as a public servant, a Federal Representative, as we tonight reunite for a few moments as old friends—but now, not as youths, but as responsible adults with problems and a government on our hands—our hands. It's our government to preserve for those who follow, and in memory of those who went before.

I'm here because of your Congressman TOM CURTIS, not just to permit myself the pleasure of a wonderful reunion. This is not the gratuitous expression so often heard publicly or the flowery protestations on the floor of the House, as a prelude to destructive attack. For me, this is a token of respect for a hard worker, and I think of the Curtis subcommittee's work on the problem of life insurance taxation, which became a factual textbook underlying the study and hearings for this year's tax bill—a pity more didn't study this document. I predict these views, with TOM'S additions this year in the minority views, in which we both joined, will be remembered in the future, becoming increasingly influential. TOM'S effectiveness can be measured in committee and floorwork by a few simple examples. The reciprocal trade bill of last year in committee and floorwork shows his guiding hand as he reconciled the conflicting views of both parties and the objections of the protectionists. I say this from a most critical viewpoint myself, as a dissenter to parts of the program. More recently, TOM suggested the airport compromise that joined the existing allotment formula and the lower spending figure—in which Democrats and Republicans then joined. In committee such adjustments are often made through TOM'S efforts as in the Mills-Curtis formula for last year's insurance taxation. And I commend TOM for courage—as his championing the facts in the Goldfine issue last year. As many popularly joined the attack like howling wolves, TOM stuck to the facts, reminding the House that regardless of respective sides in the argument, we were violating our own House rules created to prevent character assassination.

TOM'S work time and again in the Joint Economic Committee is a guiding force, as in the current study of the 1959 President's Economic Report. It's a pity that the somewhat technical nature of the study of inflation, price stability and maximum employment lacks the glamour and public attention which its importance warrants. You would all enjoy the debate between TOM and several Members on Monday, March 9 (CONGRESSIONAL RECORD). So you see, my visit is actually not a friendship matter, as such, but a matter of respect for and teamwork with a legislator who has courage, ability, and a dedication to principles, which my remarks tonight will, I hope, further explain.

As a small businessman who knew little of the ins and outs of politics, and as a Republican in an overwhelmingly Democrat area, I ran for public office 5 years ago and made but one political promise—that I would measure each piece of legislation by two yardsticks: (1) Is it a function of the Federal Government? (2) Can we afford it?

I promised I'd vote on each proposal according to whether or not it passed those tests, and letting the political chips fall where they might.

Having tried conscientiously to hew to that line for 4 years, a course described by some as political suicide, I was immensely proud when the people of Dallas County, in the biggest offyear turnout on record, roundly endorsed that attitude toward government by returning me for the third time as their Representative in Washington. But did I win the election?

What wins a given election? No one can ever be entirely sure. The time, effort, and money of many dedicated citizens, political amateurs, many of whom were previously unknown to me, won this particular election.

This much I know, and there is no need to kid ourselves about it. Dallas Countians, like others in the South, for the most part regard themselves as Democrats. But conservatives of both parties effectively united to stand behind an unabashedly conservative record in Congress, and they didn't balk at my own avowed Republicanism.

The Republic is at the crossroad. Whether it is to remain the traditional constitutional Republic in a democracy or become a centralized inflated supergovernment, antithetical to the beliefs of our Founding Fathers, which beliefs we have not countermanded, not really, nor do we intend to, I am convinced.

A democracy is government of, by, and for people. The people participate. A Republic is representative government, wherein the people are represented by others of their choosing. A representative, then, represents all the people, but is elected by a majority of the voters. Here's one problem—it is not a majority of the people, over half don't participate.

A second problem implicit in our form of government is the assumption of an "informed electorate", that is, that the voters know the issues and problems confronting the Nation and its Government. To the degree they don't, the government, as in the case of people not voting, is weakened. Using his judgment, the Representative, then, votes, representing his constituents, as he feels the majority of his constituents would, if in his shoes, facing the particular circumstances and facts. That simply is our form of government and the two problems.

We are at the crossroads because a majority don't vote, and those who vote (as well as the others) don't study the issues and aren't informed. The crossroads point which way we'll go—preserve constitutional government or embrace socialism or another ism.

It is now a question of preserving our Nation and its institutions. This is done through political parties. The parties must have sound principles or fail in this task.

It is to that job we must dedicate our principal effort. For, if we fail in it, there will not be much need to worry about elections. And, if we succeed—by awakening the American people to a recognition of thier peril—victory at the polls will follow.

We must bring to our task more than just an urge to take power. A political party enters this fray ill-equipped unless it is armed with basic principles—unchanging beliefs so precious they cannot be sacrificed for any political victory. Without such principles, a political party is nothing more than a gathering of office seekers and their friends. Without principles, a political party, in the words of our President, is only a conspiracy to gain power.

I believe the Republican Party, of the two, is the only possible party now to accomplish this objective, as you will see. To me, this assertion isn't blind party loyalty either, by a long shot, but critical appraisal.

It is true that any party representing a broad cross section of the American people will encounter differences of opinion as to details and method. That is true of our party. In fact, I suggest that we Republicans have permitted these differences to become so magnified in our own minds and the public mind that the principles which unite us have been forgotten or ignored. As a result there has been all too much talk about hyphenated Republicans—liberal-Republicans, conservative-Republicans, modern-Republicans. It is time—if we are to face the challenges that confront us—that we start thinking, talking, and acting as Republicans—period.

Let us heed the words of Lincoln when he said: "I'm afraid of the result upon organized action where great results are in view—if any of us allow ourselves to seek out minor or separate points in which there may be differences of views as to policy and right, and let them keep us from uniting in action upon a great principle in a cause on which we all agree."

Let us remember that our strength can stem only from the basic principles which unite us.

These principles are so deep and instinctive that we have unfortunately too often felt it either unnecessary or too difficult to put them into words. But they must be put into words; they must be enunciated over and over again. Our beliefs and principles must be articulated so clearly and forcefully that there can be no doubt as to where we Republicans stand and why.

Let me presume here tonight to make a modest beginning at putting into words what we so deeply and firmly feel.

We believe, we Republicans, that no generation can live solely for itself but rather that it has the heaviest of obligations to preserve the Nation and its institutions, strengthened and improved, for those who follow. We know that our heritage was won only by the sacrifice of those who preceded us. We have the high moral duty to sacrifice, if need be, to preserve and protect it.

We know, as we face the problems inherent in preserving our society, that the right way is not always the easy way, but that we have no choice except to take the hard way if it is, in truth, the right way. We recognize that we will find ourselves frequently bucking the popular tide, for we know, just as surely as the Democrats, that there is little political appeal in self-denial. If we accept the responsibility of leadership, however, and that is one of the functions of a political party, we must serve as stern guardians of the national commonsense.

We accept, as part of the responsibility of leadership, the duty of making clear to the people that the easy way, if it is wrong, leads only to the misery of retraced steps or the finality of disaster. Championing what we believe to be right may at times lose us political battles; but we are supremely confident it is the only way to a clear conscience and ultimate victory.

We believe in a government of laws which have as a principal aim the prevention of the seizure of dominant power by any man, or group of men.

We believe that the political and economic strength of a nation depend upon the genius of its people and that genius cannot flourish wrapped round with the chains of an all-powerful state or an all-powerful minority.

We believe that liberty is man's most precious possession and that it includes the freedom to have an incentive to produce. This has led to our faith in the soundness of an economic system based upon man's universal urge to better his lot. We believe that success, if it is to be the incentive for all, cannot be mocked and scorned and discouraged in an appeal to the envy of others.

We believe in a limited government as the best means of preserving individual freedom and initiative, but this does not bind us to the legitimate needs of our citizens or the challenges which confront our Nation.

We insist, however, that the needs the Federal Government is called upon to meet be real needs which cannot be met by individual initiative or by the unit of government closest to the people, and particularly, that they are not needs manufactured by those looking for special advantage or power.

We believe that the challenges to our Nation's survival can best be met, not through ill-considered actions based on fear or emotion, but by a nation which itself is guided by basic principles, proceeding confidently because it is physically strong, morally right, and carefully prepared.

It is because of these beliefs, these principles, that the Republican Party is called upon by its own conscience to move vigorously to the task of preserving our Nation against the present-day threats to its survival.

In my book there are today three great threats facing us as a people and as a Nation:

The threat of communism.

The threat of inflation.

The threat of new monopolies.

Each must be met head on. Each must be fought relentlessly if what we call the American way of life is to survive.

The first threat is the most dramatic and the most apparent. It stems from the rapid rise of Soviet military and economic power. We have seen the Soviet Union ruthlessly trample on the rights of its people and other nations in its drive to rule the world. By concentrating on the means to produce military power, it has rapidly industrialized its economy and achieved far-reaching scientific advances, a combination which has made it a real threat to world security. We may deplore their methods, but we ignore, at our own peril, the presence of vast military and economic power in the hands of a small group of men imbued with a fanatic belief in the inevitability of communism's world conquest.

The reaction of the Democrats to the more dramatic evidences of Russian military power has been characteristic. Conditioned from habit, their immediate response has been that we outspend the Russians and achieve victory through sheer weight of the American dollar. Democrat spending bills followed quickly in the orbit of the first Russian satellite and every new announcement from the Kremlin quickens their flow.

It would indeed be wonderful if all we had to do to preserve our Nation against the Russian military threat was to turn on a spending spigot. It is not that easy, and the political party which tells the American people that it is, is gambling recklessly with the future of our Nation. If, as a nation, we rely solely on scattering our national wealth to the winds in order to quiet every fear, we can lose this fight before we start.

We cannot meet the Russian military challenge by siphoning off and diluting our available resources, both of brains and materials. Yet, the numerous critics of our defense policies insist, when you put all their charges together, that we engage in just such a scatterbrained effort. The net effect of following the advice of a Symington, Johnson, Anderson, Jackson, or any other Senator or Representative who wants more money for a specific defense need, would be weakness through dissipation of our strength. It would be a defense based not on the best estimates of our National Security Council, the entire intelligence resources of the Nation, and the expert advice of our Joint Chiefs of Staff and our President, but on the worst fears of our most frightened politicians.

What it will take to beat the Russians at this gruesome game is a government and people ready, of course, to sacrifice whatever is needed for our overall superiority, but determined at the same time to proceed only on the basis of sound estimates, rational thinking, and carefully conceived plans which look not just to today but also to tomorrow. This is the hard road, and only a party of principle has the courage to stand up to the fearmongers and tell the American people it is the road we should follow.

It is clear, too, that only a party of principle can furnish the kind of leadership which stands fast against those Democrats who would sacrifice our world position in the face of the potent power of the Soviet Union. When it is all boiled down, the constant carping over the inflexibility of Mr. Dulles, the demands for a new approach to the Soviet Union, and the laments for the lack of viability in our foreign policy are nothing more than a frightened unwillingness to face up to the fact that you can't appease the Russian without losing your shirt in the process. We are confident the American people won't soon again be led down the so-called easy road of appeasement.

The second threat to our security as a Nation is the insidious menace of inflation. Our response to inflation is not only significant in its own right but it cannot be divorced from the challenge of the Soviet Union.

No greater test of the principles of the Republican Party can be provided than in the fight against inflation. It cannot be successfully undertaken unless we are willing, as a Nation, to think more of the future than of ourselves and to take the hard but right way so that our Nation and its institutions can be preserved.

As we move positively against the threat of inflation, we Republicans are accused of being preoccupied with balanced budgets, of being negative when we oppose unessential spending programs, and of having a narrow bookkeeping attitude toward the problems of our Nation.

I say to you: There can be no more positive programs, for our party or any party, than to try to save this Nation from the disaster which will take place if inflation, through habitual spending beyond our income, becomes the national way of life.

As we oppose programs which individually have vote appeal but which taken together lead swiftly and surely to national bankruptcy, we lay ourselves open, of course, to the demagogue's cry. But what we seek is more important than any single spending program. Unless we can maintain the stability of our currency, we will not have the strength to support any governmental program, no matter how desirable—be it for defense, for scientific advance, or for human welfare. Bound up in the fight for a balanced budget is the question of whether our economy will have the strength and stability to maintain us in the battle for survival.

Let it be remembered that we have been living beyond our income in 23 of the last 28 years. The credit of the U.S. Government is at the breaking point.

It is not just the national budget that is involved in the Democrat spending programs. The personal budget of each and every individual and family is involved. An unbalanced national budget means unbalanced family budgets; it means loss of credit, of earnings and savings, insurance, pensions, and annuities. When unbalanced national budgets and inflation become our national way of life, they all go down the drain together.

There is also a moral issue.

The time has come to end the completely immoral practice of passing on to our children the debts we incur for our own immediate benefit. We could at least have respect for the morality of the spenders if they would suggest that this generation pay, through higher taxes, for the cost of the programs they so glibly propose. They lack the courage for that, and in many cases, like the Senators from my State, they not only beguile the people with vast spending programs but promise simultaneous tax reductions. Let us call a spade a spade. Mortgaging our children's future is basically immoral.

There is the question of equity.

The first obligation of government is to treat its citizens equally. There is no equity when a government spends to provide special benefits for some of its citizens, because they are politically powerful, at the expense of all other citizens. But, the inequity is tragically multiplied when a government must borrow and inflate its currency to do so. For inflation does not strike all citizens an even blow; it hits hardest at the weak, the unorganized, at those who lack the means to protect themselves from its subtle and devastating robbery, the widow living on insurance, the aged living on pensions. No government which pretends to serve all the people can retain their confidence if it promotes wholesale inequity by choosing the easy road of unbalanced budgets.

There is the issue of survival.

I have spoken of the military challenge of Soviet Russia and the kind of response we must make to it. Will we have the sheer physical strength for that challenge—no matter how many missiles are on the launching pads—if our underlying base of a sound fiscal structure and a strong economy are rotted away by inflation?

The answer, of course, is "No," but the Soviet challenge is more than military; it is a total challenge on the military, political, economic, and moral fronts. Can the United States meet that total threat with its currency debased, its credit gone, its economy in turmoil, its citizens divided and its morality compromised, if we adopt inflation as a way of life? Of course not.

Politically, can we hold ourselves up to the nations of the world as a shining alternative to communism if we are unable to keep our own house in order, if we display a fatal political weakness in our form of government by casting aside principle for the fatal charms of expediency? How can we be an example to the world if we cannot in times such as these even meet our current needs out of current income?

Can we meet the Communist economic offensive if through inflation we price our goods out of the world market and if the American dollar becomes a currency to be shunned rather than desired?

And morally, where does this Nation stand as opposed to immoral communism if it succumbs to the immorality of inflation?

Let no man tell you that those who fight against the unbalanced budgets which cause inflation are preoccupied with the mechanics of bookkeeping. We are preoccupied, but our preoccupation consists of the most urgent and positive program this Nation can undertake—the prevention of a national disaster. It is our job as Republicans, as a party of principle, to awaken the Nation to this clear and present danger.

The President has presented the Nation with a balanced plan for security and public

welfare. He has presented a plan balanced as to income and expenditures. It is a truly Republican program. It is our job as Republicans to exert every effort to make this plan a reality.

I mentioned earlier that one of the basic principles of the Republican Party is the belief in a government of laws which have as a principal aim the prevention of the seizure of dominant power by any man or group of men. Because of this principle, the Republican Party is called upon to meet the threat of the new monopolies, powerful labor organizations under the domination of a handful of men.

Under Republican leadership, this Nation met the challenge of the seizure of dominant power by a few industrialists and financiers a generation ago. It curbed the power of the trusts when in the public interest it enacted antimonopoly legislation under Republican leadership.

Today similar power rests in the hands of men who dictate the policies of our national labor unions. It consists of vast economic power, the power to cripple an industry or a nation. It is economic power which has reached out so successfully for political power that it has taken over, for all practical purposes, the Democratic Party and now controls the Congress of the United States. It is a combination of economic and political power which threatens the national interest because it is a power which places its own interest above the interest of all citizens.

Curbing the power of the new monopolies will be infinitely more difficult than dealing with the old industrial and financial monopolies, for the new monopolists have wrapped themselves in the cloak of the so-called common man. They have been careful to inculcate the doctrine that their monopoly interest is identical with the interest, not only of union members, but all working men and women. No attempt can be made to curb the power of the new monopolies without incurring their charge that it is a move against the public interest.

But the public—the consuming public—does not benefit from the exercise of naked monopolistic power to raise wages, and hence prices, beyond the level justified by increased productivity—nor from the extortions of a Hoffa made possible by the power his monopoly gives him.

The public—the union worker public—does not benefit when its dues are stolen, or frittered away, or spent for propaganda or political activity against its wishes.

The public—the taxpaying public—does not benefit when the political power of the new monopolies is used to extract special benefits from a pliant Congress or legislature.

The public—the small-business public—does not benefit when its choice, confronted with the overwhelming power of a giant union, is to accede to its demands or go out of business.

The public—the farm public—does not benefit when the new monopolies drive up farm costs far beyond the ability to increase farm prices.

Nor can the public—all of us as free citizens—benefit when dominant political and economic power rests in the hands of a few men, no matter how much they claim to have our best interests at heart.

Let there be no mistake about it. The evils which have arisen because of the emergence of the new monopolies are the result of the power they hold in their hands. We cannot eliminate the evils until we restore the balance of power and to do so, we must curb the powers of the new monopolies even as we protect the very legitimate rights of working men to organize for their own protection and own welfare.

As a party of principle, we cannot dodge this issue. The Democrats must avoid it at the peril of their extinction as a political force. They are incapable of going beyond what the new monopolies will permit, and this consists only of wiping the smudges off from the faces of those union leaders who have gotten dirtiest in their greed for power. It's up to us to take the lead in a sustained effort to curb this threat to the stability of our Nation. It will in the end earn us the gratitude of the vast majority of the American people who, even now, sense the danger involved in letting unbridled monopoly power run loose in our land.

In these great tasks, then, in meeting the Communist threat, in fighting inflation, in curbing the new monopolies, we Republicans have a job to do. At stake is the future of our Nation and the security and happiness of our people.

There is only one way we can go about this task and that is to devote our every resource to it. We cannot succeed, in the face of an overwhelming Democrat majority in the Congress, unless we arouse the American people to the dangers which confront them and unless we imbue them with a belief in the principles we uphold. We must, through them, make it politically impossible, for any party or group, to lead this Nation down the easy road to its downfall.

We need to make our party an effective political organization. We need to enlist in our ranks the millions who believe, as we do, in the principles we uphold. We need the devotion, discipline and dollars without which a party cannot function. We need to tell our story, clearly, unhesitatingly, forcefully so there is no man in this land who does not know our party's principles, program, and goals. We need, in short, to get down to work.

And as we set upon this noble task of saving a nation, should the path look dim, the goal remote and the obstacles insurmountable, we can do no better than take courage from the faith that: "Right makes might, and in that faith let us to the end dare to do our duty as we understand it."

Potomac's Ills Shown in Film

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD a small comment on pollution in the Potomac River which appeared in the Washington, D.C., Post and Times Herald on April 12, 1959:

POTOMAC'S ILLS SHOWN IN FILM

The poisoning of the Potomac by sewage—including the rainy day sewer overflow near the mouth of Rock Creek—was shown yesterday on a WRC–TV public service program.

It took the form of a film, "George Washington's River." The movie was produced for national distribution by the U.S. Public Health Service by the staff of the TV program "Our Beautiful Potomac."

The film showed gas bubbling up from effluent discharged near National Airport; a girl swimming near Key Bridge in water with a bacterial count so high it contained "2 million bugs a mouthful"; grease slicks on the Tidal Basin under the blooming cherry trees, and detergent suds foaming up at the mouth of Pimmit Run from wastes being dumped into the creek.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Today's Challenge, and How To Meet It

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 21, 1959

Mr. BRIDGES. Mr. President, on April 17, 1959, there was a speech given by the Honorable Arthur E. Summerfield, Postmaster General of the United States, before the Los Angeles Merchants and Manufacturers Association dinner, entitled "Today's Challenge, and How To Meet It."

Mr. Summerfield, in this speech highlights the Communist threat to our national safety and our battle against inflation. It was an outstanding address and doserves to be called to the attention of every Member of the Congress and every citizen of our country; therefore I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TODAY'S CHALLENGE, AND HOW TO MEET IT

(Address by Hon. Arthur E. Summerfield, Postmaster General of the United States, before the annual dinner of the Los Angeles Merchants and Manufacturers Association, Los Angeles, Calif., April 17, 1959)

It is always a great pleasure for me to be in Los Angeles.

I am always inspired by the vitality of this great city—and, indeed, of all California and the Pacific coast.

All my life, I have thrilled to the story of the winning of the West.

It is one of the great adventures of all mankind—the westward sweep of the pioneers, the gold rush, the pony express, the constant blazing of new frontiers.

I stand in awe of the courage and strength and faith of the Americans who lived this tremendous story.

Nothing could stop them from gaining the better life they saw for themselves and their children.

They left a magnificent heritage for you—for all Americans—to ponder and to uphold.

California today is a monument to their vision.

You are on the way to becoming our most populous State.

You have assumed great responsibility in economic and political leadership.

You face opportunities that are virtually unlimited in scope.

But this you also know—that the very essence of real opportunity is challenge.

And because the meeting of today's challenge is so fundamental to the progress you would make—so basic to the ends we must achieve as a nation—I am deeply anxious to talk with you about it.

I want to bring to you, tonight, a clear picture of the urgent nature of the challenge we face, and how we can meet it.

I want to speak to you—not only as your Postmaster General, but as a member of President Eisenhower's Cabinet and a member of the President's Cabinet Committee on Price Stability for Economic Growth.

I come with firsthand knowledge of the problems facing our Nation, and the steps your Government is taking to solve them.

But I come with more than a report.

My purpose, above all, is to talk with you about action.

For, my friends, we are at an extremely crucial stage in the progress of America.

We have a choice of paths to follow.

We have momentous decisions to make.

The ultimate responsibility for these decisions is with the American people.

And I am confident that, if the people apply their real genius, and determination, and devotion—the final decisions will be the right decisions.

There are four specific problems I should like to discuss—and then, if I may, I should like to suggest the vital part you can play in meeting each of them.

They are:

1. The Communist threat to our national safety.
2. Our battle against inflation.
3. The destructive monopoly power of a group of union leaders.
4. The urgent necessity for tax reform.

All of these, of course, are interrelated.

Our national defense depends upon a strong economy—and our economy is acutely responsive to what we do about inflation, about production costs and prices, and about taxation.

The Communist challenge is many sided.

It is military, political, spiritual and economic.

We and our allies have steadily rebuffed the military and political threats.

Wherever the Communists have probed, they have found us standing firm.

At Lebanon, in the China Sea, in the unity of our NATO alliance—and now in the Berlin issue—we have met the challenge with unmistakable evidence of the strength of our purpose.

We shall continue to keep our military power equal to any test.

Our overall might in planes, missiles, ships, and other equipment, must always be capable of deterring, and if ever necessary, defeating, any attack upon us.

We shall continue to meet the Soviet political challenge.

We shall lead the way in exploring every avenue of reasonable hope for justly solving the issues that divide the world.

In the battle of spiritual values, we cannot lose so long as we preserve the freedom and moral strength on which our way of life is built.

The Soviets know all this very well.

Why, then, are they confident of ultimate victory?

Because they are concentrating on all-out economic war—and they believe they can defeat us in such a war without risking their own total destruction.

They intend to become the world's one first-class economic power, forcing us into second-class status. And for us, such an outcome would be just as tragic as nuclear devastation.

Today we are well in front. But they believe we have not the system or the will to maintain our economic strength and growth.

They expect our economy to explode, while theirs continues to grow.

My friends, let me emphasize that we dare not look lightly on their great expectations.

For here we do indeed stand at the crossroads of decision.

The soundness of our economy is threatened by deadly forces that have wrecked other nations in the past.

They are the forces of inflation and onerous taxation—and we are not yet united as a people to overcome them.

I suggest to you that there is urgent reason for us to do so.

As Allen Dulles, Director of the Central Intelligence Agency, said recently:

"If they, the Soviets, succeed and we fail, it will only be because of our complacency and because they have devoted a far greater share of their power, skill, and resources to our destruction than we have been willing to dedicate to our own preservation."

Let us look at some basic facts about inflation.

I am sure we all agree on what inflation is—and what it does.

Certainly we have had ample opportunity, over 20 years, to see it in action.

To most Americans, inflation means higher costs of living.

It means more and more struggle to try to make ends meet.

We have inflation when the cost of what we buy keeps rising while the value of the dollars we have to buy it with keeps dropping.

Since 1939, our cost of living has more than doubled.

The value of our dollar has dropped until the 100-cent dollar of 1939 is now worth just 48 cents.

How much lower would you say we dare to let it go?

Inflation feeds on the income and the savings of every individual, every enterprise, in America.

It eats away the savings we cherish for our family's security.

It robs us of the real value of the dollars we earn.

It destroys the will to work and the desire to save.

I suspect almost everyone in this room knows of someone whose savings, or insurance, or social security—carefully nurtured through half a lifetime—now is tragically inadequate to meet his needs.

As President Eisenhower has put it:

"Inflation is not a Robin Hood, taking from the rich to give to the poor. Rather, it deals most cruelly with those who can least protect themselves. It strikes hardest those millions of our citizens whose incomes do not quickly rise with the cost of living. When prices soar, the pensioner and the widow see their security undermined; the man of thrift sees his savings melt away; the white collar worker, the minister, and the teacher see their standards of living dragged down."

As businessmen and community leaders, you are only too well aware of what inflation brings in rising costs and stifling taxes.

And, finally, I would point out that the problem affects, in equal measure, the cost of maintaining the operations of your Government.

Now, what are we doing to meet this deadly force?

We are waging a battle, led by the President of the United States, which in the past year has succeeded in bringing the rise in the cost of living under control.

We are fighting to accomplish the stability of the dollar we must have to go forward soundly.

We are striving to continue our economic growth at the rate of which we are capable, with its expanding opportunity for every citizen.

But we are also facing tremendous pressures for a resumption of the inflationary process.

They are vast pressures for extravagant Government spending, and for a sharp new uptrend in the spiral of wages and prices.

Amazingly, the spending pressures are actually being led by some of the leaders of Congress—and of some State administrations.

They are practicing government by pressure group rather than government for the people.

And they will only be dissuaded by public opinion strong enough to impress its will upon them.

For this reason, it is vitally important for our people to understand some plain, straight facts.

Government, in our system, is constituted to serve the people. It must meet all the legitimate needs of its citizens.

It must do all it can for the good of the people, within the means the people are willing and able to provide.

But there are those in and out of Government who stoutly observe that we are a big nation of great wealth—and, therefore, we should put no limit to what we do in public projects—whether or not the people are able to pay the bills.

Nothing could be more crassly misleading—for the fact is, the people have no choice.

Who else will pay?

The Government has no wealth of its own. It is the agency of the people.

And when it spends more than it collects in taxes, every citizen has to pay the excess, in one way or another.

If it is not in higher taxes, then it is in suffering the inflation that deficit financing by any government inevitably brings.

Inflation itself is an invisible tax.

It is a tax without exemptions—a tax on the income of the poor in the same rate as on the incomes of the more well to do.

It is a severe tax on the savings of the thrifty.

It is, in the end, the highest and the cruelest tax of all.

If there is one thing that history has made frighteningly clear—it is that continued deficit financing by a government degrades the value of its money and spreads inflation ever further and deeper through the economy of its people. The ultimate result is collapse.

Great students of economics tell us the decline and fall of the Roman Empire was due principally to the confusion and upheaval of inflation.

We all know what happened when Germany accepted inflation as a national policy after World War I.

In 1923, 42 billion marks were required to buy 1 cent in American exchange.

Simple commodities of daily life cost trillions of marks—if you could get them at all.

And the way was open for a demagogue such as Adolf Hitler to lead that country into the tragedy of World War II.

These are but a few of the examples that stand out on the open book.

But they go unheeded by the many Members of Congress and the State administrations that are pushing vast spending schemes—schemes that far exceed the budgets available to pay for them.

More than 7,000 bills have been introduced in this session of the 86th Congress.

Only a small handful of these are major measures of broad national interest.

The vast majority would provide benefits of one kind or another to individuals or groups.

And in no case are new taxes proposed to offset them.

Their backers are encouraged by the fact that the majority of the present spending Congress is committed to Federal spending—and to deficit financing—as an economic policy.

Chairman BYRD of the Senate Finance Committee has noted, with alarm, that the effects of that policy already are plain.

The Senate, he reports, has voted to increase President Eisenhower's budget proposals by 24 percent, and the House has voted increases averaging 12 percent.

These increases represent billions of dollars.

Let us now discuss the third problem we face—the effect of the huge economic power exercised by union monopoly leaders.

This is a power that ranks among the highest accumulations of vested interest to be found in history.

It is a monopoly that draws upon huge financial resources—that permits a few perennial leaders to spend millions of dollars of dues money for political purposes, exactly as the leaders see fit, with no choice given the men and women who pay the dues.

It is a power capable of imposing at will an ever-rising cost of living upon our people.

There is no question but what the legitimate function of every labor leader is to ask for—to negotiate for—higher wages.

This is a rightful purpose of union leadership.

I myself worked at a factory job as a young man—and I know very well that one of my goals was higher wages.

I have always been, and will always be, in favor of a responsible union movement.

But union members, with all other Americans, have every reason to insist that their leaders, as well as the leaders in management, exercise a high order of statesmanship.

It is up to union leaders to recognize that if they use their monopoly power to force wage increases and employee benefits too high—they bring about fewer jobs and greater unemployment—and thereby miserably fail in their duty to their members.

By forcing wage increases which far outrun increases in productivity, labor leaders can set the spiral of wage-price inflation going again.

Once launched in the basic industries, the inflationary wave will sweep out through all manufacturing, transportation, distribution, every part of the economy.

Why do excessive wage costs have such powerful impact?

Because, after exclusion of all taxes, up to 83 percent of all income generated in the national economy goes to payment of labor.

For a $3,000 automobile, for example, the required steel costs about $290—and even this price at the steel mill, in turn, includes labor cost as its main component.

What this means is that an unearned rise in employment costs has four times as much inflationary effect as a corresponding rise in all the remaining costs of production put together.

With this in mind, let us note that 154 major wage contracts come up for negotiation this year—including the steel industry, with its nearly 1 million workers.

The cumulative effect of excessive wage-cost increases on this scale I leave to your imagination. There would be no way to describe it other than to call it a national calamity.

Everyone would suffer.

The blow, as we have noted, would fall hardest on the millions whose incomes have not gone up—the people on salaries, fixed incomes, and pensions.

But let no one assume that he would escape—least of all the wage earner himself.

He would soon find that the new-won increase had evaporated in higher living costs.

Worse, he could find that even his job is gone because the product he makes has been priced out of the market—no longer able to compete effectively at home or abroad.

And this, ladies and gentlemen, is no idle speculation.

The time when we were virtually the only country able to meet the great world demand for many types of finished goods is over.

The productive ability of most industrial nations is greater than ever before.

Competition is in full swing.

And today, we are seeing a rising number of American goods being priced out of the foreign markets.

The American producer, with his sharply increasing differential in wage costs, is simply unable to compete.

Nor is this a minor factor in our employment picture.

The estimate is that our export trade sustains four and one-half million jobs in America.

Let us ask this question of those who would continue to push excessive wage costs:

How many of these jobs—how many hundreds of thousands—how many millions—will be lost if we persist in making our goods so costly they have no chance to compete.

Indeed, let us ask another question:

How is it that foreign industries can make some of the products in which we are most efficient, ship those products thousands of miles to our own markets, and sell them at a price so low that we can no longer compete, even here at home.

Such is the growing situation in which our wage-cost inflation is placing us.

We are told, for example, that the Japanese have bought scrap metal here on the West Coast, carried it back to their mills, processed it into finished products, returned them back across the Pacific Ocean, and still undersold American producers by as much as $29 a ton.

We should, and do, look to the increasing of job opportunities here at home through the expansion of our production capacity.

We should take every step to encourage, not sap, the growth-power of industry and business.

But we can hardly say we are giving full encouragement if we permit wage-push inflation that deprives our industry of adequate earnings to plow back into new products, equipment, and plants.

Every thinking American, I believe, will agree that the decline has gone far enough when the ratio of profits to sales, after taxes, for all industry, drops from 7 percent in 1948 to 4.8 percent in 1958.

Especially is this true when we recognize the burden our taxation is placing on the accumulation of capital for investment.

It is the same burden being imposed on the personal incentive and earning power of every citizen.

The tax foundation tells us the average earner of $4,500 a year works 22 days each month.

Seven days of this total—nearly one-third of his working time—is taken from his income in taxes.

And as he may succeed in building his income, he can look forward to the tax chunk becoming larger.

We need to relieve this stifling tax load being carried by the individual citizen and by our business system.

Our great Nation has been built on the motivation of high levels of individual achievement.

We have encouraged, with material reward, each citizen to perform to the best of his capacity.

Even the Soviets have taken note of this advantage.

Russia, despite its Communist doctrine, now offers high incentives for outstanding individual performance in industry, science, and other areas of its society.

Consider, against this, the fact that we have been moving in the direction of destroying incentive.

Through taxation, we have steadily compressed the reward for doing something as opposed to doing little, or doing nothing.

Our population is growing rapidly.

Business can create new jobs to meet this growth only as billions of dollars are invested in new tools and capacity.

Now, where is this money to come from?

Today, Federal taxes alone can take more than half of many companies' net income.

Then follow State and local taxes.

There are over 100,000 taxing authorities in our country.

Their weight can literally crush the ability of business to meet its job-creating capital needs.

Our present tax structure is seriously outdated.

It is a set of laws reflecting largely the conditions of the past, especially World War II, when the goal was the confiscation of war profits, not the building of a sound peacetime economy.

A sensible, equitable, dynamic tax program is needed in its place.

Such a program will keep total revenues up, not by taxing away incentive and means of growth, but by steadily increasing the tax base.

These problems I have discussed this evening can be clearly stated.

But how clearly do we see the answers that can be given to them.

This is our task.

And I believe we cannot emphasize too heavily the answers that are being provided by our national leadership, and by leaders in many States.

These answers add up to a program of full employment with stable prices and tax reform—a program offering greater opportunity for every American.

It is because we have pursued such a program that our economy has bounded back from the recession to a dynamic new level.

The signposts are clearly visible and our program is well underway.

First of all, we have a sound and sensible philosophy of government.

We have adopted fiscal policies that are sound and productive and set realistic budgets.

We are meeting the full needs of our defense program.

We are meeting all the legitimate needs of our people.

We have refused to give away taxpayer money to nonessential projects, lavish spending schemes, and welfare state activities intended to curry favor with special groups rather than to meet the needs of all the people.

We are attempting to operate the Government on a pay-as-you-go basis, thereby avoiding the fatalistic deficit philosophy so easy to get into but so desperately hard to shed.

We are encouraging a higher order of statesmanship in union-management wage negotiations.

We are bringing public opinion to bear so that union leaders consider the real welfare of their members and the Nation rather than striving to outdo each other in wringing inflationary wage packages from industry.

We want adequate laws to control abuses of union leader monopoly power.

Such laws were established for business, correctly and firmly, when some businessmen abused the public trust in years past.

We want to give union members their rights to pass on the action of their leaders and the use of their dues.

And finally, we intend to push forward as rapidly as we can to achieve a progressive tax program.

I believe that heartening progress is being made in all these areas.

The sound fiscal program of the President with his insistence upon balancing the budget, is rapidly gaining wide support.

We are giving utmost attention to the development of aggressive programs to help prevent the resurgence of inflation, with its higher costs of living.

Toward this end, the work of the Cabinet Committee on Price Stability for Economic Growth is under way.

The committee, as you know, is headed by one of California's great sons, who is serving our Nation so ably—Vice President RICHARD NIXON.

I am proud to be a member of this group.

In the wage-price area, we can only hope that the statesmanship we so urgently desire will be forthcoming.

It is not immediately apparent in the announced intentions of demands we have seen.

It is clear that union members themselves want responsible union leadership—responsible to their welfare, and to the national welfare.

With the great majority of the public at large, they want laws that will help to assure responsible leadership.

In regard to taxation, we are working to carry forward a program of tax reform and reduction.

The President's stress on a balanced budget is related directly to this goal.

Steps in the right direction already have been taken with the Revenue Act of 1954.

The time is approaching for another bold and imaginative breakthrough on tax policy that will benefit and encourage all taxpayers—large and small.

Obviously, this program cannot call for immediate and sharp reduction in all income tax rates.

It calls for gradual reform.

And it calls for equitable reduction for all taxpayers.

Its goal includes corresponding cuts in capital gains, estate, gift and excise taxes.

It provides for job-creating reductions of business tax rates—and realistic depreciation provisions.

In short, the objective must be a completely organized and integrated tax program that will meet the real needs of our entire economy.

The public, more and more, is rallying behind the President, who is fighting to maintain a balanced budget, to achieve tax reform, and to bring under control the extravagances and excesses that feed inflation.

But let me not overstate this premise.

The battle is far from won.

The special interests bent on spending, taxing, and deficit financing still are riding high—still have the ears of the majority of our Federal legislators and State administrations.

Washington is swarming with representatives of the special interest groups.

Each is concerned with favoring legislation for his pet project.

The fight for fiscal sanity is being waged by the President, members of his administration, and some Members of the Congress.

It is this group, almost alone, that is bearing the brunt of the battle.

The leftwing economists, the welfare-State plotters, the racketeering union bosses, and their minions of do-gooders and political captives are using every kind of vicious attack to break this firm stand.

Washington is the ground from which they launch their tirades, and their slogans claiming "neglect of the jobless," "favoritism to big business," "inadequate defenses," "obsession with the budget," and the like.

They are making an all-out attack on the free-enterprise system, and they have many camp followers in the legislative halls—some deliberately—others without knowing the effects of their misguided efforts.

My appeal to you tonight, and to the American people, is to join this battle to meet this challenge.

Remember that, in the struggle with Russia, we are strong militarily—we are strong politically—we are strong spiritually.

We must continue to strengthen ourselves economically.

We can no more appease inflation than we can appease Soviet aggression.

I believe we shall continue to build the strongest, freest way of life the world will know.

But I also believe that, to do so, America must maintain a sound economic philosophy, and sound policies firmly based on that philosophy.

We must never accept the premise that our basic problems cannot be solved.

Inflation, deficits, high costs of living, and appressive taxation all are manmade.

So, too, is the destructive monopoly power of union leaders.

There is nothing sacred about them.

By attacking these problems with intelligence, determination, and perseverance, we shall overcome them.

May there be a reassertion—by all of us—of the courage and strength and faith of the Americans who opened the great West.

I am confident that the business and community leadership of the west coast, which is so well represented here tonight, will play a vital part in keeping our free enterprise system strong.

As civic leaders in a key city and State, your views and actions are vitally important—to your own progress, to your State, and to the Nation.

This is why I am deeply impressed by the emphasis your association places on employee communications.

Employees want information on which to base their decisions.

And they want fair and honest information.

I have always felt that businessmen should provide their employees with the facts about the issues that affect the ability of the business to compete, to advance, and to grow.

For these are the factors that determine the rewards and the opportunities for the employees themselves.

Perhaps too many businessmen are failing to meet this responsibility, to the detriment of their employees, their stockholders, as well as themselves.

I would ask you to give this your deepest thought.

Are businesmen and civic leaders doing enough to help provide the facts to everyone associated with them—employees, stockholders, community neighbors, and voting citizens.

Is any competition more important than the competition to determine how soundly this Nation is to conduct its economic affairs.

Is any problem more important.

I would dare to suggest that you assess what you are doing individually.

If you believe that we must attack the causes of inflation and onerous taxation firmly and intelligently—if you believe union monopoly power must be curbed—ask yourself if you are doing all you can to support that belief.

Your belief in America can be effective only as you let it be known.

I urge you to take your place among those who will speak, work, and fight for sound policies and a stronger America in the years before us.

There is nothing more important to you, your family, your future, and your Nation than that you take your stand now.

Speak up—let your representatives in Congress know what you think.

Let them know you understand that a Government big enough to do everything for its citizens from cradle to grave is also big enough to take everything from them in taxes.

Every businessman must understand that the political party of his choice is what he makes it—either by his participation or lack of participation in its affairs and in its choice of candidates.

Unless responsible citizens, especially business leaders, devote more of their time and effort and organizing ability—as well as their money—to unselfish politics, directed to the greatest common good, Government by pressure groups will continue to grow.

Only by universal participation can we be sure that the Government will serve all the people—not some special interest—and assure the greatest opportunities for all our citizens.

My friends—this is the banner of true liberalism.

Advancing under it, we shall meet the Communist economic challenge as surely as we shall meet the military and political challenge.

We shall constantly move forward into the golden era of unlimited opportunity that lies ahead.

We shall preserve the great free and growing economy which is the foundation of all our freedoms—our security—our prosperity—and our future, in a strong, free, and better world.

Address by James K. Vardaman, Jr., to the Georgia Bankers Association

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 21, 1959

Mr. RUSSELL. Mr. President, my home State of Georgia is fortunate to have as one of its newest citizens the Honorable James K. Vardaman, Jr., the distinguished son of a former Member of this body, and himself a member for 13 years of the Federal Reserve Board. Mr. Vardaman recently became president of the Bank of Albany, located in Albany, Ga.

Because of his unique background as a former member of the Reserve Board and now as a commercial banker, Mr. Vardaman was invited by his new colleagues in the Georgia Bankers Association to address their annual convention held last week in Augusta, Ga.

His address was an able discussion of the role and problems that confront banking in our changing society, and included some interesting and penetrating observations about our country's future. I ask unanimous consent that his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF JAMES K. VARDAMAN, JR., PRESIDENT, THE BANK OF ALBANY, ALBANY, GA., BEFORE 67TH ANNUAL CONVENTION, GEORGIA STATE BANKERS ASSOCIATION, AUGUSTA, GA., APRIL 16, 1959

On last December 1, by grace of perseverance, good luck, and the friendship of President Eisenhower, I ceased to be a Washington bureaucrat seeking for a solution of banking and economic ills, and gleefully became a part of the problem. So today, not only do I not feel called upon to tell you what to do about our troubles and problems, but I think it would be presumptuous for me to even attempt to do so. Rather, if you will bear with me for about 20 minutes, we will consider together as fellow sufferers, some of the questions that are going to have to be answered during the next 10 years—and a few that may require answers within the next 10 months, before the adjournment of the 1960 Congress.

Like other industries and individuals, banking is today at a crossroad. That is nothing to be alarmed about, because it always has been; and this crossroad is not much differentt from those of the past. Almost every month during our banking career we have arrived at a crossroad—where a determination is to be made—to change direction, to go forward or backward—or to stand still, which latter is really just another way of going backward, relatively.

And at today's crossroads, the same as at those of the past, we can either point with pride, or view with alarm, depending on what mood we are in. But maybe this time we had better do both—the first to help our morale and the second to protect our future.

As private bankers, we can certainly point with pride to the development of our industry and more particularly to the people who staff our banks. Of all American enterprises there is not one in which the rank and file of personnel, both employees and officers, has shown so much improvement as have our bank people. Walk into most any bank today and you cannot help but be impressed by the friendly, intelligent, and understanding appearance and attitude of the people you meet—at the desks and behind the counters. These are really our public relations group, and without them and their cooperation—no matter how much advertising we do—our banks cannot progress and our communities will not be served. I hope that we who have reached positions in the top executive echelon of the industry will always be mindful of our debt to these people and always be sure that our bank pay scale does not fall below that of other comparable industries.

Institutionally, too, banks can be proud of their record, particularly since World War II. The industry has made much progress—ethically and materially. By broadening its services, it has in some instances caught up with the public which it serves, especially in the small loan and consumer credit fields; also in trust service it has been wisely progressive, although there is yet much to be done by banks in that field in cooperation with the reputable lawyers of the American Bar Association. However, the two services in which banks have probably made the greatest advance in public confidence and support are in ethical conduct of commercial banking, and in the expansion of physical plant and equipment for the prompt and convenient service to customers.

Increase in public confidence has come with the elimination to a large extent of the "Scrooge" type of banker—the one who allowed or even advised the customers to borrow too much, who charged outrageous interest, and who foreclosed at the first opportunity. The FDIC and the State banking departments have done much to eliminate that type of banker, but unfortunately there are a few left. But an enlightened public will soon take care of them—and their banks, too, if they are not got rid of.

Public support of banks has increased in proportion to the increase in quality, quantity, and convenience of commercial bank services. Among these improvements may be numbered more intelligent and better trained and more courteous personnel; modern, open quarters, and the elimination of the old fortress and cathedral type of banking houses; the drive-in and the walk-up windows, and most of all in those progressive communities where the law permits, the location of facilities or branches away from the congested districts, where customers can transact their business without rupturing their dispositions and time schedules by fighting traffic and parking conditions in downtown areas, and standing in line before inadequate tellers' facilities and officers' desks.

Indeed, it appears to me that banking, as an industry, can justifiably "point with pride" to many phases of its operations; but again I emphasize that the greatest advance has been made in the quality of bank personnel.

Now, let's "view with alarm" for a few minutes—or better still—let's leave out alarm and view with commonsense and courage, some of the potentials and actualities which cast their shadows upon our future as bankers; and upon the institution of private banking—and even upon our inpendence as free citizens of an intended constitutional Republic. I use the word "intended" advisedly because our Founding Fathers would hardly recognize the structure which we have allowed to grow up in Washington, as even a stepchild or distant relative of the sort of Republic that they intended we should have.

One of the blackest clouds that hangs over us is the potential takeover by the Federal Government of all private banking, either by a straightjacket pattern of controls of rates and services, or by direct Federal ownership. I can feel, rather than see, some of the smiles of derision that welcome such a statement; but I say to you with complete sincerity that, in my considered opinion, private commercial banking is today, closer to total Federal Government control or ownership than it has been at any time since 1933.

Why is this true? There are several political reasons for this Socialistic trend; but the strongest impelling force is the certainty of tragic inflation and the imposition of total Government controls. Once this transpires, private banking will pass to Federal domination—and remain in that status for many years.

We have not as bankers, nor have our business leaders, nor our public officials—none of them—presented a workable plan for the prevention of inflation—nor has anybody been wise enough to figure out any such plan, so far as I know.

As of now, all the Federal Reserve will do, or the Treasury can help do, is to take actions which will defer, moderate, and spread out the inflationary impacts so that the natural and corporate populations can have some time to adjust themselves to changing values. You may call this creeping inflation or any other coined phrase you choose, but the result will be the same. And the only alternative under our present law and system of Government, is a stop-spending and tax program on the part of Government, and a discount rate and reserve requirement from the Federal Reserve that, together, will stop progress and bring about the bust quicker than if nature is allowed to take its normal course.

Of course, another alternative is to change the present law and Government system and put into effect that bureaucrat's dream—a complete control plan of wages, profits, spending, and production, and allocation of basic materials. That sort of program would definitely end the boom and bust cycle—and also all personal freedom and liberty.

Certainly we have been alternately inflating and deflating since the birth of the Republic—and if you don't believe it, just compare the purchasing power of the dollar for each 10-year period of United States history. Personally, I prefer that cycle to the cure by bureaucratic regimentation; even though I believe that if the present inflationary trend continues unchecked, something is bound to "give" along about the late 1960's, and the resultant carnage will make the 1930's look like a happy Sunday school picnic on a sunny spring day.

I certainly do not even pretend to have the answer to this problem and during my recent 14-year tour of duty with the Federal Reserve Board, I never heard so much as one man or woman come up with a workable suggestion to stop this apparently inevitable cycle. We all give lip service to a "balanced budget" and to sane economic behavior—but it is always for the other fellow, never for us, where it pinches our own pocketbook.

We like to sit around the cracker barrel and belabor Congress for its alleged extravagance and "pork barreling." No particular conduct of the American people and the American press is more insincere than that sort of hypocritical criticism.

Who is Congress? Are they a special brand of humanity, set apart for their wisdom or sanctity or courage? Certainly not. They are just a plain, average group of American men and women, elected or chosen by their plain, average, American fellow-citizens every 2 years. I have been associated with Senators and Congressmen in a rather personal and intimate capacity off and on for nearly 40 years. And in my informed opinion, they constitute an above-the-average group—in intelligence, in sincerity, in loyalty to American ideals, and best of all, in just plain and humble Christian faith.

Never forget: the Congress represents you, and is a cross-section representation of your and my hopes and desires, fears, and faiths and also of our individual greed and selfishness.

It has been my observation through the years than an extravagant or inflationary Congressman is one who votes to spend money on some Federal project that you or I do not want nor approve; and a constructive or conservative legislator is one who votes for everything that helps our particular community and votes against those projects which do not help us or our own localities.

As an example, Georgia papers headlined a few weeks ago with great gusto and praise the fact that so many millions or billions of dollars were being spent in Georgia by the Federal Government. And the press was rightfully complimentary of the splendid men and women who make up the Georgia congressional delegation, and of their helpful service to the people of this State.

Without presuming to guess or suggest an answer, I ask you the simple question: How long would a man or women be allowed to stay in Congress from Georgia who voted against those projects which favored his or her community in this State, regardless of its inflationary impact on the national economy?

One finds similar uninspiring parallels in the attitudes of private business and in labor organizations; in agriculture; in veterans; and most unfortunately for the safety of our country, in the Armed Forces. I have yet to find one wholly unselfish organization, be it political, labor, industry, military, agriculture, or social.

Every one of you here probably has had this same thought and experience; and it's not that the world is all bad or that people are not any good. It's been my hapy experience that about 99 percent of people are honest and good to the best of their knowledge and belief. But people are also human; and the self-preservation instinct simply will not be downed in our time. You know this as well as I, so why should we ask the question: Is inflation inevitable? One might just as well ask if humans are human.

And because I think that inflation is a certainty does not make me feel any doubt as to the successful future of America—its continued growth and development, spiritually and economically, and as a happy home for many hundreds of millions of people. Our future as viewed from today is no worse than it appeared after the Revolution, or the Civil War, or World War I, or at several other times in our history.

Inflation of a sort, or depression of a worse sort, have always been with us. And always the younger generation, and the next generation, have handled the problems inherited from the previous bunglers, in a way which has made this a better world, and particularly have these successive generations made this a better country to live in—a better country morally, and a happier, more comfortable country materially.

And having learned this from history and experience, I have no patience with the mouthings of old people or cynics, or just plain hypocrites of any age, who pretend to see the end of good times in this country, or who forecast death and destruction to the happiness and welfare of our people.

What most of these gloom garglers are really doing is reluctantly recognizing and bemoaning the fact that the old order changeth and giveth place to the new. That change may not be progress in some of our minds; but it is inevitable evolution; and we had better learn to live with it, even if we don't like it—and even though it is sure to cost some of us money and other material losses, based on our present monetary standards.

Just stop and think what our grandfathers would have thought of the income tax of today? Or the real property tax? Or the capital gains tax? Any one who reads our history knows that in the opinion of the old folks this country has been on the road to ruin ever since the first Continental Congress.

My advice to you of my ancient age is to quite growling and grumbling; grease your rusty mental joints with a little oil of commonsense, and learn to live in this very good country of ours and enjoy it.

And above all, have faith in the younger generation and the next generation, and know that they will do a better job than we have done.

Of course, we would probably not recognize this country and its Government if we came back 50 years from now; but it will still be here, and our progeny will be living in it and probably enjoying themselves more than we are today—with a 3-day workweek and a proration of profits to labor and capital alike—and some on the side for the indigent and unemployed.

That prospect does not disturb me, so long as it does not come in my time. I am not adjusted to it. But this country 50 years hence will be their world, just as this one is ours. And ours today would probably be just as indigestible mentally to General Washington and his contemporaries, as our socialistic future is to you and me.

What I have tried to say to you, ladies and gentlemen, is that evolution and progress are one and the same in many respects. And one's opinion depends largely upon whether one's view is through the clear, unglassed eye of youth; or through the dimmed optics of age—often hampered by outdated bifocals which were probably dropped in the breakfast oatmeal when you read in the morning paper that Walter Reuther was demanding a 4-day workweek.

Seriously, to you few gentlemen who may be near my age—and to you ladies who could never possibly be half my age—let's learn to accept without weeping and wailing those economic and social changes in our lives which are being forced on us in pretty much the same manner that child labor laws, the right to strike, and the 8-hour day and other evolutionary and revolutionary changes were forced on our parents and grandparents.

But the decision to accept does not imply that we of our generation should do anything to hurry these changes. And that is one more thing I want to talk about in closing, I feel that we as bankers are deliberately and effectively and with considerable feeling and heat, doing much to aid the enemies of private banking to effect an early Government take-over of our industry, or at least to bridle it with both general and selective controls on rates, reserves and earnings. I refer to the manner in which the bitter personal and institutional fight is being waged between the group known as "Independent Bankers" and the group known as "Branch Chain or Holding-Company Bankers."

And before you throw vegetables this way, I say hurriedly that I am not here to favor or oppose any particular form of commercial banking in Georgia, so long as the institutions are chartered by the State or Comptroller of the Currency, and are members of the FDIC and the sovereignty of the State of Georgia is sustained.

I have no feeling one way or the other as to which systems you choose for Georgia; and being a newcomer and a stranger among you, I would not presume to advise or influence your own opinions in any way.

But I do want to question seriously the advisability of the trend and nature of the contest being waged—especially the destructive criticism being levelled against each side by the other, in view of the effect on the public and legislative minds.

If only one half of the bad things being said and circulated to the non-banking, but actively voting public, are true, then that public may well conclude after a few more months of this short-sighted bombardment, that both sides are rotten to the core, and that maybe the Federal Government had better take over the whole kit and caboodle, and do away with private bank ownership entirely.

Having just come from 13 years of service in one of Washington's greatest bureaucracies—a position which placed me in intimate and knowledgeful contact with other bureaus of similar ambitions and intent—I can assure you that the big Government empire builders are using the intrabanking struggle, and all of the mean and unfair things that are being said and published by each group about the others to keep the banks divided among themselves. In other words, divide and conquer. And bankers' own words are being quoted to convince the American voters generally, and the Congress in particular, of the viciousness and weaknesses of all types of private banking.

If any of you want to pursue this subject further, I will be glad to talk with you individually or in groups, to try to make clear to you what I personally know to be true; that is, that you had better reach some agreement among yourselves, and I do not care what that agreement is, but it is imperative that you do reach some intraindustry understanding and present a united front to the public and to the Congress; or else we may have legislation of a national character which will wipe out State lines and State systems, so far as commercial banking is concerned.

Throughout this family fight, and the others that are bound to follow as long as

we retain the few freedoms left to us by the Supreme Court, the Federal Reserve Board and the Department of Justice, let's please try to remember that the world does not end with our generation. Our children and their children will come along to enjoy this great country which our generation seems to have pretty well messed up.

Never having known the "good old days," they will undoubtedly enjoy life even more than we. Poor things, they will probably not be able to visit but three or four planets in the course of their lives, and their 5-hour day and 3-day week will undoubtedly be as tolerable to them as the 14-hour day and 6-day was to our people who lived during the "golden age" of early nineteen hundreds.

They will muddle through and be happy, because they will not know any other way of life.

Kowalski Fight for Economy and Dignity in the Armed Forces

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, April 21, 1959

Mr. PROXMIRE. Mr. President, Representative FRANK KOWALSKI, of Connecticut, deserves credit for pressing hard for a congressional investigation of the waste of manpower in our Armed Forces by using military personnel for various menial jobs from maid to chauffeur. Developments are beginning to confirm Representative KOWALSKI's charge indicating that a full division of able-bodied, expensively trained fighting men are being shamefully wasted.

This is a disgraceful waste of the taxpayer's money. The Milwaukee Journal has recently commended and supported Representative KOWALSKI in his fight for economy and dignity in our Armed Forces. I ask unanimous consent that an editorial recently printed in the Milwaukee Journal, entitled "Wasteful Defense Servants," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WASTEFUL DEFENSE "SERVANTS"

When Representative KOWALSKI, Democrat, of Connecticut, declared that the military services were wasting the equivalent of a division of men by using them as servants, chauffeurs, and in other menial jobs, the Defense Department denied the charge.

KOWALSKI is a West Pointer and served 33 years in the Army before retiring as a colonel, so he speaks with authority. But a Defense Department personnel official estimated that the services had a maximum of 3,000 men in servant-driver type jobs.

Now, however, a Defense Department report indicates that the Congressman was essentially right. Some 17,500 soldiers, sailors, airmen, and marines are used as aides, stewards, chauffeurs, etc.

The figures are somewhat fuzzy. They need the further explanations which a House Armed Services Subcommittee proposes to get. Investigation will probably show some of the jobs to be essential. Yet anyone who has been in military service knows the extent to which manpower is wasted.

Vigorous congressional action to require the services to use men in jobs for which they have been expensively trained will pay off. Defense dollars will be saved and defense forces bolstered, even though some high ranking officers lose extra services to which they have become accustomed.

Needed: A Realistic Approach to East-West Foreign Ministers' Conference

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, April 21, 1959

Mr. WILEY. Mr. President, as we know, the free nations are currently meeting to formulate a program for the coming Foreign Ministers' Conference with the Soviet Union at Geneva.

The West, I believe, must approach this conference, not with wishful thinking, but with realism.

We recognize that there are critical issues for which we must strive for solutions. At the same time, it is important to emphasize that we cannot isolate the German situation. The pressures on Berlin are only a segment of the global strategy by which the Communist world conspiracy is attempting to further its objectives.

Recently, Mr. Allen Dulles, director of the Central Intelligence Agency, in an address in New Orleans, outlined some realistic factors of the worldwide campaign of communism.

Among the factors stressed by Mr. Dulles are the following:

As long as the principles of international communism motivate the regimes in Moscow and Peiping, we must expect that their single purpose will be the liquidation of our form of free society and the emergence of a Sovietized, communized world order.

They change their techniques as circumstances dictate. They have never given us the slightest reason to hope that they are abandoning their overall objectives.

They are devoting about twice as much of their gross national product to military ends as we do.

Those who feel we can buy peace by compromise with Khrushchev are sadly deluded. Each concession we give him merely strengthens his position and prestige and the ability of the Soviet regime to continue its domination of the Russian people.

The April 20 issue of the U.S. News & World Report carried a number of such excerpts from Mr. Dulles' realistic appraisal of the Soviet Union's ability and purposes. I ask unanimous consent to have these excerpts printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY WORRY ABOUT RUSSIA?—A REPORT FROM ALLEN DULLES

Following are excerpts from an address by Allen W. Dulles, Director of the Central Intelligence Agency, in New Orleans on April 8, 1959:

"The challenge of Soviet power presents today a triple threat: First, military; second, economic, and third, subversive. This challenger is a global one.

"As long as the principles of international communism motivate the regimes in Moscow and Peiping, we must expect that their single purpose will be the liquidation of our form of free society and the emergence of a Sovietized, communized world order.

"They change their techniques as circumstances dictate. They have never given us the slightest reason to hope that they are abandoning their overall objective.

"To achieve this objective, they are devoting about twice as much of their gross national product to military ends as we do. The U.S.S.R. military effort as a proportion of gross national product is greater than that of any nation in the world. Their continuous diversion of economic resources to military support is without any parallel in peacetime history.

"We estimate that the total value of their current annual military effort is roughly equivalent to our own. They accomplish this with a gross national product which is now less than half of our own.

"Before leaving the military phase of the Soviet threat, I want to dispel any possible misinterpretations. First, I do not believe that the Soviet now have military superiority over us; and, second, I do not believe that they desire deliberately to provoke hostilities with the United States or the Western World at this time. They are well aware of our deterrent force. * * *

"Taking into account our over-all military strength and our strategic position vis-à-vis the Soviet Union, I consider that our military posture is stronger and our ability to inflict damage is today greater than that of the Soviet Union.

"The secret of Soviet progress (economically) is simple. It lies in the fact that the Kremlin leaders direct a far higher proportion of total resources to national-policy purposes than does the United States. I define national-policy purposes to include, among other things, defense and investment in heavy industry.

"Here are some examples: While the Soviets last year were producing only 1 automobile for every 50 we produced, they were turning out 4 machine tools to our 1. * * *

"Commercial investment, which includes stores, shopping centers, drive-in movies and office buildings, has been absorbing over $6 billion a year in the United States, and only $2 billion in the U.S.S.R.

"Our housing investment is roughly twice that of the Soviet even though living space per capita in the United States is already four times that of the U.S.S.R.

"What of the future? In Khrushchev's words, 'The Soviet Union intends to outstrip the United States economically. * * * To surpass the level of production in the United States means to exceed the highest indexes of capitalism.'

"For example, compare primary-energy-production trends in the two countries. Soviet production of coal, petroleum, natural gas, and hydroelectric power, expressed in standard fuel units, amounted to 45 percent of the U.S. production in 1958. By 1965 it will be close to 60 percent. The absolute gap in primary energy has been closing since 1950. At the present pace, it will continue to narrow over the next 7 years.

"Similarly, the absolute gap in steel production has been shrinking over the past 5 years. The maximum gap in steel capacity apparently was reached in 1958.

"The comforting illusion spread by the 'disciples of the absolute gap' should not serve as a false tranquilizer.

"At the same time, it is important not to exaggerate Soivet prospects in the economic race. In the propaganda surrounding the launching of the 7-year plan, Khrushchev made a number of statements about Soviet

economic power which were nothing more than wishful thinking. Specifically he stated that, 'after the completion of the 7-year plan, we will probably need about 5 more years to catch up with and outstrip the United States in industrial output. Thus,' he added, 'by that time [1970], or perhaps even sooner, the Soviet Union will advance to first place in the world both in absolute volume of production and in per capita production.'

* * * * *

"The Kremlin leaders claim U.S.S.R. industrial output to be 50 percent of that of the United States. Our own analyses of Soviet industrial output last year concluded that it was not more than 40 percent of our own.

"Secondly, Khrushchev forecasts that our future industrial growth will be only 2 percent a year. If this is true, the United States will be virtually committing economic suicide. This prediction I regard as unrealistic.

"A saner projection would place 1965 Soviet industrial production at about 55 percent of our own. By 1970, assuming the same relative rates of growth, U.S.S.R. industrial output, as a whole, would be about 60 percent of that in the United States.

"Those who feel we can buy peace by compromise with Khrushchev are sadly deluded. Each concession we give him merely strengthens his position and prestige and the ability of the Soviet regime to continue its domination of the Russian people, whose friendship we seek.

"The over-all power of the free world is still vastly superior to that under the control of the leaders of international communism. * * *

"They are not supermen."

Buzzard's Roost Dam on Illinois River, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 21, 1959

Mr. NEUBERGER. Mr. President, the Coos-Curry Electric Cooperative, Inc., of Coquille, Oreg., has applied to the Federal Power Commission for permission to construct the Buzzard's Roost Dam on the Illinois River. To the best of my knowledge, the proposal for constructing a 500-foot dam in this vicinity is the largest hydroelectric project ever undertaken by a consumer-owned rural electric cooperative.

Economic feasibility of the project, estimated to cost approximately $52 million, will depend somewhat on the source of funds and the interest rate on any loan obtained. This is brought out in a preliminary analysis of project financing, which has been provided me by Mr. Bruce Shavere, the manager of the Coos-Curry Electric Cooperative.

So that my colleagues in the Senate will know details of the largest cooperative-sponsored waterpower project ever proposed, I ask unanimous consent to have printed in the Appendix of the RECORD a preliminary summary report which emphasizes the impact of interest rates on the cost of power to consumers. Naturally, the cooperative will have to satisfy the FPC regarding its proposed facilities for handling the fishery resource in this area before any license can be issued. This and other factors must be thoroughly evaluated by the Commission before any license is approved.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

PRELIMINARY SUMMARY REPORT, BUZZARD'S ROOST HYDROELECTRIC SITE, ILLINOIS RIVER

The Buzzard's Roost hydroelectric site is located on the Illinois River, a tributary of the Rogue River in Curry and Josephine Counties, Oreg. A hydroeletcric development at this site will consist of a major storage project intended to regulate and utilize essentially the total natural streamflow of the Illinois River and its principal tributaries above the dam.

It is contemplated that the project operation would be coordinated with the Bonneville Power Administration Columbia River system to achieve the most efficient and economical utilization of these resources, including the resorvoir storage, when operated integrally with the Columbia River system. Such coordination will be achieved through an agreement between the Coos-Curry Electric Cooperative, Inc., and the Bonneville Power Administration whereby Bonneville would regulate the operation of the project in conjunction with its Columbia River system to obtain the most beneficial use of these resources as a part of the Northwest's power resources. Such coordination may result in a firm output from this project in excess of that which could be realized if the project were to be considered as operating independently from the Columbia River system.

A summary of basic data and project costs along with a summary analysis of annual costs and the resultant power and energy costs is presented on the attached sheets. A brief general description of the principal project works is as follows:

A concrete arch dam having a crest length of approximately 1,500 feet would be located on the Illinois River approximately 6 miles upstream from the confluence of the Illinois and the Rogue Rivers. The dam would be of the nonoverflow type with a separate side channel spillway having a capacity adequate to pass the maximum flood which could be anticipated on the river when utilizing the available storage behind the dam. A reservoir covering approximately 4,250 acres would be created behind the dam which would have a total storage volume of nearly 1,200,000 acre-feet. A maximum drawdown in the reservoir of approximately 70 feet would yield a usable storage in the reservoir of approximately 200,000 acre-feet which, for the purpose of this preliminary analysis, is assumed adequate to provide the necessary regulation of the streamflows to allow essentially full utilization of the streamflows of the river during a repetition of the 1936–37 water conditions.

A reinforced concrete powerhouse would be located at the base of the dam and would be constructed as an integral part of the dam. The powerhouse would contain generating equipment totaling 135,000 kilowatts, consisting of three 60,300-horsepower Francis-type turbines directly connected to generators rated at 50,000 kilovolt-amperes, 0.9 pF (45,000 kilowatts). Step-up transformers and circuit breaker controls would be constructed adjacent to the powerhouse.

The plant output would be transmitted from the project site to Gold Beach by means of two 115-kilovolt transmission lines, where the power would be delivered to the cooperative's distribution facilities and where connections would be made to the Bonneville Power Administration for transmission to other users.

PRELIMINARY SUMMARY, COST OF POWER AND ENERGY, BUZZARD'S ROOST SITE

The following table shows the cost of power and energy from the Buzzard's Roost project under four assumptions as to rate of interest on funds borrowed. This analysis assumes financing under existing REA laws, which provide for payment of interest only for the first 5 years of operation and retirement of the loan during the succeeding 30 years.

It should be recognized that the 35-year debt retirement period does not properly represent the useful life of a hydroelectric project. Accordingly, the following table also shows the average cost of power and energy during the 47-year period extending from the date of completion of the project to the date of expiration of the Federal Power Commission license.

The costs presented below are based on interest, amortization of the cost of the project, and estimated cost of operation, excluding taxes. No consideration is given to the value of the facilities remaining at the end of the period.

	35-year period	47-year period
Cost per kilowatt of peaking capability, interest rate:		
2 percent	$17.91	$14.20
2½ percent	19.22	15.18
3 percent	20.59	16.20
4 percent	23.47	18.34
Cost of energy, based on 1936-37 water conditions (mills per kilowatt-hour), interest rate:		
2 percent	4.68	3.71
2½ percent	5.02	3.97
3 percent	5.38	4.23
4 percent	6.13	4.79

The Challenge of the Refugee and Escapee Problem

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 21, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have received from the American Council of Voluntary Agencies for Foreign Service, Inc., regarding the challenge of the refugee and escapee problem.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE CHALLENGE OF THE REFUGEE AND ESCAPEE PROBLEM

AMERICAN COUNCIL OF VOLUNTARY AGENCIES FOR FOREIGN SERVICE, INC.,
New York, N.Y., April 7, 1959.

The American Voluntary Resettlement Agencies which are members of the American Council, have been active for many years in mass and individual migration and resettlement of peoples displaced by wars' aftermath, calamity or political oppression. In the past decade, some 600,000 such persons have been resettled in the United States through sponsorship secured by voluntary agencies. This human response to human need was a work of rescue which not only saved individuals and family lives but also has been of service to the economy of many over-populated countries. Further, it served as a great social and economic advantage to the American economy.

It is the belief of the American Voluntary Agencies that U.S. programs to assist refugees and escapees are interpreted overseas as a significant index of our Government's foreign policy. We cannot, therefore, ignore the fact that the millions of refugees still homeless and dispossessed are a threat to the peace and stability of many areas of the world, and that refugee aid and programs of resettlement, rehabilitation and integration must be continued and strengthened.

The American voluntray agencies have ongoing relationships with governmental and intergovernmental agencies charged with the responsibility for assistance to refugees, such as the United Nations Office of High Commissioner for Refugees; the Intergovernmental Committee for European Migration and the U.S. Escapee Program. The need to make adequate funds available to those governmental and intergovernmental agencies is a continuing one and requires the fullest support.

While there have been important accomplishments by all the agencies working on behalf of the refugees, the task still remains tremendous and challenging. It demands the maximum efforts by all governmental and voluntary sectors.

As part of the U.S. participation in the projected World Refugee Year, our country should continue to set an example for the free world by generous, imaginative and extensive refugee assistance programs. This may well include refugee immigration legislation which would maintain our tradition as a haven for the oppressed and dispossessed, and demonstrate the good will of the American people in accepting moral as well as financial responsibility for a fair share of the solution of the world refugee problem.

The 1958 Column of the Year—Tribute to S. L. Latimer, Jr.

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 21, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent that "The 1958 Column of the Year," as selected by the editors of Dixie Business, be printed in the Appendix of the RECORD.

The column selected this year was that written by Mr. S. L. Latimer, Jr., editor of the State, of Columbia, S.C. It is entitled "From Across the Editor's Desk," and appeared in the State on May 25, 1958.

I am glad, indeed, to join in paying tribute to Mr. Latimer. His leadership of the State has made it one of the foremost newspapers in the South, and I think it very fitting that his column be selected.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

FROM ACROSS THE EDITOR'S DESK

(By S. L. Latimer, Jr., editor of the State)

The late Mr. Ambrose E. Gonzales of the State, always had a ready answer, and a good one.

As the books of his classic Black Border series, done in Gullah, came out he presented me with copies. Upon receiving his autographed "The Captain," I thanked him and remarked that it had such an attractive binding. He laughed. But he didn't forget what I said. When "Laguerre," the next in the series, came out, he wrote me a note: "I hope," he said, "you enjoy the cover." I did not fail to catch the reference.

Once a rather well-known Columbian wrote a hot letter to the editor criticizing the State rather unjustly, the charges being without foundation. It irritated Mr. Ambrose for it was from a man to whom the State had been kind. He gave me the letter to publish. "I would dress him down," he said, "but I like him so I will let him off lightly." Whereupon he dictated to me this editor's note to printed after the letter: "The State would answer Mr. ——— but why waste lather to shave a jackass?" I was flabbergasted, but I said nothing. Later I showed it to Maj. McDavid Horton, my immediate superior. He too wondered what Mr. Ambrose would have said had he wanted to "dress him down." Together we went to Mr. Gonzales. "Oh, well," he said, "maybe it is a little too rough. Just print the letter without comment."

Once a group of advertisers became sore over a tax stand taken by the State and retaliated by withdrawing copy. It was costly to the paper, which was not in clover, moneywise, and could ill afford to lose the revenue. But it was a two-edged sword; it cut both ways. Those who had dropped their ads were feeling the effect in their sales. Finally one of the leaders wrote that if the State would change its policy in the matter, the advertisers would return. To which Mr. Ambrose sent this terse reply:

"DEAR MR. ———: Your letter received. The State is not for sale.

"Yours truly,

"A. E. GONZALES."

Dr. Stanhope Sams was a man of wonderful information. He would have been a whiz on these quiz shows. No telling what he would have won. At one time he was on Collier's, then on the State as an editorial writer, then a Government representative in the Far East, and later editor of the Japan Times, an English language newspaper published at that time in Tokyo. But he loved Columbia and the State, and finally came back on this newspaper, where he wielded a gifted literary pen until his death.

One day Mr. Ambrose wanted to clear up some obscure point, and was prepared to put someone to work to uncover it. I would have been the one to do the looking up had not at that time Dr. Sams come along. I have forgotten what the question was, but Mr. Ambrose asked Dr. Sams if he knew the answer, which he did. Mr. Ambrose looked at him in admiration. He liked a quick, well-informed mind. Then with a twinkle in his eye he said: "Stanhope, you've got more damned useless information than any man I ever knew."

One reason Robert E. Gonzales was such a success as an editorial paragrapher was that he had such a fine and exacting teacher in his uncle. Bob used to say that if he wrote 40 quips, his Uncle Ambrose would throw 20 of them away and edit severely half of those remaining.

But let no one come to the conclusion that Mr. Ambrose was master only of terse comment. He could write with all the great tenderness of his big heart; he could be as firm as his steel-like character; he could interpret with uncanny astuteness. He liked sports, he had a wonderful baritone voice, he loved people. What a pity that he should have been so crippled for the last years of his life; yet what an inspiration he was, as he carried on so courageously. Every one of his Black Border books was written with hands that knew untold pain, or dictated with a voice which he could use only with great strain and tiring effort.

Mr. Gonzales was born May 29, 1857, at Charleston, 101 years ago next Thursday. He died in July 1926 at Columbia. He is buried in the family plot in Elmwood.

Fair-Trade Legislation

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, April 21, 1959

Mr. PROXMIRE. Mr. President, in a letter in today's New York Times, Mr. Arnold Ross, of New York, writes an excellent answer to many of the editorial criticisms of fair trade that have been featured in the big national newspapers.

Mr. Ross concentrates on an editorial opposing fair-trade legislation that had previously appeared in the New York Times; but his answer applies generally.

Mr. Ross makes two especially pertinent points. First he points to the fallacy of the 1956 study of the Department of Justice, which is the principal reliance of those fighting fair-trade laws. This study of eight non-fair-trade cities purported to show that consumers could save 27 percent in buying a large number of items below the fair-traded price. As Mr. Ross writes, this neglects the fact that what the non-fair-trade merchant does is use the nationally advertised item as a loss-leader to pull customers into his store. He then hikes the profit margin on other items to abnormally high levels, so that the net saving to the consumer is zero.

Mr. Ross also administers a coup de grace to the big newspaper opponents of fair trade by pointing out that they themselves practice fair trade, and insist on it, and are very successful with it. The New York Times, for instance, specifies exactly what the price you and I shall pay for that great paper when we buy it from the newsstand. Can anyone recall buying a paper below the fair-trade price printed on it by the manufacturer-publisher?

Mr. Ross has artfully snagged the Times in a neat "Do as I say, not as I do" contradiction; or, as the old French proverb goes, "Why be hypocritical, when it is so easy to be self-deluded?"

Mr. President, I ask unanimous consent to have the excellent letter by Mr. Ross printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FAIR TRADE BILL BACKED—CONTROL OF RETAIL PRICES IS HELD NECESSARY FOR MAXIMUM VOLUME

TO THE EDITOR OF THE NEW YORK TIMES:

Your April 13 editorial "The Fair Trade Bill" presents an oversimplified view of the fair trade problem.

In the first sentence you describe the Harris bill as a "radical piece of legislation." This seems like a poor way to describe a principle which, under a Federal enabling law enacted 20 years ago, was adopted by 45 out of 48 States.

You further state that passage of this bill holds a threat of higher prices to the consumer. You quote a 1956 Department of Justice survey showing that "8 non-fair-trade cities' consumers could save 27 percent in buying some 77 items at the lowest prices prevailing in those cities as against the prices for the same goods in fair-traded areas."

This is only half the story. The only alternative open to a merchant faced with an abnormally low profit margin on any given type of merchandise is to mark up other categories of merchandise to abnormally high levels. The net saving to the consumer is nothing. He has merely been enticed by one item only to be gouged on another.

This, however, is not the worst evil that comes in a totally non-fair-traded economy. Only the largest dealers have the selection of merchandise required to pursue the loss-leader method described above. The end result is that the thousands of small merchants who do not have the selection of blind items which is necessary to merchandise successfully in this manner give up handling these football items altogether.

It is impossible to maintain anything like our vast system of mass distribution without a mass system of retail outlets making all types of merchandise readily available to all people at all times and at a fair price. The natural result of a non-fair-traded economy is a gradual concentration of sales in a few hands with an inevitable diminution in overall volume. The threat to our industries and factories would be a severe one.

Several months ago the Times carried a better review of this problem. It appeared in "The Merchant's Point of View." The conclusion was that mass distribution was impossible for any length of time without fair trade or something similar to it.

The New York Times, as well as every other newspaper, seems to embrace this principle of fair trade in its own distribution system. I have yet to buy my copy from any newsstand for less than the purchase price shown on the front page.

I think that your circulation manager must be fully aware that an uncontrolled retail price would be the first step to a reduction in the number of newsstands and an inevitable reduction in circulation.

ARNOLD ROSS.

NEW YORK, April 14, 1959.

Resolutions of Central Cooperatives, Inc.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, April 21, 1959

Mr. WILEY. Mr. President, from time to time I welcome the opportunity to pay tribute to the fine work which cooperatives are performing in behalf of the public.

Today, I should like to invite attention to one such organization: Central Cooperatives, Inc.

Currently this fine cooperative is serving patrons not only in Wisconsin, but also in Michigan, Minnesota, and North and South Dakota.

We recognize that, over the years, such cooperatives have benefited not only their patrons by providing a wide variety of services at minimum costs, but also the economy of the local communities.

Recently, I received a series of resolutions adopted by Central Cooperatives, Inc., on a number of significant issues—many of which are before the Congress.

Recognizing the broad-scope thinking behind these resolutions, I am taking the liberty of calling these to the attention of my colleagues. I ask unanimous consent that these resolutions be printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTIONS, 42D ANNUAL MEETING, CENTRAL COOPERATIVES, INC., MARCH 23–24, 1959

RESOLUTION 1—PURE FOOD REGULATION

Whereas serious violations have occurred in regards coloring and preserving of foods for human consumption; and

Whereas the consumer should be protected by Government agencies; and

Whereas Central Cooperatives, Inc., has taken a lead in the protection of consumer health: Be it therefore

Resolved, That Central Cooperatives, Inc., be commended on its stand in its refusal to compromise on this vital health issue.

RESOLUTION 2—ST. LAWRENCE SEAWAY

Whereas the St. Lawrence Seaway is now a reality; and

Whereas the Central Cooperatives, Inc., has supported the development: Be it

Resolved, That Central Cooperatives, Inc., and other cooperatives in the area make full use of its facilities now available, to open new transportation service with cooperatives in their area and abroad.

RESOLUTION 3—THE FORAND BILL FOR THE AGING

Whereas there is a lack of medical and hospital care provided for the aging through existing agencies of insurance;

Whereas life expectancy and longevity is rapidly increasing each year and it is generally agreed that the problem of providing medical care for people on social securiy is an ever increasing one; and

Whereas up toth present no Federal legislation has been passed to help solve this problem: Be it

Resolved, That the delegates assembled at this 42d annual meeting of Central Cooperatives, Inc., go on record in favor of H.R. 4700, known as the Forand bill, and that cooperatives here represented urge their Congressmen and Senators to vote in favor of this bill.

RESOLUTION 4—LABOR AND COOPERATIVES

Whereas the principles upon which both the cooperatives and the labor movement are founded are very much the same—in both groups people unite in common interest so that they can benefit from the strength which their association gives them; and

Whereas cooperatives of the Midwest have been developed primarily by people engaged in agricultural pursuit; and

Whereas they are established on the basic principle of open membership; and

Whereas workers and laborers in the industrial areas of our Nation are aware of the need of cooperation to improve their economic welfare; and

Whereas consumer cooperatives shopping centers are being developed in many metropolitan areas: Be it hereby

Resolved, That all organized labor be invited to avail itself of the services offered by cooperatives.

RESOLUTION 5—SALES TAX

Whereas it is common knowledge that a general tax is regressive and puts an unfair tax burden on those least able to pay: Be it therefore

Resolved, That Central Cooperatives, Inc., at its 42d annual meeting oppose the sales tax and insist that the principle and ability to pay be recognized in all tax matter.

RESOLUTION 6—RURAL ELECTRIFICATION AND TELEPHONE PROGRAMS

We reaffirm our endorsement of the national rural electrification and telephone programs.

We urge on the National Congress that it provide adequate safeguards for rural electric cooperatives by continuing to furnish sufficient loan funds to permit construction of line and adequate generating facilities wherever these are necessary.

The issue of interest rates on REA loans is, in our opinion, one to be debated by the National Congress rather than by executives in the Department of Agriculture, and we ask that this expression of our position be called to the attention of the Secretary of Agriculture.

RESOLUTION 7—EDUCATIONAL TV

Whereas Central Cooperatives, Inc., is operating in the area of northern Wisconsin, upper Michigan, and northern Minnesota; and

Whereas Central Cooperatives, Inc., is interested in the growth of educational television; and

Whereas channel 8 has been allocated to the Duluth-Superior area which will cover the same general area: Be it therefore

Resolved, That Central Cooperatives, Inc., and its affiliates cooperate in the drive for funds to put channel 8 into operation at the earliest possible time.

RESOLUTION 8—COOPERATIVE TAXATION

Whereas cooperatives are obligated to pay patronage refunds to their patrons in proportion to patronage; and

Whereas such patronage refunds therefore cannot be income to cooperatives, and are therefore properly excludable from gross income of cooperatives; and

Whereas legislation proposed by the Secretary of the Treasury would, if introduced in Congress and passed by Congress, declare that patronage refund liabilities of cooperatives must be included in computation of their gross income for tax purposes; and

Whereas such legislation would furthermore declare that cooperatives would be taxed on all patronage refund liabilities, unless they were paid either in cash or in certificates bearing 4 percent interest and redeemed in cash within 3 years; and

Whereas such a program would cause dire hardship in all types of cooperatives: Be it therefore

Resolved, That delegates and members of Central Cooperatives, Inc., vigorously oppose this legislation.

RESOLUTION 9—SMALL LOANS

Whereas Central Cooperatives, Inc., has always represented the interests of the consumer and has protected the consumer against inflation and business abuses; and

Whereas the consumer's interest is always under-represented in the conflict of pressure groups in legislative bodies of our State and national governments: Be it

Resolved, That the annual meeting go on record in support of Governor Freeman in his request that the Minnesota legislators (1) force lenders to state the true simple interest rate they charge, (2) reduce the small loan interest rate, (3) help people understand what credit life insurance is, and (4) let him appoint a consumer counsel.

RESOLUTION 10—YOUTH PROGRAM

Whereas the young people of today will be the leaders of tomorrow; and

Whereas continued vitality and growth of our cooperative depends upon the infusion of new life and spirit; and

Whereas Central Cooperatives, Inc., has established a scholarship program to stimulate interest by young people in cooperatives: Be it therefore

Resolved, That all member cooperatives take advantage of this opportunity to build increased understanding and participation in cooperatives by the young people in their communities.

RESOLUTION 11—EXPRESSION OF APPRECIATION

We, the delegates of the 42d annual meeting of Central Cooperatives, Inc., appreciate Brooks Hays' taking time out from his busy schedule to address our group last evening.

We express our appreciation to the management and staff of Hotel Duluth for the fine facilities, their courtesy, and accommodations.

We also wish to extend our recognition and appreciation to the guild for their service with the coffee break, to Jerry Voorhis for his inspirational luncheon speech, and to the judges of the co-op essay contest: Sister Mary, College of St. Scholastica; Robert Haakenson, University of Minnesota, Duluth branch; Orville Manion, Wisconsin State College, Superior; Lydia Peterson, Northland College of Ashland.

Foreign Language Training in the Public Schools

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Tuesday, April 21, 1959

Mr. CASE of New Jersey. Mr. President, I should like to call attention to the recent address delivered by the Secretary of Health, Education, and Welfare, Arthur Flemming, before a gathering of foreign language teachers in which he cites some of the problems in our education system today. The Secretary has been keenly aware of the lack of foreign language training in our public schools as well as the inadequacy of teachers' salaries which has resulted in a critical shortage of teaching personnel. Fortunately, he is determined to do something about these weaknesses and some progress has already been made. Excerpts from the Secretary's address were reported in the press, and I ask unanimous consent to have printed in the Appendix of the RECORD the article which appeared in the Washington Star of April 18, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LANGUAGE INABILITY IN UNITED STATES IS HIT

Health, Education, and Welfare Secretary Flemming yesterday decried this country's "inability to use foreign languages," a fact which he called "one of the principal obstacles to world peace."

He also pledged himself to work "in season and out of season" to see that teachers' salaries at all levels were doubled within the next few years.

"This inability to use foreign languages deprives us of outstanding opportunities to promote understanding between the nations of the world," Mr. Flemming told more than 1,000 language teachers at the Sheraton-Park Hotel.

The teachers, gathered here for a 2-day Northeast Conference on the Teaching of Foreign Languages, represent 300 public and private elementary and secondary schools and colleges.

Mr. Flemming noted that the trend in eliminating language requirements from academic curricula had encouragingly been reversed. At the same time, he pointed out there were 50 official and unofficial foreign languages which were "not taught at all in any U.S. institution of higher learning."

"I am also told," he said, "that there are some 30 languages, each spoken by 5 million foreign peoples, for which we have no dictionaries."

Mr. Flemming said the sputnik crisis 17 months ago had spotlighted the weaknesses in the U.S. education program, paramount of which, he said, were teachers' low salaries and inadequate language training.

"We must strengthen the salary structure of teachers at all levels," he warned. "Society has no right to penalize teachers and their families."

In describing HEW's efforts to establish language training and research centers across the country, Mr. Flemming said his Department had already underwritten $400,000 for six such centers beginning next fall. The centers would concentrate on one or more of the six so-called critical languages not commonly taught in the United States—Russian, Chinese, Japanese, Arabic, Portugese, and Hindustani.

The Secretary said he expected to get the additional $400,000 provided for in the National Defense Education Act with which to establish six more language centers.

Dr. Galo Plaza Hails U.S. Policy Changes

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 21, 1959

Mr. SMATHERS. Mr. President, one of the truly great friends of the United States in Latin America, Dr. Galo Plaza, the former President of Ecuador, was invited to address the Pan American Union in Washington yesterday. There is a report of his fine and informative address in the Washington Daily News of today, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW ERA OF UNDERSTANDING—GALO PLAZA HAILS U.S. POLICY CHANGES

(By Harry Frantz)

Dr. Galo Plaza, former President of Eucador, believes the American Republics are about to start a new era of understanding and cooperation which will help the flow of capital for Latin American economic development and will increase technical cooperation.

Dr. Plaza spoke yesterday at the Pan American Union to an audience of ladies representing Washington official and diplomatic life. The meeting was arranged by Sra. Jose Mora, wife of the Secretary General of the OAS.

CHANGES

"Recent decisions and attitudes have constituted a welcome change in U.S. policy for Latin America, which will help dissipate most of the grievances and eliminate the harsh attitudes that have clouded inter-American relations in the past," Dr. Plaza said.

"The sincere critics in Latin America of U.S. policy now speak highly of the leaders in the United States who, having detected the flaws, have embarked on honest and constructive efforts to correct them."

Dr. Plaza cited the following steps which he said are clear indications of a favorable change in U.S. policy for Latin America:

The United States has agreed with other Republics to create an exclusively inter-American lending institution;

The United States has agreed to put into practice some workable procedures to mod-

erate extreme fluctuation in the prices of basic commodities from Latin America; and

For the first time the United States has looked with sympathy and approval on our plans for a common market in Latin America after opposing any such idea for years.

Dr. Plaza said that the Communists mixed the Latin American dissatisfaction with other problems for which the United States was not responsible, "and produced a Molotov propaganda cocktail" which repeatedly exploded during the trip last year of Vice President RICHARD M. NIXON and more recently in Bolivia.

"The reasons for resentment were there, the way it was expressed was foreign to Latin America," he said.

Galo Plaza said that Latin America will have to revolutionize its economic system so as to make more efficient use of its natural resources by: the application of technology to agriculture, a rational program of industrialization and a common market.

Negro Housing in Atlanta, Ga.

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 21, 1959

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the able editorial from the Thomasville (Ga.) Times-Enterprise. The title of the editorial is "NAACP, Please Take Notice."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NAACP, PLEASE TAKE NOTICE

If the NAACP is interested in anything so mundane as how Negroes are housed, where they live, and in what sort of an environment they are growing up, we earnestly suggest that they take note of the recent report of the U.S. Civil Rights Commission, which said that Negro housing in Atlanta is "vastly better" than can be found in many northern cities.

Following the investigations of the Commission in Atlanta, the Chairman, John Hannah, said Atlanta's Negro housing "may not be ideal, but the situation here is definitely better than in many northern cities."

Now we are aware of how the NAACP operates and frankly doubt that this revelation will inspire them to take time off from their determined campaign to integrate southern schools; but we do feel that if they are at all interested in the progress of their race, they might want to follow up Hannah's remarks with a good long look at conditions in some of the northern cities he mentioned.

While he was about it, the Chairman and members of the Commission issued a warning: Orders for Federal agencies in the housing field to promote housing integration would bring about the "utter ruin" of the home-building industry in the South.

This is straight talk, the kind which takes facts into cognizance and gives due recognition to all aspects of the situation and emerges with a realistic report which should not, but may, be ignored by the northern cities and the racial agitators of the NAACP. Good relations apply in Atlanta between the two races and southern whites are making a determined effort to insure that Negroes have access to adequate housing and other facilities. They have gone about the job in such a way that the results do not bear comparison with situations as they exist in northern cities; but, sad to relate, no credit will be given the South for these endeavors by the radical elements who want only their own campaign propaganda weapons to be heard.

What Our People Are Facing

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. PUCINSKI. Mr. Speaker, I have asked unanimous consent to include in the Appendix of the RECORD today a series of articles prepared by the Peacock Publications in my district on the great array of problems confronting America today.

While I personally do not agree with some of the conclusions drawn in this series, there is no doubt in my mind that it deserves a place in the forum of public debate, simply because it presents a graphic panorama of the vast complexities confronting America in its struggle for survival.

I believe that the Peacock Publications deserve commendation for attempting to present to the citizens of my district the broad and overall picture of this Nation's problems. I hope that the various public and private agencies which play such an important role in the struggle for survival will dispassionately study the various observations expressed in this series and, in the shortest possible time, will offer to me, and perhaps other Members of Congress, their rebuttal.

The series mentions, for instance, a "spending bloc" in this present Congress. I, for one, feel reasonably certain that when the record is completed for this present Congress, we will have written an impressive record of action which will help the Nation back to the road of full employment.

In its conclusion, the authors of this series propose a special commission to study America's great problems, to be headed by the President of the United States and his two immediate, and fortunately surviving predecessors, Herbert Hoover and Harry Truman. This I believe is a sound idea. We, as a nation, are today faced with a gigantic struggle against the growing menace of economic war from the Communist bloc of the world. I think it would be tragic indeed if, in this great period of peril to America, we, as a nation, failed to call upon the vast knowledge and experience of our three living Presidents to help, in a bipartisan way, work out some of the solutions.

I think that Mr. Raymond J. Peacock, publisher of this chain of newspapers, Mr. Marvin McCarthy, who actually compiled this series, and the entire staff which had helped prepare this material deserve commendation for their efforts that have indeed raised some provocative questions which I shall attempt to answer at a later date and which I am sure others will attempt to answer.

Unless the citizens of America are encouraged into a full-scale debate of the great issues confronting our nation by articles such as this one I am presenting today, we may very well inadvertently destroy the dynamics of free speech which has given this Nation growth and vigor.

This series ran in three installments, namely, March 18, March 25, and April 1. I trust my colleagues will study this provocative series carefully and, in due time, add their own observations on its contents. The series, Mr. Speaker, follows:

WHAT OUR PEOPLE ARE FACING

(EDITOR'S NOTE.—This is the first of an exclusive series presented by the Peacock newspapers as a community service—Community America. Publisher Raymond J. Peacock expresses appreciation for the assistance given in preparation of the series by Tax Foundation, Inc., Civic Federation, U.S. Department of Labor, Illinois State Chamber of Commerce, Taxpayers Federation of Illinois, the crime commission, and other agencies. The basic information was provided by them. Figures are from official sources.)

This is the story of a multibillionaire with threadbare pockets, who is in trouble and doesn't seem to realize it.

You know him well.

He is beloved and trusted by all of his very large family, but now he has them worried. He has become the biggest spender the world has ever known, and with it the world's softest touch.

This splurging multi-billionaire puts on a fabulous front. He spends and spends far beyond his means, and picks up all the checks.

He has $20½ billion in solid gold "in the bank" at Fort Knox, but he also has $276 billion in unpaid checks floating around.

How he keeps on going and where all that money comes from, you, of all people should know.

By now you surely have guessed—this is the story of Uncle Sam, and what's to be done about him.

We wonder if you, as Mr. or Mrs. Average Citizen, fully comprehend just what you are in the middle of. You should, because it is all the nephews and all the nieces, even unto the fourth generation, who eventually must tote up and foot the uncle's staggering bill.

It is a liability measured not only in dollars, but in terms of economy, free enterprise, standards of living, conditions of working, morale, dignity, integrity—even freedom itself.

It is a complex picture; in full and concentrated form it is frightening.

The time has come to gather in all the scattered components and loose ends and wrap them up in one package, in an effort to determine just what it is we are buying.

This, then, is the introduction to a series on America's overall problem, presenting the various factors which in themselves may appear to be individual, but when put together definitely form a composite pattern.

It is to be a nonpartisan analysis, without recrimination or placing of blame. It is to be factual, based on information and matters of record provided the Peacock Newspapers by the Nation's top authorities.

The hope is to bring home the full import of the dilemma which America is facing, and, as we go along, to suggest primary steps toward what may be a solution.

The national spending spree, which the Illinois State Chamber of Commerce calls "nothing short of terrifying," is the explosive kernel from which has come thundering chain reaction.

Last year all government—Federal, State, and local—hit a postwar spending high of $131 billion, which was a 134 percent increase over 1948 and $12.9 billion more than the governments took in for the year. In 23 of the last 27 years, spending has been greater than income. The parlay has been tremendous.

Out of this overspending has come what the Civic Federation terms "a stampede for more money from the taxpayers." All taxes last year totaled $109 billion, as against $54.5 billion 10 years ago, an increase of 99.7 percent. Huge new tax proposals are now being made.

Next step in the chain follows naturally, an accumulation of America's debt as the multibillionaire of our story continues to spend what he doesn't have. The overall American debt now stands at $332½ billion, which is more than could be paid off in 2 whole years if not 1 cent were spent for anything else. Mere interest on the debt today is more than whole budgets used to be.

The present debt is a 23-percent increase over 1948 ($271 billion), which included the massive war spending. The current authorized limit on the Federal debt only is $288 billion, but actually stands at $276 billion. The ravenous tax horde is snapping eagerly at the $12 billion margin.

In Illinois and Chicago, the spending, taxing and piling up of debt has kept pace with the national trend.

And now for step 4, a truly resounding rocker—inflation. As the governments borrow more, the financial institutions use the collateral received (largely bonds and certificates) as the basis for more lending to the public, at a ratio of several to one.

Prices, overall costs and wages go up. We make more, spend more, owe more. Estimates of the actual value of the once 100-percent dollar range from 48 to 60 cents. Who really knows? Certainly, not the experts. The best authority is the housewife, who can tell you to the item or pound how much her dollar will buy in commodities today, as compared to 10 years ago.

Step 5: The economic mushrooming has thrown both management and labor into turmoil.

To meet rising expenses, management has resorted to various steps, some of them ominous. One is the constant advancement of prices. Another is a trend by some big business to enter the retail field (as reported by Advertising Age), and generally strive to increase its own bigness at expense of the small.

The Illinois Retail Merchants Association warns: "Smallness is in an increasingly precarious position."

The U.S. Chamber of Commerce says: "Present tax rates are changing the nature of free enterprise and will destroy the system in a relatively short time unless adequate tax reform measures are enacted."

Labor moves, too, in defensive counteraction. More and more pressure for higher wages is exerted. All proposals for labor-curbing legislation are vigorously combated. The mammoth Teamsters Union has sought to increase even its 1,600,000 membership, first by a proposed unionization of New York police, more lately by a move toward entering the Puerto Rican labor picture.

Threat of an industrywide steel strike, which could be paralytic, when present contracts expire in June, already is looming.

Step 6: Rackets and crime run rampant. With more and looser money on the market, the vicious elements are grabbing for all they can get. Major crime in 1958 was the greatest in America's history, with emphasis on theft and embezzlement. The racketeers have become so audacious and domineering the entire Nation is indignant. You see them on television during congressional probes, thrusting belligerent faces into the microphone, and "taking the fifth" by refusing to testify.

You feel an impulse to turn off the TV at once, and eject this unsavory intruder from the living room.

The final and most distressing phase of the chain reaction is a deterioration of national morale. People are becoming more content to leave everything to the Government. Congressmen report they are receiving a minimum of mail containing complaints or protests on conditions. Relief rolls are rising. Unemployment is going up and is nearing 5 million.

Elections come and go with little flurry and light voting, almost as a matter of course. Most people just don't seem to care any more.

Now, how does all of this affect you?

Here are a few simple examples which will do for now. In the spending spree, $769 was charged last year against every man, woman, and child in America.

The 65 million workers in the Nation now are paying an average annual tax of $1,675 apiece. The average income of workers has risen to $5,600, but the percentage of tax increase has outstripped it.

Of the gross American debt, you, your wife, and each of your children owes $1,952.

And hidden taxes—well, here's an example right at home. The Easter bonnet which mother will wear this year will have 150 taxes on it, according to Tax Foundation computations. Each egg that she colors and hides for the children will have 100 of the unseen taxes.

Yes, the time has come, and so, what's to be done about it? We believe that America is facing its greatest nonwar crisis in history. We believe it is big enough and definitely timed for this:

A consultation at America's highest level, between its present President and his two living predecessors, and their determination of what should be done:

Dwight D. Eisenhower, master military strategist and administrator.

Herbert C. Hoover, great statesman, humanitarian, and economist.

Harry S. Truman, super wise in the ways of politics and governmental workings.

Together, they could survey the great American problem, and establish a commission to work it out.

Such a commission, under this combined guidance, would be made up of our greatest and most inspired leaders.

They would have to be dedicated men, and in that we are fortunate. America still has such leaders and patriots and that's the salvation.

The last sad day will be when America runs out of dedicated men.

SECOND INSTALLMENT

You wouldn't believe that Uncle Sam, spendthrift though he is, could find so many square holes into which to pour so many round dollars.

It just doesn't fit—this greatest spending binge in history by our national multibillionaire.

It has shot so many holes in our national economy that something must be done about it—now.

Unless something is done, we face the threat of these eventualities:

1. The already crushing tax burden being increased until it exceeds 50 percent of what everybody earns. It is now 30 percent.

2. Inflation ballooning to the point where such fixed-amount assets as pensions, insurance, annuities, etc., become comparatively worthless.

3. America going bankrupt.

The first installment of this series suggested that consultations be held by President Dwight Eisenhower and his two living predecessors, former presidents Herbert Hoover and Harry Truman. Upon their determination of what should be done and under their guidance, a commission would be appointed at the highest levels to develop and consummate a program to apply the brakes before the brink is reached.

Purpose of this second chapter is to explore some of the drains down which America's wealth is going, and to point up the astonishing disagreements which exist between recognized authorities over what to do about them.

If any further evidence were needed that the time has come, this wide-spread uncertainty should be proof positive.

The Federal budget: President Eisenhower has submitted to Congress a budget for fiscal 1959–60 amounting to $77 billion. He believes that with proper economy the Government, for only the fifth time in the last 28 years, can break even on its income and spending.

The spending bloc in Congress says this is not enough, the budget should be increased by at least $4 billion.

Chairman HARRY F. BYRD of the Senate Finance Committee retorts: "A $5 to $6-billion cut in the budget could be accomplished without the impairment of a single essential function."

The difference of opinion: $10 billion, dollars.

National security: Expenditures of approximately $40 billion are proposed for missile and rocket development and keeping other components of the Armed Forces in strength and readiness. On this score, military safety of the Nation, the disagreements are minor, largely over such "outdated" elements as foot soldiers and tanks, merely a matter of a billion or so here and there.

Foreign aid: The budget calls for $3.9 billion to assist economically and militarily our allies in the cold war. Discussion of the factors involved in this debate could go on interminably.

To boil it down, President Eisenhower's special panel of advisers on foreign aid says the budget should be increased by at least $400 million. Christian A. Herter, the Under Secretary of State, concurs.

In sharp disagreement is the Citizens Foreign Aid Committee, which includes nationally-recognized leaders. This organization says foreign aid should be cut exactly in half.

The range of disagreement: $2 billion.

Inflation: Will it bring fabulous wealth or national ruin?

Says Prof. Sumner Slichter, of Harvard, an outstanding authority on economics: "I regard creeping inflation as a necessary cost to economic growth. I favor incurring this necessary cost."

Replies Chairman A. WILLIS ROBERTSON, of the Senate Banking Committee: "If inflation continues at only 3 percent a year, the savings and life insurance of today's young people will be virtually worthless when they need it most."

Public welfare and assistance: Here is a problem worthy of the great humanitarian, Herbert Hoover, because it embraces all the human element of people out of work, in need of food and rent, some face to face with an actual fight for survival.

Spend whatever is necessary, a great many say, to keep as low as possible suffering and want in this land of plenty.

But others point out, as of the end of 1958, the U.S. Department of Agriculture had in storage $5.3 billion worth of surplus farm products. Why not apportion all of these foodstuffs to the appropriate agencies for distribution to needy institutions and individuals, they ask, and, thus, save that $5 billion?

Cost of Government: There are innumerable yardsticks by which to measure the tremendous bulge in scope and spending of Government. Representative is the swelling

total of civilian employees required to handle it.

As of 1958 1 out of 8 of all the Nation's workers was employed in some phase of Government, a total of 8 million.

The disagreement here is whether to lop off a million or two and throw them out of work, or keep them on the payroll and off unemployment compensation and relief.

Nation's solvency: How could America go bankrupt with such vast resources as it has? Ask inflation's nonalarmists.

The total national wealth has been computed as $1,326,400,000,000. That spells out to a fantastic 1 trillion, 326 billion, 400 million dollars. It includes everything, all property, all moneys, all resources, even all livestock down to the last head munching the last blade of grass, and perhaps wondering if there's a Federal subsidy on it.

The Nation's gross annual income, as of 1957, had reached $440.3 billion. It is called gross national product, and includes the proceeds of all goods and services.

Tremendous recources, none can deny. But there is the inevitable other side.

So America's income is $440 billion a year, counters the rebuttal team. In that same year, 26 percent of it was spent on government upkeep alone, leaving 74 percent to take care of all other requirements of all the people.

So Uncle Sam does have $1,326 billion in his total estate, they concede. But already overspending has taken a one-fourth bite out of it—the gross government debt of $332.5 billion. At the present rate of erosion, just how much of the estate will be left for the uncle's great and grand nephews and nieces of the future?

Illinois, though riding the same tidal wave, is not in too bad shape, when compared to such traditionally stalwart sister States as Ohio, Michigan, and New York.

Ohio's Gov. Michael V. DiSalle has made a clean breast of it, the State has gone through a $213 million surplus and is now stone broke.

Michigan is broke, too, with payless paydays an imminent specter. Credit has run out at many banks. Industrial firms recently advanced the State $32 million on anticipated tax receipts, to meet pressing current expenses.

New York, up to its financial ears, has passed a record $2 billion budget and is working on a $277 million tax boost.

Welcome aboard, Alaska and Hawaii.

THIRD INSTALLMENT

This is the wrap-up of the series, "What Our People Are Facing," putting together all the assorted parts of the skids down which the Nation is plummeting.

Fortunately, there is still time to apply the brakes.

The two previous installments told how the four horsemen of folly—spending, taxing, debt, and inflation—are riding roughshod over the land and must be checked and unseated unless we resign ourselves to one of these two eventualities:

1. Either America goes bankrupt, or
2. Its citizens do.

Either one would drag the other under.

The financial analysis has been completed, and now we come to the summation. It will spotlight some of the other major issues which have developed as natural secondaries to the primary upheaval caused by the economic splurge.

These factors pertain directly to the job, the home, the way of living, the people's thinking, their future. It is necessary to view the picture as a whole to realize that the Nation faces not mere unrest but an actual crisis.

Labor: A loaded time bomb which isn't going to wait much longer is the labor-management strife sweeping the country, as each side grasps for every conceivable advantage to remain afloat in the financial whirlpool. Labor clamors for more wages as living costs rise. Management resists to the bitter end, then passes the burden on to the people by increasing prices with the wages.

Plundering and gangster leadership have brought some labor faction under congressional fire. Manufacturing groups are organized to combat racket picketing.

Unquestionably, a strengthened Federal code to govern labor-management conduct is mandatory. We must have new laws, with muscle, to whip both sides into line. Congress drafts and redrafts new regulations, but takes no stand-up position.

Management complains that the proposals are not tough enough. Labor replies through its AFL–CIO president, George Meany, that new restrictions being considered are "calculated wickedness." Inevitably comes the watering down.

Bluntly, Congress simply hasn't had the guts.

Great wisdom, understanding, and absolute nonpartisanship are required to solve the labor problem.

Strikes: The incidence of strikes in America might surprise you. In 1958, considered a normal year, the Department of Labor reports there were 3,400 separate strikes or work stoppages. That's an average of almost 10 new ones every day of the year.

A total of 2,200,000 workers were involved. They lost 23,500,000 man-days of production and pay. The average for each striker was 10.7 days for the year. Unions always maintain that the financial losses on their side resulting from strikes always are recouped. We wonder.

The bigger the strike, the bigger the cost. The steel shutdown in 1956 resulted in an $880 million loss all around.

Now there is concern that there may be an even bigger steel strike when the present contracts expire on June 30. Advance information is that the steel workers union will demand a billion dollar package in raises and benefits.

A prolonged steel strike now could cripple the country. Mr. and Mrs. Citizen may as well start scratching now. You have no doubts, have you, about who is going to have to come up with that billion?

Homefront: The way of living is, of necessity, undergoing drastic changes. Because of the uncertainty of foreign relations, thousands of young men still are being drafted from their homes. Approximately 2 million men and women remain in the armed services.

Two or more members of a family often must work to meet the household's expenses. A breakdown on what portions of each 8-hour day's work are devoted to the bare necessities has been provided by the Tax Foundation.

Think this over during your next coffee break: taxes, 2 hours, 29 minutes; food, 1 hour, 39 minutes; housing, 1 hour, 25 minutes; clothing, 37 minutes; transportation, 42 minutes; medical, 24 minutes; recreation, 20 minutes; other, 24 minutes.

So you can have all the recreation you want, if 20 minutes worth of work a day will pay for it. At $100 a week (the average worker's pay), that figures to about $4.15 a week, for shows, golf, movies, picnics, trips—everything. Good advice is, don't take up roulette.

People's thinking: The weight of the whole thing is getting people down. Morale is sinking. People just pay their bills if they can, skip them if they can't. They grumble, of course, but do nothing about it. More and more of them are coming to regard Government assistance as their due.

Despite the self-importance bristling news letters which some Congressmen send their constituents, best-informed sources in Washington say that Congress actually is receiving meager mail protesting conditions and demanding corrective action.

Congress goes on its way as it pleases, at many tangents and there is in Congress a segment of men who are selfish, willful, and uncompromising. They'll cut the other fellow's projects any old day, but not one single penny from their own.

The Peacock newspapers have proposed in this series that President Eisenhower and former Presidents Herbert Hoover and Harry Truman collaborate to determine the fundamentals of what must be done for the Nation's salvation, and then appoint a highest level commission to carry them out.

The people can bring about action, but they must speak up. They must hammer away at their elected representative in government—local, State, and National. Speakers' bureaus which reach large numbers of people could make this subject a headliner. Concerted effort of press, radio, and television could exert tremendous influence.

Dedicated men must be found to take the lead. The message can be put across before it is too late: "Do something now."

So there you have the picture of what our people are facing—perplexing and portentous.

We may be but a small voice in the journalistic wilderness, but that voice can and does cry out.

The forest gets terribly big. It could engulf us all.

What it's costing United States and you

Oregon Dunes and Sea Lion Caves National Seashore Recreation Area

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 21, 1959

Mr. NEUBERGER. Mr. President, a group of National Park Service officials have visited Oregon coastal areas to explain provisions of a proposal to establish the Oregon Dunes National Seashore Area. I am certain that the residents of Florence and Reedsport, where the Park Service representatives addressed public meetings, share my gratitude for the information which has been provided from this authentic and expert source. Certainly no one could be better qualified to give straightforward answers to local citizens than the group of Park Service officials headed by Mr. Ben H. Thompson, Park Service Chief of Recreation Resource Planning.

In an especially cogent review of some of the questions raised in connection with proposed seashore development by the Park Service, Mr. Malcolm C. Bauer, of the Oregonian points out:

Even the most promising public development needs, to be understood before it can be popularly accepted.

The public meetings attended by Park Service officials at Reedsport and Florence, Oreg., have certainly added to better understanding of the bill which I am sponsoring to create the Oregon Dunes Seashore Area along 23 miles of Oregon's most scenic seacoast. I ask unanimous consent to have Mr. Bauer's article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Portland Oregonian, Apr. 19, 1959]

PRECEDENT MEAGER FOR NATIONAL SEASHORE

(By Malcolm Bauer)

National Park Service officials, enthusiastic though they may be over the proposed creation of a 35,000-acre National Seashore Recreation Area on the central Oregon coast, should not be surprised at the questions raised by residents.

This is a new idea, and it has burst on the residents of the Reedsport-Florence area in the form of a congressional bill before many of them were aware it was even in the study stage. The NPS's comprehensive "Pacific Coast Recreation Area Survey," which includes a recommendation for an Oregon Coast National Recreation Area, was not in general distribution until after Senator RICHARD L. NEUBERGER's bill was in the hopper.

In fact, NPS officials candidly confess that they, too, are a bit uncertain about the details of development and prospects. As of now, there is but one seashore recreation area in the national parks system, a 28,000-acre area on Cape Hatteras, created in 1937. Circumstances there are considerably different. There are, for example, eight towns within the limits of the recreation area; all have been excluded from NPS administration, with room for expansion. Reedsport and Florence, the only two sizable communities in the Oregon dunes area, are both outside the area contemplated for acquisition.

There is, however, a helpful guide to what may be in store for this 24 miles of Oregon coastline, if it is authorized by Congress. The National Park Service has prepared a number of questions and answers setting forth intended policy in the Cape Cod national seashore recreation area, which is also in the incipient stage.

There is no reason to believe the answers would be different if applied to the Oregon project. Following are selected excerpts from a paper distributed by NPS officials who held hearings at Reedsport and Florence this week:

Question. What is the difference between a national seashore and a national park?

Answer. In general, a national park might be larger, might be less modified by man, and require more stringent application of protective controls. A national seashore is a classification of equal importance and significance. It is an area capable of sustaining, in part at least, some special public uses, such as the hunting of waterfowl, which would be inappropriate in a national park.

Question. Would homeowners be evicted?

Answer. Where continued residential occupancy does not defeat or seriously impair the major conservation purposes of a national seashore, it would be permissible practice to buy property subject to lifetime or lesser periods of occupancy of the houses by their owners, if they so wish.

Question. What provisions would be made for services?

Answer. "The National Park Service would not provide motels, restaurants, and related facilities and services within the national seashore. Such facilities are provided and could be expanded by private enterprise in the towns and villages * * * outside the proopsed national seashore."

Question. What facilities would be provided by the Government?

Answer. "The Park Service suggests that only those forms of active recreation need be provided for that area associated with the natural outdoor conditions in the area, such as selected sites for swimming with necessary sanitary facilities and dressing rooms and, of course, lifeguard service; trails for hiking, bicycling, and horseback riding; campgrounds and picnic areas, and such access roads as may be required. Interpretive facilities, such as visitor centers, nature trails, and appropriate markers and signs, add to public understanding and judgment of the area and are customarily provided by the Government, as well as certain administrative buildings—headquarters, ranger stations, maintenance shops, etc."

Question. Would there be an entrance fee?

Answer. "No, since the main routes of access are and probably will continue to be by State (or in Oregon's case national) highways."

And the following response to a question about "beach buggies" on Cape Cod will be of particular interest to Oregonians who revel in the hardy sport of bouncing jeeps over the dunes:

"The use of beach buggies would be permitted in designated areas, but would be limited to specified beach and access points only. The Park Service report suggests that indiscriminate riding over the dunes would seriously damage the scenic and scientific interest of these significant natural features."

Oregonians will want to learn the answers to a good many questions before they make up their minds on the merits of the Park Service proposal. Even the most promising of public developments needs to be understood before it can be popularly accepted.

Mandatory Control Program on Residual Oil Imports

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. SAYLOR. Mr. Speaker, from down East have recently come some exceedingly vehement denunciations of the White House order creating a mandatory control program on residual oil imports. I think it is about time that our friends in New England pursue a more objective and consistent course in our old international trade program. In the first place, it is difficult to understand how a region of the United States that has already experienced very critical fuel shortages because of the unreliability of sea traffic in periods of hostility would object to any program designed to guarantee availability of supplies under similar conditions. The President's proclamation issued on March 10 was prompted because oil imports have so enervated domestic fuel industries as to seriously weaken the mobilization base. The President is aware that a fuel which must be transported over ocean lanes infested with enemy submarines could not be depended upon to run a war machine.

Assuming that those New Englanders protesting the White House order, have forgotten events of not too many years back, I should like to place in the RECORD a number of headlines that appeared in our newspapers during the early part of World War II when tankers coming from ports on the Gulf of Mexico were being intercepted both in the Gulf and along the Atlantic seaboard. Here are but a few that I have taken from my files: "U-Boat Torpedoes Tanker Off Jersey"; "Tanker Sunk Off Our Atlantic Coast"; "Florida Crowd Sees U-Boat Sink Ship Off Shore"; "Two Tankers Torpedoed—One Off Jersey Witnessed by Thousands in Resort Towns"; "Allied Tanker Seen in Sinking Condition Off Long Island."

There is the story of what can happen on the high seas in wartime. I might also recall for your benefit that at one time an enemy underwater action was responsible for sinking a tanker within a short distance of New Orleans. In addition, at one time three tankers went down in the immediate vicinity of Dutch West Indies, which happens to be the principal source of the residual oil that moves into our east coast markets at the present time.

Now, how was New England affected by the inability to move oil over the water? As late as the spring of 1943, the fuel shortage impaired normal activity up and down coastal areas from Maine to New York. Earlier, the Petroleum Administrator in Washington warned New England to prepare for the worse. This headline from the New York Times explains the situation: "Ickes Says Worse

Situation Is Coming and Asks Conversion to Using Coal." The wisdom of this prediction is confirmed in these 1943 headlines: "Hospital Is Ordered Closed By City To Save on Fuel Oil"; "Stillwater Worsted Mill Closed by Oil Shortage"; "Eight Rhode Island Textile Plants Forced To Close Today"; "Exodus of Labor Threatens Mills in Fuel Oil Crises"; "Fuel Oil Shortage Here To Close 95 Parochial Schools"; "Oil Shortage Forces Two War Plants To Close."

If further evidence is desired, I am sure that the Library of Congress will be happy to make available complete copies of the newspapers carrying these accounts of horror off the Atlantic coast and the subsequent difficulties in fuel-hungry New England.

The almost total destruction of tanker traffic in the early part of the war was effectuated by a nation whose sea forces included 150 submarines. Today, the Russians have a fleet of some 450 underwater craft. No power in world history has ever had so large a submarine force. Two-thirds of Russia's submarines are long-range ocean patrol types developed after World War II with the aid of German naval designers.

Adm. James S. Russell, Vice Chief of Naval Operations, in speaking before the Military-Industrial Conference in Chicago recently, included this paragraph in his report on Red naval power:

> Quantitatively we may expect the Soviet submarine fleet to remain at about its present level; qualitatively, however, the threat to the free world will continue to grow as the older and smaller submarines are phased out of service and the number of new long-range types increases. These long-range submarines pose a threat not only to our vital traffic across the seas, but to our industrial centers as well, for the Soviets have the capability for arming these submarines with missiles and it must be assumed that some are already equipped.

With this knowledge, Mr. Speaker, can anyone here take issue with the President for his action based on the likelihood that foreign oil would be available in wartime? He knows the vital importance of vigorous domestic coal and oil industries. It was his responsibility as Commander in Chief of the Armed Forces to proclaim the oil import order in behalf of America's mobilization program. I am hopeful that there will be no more contesting a decision made in the interests of national safety.

I also remind my colleagues from New England that there is no justifiable reason for your anticipatory fuel problems. These illusions were created even before the mandatory control plan went into operation. The amount of residual oil to be admitted under Presidential order is the same as was imported in 1957, at that time the highest quantity in history and almost equal to the 1958 figure. Thus the deluge may continue its deplorable economic impact on producing regions of the United States, and I assure you that I shall strive for legislation for a further cutback to a place where imports are in line with the tariff and quota protection afforded industries in other areas. Meanwhile, no one should anticipate any scarcity of fuel supplies under the decree. A considerable number of the east coast plants now on residual oil are equipped to convert to coal, which is available in adequate quantities at reasonable prices. Bituminous coal prices at the mine have remained steady for the past decade, and studies by outstanding industrial economists disclose no tendency toward a sharp upward movement over the long term.

I am, of course, conscious of the fact that residual oil has been available to east coast customers at prices slightly below what they would have to pay for coal. The importing companies have captured coal's traditional markets because they are able to adjust prices without any threat to the corporate structure. The profits from the sale of gasoline and the lighter oils are usually adequate to absorb the production and refining costs, so that residual oil is left over to be sold at whatever price will capture the market.

With all of this foreign residual oil—the more than a billion and a quarter barrels of it—that entered the United States in the past 10 years, what have the people of our country gained? What benefit has accrued to the populace of any single State or region? Residual oil cannot be used for heating homes, and you would not be driving any more if you tried putting it into the engine of your car. The big plants and generating stations are principal customers of this fuel. Their use of a foreign commodity in preference to a product of America's mines is certainly not inconsistent with the philosophy expressed by their representatives in Congress. Time after time members of the New England delegation have vociferously denounced trade policies that permit imports to impinge upon business conditions in leather goods, textiles, fish, lumber, bicycles, watches, and products of other New England industries.

This factor should be kept in mind when residual oil imports are under consideration. If our coal miners back in Pennsylvania are deprived of a means of livelihood because of a foreign invasion on their markets, where do we get the purchasing power for the goods that New England manufactures and sells? In my estimation it is about time that Members of Congress from the many areas suffering economically from unfair import competition collaborate on our identical problems. I can assure you that I have always concurred in recommendations to adjust international trade policies in such a way as to safeguard industries in New England, the South, and in other regions. I am convinced that we can get together if we consider the matter on a nationwide scale. Each year a growing number of communities is added to the list of industrial centers paralyzed or severely injured through inequitable import competition. The automobile manufacturers, who formerly led the free trade brigade into Washington when the Reciprocal Trade Agreements Act came up for extension, have been noticeably silent in recent times. There is a definite fear that, unless someone puts the brakes on foreign cars entering this country, the big American jobs are going to get run off the road and unemployment around Detroit will be even worse than has been the case during the past year. Even the big office machine manufacturers, who once were proudly in the president's chair of a leading free trade committee, are beginning to wince when they walk into the Pentagon and see the large number of Olivettis and other foreign-produced typewriters and calculators.

The Presidential Order restricting residual oil imports is designed to protect the Nation in emergency periods. It is certainly one executive department order to which no one in this country should object, yet restrictions on oil need to be bolstered considerably, and chances are that any help that we representatives of fuel-producing districts can get will redound to the benefit of the rest of the country. With unemployment persisting on a high scale, I do not think we can afford to pass up the chance to get our people back to work.

Visit to Capitol by Senior Class of Metairie Park Country Day School

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 21, 1959

Mr. LONG. Mr. President, on April 8 it was my pleasure to have as my guests in the Senate Chamber the senior class of the Metairie Park Country Day School. This fine institution, which is located in Metairie on the outskirts of New Orleans, has one of the loveliest settings of any school I have ever seen.

The school is dedicated to the pursuit of higher education and to the development of the kind of individual who will become a valuable citizen in this great country.

Every year, the senior class of the Metairie Park Country Day School visits our Nation's Capitol as part of its general educational program. I am particularly proud to have such an outstanding group of young Louisianians come to Washington, and I look forward to their visit each year.

I ask unanimous consent to have printed in the Appendix of the RECORD the names of the 31 students and 2 chaperones from the Metairie Park Country Day School in Metairie, La.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

Chaperones: Mrs. Martha Wilson and Mr. Frank B. Markriter.

Students: Philip Claverie, Kenneth Cohen, James Coleman, Georgia Connell, Katherine Connell, Richard Favor, Melinda Felt, Gore Friedrichs, Harvey Gleason, Thomas Hogan, Anne Heath, Robert Johnston, Magtilit Laan, Lawrence Lashley, Henry Lazarus, Herbert LeBourgeois, Robert McCoy, Gretchen Miller, Georgia Monsted, Elinor Moore, Charles O'Niell, Courtney Ann Parker, Peter Posey, Katie Robinson, Helene Rowley, Maria Springer, Judith Weston, William Williams, Frederick Wirth, Nancy Witherspoon, and Linda Woods.

Appendix

Jefferson-Jackson Day Address by Hon. Frank E. Moss, of Utah

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 22, 1959

Mr. MURRAY. Mr. President, on March 31 our able and distinguished colleague from Utah [Mr. Moss] addressed the Jefferson-Jackson Day banquet at Conrad, Mont.

I ask unanimous consent that his address on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF SENATOR FRANK E. MOSS, DEMOCRAT, UTAH, BEFORE THE JEFFERSON-JACKSON DAY BANQUET AT CONRAD, MONT.

Certainly it is a real distinction to be invited to address a group of dedicated Democrats on the day they honor such party stalwarts as Thomas Jefferson and Andrew Jackson. And I am fully aware that in Conrad, Mont., I am among very good Democrats indeed—members of the party who are effective as well as loyal—who give foot service as well as lip service. Pondereille County (Ponderay) is famous for the size of its Democratic turnouts at party functions, like Jefferson-Jackson dinners, and at the polls.

I am happy to see and great you all and to visit again with those you have chosen to lead you in party affairs. In mentioning some, I realize that many more remain unmentioned; and that, in this type of activity, it is the work of every individual and the carrying of every district that makes it possible to keep the Party going and gives people like me the opportunity of serving my State in Washington.

Youall realize, I am sure, the pleasure it gives me to see again, even for a short time, the grandeur of the mountains and plains, the lakes and waterfalls, of the West. And to visit in Montana, a state that is linked to my own bonds of friendship and mutual interest, and also with a common pioneering tradition, and by many of your people being descendants of early Utah Mormon pioneer families.

I appreciate the confidence of Congressman ANDERSON in inviting a freshman Senator to address the big celebration in his hometown. And I learned coming in tonight that the Congressman is one of those somewhat unusual men who can carry his hometown in an election. I am told that ROY ANDERSON has always been a leader, and I believe it, because I can tell you that he has certainly shown that leadership in Washington in every way—from being an officer in the Thursday Morning Prayer Breakfast Group to outstanding work for the Hawaii statehood bill in the House Committee on Interior and Insular Affairs. As a major general in the Army Reserve, Congressman ANDERSON is the highest ranking Reserve officer in the Congress. As every one in my audience knows, he commands the 96th Infantry Division, of which there are many units in Utah; and we have many mutual friends in that organization. Fortunately, he has been assigned to the Armed Services Committee, where his experience can be used to best advantage in helping to guide our defense program during these critical times. On the Interior Committee, Congressman ANDERSON has rendered yeoman service in Indian matters. Our Indian brethren appreciate his sympathetic and constructive interest in their problems.

For a new Senator, Washington has many surprises, most of them pleasant. My biggest surprise, however—and I think I can claim an exclusive on this one—was to be asked to address Lincoln Day as well as Jefferson-Jackson dinners. One of the first pieces of mail I opened was from Republican National Chairman Mead Alcorn, requesting my preferences as to places to deliver Lincoln Day speeches.

And actually, I should like the opportunity of talking to a Republican Lincoln Day audience. They might not like what they heard, but I could tell them some things they don't hear often enough and that they ought to know. For one thing, I could quote them words of Lincoln that the Republicans don't use very often. For example, Lincoln said: "The dogmas of the quiet past are inadequate to the stormy present * * * as our case is new, so we must think anew and act anew." How many Republican Lincoln Day speakers quoted that this year? Or were they talking about the balanced budget and that alone? Our revered Civil War President also said: "There are already among us those who, if the Union be preserved, will live to see it contain 250 millions of population. The struggle of today is not altogether for today; it is for a vast future also." Lincoln thought and planned not only for the present but for the great future which he saw for America.

And it is no accident that those we honor today predate Lincoln by many years; and no accident that our party is so much older than the Republican Party. For, if there is one thing that is necessary to the survival of any organization or institution, it is just this ability to think anew and act anew when conditions require it.

I object to conservatives wrapping themselves in the mantle of Jefferson as much as I do the mantle of Lincoln. The conservatives of Jefferson's day were not those who signed the Declaration of Independence or helped construct and obtain ratification of the Constitution.

Let the standpatters read this, inscribed on a panel of the Memorial Room of the Jefferson Memorial. I quote: "I am not an advocate for frequent changes in laws and constitutions. But laws and institutions must go hand in hand with the progress of the human mind. As that becomes more developed, more enlightened, as new discoveries are made, new truths discovered and manners and opinions change; with the change of circumstances, institutions must advance also to keep pace with the times."

What conservative standpat Republican of that day or this day would have had the courage and vision to obtain the Louisiana Purchase and secure to America in her infancy the great State of Montana and all of her sister States down river to the gulf?

Jefferson was a man of action and courage; but, above all, a man of vision. Because of these, I am happy to count myself a Jeffersonian Democrat and to point to the distinguished Senators from Montana as worthy successors to the Jeffersonian tradition.

As the experienced and respected chairman of the Senate Committee on Interior and Insular Affairs, JAMES E. MURRAY, stands today as the most powerful individual in America influencing the development of water resources. I am most grateful for the opportunity of serving with him on the committee. I also wish to acknowledge his personal friendship and encouragement. Before the session, when I visited Washington to make plans for the beginning, it was Senator MURRAY who made my task much easier by making available the use of his office and facilities.

And we are all aware of the outstanding contribution to the leadership of the U.S. Senate made by MIKE MANSFIELD, and of the meaning to the West of that leadership. Senator MANSFIELD is the Democratic Party whip, or assistant leader. He is a leader on the Foreign Affairs Committee. I point out further that the policy of MANSFIELD, that all Senators must have membership on important committees, has greatly benefited our section; and, at the same time increased the contribution that new members can make to the work of the Senate. So successful has been this policy in fact, that public approval, plus the nudge given by the electorate last fall, has forced the Republican leadership to adopt a similar one.

And wouldn't the growing political power of the West have delighted Andrew Jackson. Old Hickory was the first western President, coming from what was to easterners the frontier—Tennessee. And however different the backgrounds of Jefferson, the Virginia intellectual, and Jackson, the Tennessee warrior, may have been, their basic political philosophy was in agreement on one most important point—that the Government of this Republic belonged to all the people.

The Western Conference of Democratic Senators now includes the States of Alaska, Oklahoma, and Texas, and shortly Hawaii. We include 23 of the 28 Senators from the West; and when Hawaii's 2 Democratic Senators are elected, we shall be 25 of 30 Senators. Not only do we have numbers, but we have leadership as well.

Speaking of the election, one of the most interesting features to me is the reaction of the Republicans to their defeat.

To go back just a few years, about the time General Eisenhower emerged as the man who might restore the Republican presidential dynasty, professional advertising and public relations men were brought into political campaigns as never before. Often to their surprise, these gentlemen were presented as able to put vote getting on a scientific basis.

If they could sell soap or automobiles, it was said, why not candidates? And why not? What was forgotten is that the same brand of soap or the same make of car is not always the most popular; or, to put it another way, advertising men, like the rest of us, have their failures as well as their successes.

But the Eisenhower campaigns were certainly successful, and the Republican leadership had their big contributors, the rank and file, and themselves, sold on the fact that this was the answer.

So their reaction to the defeat of 1958 is that something went wrong with the sales talk. What they need, the newspapers report, is a new image. Not new candidates. Not a new program. Above all, not new ideas.

Just a new image—a new front to present to the voters.

While the Republicans are searching for their new image—something that will make Senator GOLDWATER and Governor Rockefeller look good together—we Democrats have more serious business to attend to. It is up to us to supply the deficiencies in Republican thinking, in Republican programs, and, as far as Congress can, in Republican leadership. We promised the voters action. Let's see how we are producing on that promise.

The Easter recess is the close of the first phase of a session of Congress. Newspaper commentators in Washington are saying that no Congress has done more in this short time than has this one.

Normally, at this stage, no major bills have been acted on; legislation is in the drafting stage or in committee. But we went to the country last fall with a program, and we are enacting it. Here are some of the things the Senate has done:

We have passed a housing bill to bring closer our goal of a decent home for every American.

We have passed airport legislation to prepare America for the jet age in transportation.

We have started a nationwide program to put depressed areas back on their feet.

We have added another great Western State—Hawaii—to the Union.

We have moved ahead in clearing the Nation's slum areas and helping urban renewal.

And, as always, we have stood with the administration on vital matters of foreign policy, even while disagreeing with the White House on many points of national defense.

Much remains to be done, and we are working on many other problems.

The Montana delegation is leading the fight to develop a farm program that will insure the prosperous continuance of the family size farm and provide the farmer with a fair share of the national income. And one which, if properly administered, will eventually cost the taxpayer less money. I am disturbed at the growing resentment of consumer groups at the cost and ineffectiveness of our present program. This cost is being used to separate the farmer and the farm program from necessary labor support.

Another vital program is that of education. The administration continues to do everything possible to put this on an "every locality for itself" basis, even advocating eliminating Federal contributions to areas having unusual educational demands due to Federal projects.

I am happy to be supporting Senator MURRAY and your distinguished first district Congressman, LEE METCALF, as a cosponsor of their bill to provide some degree of equalization of education on a national basis. While the control and administration of education may be a local function, the quality of education, in times like these, is very much a matter of national concern. We cannot maintain our military position or our economic position without an adequate program. And equalization of opportunity is a vital part of such a program.

Both Utah and Montana have State equalization programs. We have long recognized the folly of allowing educational opportunity to depend on the amount of taxable property that happens to fall in a particular school district. Both Utah and Montana educate large numbers of children who leave the States as soon as they are through with school and ready to become taxpayers. And our equalization programs have not meant centralized State control. What we have done in our States we can—and should—do in the Nation.

But of major importance to the West, I think, and of vital importance to the Nation, is the matter of the preservation and development of our natural resources, and of our most important resource—water.

Certainly it is not necessary for me to convince a Montana audience that we need to conserve our water and other resources. But we still have a big job to do in this field—let's make no mistake about that. And we westerners must continue to take the lead in showing why it is in the interest of all America to develop these resources. And as Democrats we must make the Nation see that we are going to get full development only with a Democrat in the White House.

It is true that we are beginning to recognize that water conservation is a national, not a local, problem. As our water table falls, our demand increases. Today we are using about 240 billion gallons a day. By 1975, if our 175 million population grows to 225 million as expected, even our present rate of consumption would strain our resources. But our rising standard of living requires much more water per capita both for personal and home use and for industrial expansion. It is expected that by 1975 we will need 350 billion gallons a day, or more than a 90 percent increase over the amount used in 1950.

Preservation of water resourecs is one of the principal items claiming the attention of the Congress, and the Western Conference of Democratic Senators is actively working on a commission to survey the Nation's needs. Already, we look upon resource development as an investment—not as an expense. We must make all our people see the problem in these terms.

One change that might help and an idea that is getting some attention in Washington these days, is a more businesslike accounting system for the Government. The plan is to separate, as businesses do, items that represent capital investments and self-liquidating projects from expenditures for regular expense items. It might be that defense items could be placed in still a third category. This would make discussion of budget items more specific and enable us to comprehend this complicated subject more clearly. It is hoped that it would promote greater public understanding and interest in the Government's fiscal affairs.

One of the problems of Utah and the Upper Colorado River Basin States is to assure adequate appropriations to push ahead on the great upper Colorado River project. A whole speech could easily be devoted to the history, the features, and the benefits of the upper Colorado storage project that is now underway. It is an example of the work that is necessary and the time that often must be expended to get these projects going.

For more than 50 years this project has been in mind. Some land withdrawals were made as early as 1904.

The project, when completed, will develop an area of 100,000 square miles. It will consist of four large mainstream dams, one on the Green River on the Utah-Wyoming border, one on the Colorado on the Arizona-Utah border, one on the San Juan in New Mexico, and one on the Gunnison River in Colorado.

It provides a true basinwide approach to the development of the water and power resources. A basin fund is created as a master account in the U.S. Treasury. This cacount will receive all funds appropriated by Congress for the project and all revenue collected from irrigation, power, and municipal water sales, or other sources.

After payment of interest, operation, and maintenance costs, the revenues will be allocated on a percentage basis to the four States and will be used for participating projects in the State.

The project will add 1 million kilowatts to upper basin power capacity; 132,360 acres of new land will come under irrigation, and 234,000 acres will receive supplemental water.

One of the most interesting aspects of one of the projects, not yet started, is that it will provide a means of raising the standard of living of America's largest Indian tribe—the Navahos. The Navajo Dam, in Arizona, will provide water largely for the use of these people, who need rehabilitation so much.

More than 200 different minerals are found in the Colorado Basin area, and the project will provide the water and power necessary for their full and economic development.

The great Glen Canyon and Flaming Gorge Dams now under construction will allow the upper basin States to store sufficient water so that the commitment to the lower basin States will be in storage and will allow much water now going down the Colorado into the Gulf of Mexico to be diverted to irrigation.

This is a self-sufficient project. Every cent the Treasury pays out will be returned with interest. It is an investment in America's future.

Great recreation areas will be opened up, not only for scenic boating, fishing, etc., but the area will develop greatly in such items as bird refuges, for ducks and other migratory birds.

Our problems are your problems—because all America is one, indissoluble—in building upper Colorado and thus building our country; just as your problems are our problems—in building your great Missouri basin and northwest projects.

The Yellowtail Dam on the Bighorn River, Missouri River Basin project was authorized in 1944; the right-of-way problem on Indian lands was settled in the last session of Congress. But the project cannot be begun until it is put in the budget. But the administration has not submitted a budget request because of its "no new starts" policy. That great dam would have storage capacity of 1,080,000 acre feet, powerplant capacity of 200,000 kilowatts, and annual generation of 597 million kilowatts per hour. Both Montana and Wyoming would benefit and grow, and so would America. This would be an investment in the future of America.

What I have said about Yellowtail applies to Clark Canyon Dam, the east branch unit of the Missouri Basin project, and the Beaverhead River in the southwestern part of your great State. There is no money in the President's budget for these needed projects, and the administration's policy of "no new starts" would doom them. However, you can count on your Democratic Congressmen and Senators to fight for these western development projects.

But theirs is a greater reason than recreation or economic benefit and comforts to our people for the development of our natural resources. That reason is national survival.

During a hundred and fifty years of our history, our isolated position behind the oceans made us invulnerable to powerful surprise attack. And our great productive machine made it possible for us to get ready, with ample time, after an attack. Today we are minutes away from Moscow via missiles. In our lifettime this profound change has occurred, the details of which we are all too painfully familiar. We are aware that the Soviet Union increased its territory and expanded its world influence since World War II, but even more ominous for the future is the fact that the backward nations are beginning to use the productive methods developed by the West; and, as they do, their enormously greater populations are beginning to tell against us. We must be ready in armament, and we must grow industrially and economically.

The men in the Kremlin know what kind of world they want it to be 20 years from now. They boldly plan for that world and channel their resources, their educational

facilities, and their diplomatic maneuvers to making it that kind of world.

If we are to win in this kind of struggle, we must decide what kind of world we want it to be 20 years from now. And within the framework of democratic individual liberty, make the necessary effort to create that kind of world.

In Washington today we hear the refrain: "How much does it cost?" "Can we afford to keep ahead?" Let us remind ourselves that those, like Jefferson, who signed the Declaration of Independence, did not count the cost. They had lived under tyranny. They wanted freedom.

Now maybe I have analyzed our situation all wrong, but I don't think so. But if I am right in thinking that we must have farsightedness, courage, decisiveness, leadership in the period ahead, I believe that is calling for a Democrat in the White House. Our party has provided vision and decision in times of crisis before. With the challenge that lies ahead, I am proud that our party can put forward so many men of capacity, experience, and vigor as candidates for the Presidency.

Unlike the opposition, which is restricted to one rather tarnished heir apparent and one glittering but politically untried challenger, we can offer veterans of the political wars from every section of the Nation. Our party has, in short, what the Nation needs and the opposition lacks—leadership.

Let us raise our eyes to America's horizons of tomorrow. Let us look ahead not only 1 year or 10 years, but 50 years and 100 years. Let us build an America and a world in which freemen live and prosper. Let us seize the opportunities for leadership which are ours.

These are the tenets and the vision of Jefferson and Jackson; the tenets and vision of the Democratic Party today.

Extension of GI Law Benefits to Korean Veterans

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Wednesday, April 22, 1959

Mr. YARBOROUGH. Mr. President, the Senate Veterans' Affairs Subcommittee was told recently that the educational training provided by the GI bills for World War II and the Korean conflict not only strengthened the productive power of our Nation, but enabled the veterans to earn more money, and, the witness added, "On the basis of additional income taxes which our Government collects on this added earning power, the cost of veterans education is paying better returns than any security listed on the New York Stock Exchange. Further, those added income tax payments will continue and will probably increase over the years."

Support for my proposal to extend the benefits of the Korean GI bill is coming in from a wide variety of quarters. I am pleased to say a great many people agree with me that this measure would be an investment in the future of our country.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a group of articles from Army Times for April 4, 1959.

The first article, written by Larry Carney, was published under the headline "Four Educators Back GI and Korea Bills."

The second article was published under the heading "Hill Told 4-Year College Course Is About Finished."

The heading on the third article reads "GI, Korea Bills Necessary, Educators Report to Hill."

The fourth article was headed "Outdo Non-Veterans Scholastically—Vets Do Well in College, Survey Shows."

The final article was headed "Senator SPARKMAN Backs GI Bill."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

FOUR EDUCATORS BACK GI AND KOREAN BILLS

(By Larry Carney)

WASHINGTON.—Four leading educators spoke out last week against any reduction in the benefit formula of the proposed new cold war GI bill to make it more acceptable to budget cutters in Congress. In testimony before the Senate Veterans' Affairs Subcommittee, headed by Senator RALPH D. YARBOROUGH, Democrat, of Texas, the college administrators enthusiastically endorsed proposals to extend GI bill benefits to post-Korean ex-GI's.

Appearing before the subcommittee were Dr. Price Ashton, president of Ranger Junior College, Ranger, Tex.; Dr. Malcolm M. Wiley, vice president, Minnesota University; Dr. Clarence B. Humphrey, president, Wayne State University; and Dr. Robert G. Bernreuter, dean of admissions, Pennsylvania State University.

At last week's hearings, Dr. Ashton told the subcommittee he felt the opinion of most educators in his State was that the World War II and Korean GI bills should definitely be extended. Amounts now paid are too low, he said, and if the amounts are reduced it would make it practically impossible for veterans with families to go to college.

The educational allowances proposed in the Yarborough measure "do not grant the same degree of economic assistance to today's veteran as these same dollar amounts did for the Korean veterans," Dr. Hilberry told the subcommittee. "Living costs have increased since 1952."

Hilberry is chairman of the Michigan Council of State College Presidents. He said he had conferred with the presidents of eight other State-supported institutions which make up the council and was presenting their ideas as well.

He added that costs have increased to the veteran and as a result, the sum that a veteran will receive under the proposed cold war bill will support a smaller portion of his education than it did 7 years ago.

Dr. Bernreuter said he was afraid that if the monthly formula was reduced veteran students would "have to supplement their incomes" with outside employment.

He said this would show up in their academic achievements. "Instead of being better students than the nonveterans, the general effect would be to make them poorer students than the nonveterans."

Bernreuter said that Penn State's policy of giving preference to veterans is based upon the results of research studies contrasting the accomplishments of veterans with nonveterans. He said that a study which we have just completed shows that veterans at Penn State make better scholastic records than nonveterans.

He added veterans were more inclined to finish their education and were involved in fewer disciplinary incidents on the campus.

YARBOROUGH, in his opening remarks, said the big question before the subcommittee was whether some or all of the readjustment benefits granted to veterans of War II and the Korea conflict should be made available to the thousands of young Americans, who, because of the compulsory draft law, are required to serve in the Armed Forces during the cold war.

The Texas lawmaker said there is an urgent need to restore to our young citizen soldiers at least a portion of the opportunities lost by military service, particularly in the cases of lost educational opportunities.

He also urged passage of his bill for post-Korea orphans, saying * * * "It is only just and right that educational benefits be provided for children who find themselves fatherless because their parents were under legal compulsion to serve in our Armed Forces."

Other hearings will be conducted shortly after Congress' Easter recess. At that time the Senator plans to call to the rostrum other educators and officials of the Veterans' Administration, Defense Department, Budget Bureau, and the various veterans' organizations.

YARBOROUGH said he is hopeful that a readjustment bill for post-Korea veterans can be enacted by Congress at a very early date, so that eligible ex-GI's can resume their educational careers at the beginning of the next school semester.

The principal feature of YARBOROUGH's proposal to extend the GI bill is the provision which will continue the educational portions of the Korea measure. The cutoff date for the Korea bill was January 31, 1955. The Yarborough measure would extend the rights through July 1, 1963.

The bill provides 1½ days of schooling for each day of active service for veterans who served honorably 90 days or more.

The bill also provides vocational rehabilitation for disabled veterans, and extends eligibility for home and farm loan guarantees.

In addition, the proposed measure would authorize mustering out pay of $100 per person for domestic or foreign service for veterans honorably discharged after the date of its enactment.

Under the peacetime war orphans' measure, each surviving child would be entitled to educational assistance up to 36 months, or to the equivalent in on-the-job training.

HILL TOLD 4-YEAR COLLEGE COURSE IS ABOUT FINISHED

WASHINGTON.—A Senate veterans affairs subcommittee was told last week that the days of the 4-year college curriculum is about over. Four of the country's leading educators blamed this situation on the rapid missile-age expansions in the various technical and scientific fields.

Dr. Clarence B. Hilberry, president of Wayne State University, told the subcommittee, "it has been a long time since anyone finished engineering school in 4 years." He said that as a matter of fact, it hasn't happened for a long time even though we still call our courses full-year courses.

The Detroit educator said that many 4-year courses are becoming 5-year programs. The latest to join the list is pharmacy. These programs are not changing at just one school but at all the schools across the country, Hilberry said.

Many ex-GIs in school now under the Korea bill are not going to finish their curricula in the 4 years they are given school assistance by Uncle Sam.

"A great many of them are going to have to find the resources somewhere to continue for a 5th, 6th, and 7th year," Hilberry said, "before they have the masters' degrees and the doctorates which are required in their respective fields."

Dr. Malcolm W. Willey, academic vice president at the University of Minnesota, brought out statistics to prove that few students receive the baccalaureate degree in 4 years.

His figures show that nearly 70 percent of the students at Minnesota require more time than the traditional 4 years to obtain their first degree.

Willey said the figure was 71 percent in the school's College of Agriculture, Forestry, and Home Economics; 77 percent in technology; 61 percent in business, and 73 percent in education. He said that in Minnesota's College of Science, Literature, and the Arts, the number was 58 percent.

Willey said these figures indicate that one cannot assume that because a student enters college at 18 he will have completed his degree requirements by 22—the age at which he is likely to be called up under selective service.

He said this point "bulwarks the interruption-of-education argument, which is a valid one."

GI, Korea Bills Necessary Educators Report to Hill

Four of the Nation's leading educators told a Senate Veterans' Affairs Subcommittee last week that an extension of the GI bill to cold war ex-GIs was vital to our national security.

They said the War II and Korea bills have more than proved their investment through higher national income and better trained scholars and technicians.

A condensed version of the testimony follows:

"STATEMENT OF ROBERT G. BERNREUTER, DEAN OF ADMISSIONS AND SPECIAL ASSISTANT FOR STUDENT AFFAIRS, THE PENNSYLVANIA STATE UNIVERSITY, UNIVERSITY PARK, PA.

As the admissions officer for the Pennsylvania State University, it is my responsibility to enroll a total of 6,700 new undergraduate students for the fall semester of 1959. In doing so, I will give preference to those students who have served on active duty in the Armed Forces. This policy of giving preference to a veteran is not based, to any significant degree, upon sentimentality. Even though I am myself a veteran of War II and have personal sympathy with the problems confronting the young veteran, I do not give preference to veterans for sentimental reasons. Nor am I giving preference to them because of the nostalgic memories of those professors who remember with pleasure the days immediately following War II when a large proportion of all their students were veterans who enlivened their classes with their alert minds and their pointed questions. They enjoyed teaching such classes.

"The policy of giving preference to veterans is based upon the results of research studies contrasting the accomplishments of veterans with nonveterans.

"A study which we have just completed shows that veterans make better scholastic records than do nonveterans. Last semester at Penn State, the average grade earned by the male nonveteran student was a C. The average grade made by a male veteran student was a C+. The proportion of nonveterans who were dismissed for poor scholarship was twice as large as the proportion of veterans.

Another indication of the extent to which the veterans make better used of their opportunities is shown in the percentage of students who quit before graduating. Among those who were admitted last year as freshmen, more than one-third of the nonveterans quit. Among the veterans, less than one-fourth did not return. Proportionally approximately 1½ times as many nonveterans quit as was true of the veterans.

"Still another reason for preferring veterans has been found through a study of the disciplinary actions the university has had to take involving undergraduate students. Out of 1,587 veterans, only 4 were involved in disciplinary actions. This is approximately 1 out of each 400 veterans. This is a clear demonstration of the reason why the dean of men at our university, who is responsible for the discipline of men students, prefers to have us enroll veterans.

"The dean of men has also provided evidence which shows that veterans more frequently possess the desirable attributes which we seek to develop in our students.

"Each year the male students who reside in our residence halls are evaluated with regard to their personal adjustments, their maturity, the leadership qualities that they show, the seriousness of their attitudes toward their studies, and their ability to get along with other students.

"The veterans consistently receive higher ratings in these desirable attributes than do the students who have not had military experience.

"Each year the dean of men chooses a group of male students to act as residence hall counselors. In choosing such counselors from among those students who apply in large numbers each year he chooses those who show the greatest degree of maturity and seriousness of purpose and the ability to assume responsibility. He has not consciously given preference to men with military experience.

"Nevertheless, when he made a tally, at my request, he found that of the 36 students now employed as counselors 32 of them are veterans.

"Only four nonveterans were able to meet the standards set by his office for the position of residence hall counselor.

"It is now clear that veterans have shown themselves to be better students than nonveterans through their more serious application to their studies, through their earning of higher grades, through their smaller dropout rates, through their better discipline, through their better citizenship, and through their increased ability to assume responsibility.

"STATEMENT OF CLARENCE B. HILBERRY, PRESIDENT OF WAYNE STATE UNIVERSITY AND CHAIRMAN OF THE MICHIGAN COUNCIL OF STATE COLLEGE PRESIDENTS

"I would like to make several comments about the value of the bills now before you. First, the educational benefits are particularly valuable, since they permit a wide range of choice by the individual veteran among the various educational opportunities that are most likely to be of value to him.

"These opportunities range from advanced professional and scholarly study to on-the-job training in applied skills.

"Secondly—and I want to stress this point—the proposed legislation, in the judgment of nearly all of us in higher education wisely provides for the payment of benefits directly to the individual veteran.

"The veteran then attends the school or college of his choice. Since our experience across the country appears to be so uniformly favorable, I want to endorse strongly the provisions of the legislation for direct payment to the veteran.

"A third point. The educational allowances proposed in these bills do not grant the same degree of economic assistance to today's veterans as these same dollar amounts did for the Korean veteran.

"Living costs have increased since 1952 and therefore dormitory charges, rental for housing, and expenses for board, tuition, supplies and equipment have also increased in cost to the student. As a result, the sum that a veteran will receive under this bill will support a smaller portion of his educational costs than it did 7 years ago. These increases in costs are clear in our own recent experience at Wayne State University.

"A number of justifiable requests for loans have been made by students attending the university under Public Law 550. Such requests were apparently unnecessary only a few years ago.

"In conclusion, I would like to say that in our experience in public higher education in Michigan we have found that the educational benefits provided veterans have made possible educational opportunities for a large number of very able young men who otherwise would not have beeen able to attend a college or university."

The bills before you will constitute, I believe, a positive contribution to the total education needs of our Nation. They incorporate the essential principle of direct payment to veterans. The level of allowance though not equal to preceding allowances is substantial. Additional needs of men in this group might perhaps better be met by increasing the loan funds available under the National Defense Education Act.

"STATEMENT OF DR. MALCOLM M. WILEY, ACADEMIC VICE PRESIDENT, UNIVERSITY OF MINNESOTA

"My experience convinces me that the earlier GI bills did contribute fundamentally to national welfare, for there is no doubt that they made it possible for, and encouraged, larger numbers of men to obtain college training.

"The students thus stimulated to seek training and enabled to complete it, our University of Minnesota figures show, have fallen heavily in agriculture, in education, in business, and in technology—as well as in the specialities of the liberal arts college.

"No one can question the importance of doing everything we can to further the training of specialized personnel. For several years I served as a member of General Hershey's Selective Service Advisory Committee on Specialized Personnel, which was basically concerned with the need for more manpower.

"I also served as a member of the Commission on Human Resources and Advanced Training which made one of the most comprehensive studies yet undertaken on our country's human resources and their utilization.

"The so-called GI bills have made an immeasurable contrrbution in meeting the needs these two reports so sharply outlined.

"One cannot say that all of these students would have failed to go on to college training had there been no veterans legislation. But we can testify that a large percentage of these students are drawn from the economically less advantaged families of Minnesota, and we can assume that an appreciable number of them would not have had the resources to enter upon or complete a college education.

"We do know that a higher percentage of these students have gone further with their education and have finished it, than otherwise would be true.

"I might add, too, that the cost of going to college is rising like everything else. At Minnesota we are confronting further tuition raises. Each such increase makes it more difficult, to the point of impossibility, for some young men and women to enter or stay in college.

"The figures I quoted earlier on loan experience indicate that this is so. For one group at least, the GI assistance has served to offset in some measure these problems the students face with rising costs.

"We also know that any break in the educational career of a student, whether for health, financial, or military reasons, reduces definitely the chances that the student will complete his college work. For this reason the break associated with military service can well be the factor that results in failure to complete an education.

"It is my experience, based on contact with students, that the GI privileges have been a compensating factor that has induced students to return to college, following interruption.

"With respect to this matter of interruption, it is sometimes argued that students who graduate from high school at 18 can essentially complete their college education before military service since Selective Service calls do not come on the average until age 22.

"This might be true if all students did, in fact, enter college at 18 and continued without interruption to the baccalaureate degree. Our experience at Minnesota, where we have studied this question, shows that students in large numbers do not receive the baccalaureate degree in a nominal 4 years.

"Indeed, specific data reveal that in our college of agriculture, forestry, and home economics more than 71 percent of the students take more than the customary 4 years to the baccalaureate degree; in technology more than 77 percent; in business more than 61 percent; and in education 73 percent. In our college of science, literature, and the arts the figure is over 58 percent; and for the university as a whole, 69 percent of the recipients of the first degree take more than the normal, traditional time in school. Another observation can be made bearing on the age-range of our undergraduate students.

"The average age of a Minnesota freshman at matriculation is approximatley 18 and only 33 percent of the freshmen complete requirements for a degree within 4 years after starting, or by the age of 22. Many reasons account for this, including the introduction of 5-year curricula which are increasing, as well as general enrichment of the individual's curriculum.

"I cite these figures to indicate that one cannot assume that because a student enters college at 18 he will have completed his requirements by 22, the age at which he is likely to be called up under Selective Service. This point bulwarks the interruption of education argument, which is a valid one.

"STATEMENT OF DR. PRICE ASHTON, PRESIDENT OF RANGER JUNIOR COLLEGE, RANGER, TEX.

"I would like to speak and say at this time that the educational institutions in our State are highly in favor of the extension of benefits to veterans of the cold-war category.

"My experience with veterans under Public Laws 346 and 550 has been very gratifying.

"In the Association of Texas Colleges and the Southern Association many surveys have been made, and we have found that the veterans of War II and Korea have all tended to increase the level of education rather than to diminish it.

"At the same time we have encountered many problems with veterans simply because they are more mature.

"For that reason, we feel that we should provide benefits to the peacetime veteran because his problems are as great as a veteran of the Korean war in finishing his education. Oftentimes they have families, even dependents, and the requirements are as great or greater than they have been in the last 6 or 7 years. Expenses are higher.

"The colleges and universities in our State can take care of the veterans and do it adequately.

"We would like to see sufficient money provided by this Congress to make it a positive solution to the problem of the veteran to attend university or college.

"We have had various programs at our college in particular to try to take care of some of the financial difficulties that arise from a veteran coming out and not having adequate money to attend the college or university of his choice.

"I think generally the families of these veterans are particularly interested in having something to offer the veteran when he comes out of the service.

"Even though he serves stateside, or on foreign duty they realize that he (veteran) has a period of readjustment that will be difficult for him when he comes out into civilian life. For that reason they are particularly concerned with this legislation, and many of them express themselves along those lines.

"They feel as if it is one of the greatest pieces of legislation that has been offered in many years.

"I know in California—and I talked to many educators out there—that they have had like experiences on the quality and standard of grades and the improvement of the general attitude, disciplinary conditions of our colleges and universities through these veterans.

"I would like here to congratulate the veterans of the Korea and World War II conflicts, those who have participated in the program, because they have been a group to congratulate, and it has been very gratifying."

OUTDO NONVETERANS SCHOLASTICALLY—VETS DO WELL IN COLLEGE, SURVEY SHOWS

WASHINGTON.—Ex-GI's fare better scholastically in college than nonveterans, a recently completed survey at Pennsylvania State University revealed. Dr. Robert G. Bernreuter, dean of admission for Penn State, told a Senate Veterans' Affairs Subcommittee last week that nonveterans averaged "C" last semester at State while the average for male veterans was "C-plus." He was one of four educators that testified in favor of extending GI bill benefits to "cold war" ex-GI's.

He said the proportion of nonveterans "who were dismissed for poor scholarship was twice as large as the proportion of veterans."

Bernreuter said the study also revealed that less veterans quit before graduating than nonveterans. He said that more than one-third of the nonveterans who enrolled as freshmen last year did not return this semester. Among the veterans, less than one-fourth did not return.

Another part of the survey shows that ex-GI's get into less trouble than nonveterans. Out of 1,587 veterans at Penn State last semester only 4 were involved in disciplinary actions. This is approximately 1 out of each 400 veterans. The nonveteran ratio is 1 out of 84.

The Penn State educator said this comparison "is a clear demonstration of the reason why the dean of men at our university, who is responsible for the discipline of men students, prefers to have us enroll students."

He said that the dean of men "has also provided evidence which shows that veterans more frequently possess the desirable attributes which we seek to develop in our students."

Each year the University chooses a group of male students to act as residence hall counselors. It chooses those who show the greatest degree of maturity and seriousness of purpose, and the ability to assume responsibility, Bernreuter said.

He pointed out that the dean while "not consciously" giving preference to men with military service found that of the 36 students now employed as counselors, 32 of them are veterans.

"It is now clear," Bernreuter added, "that veterans have shown themselves to be better students than nonveterans through their more serious application to their studies, through their earning of higher grades, through their smaller dropout rates, through their better discipline, through their better citizenship and through their increased ability to assume responsibility."

Penn State's preference for veteran students is based upon the results of research studies, not sentiment. Bernreuter said many professors have "nostalgic memories" of the days immediately following War II when a large proportion of all their students were veterans who enlivened their classes with their alert minds and their pointed questions.

The professors enjoyed teaching such classes and the Penn State survey bears that out.

SENATOR SPARKMAN BACKS GI BILL

The following message is typical of the interest legislators are showing in the "cold war" GI bill. It was broadcast over 12 Alabama radio stations by Senator JOHN S. SPARKMAN, of Alabama, last weekend:

"This is your Senator, JOHN SPARKMAN. Today I want to talk with you about legislation of interest to Alabama's 348,000 veterans of War II and the Korean War, as well as those veterans who have served since those wars.

"Of special interest to these veterans who have served since that time is the fact that the Senate Committee on Labor and Public Welfare is beginning hearings on legislation that I am sponsoring which would extend the benefits of the GI bill to these veterans. More than 20,000 Alabama veterans would benefit immediately under my bill, with the total reaching 90,000 by 1965.

"I am sponsoring this bill because it would be an incentive for young men to volunteer for service in the Armed Forces and because it is only fair to provide veterans serving now some of the benefits for their service to their country and for the loss of time from civilian pursuits.

"I have no hesitancy about supporting an extension of this bill—and that's what it is. The program is in effect now for all veterans who entered service after January 31, 1955. What it has done for the War II and Korea soldiers it can well do for our soldiers who have entered service since that date.

"This GI bill is in no sense a gift to its recipients. It is a well-earned reward for a well-done job. I feel that the program should continue as long as we continue to draft the youth of our Nation away from their normal civilian pursuits.

"A total of 7.8 million War II veterans took on-the-job training. Education under the GI bill went to many men and women who otherwise could not have afforded it. This education produced 440,000 engineers; 238,000 teachers; 168,000 doctors and dentists; 112,000 scientists; 105,000 lawyers, and 93,000 social scientists and economists.

"Think what a stockpile of needed professional and technical people this program has afforded for these times when we need them so badly. Nearly 230,000 Alabamians were educated and trained following War II and the Korean war.

"The Veterans' Administration expects that by 1970 veterans will have paid back, through the medium of extra income taxes, the cost of the education that was borne by the Government.

"Another bill that I am sponsoring would give veterans of War II and the Korean war who have lost their national service life insurance a chance to reinstate it.

"Veterans would be given a 1-year period in which to file. The cost of this program to the taxpayer would be nothing. All administrative costs would be borne by the policyholder. This bill is pending before the Senate Finance Committee. A similar measure passed the Senate last year as an amendment to another bill, but was omitted by the Senate-House conference committee.

"When War II and Korea war veterans were separated from service they had the option either to keep or to cancel their national service life insurance. Many chose to cancel because of financial difficulties, or simply because it was easy to do so. I remember my own experience from War I. The pay for the premium on my insurance was simply taken out of my check each month. Well, when I was discharged, naturally I just didn't continue to pay. I had the opportunity to renew it under an act passed by Congress some years after that. I renewed it and I'm carrying it today. I

believe the veteran of our War II and Korean war ought to be given the same opportunity.

"I wish I could talk to you about other legislation I am sponsoring but I must sign off."

Usurpation of Power by the Supreme Court

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 22, 1959

Mr. RUSSELL. Mr. President, the increasing concern over the usurpation of power by the Supreme Court is not confined to any one section of the country, nor does it spring from any one decision by the Court. Thinking people all over the country are aware of the threat to our institutions and the individual liberties of our citizens inherent in the distorted conception of its power held by the present Court.

A judicial oligarchy of power-seeking men abusing the life tenure designed to permit patriotic men to sustain the Constitution now threatens to unravel the fabric of that great document in order that they may rewrite it to their liking.

Mr. President, I ask that a column written by Mr. George Todt, which appears in the North Hollywood, Calif., Valley Times of April 15, 1959, entitled "Against Federal Usurpation," be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

AGAINST FEDERAL USURPATIONS

(By George Todt)

"I would have you day by day fix your eyes upon the greatness of your country, until you are filled with the love of her; and when you are impressed by the spectacle of her glory, reflect that it has been acquired by men who knew their duty and had the courage to do it" (Pericles).

A prime objective of the Sons of the American Revolution, one of the real bluebloods among an expanding number of patriotic societies in the United States today, is to perpetuate the memory of those men, who, by their services and sacrifices during the war of the American Revolution, achieved the independence of the American people.

I was recently privileged to hear the president-general of Sons of the American Revolution, Hon. W. A. Wentworth, a retired Borden executive who had headed up his company's public relations department, address the combined Pasadena-Los Angeles chapters of the society in the Green Hotel in Pasadena. He had much on his mind—and he said it with force and dignity. He was little short of tremendous.

In the course of this great American's remarks, he made it plain that the Sons of the American Revolution took a very dim view of some of the Supreme Court's recent decisions in which it denied the States the right to (1) enforce antisedition laws, (2) investigate subversion within their borders, (3) dismiss employees who refuse to testify on the ground of self-incrimination, and (4) operate public schools in a manner consonant with local needs or desires.

What is being done to curb this situation, if not correct it? Let the highest ranking national officer of the Sons of the American Revolution answer in his own words:

"Recently the house of delegates of the American Bar Association cited 24 decisions of the U.S. Supreme Court which cripple national and State security, with particular reference to Communist activity.

"The report states that recent decisions 'have been severely criticized and deemed unsound by many responsible authorities.' Remedial legislation will be sought from the Congress. One proposal would restore the authority of the States to enforce laws against sedition. Another would clarify the powers of the Un-American Activities Committee of the U.S. House of Representatives.

"You are, of course, familiar with the admonition of the Conference of Chief Justices of State Courts of Appeals, meeting in California last fall. They said, in part: 'The overall tendency of its (Supreme Court) decisions during the last 25 years has been to press the extension of Federal powers and to press it rapidly. * * * This conference respectfully urges that the Supreme Court of the United States * * * exercise one of the greatest of all judicial powers—the power of judicial self-restraint.'

"That conference has now established a committee for the purpose of 'achieving a sound and appropriate distribution of judicial power between the Nation and the States.'

"Later in the fall, Chief Justice Warren, of the U.S. Supreme Court, spoke in California where the Conference of State Chief Justices had leveled criticism at the U.S. Court's decisions. Apparently in reply to those criticisms, he said that if the Federal Government has infringed on States rights it was generally 'only when the States themselves have failed to meet the needs of the people.'

"I ask you whose function it is to determine the needs of the people—the legislative or judicial branch of the Government? When the Court decides what the 'needs of the people' may be, is that anything but usurpation? Let us quote from George Washington: 'But let there be no change by usurpation; for, though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed.'

"At its October meeting, the board of trustees of the National Society of the Sons of the American Revolution recognized the seriousness of this situation which has been created by the acts and decisions of the Supreme Court. They adopted a statement and resolution entitled 'Acts of Usurpation by the Justices of the Supreme Court of the United States.'

"In the Sons of American Revolution statement, the State chief justices are commended for their admonition to the U.S. Court that has been mentioned here previously. The Sons of the American Revolution resolution then exercises the right of petition by criticizing the U.S. justices for usurpations committed in cases involving subversion, for interference with the investigating and lawmaking powers of Congress and of the States in the antisubversive field, and for its course of action in the integration cases.

"It further declared that replacement of the present justices may be the only way of correcting the present situation, which has become intolerable."

While the majority of our citizens, including this writer, are loath to criticize the Supreme Court because of the great authority it bears and because of the natural respect we all have for this great American institution, we must always bear in mind the inevitable imperfections of human beings. Sometimes we do exceed our authority. And then, regardless of the rank or position we may hold, we must upon occasion be called to account.

As with high ranking officers in the Armed Forces during the late war: We who were lower on the totem pole saluted them because they bore in their persons the authority of the U.S. Government—not because of any exalted condition of their own private protoplasm over ours. And when such high ranking officers exceeded their authority for any reason, they were subject to courts-martial. Authority under a Republican form of government must never be construed with license or freedom from lawful responsibility. And that goes for everybody in the higher echelons, too.

When the president-general of the Sons of the American Revolution and that entire respected patriotic body feels constrained to speak out publicly upon what it now calls an "intolerable situation" with respect to the highest court in the land—then we have obviously arrived at a pretty pass of affairs, indeed. What's the answer?

Oratorical Contest Award to Shannah Pharr

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 22, 1959

Mr. YARBOROUGH. Mr. President, Shannah Pharr, a 17-year-old high school student from Odessa, Tex., has had an opportunity to compare the American way of life with other systems.

During World War II her parents were killed in a Nazi concentration camp. She is now the adopted daughter of an American couple, and recently she won a District Oratorical Contest which the American Legion sponsors for high school students. Her topic was "Americaism," a subject which has special meaning for her.

Mr. President, in special recognition of Miss Pharr and the other high school students who are learning through this contest more about the ideas and ideals which have made this Nation great, and as a salute to the American Legion, which sponsors the competition each year, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Monahans, Tex., News for Monday, March 16, 1959, under the heading "German Girl, Orphaned in World War II, Wins 'Americanism' Oratorical Contest."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Monahans (Tex.) News, Mar. 16, 1959]

GERMAN GIRL, ORPHANED IN WORLD WAR II WINS 'AMERICANISM' ORATORICAL CONTEST

Shannah Pharr, 17-year-old World War II orphan from Germany and adopted daughter of an Odessa couple, Friday won the American Legion National High School Oratorical Contest for the 16th District, held at the Monahans Junior High School auditorium at 2:30.

She is a student at Ector High School in Odessa.

Jimmy Kent, who was to have represented Monahans in the contest, was unable to participate because of a conflict with a 3-day student council meeting.

Contestants spoke on some phase of the U.S. Constitution. Thomas Marlow, 16th

District Americanism chairman, said Shannah's father and mother were killed in a Nazi concentration camp, and that her talk expressed why she was proud to be an American citizen.

She will advance to the 5th Division contest in Lubbock on March 20, then to the State finals to be held in San Angelo, April 3, if she wins in Lubbock.

The State finalist will compete in the national contest at Portales, N. Mex., on April 21.

First place award is $4,000, second place $2,500, and third $1,000, all in the form of scholarships.

Fidel Castro and the Liberation of Cuba

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 22, 1959

Mr. NEUBERGER. Mr. President, the seat of this Government has just had a visit from Fidel Castro, one of the most controversial figures in the Western Hemisphere.

I cannot claim any special knowledge of Cuban events, but I try to read omnivorously about such developments. I recently have read in the issue of the Reader's Digest for April 1959, a very comprehensive and complete article reporting on Fidel Castro and his revolutionary movement.

The author of the article is Miss Dickey Chapelle, who also has covered such historic occurrences for the Reader's Digest as the Hungarian revolt against Soviet tyranny, and the landing of American marines in Lebanon last summer. I think it is significant that the editors of the Reader's Digest have called attention, in their introduction to Miss Chapelle's article, to the fact that Dictator Batista, of Cuba, had previously conducted in that neighboring land of ours "a regime of terror and corruption without parallel in Cuba's tragic history."

I ask unanimous consent that the article from the Reader's Digest, as condensed by me to conform to the rules of the Senate, be printed in the Appendix of the RECORD. The title of the article is "Remember the 26th of July."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Reader's Digest, Apr. 1959]

REMEMBER THE 26TH OF JULY—THE STORY OF FIDEL CASTRO AND THE LIBERATION OF CUBA

(Until Jan. 1, 1959, an ironclad tyranny held the island of Cuba in its grip. Only 90 miles from the United States, Dictator Batista was conducting a regime of terror and corruption without parallel in Cuba's tragic history.

(Now Cuba is free of that dictator and there is hope of democracy in the air. This is the dramatic eyewitness story of how victory was won. It is largely the story of one man, Fidel Castro, who at 32 has become a legend for his daring and determination. Starting with nothing more than a hatred of tyranny, Castro led the revolt until it became a revolution which ended in triumph.—EDITOR'S NOTE.)

(By Dickey Chapelle)

When Cuba's strong-man President, Fulgencio Batista, celebrated the dawn of New Year's Day 1959, by desperately fleeing his homeland, some of the wisest heads in the rest of the world wagged in disbelief. The odds against what had happened were too high to calculate. True, it had been known that Batista's forces were embroiled with a bearded guerrilla named Fidel Castro, who, leading a motley band of malcontents, was staging raids in Oriente Province hundreds of miles east of Havana. But Batista wielded a modern military force, possessed made-in-U.S.A. planes and tanks. How could this ignominy have overtaken him?

Probably the only place on earth which did not share the sense of shock was Cuba itself. The people there knew what the world had had no way to find out: that there was a deep-seated hatred of Batista in Cuba and that civil war had been flickering across the entire 700-mile length of the island for many bloody months. They knew it because they had been feeling the hatred and fighting the war.

Nearly 10,000 men and young women were wearing the ragged green rebel uniform, and a dozen times that number had been welded into a daring underground. This underground included the vastly wealthy and the ghastly poor; it included farmers and store clerks, college professors and people who could not write their names, veteran military officers and current debutantes. The network also embraced exiles and sympathizers in Miami, New York, and half a dozen Latin American capitals.

The Castro movement had raised huge amounts of money, recruited and equipped fighting men, bought, smuggled and even manufactured arms, supported the widows and orphans of the war and cared for the wounded. There was one thing it had not done, however: It had not won much space in the world press.

Batista's oppression was never more effective than against correspondents. He destroyed the profession of reporter in Cuba and tricked its remnants into unwitting alliance. Cuba's many radio stations were assigned wave lengths which jammed U.S. stations, blacking out their newscasts.

Batista's police identified more than a dozen foreign correspondents en route to rebel-held areas and hustled them out of the country emptyhanded. The one conflict which Cuba's strong man won to the very last was the war of words: Press association teletypes were still clicking out the official description of how Batista's forces had won the critical city of Santa Clara, between Oriente and Havana, while Batista clambered into his escape plane—because the Santa Clara battle had been irretrievably lost.

During the last weeks of 1958 I was able to watch, at firshhand, the Castro forces come of age as a working army. On the last day of November a photogenic girl courier, code-named Piedad, led me into Castro territory—5 minutes by jeep outside Cuba's second largest city, Santiago de Cuba. (It was one of her last acts as a rebel heroine; she disappeared without a trace after being detained by the police "for a traffic offense" a few days later.) At that time the rebels controlled much of the surrounding countryside in the island's easternmost province, Oriente. The day before Christmas another courier, a chunky, whistling farm boy this time, showed me how to cross out of rebel-held terrain past Batista lines. By then the only spots in all Oriente Province still controlled by the dictator were in the dozen largest towns, where his troops were entrenched behind concrete fortress walls.

Since Oriente grows almost half of Cuba's sugar, the main crop of the island's economy, the handwriting was plain on the wall. Just what it said became explicit in the last present that a group of young Castro recruits gave me. It was a road map on which they had painstakingly drawn the tactical situation in the other five provinces of Cuba. Their markings identified nine advancing rebel columns by position, numbers, arms, and the name of the commanding officer.

I stood openmouthed at their candor. "But what will happen if this is confiscated from me in Havana when I try to board my plane for the States?"

"Never mind," said a tall youth, gesturing with his made-in-U.S.A. rifle just captured from a Batista garrison. "The enemy knows what we're doing now. They just can't stop us."

This gay military heresy was more prophetic than either of us guessed. Batista fled a week later, and I encountered the tall recruit again in Habana's presidential palace a few days after that. We were there to watch the rebel forces' presidential appointee, one-time jurist Dr. Manuel Urrutia Lleó, take his seat behind the desk that had been Batista's.

Watching him, I thought about all the rebel eyes that would never see him here because they were closed in death. I thought, too, about another irony: the fact of violence in Cuba at all.

Nowhere in the world does nature show a gentler face than in Cuba. The sugar cane rears itself to record heights, the orchids bloom riotiously year-round, the tropical rains fall quick and warm, the sun is a ubiquitous blessing. Beneath rich earth lie much of the Western Hemisphere's strategic manganese ore and deep lodes of nickel and copper. Only an hour by air from Miami, the island is bordered by great scallops of white sand beach, sloping into the improbably blue sea.

But every travel folder lyric about Cuba can be matched by a saga of misrule, corruption, and terror. In the half century since U.S. blood soaking into San Juan Hill, helped to buy the island's independence from Spain, a rhythm of repression and revolution has been the beat.

In the late 1920's and early 1930's the oppressor was the cruel Gerardo Machado. When he was toppled after days of bloody rioting by students and other groups—rioting that was climaxed by a massacre of army officers—a tough young noncom moved swiftly into the vacuum of leadership: This was Sgt. Fulgencio Batista, who elbowed and bullied his way until he became a colonel, later a general, eventually President of Cuba.

Batista towered stormily over Cuban politics for almost two decades. In the beginning he tolerated certain forms of democracy: A liberal, written constitution, regular balloting, public education. But this was government by the people in name only. Batista's grip on the army was the last answer in every crisis. In 1952, fearing the outcome of an election, he made a naked power grab—and won.

At first Batista played his dictator role with benevolent overtones. Like Mussolini, he made the trains run on time, cleared the big-city streets of beggars and litter, disciplined outward avarice by innkeepers, cab drivers, and others who came in contact with tourists. He initiated the most ambitious construction program in all Latin America: Highways, tunnels, office buildings, apartment houses, hospitals, orphanages.

Havana was the chief beneficiary of this facelifting. But two out of three Cubans live in small towns or as squatters beside sugar and coffee plantations. The outpouring of capital and cement did not reach their earth-floored huts. They still ate less than their stomachs craved, their roads remained potholed and flooded, their school buildings

jerry built or in disrepair, their hospitals only paper promises.

Soon it became commonly accepted that at least $1 out of every 5 spent in the country's building boom was lining the personal pocket of a Batista henchman. The dictator himself piled up a fortune estimated at $300 million. A minister of the treasury, debt-ridden when he took office, became a multimillionaire in a matter of weeks. Hundreds of other fortunes—large and small—were made as the Government steadily robbed the people. (One senator, Rolando Masferrer, maintained a private army of more than 1,000 men.)

The looting of Cuba on such a lavish scale could not be hidden, and the cries of citizens who foresaw bankruptcy grew loud. Batista first tried to anchor his critics to his cause as he had anchored the army—with a chain of gold. Here he made two bad guesses. Not all his critics were corruptible. And stolen pesos could not dry up the rising hatred felt toward him by the people he was robbing—there simply were too many of them. So he decided to try to silence them by terror.

Around his empire of corruption, Batista built a secret-police organization. The letters SIM—for the Spanish version of Military Intelligence Service—and the sleek olive drab radio cars, with submachineguns visible in the back seat, soon became symbols of horror. Every police station in the large cities was said to have its own torture chamber. (After Batista fled I visited two of them and was seized with a feeling or revulsion.)

Cubans came to believe that no one arrested by the SIM would be seen alive again, and in time more and more families found their forebodings coming true. The mutilated bodies of husbands and sons—including teen-agers—were found in the gutters after arrest. One rebel told me he had searched for the remains of his father among 92 bodies piled at a Havana street intersection one morning. "He was one of the last I looked at," he finished.

By 1955 the interlocking directorate of graft and terror held horrendous naked power. The minister of public works had openly abolished public bidding on Government contracts. Ten thousand slot machines were under the personal control of Batista's brother-in-law, the nation's director of sport. Schoolteachers were resigning to avoid paying a direct cut of their salary checks to a fund accountable only to the minister of education. Parking-meter income was paid into a fund accountable only to the family of the mayor of Havana.

The most truculent villain of the era, according to the rebels, was a police chief, Esteban Ventura. To every rebel fighter I knew, Ventura was notorious for the cruelty of his repressive measures and stood as the symbol of the Government's participation in Cuba's prostitution and drug traffic. Early in 1958 Dr. Francisco Alabau Trelles, a patriotic Havana judge with the constitutional power to indict, openly accused Ventura of torture and butchery on evidence so convincing that not even Batista could quash it. The dictator rescued his henchman by suspending constitutional guarantees for all Cubans—the right to a court trial and the freedom of the press were the operative ones, of course—so that proceedings against Ventura could not be carried forward.

On my desk before me are two signed statements documenting the terrorism. One is from a 50-year-old schoolteacher, mother of three children. The Havana police thought she knew where rebel arms were hidden. They arrested her in the middle of the night, and she tells how she was violated with a soldering iron in Havana's 10th district police station on February 24, 1958. A physician's certificate confirms her assertion.

The other documents is from José Ferrer, who owns the largest concrete works in Cuba. Two of his clerks, sisters, shared an apartment on the outskirts of Havana. One Sunday night they came back from a weekend at their parents' home in the country and were seen being followed into their living room by two policemen carrying automatic rifles. When the girls did not appear for work the next morning, their boss sent a messenger to their apartment.

"They're here," the emissary reported by phone. "Both have been shot to death, and one has been raped."

At their funeral, a resplendent aide wearing the insignia of Batista's staff sought out Ferrer. "President Batista asked me to extend his personal apologies," he said. "This has been a terrible mistake. The police weren't after those girls at all. They were seeking two people who lived in the apartment across the hall from them."

The cancer of such terrorism spared no class of Cubans. When the imposing University of Havana proved a spawning ground for anti-Batistas, it was summarily closed. One by one, every university in Cuba, and many schools, shut their doors after their faculty members disappeared into martyrdom, exile, or the rebel forces. By the end of 1957, the ranks of sickened businessmen, revolted physicians, and angry teachers closed into a major civil-resistance network against Batista.

The best epitaph for Batista's terrorism was given me by a bearded rebel rifleman who had been a shoe salesman. "The thing that made the people hate Batista was very simple," he said. "He killed so many of them. He just killed too many people."

Terrorism, corruption, and irresponsibility are the principal reasons the Cubans deposed Batista. But they do not explain why all Cuba turned to Castro. He remained a long way from Havana, and the early reports of his personal struggle told of almost unrelieved disaster. Fidel Castro, the man who was to win so improbably, lost not once but time and again. And after each catastrophe there came a black hour when almost the only source of faith in victory was the man himself. This the Cubans see as the very heart of the Castro epic.

Fidel Castro, now only 32, was born to a life of ease and comfort. His family owned a sugar plantation in the heart of Oriente Province. Unlike most of his neighbors, Fidel's father, Angel, had known what it was like to be a penniless immigrant, to find work only a few months of the year as a cane-cutter, to tame new fields out of jungle. So his seven children learned young that it was a simple obligation of citizenship to know how to live off the land.

When he was 13, young Fidel took up a typical Cuban sport: the breeding of fighting cocks. This enterprise ended in failure. To make a rooster fight, you keep him ill fed and mean. This Fidel simply would not do, and his plump game birds were slaughtered as quickly as he sent them into battle. Fidel never forgot the lesson that the lean and hungry will outfight the fat and overnourished.

His first schooling was by the local Jesuit fathers, who channeled some of his furious energy into voracious reading of history. He was a good student, and went on to prep school in Havana. By 1947 he had become a sophomore at the Univeristy of Havana, where he joined a group of students, exiles and others in an amphibious expedition to overthrow dictator Rafael Trujillo of the Dominican Republic. The young men had barely set sail when the Cuban navy captured them. Fidel slipped overboard and reached shore after three miles' hard swimming.

He graduated from the university in 1950 with, amazingly, three degrees, two of them doctorates: one in law and one in social sciences. His colleagues remember him for his commanding leadership, his dramatic oratory and his devotion to physical conditioning. The last they found a little bewildering, since Fidel stood well over six feet tall, weighed 200 pounds—none of it fat—and lived in a sorority where indolence was a mark of status.

He did not need to practice as an attorney to make his living, but injustice against human beings always moved him to indignant court pleas. His chosen targets were a government agency which cheated farmers of their land, and a landlord who victimized slum tenants. When he won these cases, he was named a candidate for parliament on the 1952 ticket of Batista's opposition, the Orthodox Party.

The election was never held; the Batista coup came instead. Fidel was outraged. He went back to Oriente. There he gathered around him a group of young idealists who hated Batista and all his works. Together they plotted a revolt. It was foolhardy and poorly planned, but it contained an element of daring that was to mark all of Castro's acts.

Batista's stronghold in the city of Santiago was Fortress Moncada, a complex of buildings covering six square blocks behind a stout concrete wall. Two structures dominated the wall: the city hospital and an administration building.

On July 26, 1953, at the height of a gay local festival, Fidel led about 120 rebels armed with hunting weapons in an assault on the fortress. The hospital and office building were captured quickly, and 95 of the attackers breached one of the gates. Not all of the garrison was celebrating with as much abandon as Fidel had hoped, however. His main force was fired on before the men could find the arsenal from which they had planned to arm themselves with military rifles.

Two small suicide squads held the flanking buildings to cover the withdrawal of most of the men, who fled by car. Then came two bitter acts by Batista's soldiery which sealed Fidel's resolution and possibly Cuba's fate.

First, was the capture and torture of a brother and sister, Abel and Haydée Santamaría, who had stayed behind as part of the covering squad. In front of Haydée, Abel's eyes were gouged out, he was castrated, then killed. Haydée Santamaría escaped death, became a ranking rebel, and today is one of the most honored women in Cuba.

Next came the betrayal of the largest group of attackers who had spread over the surrounding countryside in small bands. A pledge of a fair trial had been obtained for them by Santiago's archbishop from the city's military chief. The cleric acted in good faith, but as the rebels were rounded up by the army they were ordered massacred on the spot by the commanding officer.

When Fidel's group was taken an officer, pistol in hand, stalked up to dispatch the leader. The rebel gritted out, "You can kill me. But you cannot kill the idea which brought me here." The officer hesitated on the trigger, looked away, then refused to shoot. The archbishop's direct intervention stopped further bloodshed, and Fidel and his brother Raúl were taken alive to Santiago.

The handful of survivors from the Moncada attack were sentenced to long prison terms and shipped to the Isla de Pinos. (While Fidel was incarcerated there, his wife of 7 years, sister of a Batista supporter, divorced him.) In 1955 Batista, prosperous and confident, declared an amnesty for political prisoners, and both Fidel and Raúl were released. With their followers, they formed a dedicated group named for the date of their attack—the 26th of July Movement. Its purpose: the violent overthrow of Batista. Its colors: red for courage, black for martyrdom. Its motto: "Libertad o Muerte";

the same words Patrick Henry used—liberty or death.

Fidel visited the United States, briefly, to raise funds for the movement, then went to Mexico to lead a group of Cuban exiles through a year's training in guerrilla tactics. They planned an amphibious operation which for sheer confrontation of impossible odds must rank among the most daring in military history. This time, less than 100 strong, they planned to spark an island-wide revolt. They counted on support from a small underground in Santiago, led by a fine-featured young revolutionary named Frank Pais.

H-hour was set for 10 a.m. on November 30, 1956, and the arrangements were confirmed in a wire to Pais reading, "The child will be born at the expected time." But the wire was too optimisic.

The old sailing vessel *Gramma*, which constituted Fidel's assault fleet, had been built and provisioned for a score of people. On this voyage she carried 82, almost capsized in a storm, lost a man overboard and was delayed by the search for him.

Pais's force, not knowing that Fidel was still at sea, made its attack at the scheduled time; in half a day the force was defeated and most of the Pais men were captured. (Pais himself escaped to fight again.) On december 2, 2 days late for the rendezvous. Fidel sighted land—and a pursuing Cuban Navy gunboat. He ordered the *Gramma* beached. Seasick and hungry, the invaders began to crawl through mud and saw grass—with a body of 1,000 government troops in pursuit. More than 50 of the rebels were dead within the next few days, and 17 were captured. These were finally tried, along with a score from Frank Pais's force.

The president of the three magistrates who heard the cases was the veteran jurist Dr. Manuel Urrutia, the man who is now President of Cuba. When the evidence had been presented, Urrutia wrote an opinion exonerating the prisoners under article 40 of the Cuban constitution—which specifically legalizes armed resistance to tyranny. It was this action that the anti-Batista forces remember last year when they named Urrutia interim chief of state. But, at the time, Urrutia was outvoted by his two colleagues. The prisoners were declared guilty.

Of the *Gramma's* ill-starred landing force, only a dozen men, including Fidel escaped death or capture. They found one another in the salt marsh and followed footsore behind Fidel while he retraced the deer-hunting trails of his boyhood through the Sierra Maestra. One of these led to the best defensive position in Cuba, Pico Turquino, which rises harsh and jagged nearly 8,000 feet, and whose foothills are thick jungle through which a man with a machete can hack his way only a few miles a day.

It was early in 1957 that Fidel's band went into hiding there, sustained by a few peasant families. A courier passed word back to Frank Pais In Santiago that Fidel was ready to lead a new campaign. A few score young Cubans took up their hunting weapons again and disappeared from Santiago and the nearby plantations to trek to Pico Turquino. Castro's revolt was born anew.

Its first mark was a series of lightning attacks on one Cuban town after another. Without uniforms, many continuing to work at their regular jobs, the 26th of July members sabotaged public transport, water, light, and communications systems. They fanned the hopes and efforts of Cubans who hated Batista, but they reaped a bloody harvest. At Holguin, a provincial railhead, police retaliated by leaving 21 bodies of suspected rebels in the streets in one 48-hour period. In one town two accused men were beheaded, and their heads were exhibited to the people from a roving jeep. In Santiago a 15-year-old boy was tortured for 24 hours, and died with long nails driven through his forehead.

Most of these terrible events went unknown outside Cuba. The eyes of the world had been on Hungary and Suez when the *Gramma* was grounded. Now Batista clamped on a total censorship. He permitted one news announcement, however: that the bodies of both Fidel and Raul Castro had been found.

In February 1957, veteran war correspondent Herbert Matthews of the New York Times made his way into the foothills of the Sierra Maestra. He brought back the report that the Castros were not dead. In whispers—the habitual speech of the entire band so that no voice could give away their position—Fidel had told Matthews how he was preparing to try again for Batista's overthrow.

It was a desperate three-pronged effort, and each part succeeded. The Fidelistas, armed with shotguns, raided one small army garrison after another and emerged with rifles. In the cities, the Milicia continued counterterrorism, and stoically bore their losses. The Resistencia Cívica, the noncombatant arm of the movement, grew from a funds-and-propaganda effort into a major manufacturer of munitions, notably rifle grenades and land mines.

Bloody false starts on both sides marked the long months of 1957. Batista peremptorily moved thousands of farmers from the Sierra Maestra foothills to withhold their food and help from Castro; then he made a direct attack toward Pico Turquino. In 2 short weeks he learned the lesson any British general could have told him in 1776: you cannot assault with massed troops through unknown territory against guerrillas who live there. At almost the same time Castro's Milicia lost heavily in an ill-timed uprising at the port city of Cienfuegos. The bodies of more than 250 rebels were bulldozed into a mass grave after 2 days of fighting.

In November 1957, a Castro raid struck a large city for the first time—Manzanillo, population 60,000. The rebels held the town several hours and stripped the army barracks of weapons after capturing the garrison of 150. Then they did something inexplicable to the prisoners of war: they simply lectured and released them.

This was the first long step toward the realization of a Castro dream—to undermine the fighting will of Batista's soldiers. No tactic could have been more wisely chosen. It forced the dictator to extend his repressions to his own army. He at once issued an order than any man could summarily shoot his immediate subordinate for simply discussing the easy out—of surrender to the rebels. This demoralizing order stood for the rest of the war.

Advantages of Education

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 22, 1959

Mr. MURRAY. Mr. President, I have recently received two very interesting letters from an Armenian immigrant, telling of her difficulty in putting her two sons through medical school. These letters illustrate the hard work and deprivation which must be undergone in order that some young people may obtain an education commensurate with their ability and ambition.

The international and domestic situation today demands that the tremendous human resources represented by the youth of our Nation must not be wasted. We must make it possible for every young man and young woman to obtain the maximum educational advantages which their talent and aspiration allow.

I ask unanimous consent to have these two letters printed in the Appendix of the RECORD. I have had them reproduced exactly as they were written, because I feel that the language used by the writer tells the story best.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

MARCH 16, 1959.

DEAR SENATOR MURRAY: I am a mother of a 3rd year Med. Student. last year my husband got heart attack. My younger son is graduating N.Y. University with honor is accepted 4 Med. colleges. There is no scholarship aid to Fresman student in any college and besides his tuition 1200 dollar they need money to eat and rent and car fere. will you kindly put a bill on the Senete floor to give aid to dentist and Med. Students. Please this boys are not going to operate on their own eyes or brains or leg. they are good Christians and good citizen boys born here to help American sick and destitude. our good tax money goes to billions to the Arabs. 400 millions to the Turks, why not help our own citizens writ here at home. please I pray God that your comitee will pass this bill.

Students Mothers and Fathers who work for less than $6000. a year and denieng they bring up decent good boy sending throoh college. 1 avereg father my husband send the older boy 4 year N.Y. University graduating this June with honors. I have lost my health since 1952 my husband lost last year. we can't even deduct the college money about 2500 a year room and board. why somebody help desent parents. juvenile delinquents dope sellers lazy people get all the help.

God Bless you and your children.

APRIL 2, 1959.

HONERABLE SENATOR JAMES E. MURRAY: this morning I received your letter with great plasure I thank you for your interests, thanks again. Dear Sir the Med. School Education is very costly now a days the tuition is about 1200.00 or 1300.00 a year. books and Med kit white uniform cost about 500. they need about the cheapest room 50.00 a month. they need laundry car fare hair cut and 15. a week at least for food. train fare telephone calles all-together 3,500 a year. Why can't we Americans pass a bill in the Senate to help needy Dental and Med. College Students 2500 a year for four years let the parents help with the balance for clothing and extra bills. believe me Dear Senator, this fine boys and girls if they become Dr's they are not going to operate on their own legs and arms. in Washington our Sennotors are talking with Billions and Millions. they are not juvenile delinquents and not lazy releif grabbors. Most of the students have heart murmur and my Son gets some kind of sicknes. Good Friday I called Dr ——— from Richmond Hill L. I. he examined my Son 3rd year in Georgton Med Colleg. the Dr. said your diet is missing 3 glasses orange juice, 3 glass of yogourt and plenty meat.

My son can't buy none of those things because he has no vacation can't earn money the father is sick, so we will have a sick Dr graduate in 1960; we can give millions to the Turks to kill more Christians and Armenians and Greeks. we can feed korian, and our cream of the crop of good promising young citizens drag life half hungrey.

Dear Senator My younger boy is accepted to Boston Med. College. How can I send him to Boston when I haven't got the Money. I

have given the oldre boy 6 years room and Board but my younger boy allready borrowed 1500. from New York University 250 from A. G. B. U. for 2 year tuition. he is blind on the left eye: allready has borrowed so much, why can't the Senate or Congress or our Dear President give this boys and girls 10,000 for four years then the taxpayers money is well spent. I know this take time to pass a bill.

Our Dear President owes his life first to God and then to Dr White, the heart specilist. My younger sons right eye was saved by Dr ——— in Boston. my oldest son has his leg because Dr ——— of jamaican put 4 skrews in his leg. so all of us and you Dear Members of the Sennate and Congress and White house and your family needed a Dr. or will need one sometime or other. please please read my letter to your Member Sennators even to President Eisenhower and please do something. I am pleading for all the Med. and Dentel Stúdens. May God soften the hearth of our leaders. may God keep you well and healthy all you life. May I hear you please.

respectfuly yours

P.S.—Since 1941 we had sixteen operations in my family. I scrabe and saved to send two Boys to college now am exasted.

A Place To Save

EXTENSION OF REMARKS

OF

HON: STEPHEN M. YOUNG

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, April 22, 1959

Mr. YOUNG of Ohio. Mr. President, a convincing and effective argument that civil defense is a job for the military and that the request of the Office of Civil Defense Mobilization for further spending should be denied is highlighted in an editorial in the Washington Daily News of April 20, 1959.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD, so my colleagues may be informed of this timely comment on the recent nationwide bomb-alert fiasco. I commend a reading of the editorial, inasmuch as it furnishes a further argument in support of my contention that here is an opportunity for economy without in any manner diminishing the defense of the Nation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A PLACE TO SAVE

Last Friday's nationwide bomb-alert circus is a reminder—and maybe not by accident—that the Office of Civil Defense Mobilization is before Congress with a request for an extra $2 million.

That is just the downpayment on a scheme of the OCDM to hire 1,400 additional administrative employees for local offices. The $2 million would last the remaining 2 months of this fiscal year, with $12 million required for next. The States would be expected to split the cost, presumably putting up another $12 million.

The agency already has 2,501 employees, and any useful work it has done, or expects to do, is not exactly obvious to the naked eye.

We go along with the statement of Ohio Senator STEPHEN YOUNG last February:

"Over the past 9 years nearly $500 million has been appropriated by Congress for civil defense.

"I assert most of this money has been wasted.

"Here is a place where we can save the taxpayers millions of dollars and in no manner place this Nation in jeopardy."

Senator YOUNG didn't mean save just the $12 million. He mean save it all, and with that we also agree.

Civil defense is a job for the military, the policemen, and firemen. In an emergency they should not have a lot of arm-banded civilian bureaucrats underfoot.

Want in the Midst of Plenty

EXTENSION OF REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, April 22, 1959

Mr. YOUNG of Ohio. Mr. President, an editorial entitled "Want in the Midst of Plenty," published in the Yellow Springs News, Yellow Springs, Ohio, of April 16, 1959, is worthy of serious consideration.

The editorial clearly and concisely deals with the heartbreak, suffering, and discouragement of those individuals in our Nation who are unemployed. It deals with those who, in fact, are merely a statistic—"4 million unemployed."

Involuntary unemployment, Mr. President, in this Nation of abundance, resulting in worthy and industrious men and women being denied jobs, is a great moral wrong. Soup kitchens, bread lines, unemployment compensation, and charities must not be the answer of American intelligence and sense of justice to the problem of unemployment.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WANT IN THE MIDST OF PLENTY

The enormous total of heartbreak, suffering, and discouragement that is piled up by the individuals who make up the statistic "Only 4 million unemployed now; only 3 million by fall," should show more plainly than anything else how false it is to regard this statement as encouraging as far as either the present or ultimate situations are concerned—let alone meaning that a crisis has passed, that a problem has been solved.

A society that cannot find a place for any one of its members to fit into a productive groove has failed to the extent that that one individual's life is wasted. How much more so does a society fail that cannot find a place for 3 or 4 million.

It is hopeful that those are becoming fewer who believe that the answer is in letting the economic machine run without help, regulation or direction. Even the conservative magazine Newsweek, for instance, admits in its current issue that it is alarming that "statistics clearly indicated that the United States is emerging from the recession with an unemployment level about 1 million higher than it had when it came out of the 1953–54 recession * * * the odds are that most * * * will never go back to the jobs they once held," and concludes that—

"Government, industry and labor are faced with a vast job of training, education and relocation."

For the numbers of this Nation's—and the world's—population are so large that they make the problem of supplying all with gainful employment so complex that often the worker and the employer alone cannot solve it; Government must be used to help. Democratic Government is set up by men as the machinery through which they can cooperate in solving mutual problems; let us so use it in solving the problem of unemployment.

This is no place for a detailed blueprint of how "government, industry, and labor" can cooperate to put the jobless millions to work, making a richer life for them and all the rest of their fellow citizens, but it is fair to suggest that a good way to use unemployed manpower is in supplying of needs.

The unemployed and others are still ill-fed, poorly clothed and housed. So food, clothing and housing are needed.

Schools clamor for more room. Hospitals are crowded. Can unemployed manpower be used to build the buildings that would supply these needs?

Many cannot afford the medical and dental care that they need and that medical and dental science has learned how to supply—if financial arrangements can be made. Is there manpower among the jobless which can be trained to supply this care—which will not otherwise be received?

If the answer to these academic questions is not a simple "yes," it is also not a simple "no." If men do not have enough ingenuity to use idle manpower so as to fulfill their needs they deserve the chaos that will result. It is important that we clearheadedly see the problem and, with equal clearness of vision, set out to achieve its solution.

The Role of the United Nations

EXTENSION OF REMARKS

OF

HON. SAM J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 22, 1959

Mr. ERVIN. Mr. President, on April 20, my hometown newspaper, the Morganton News-Herald, published a prize-winning essay entitled "Role of the United Nations in the Modern World," written by Miss Geraldine Ball, a senior in the Morganton High School. I am given much confidence in our future when a high school student exhibits such a fine understanding of the problems of the world.

I ask unanimous consent that Miss Ball's prize-winning essay be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

ROLE OF UNITED NATIONS IN MODERN WORLD

(By Geraldine Ball)

(EDITOR'S NOTE.—This is the prize-winning entry in the world peace speech contest conducted in Morganton High School under the auspices of the woman's club. Miss Ball, a senior, delivered the following:)

Man from the beginning of time has striven to find some effort or force that would enable him to bring the nations of this world together in a lasting world peace. Yet, despite his efforts, and works of pens, pacts, slogans, treaties, or formal and informal agreements, there have always been wars.

Even in this day and era there are still forces working together to produce war. In order to offset this there has been established one force or organization to be a peace working force.

January 1, 1942, only 24 days after the United States declared war upon the Axis Powers, the world saw a meeting in Washington of 26 nations representing all parts of the world. Their purpose and aim was to sign the declaration by the United Nations. Upon signing this, each member agreed to accept the princples of the Atlantic Charter, made the preceding August, and also stated that they were against Hitlerism.

This had been the first time the words "United Nations" were formally used. The man who first used them was Franklin Delano Roosevelt. By his actions the world was to see a new era dawn, an era of development, of world organization, of maintaining peace. He died before seeing this in action, but he did see war tide change and the beginning of a place where peace might be in the making.

The first step for this organization was taken by the 26 nations, but it takes more than one step to make such an organization as the United Nations. The meetings to follow were to be the ones that would be remembered in history.

The meeting held at Dumbarton Oaks on October 9, 1944, was the one which produced the final blueprint of the United Nations, with the exception of minor details and the veto vote of the Security Council. It began with each member of the Big Five submitting a separate blueprint. From these five blueprints came one having the combined ideas of all. This organization was not to have loopholes for war as had the League of Nations.

At Yalta in February 1945 the final plans were made; the Security Council and the veto vote had been hashed out. Now, and only now, could the nations' organization work together. The membership first was to be limited to nations meeting in 1942, and those declaring war upon the Axis Powers.

The only phase left now was the one of writing and approval of the charter. San Francisco was to see its name headlined in the pages of history. It was there during a period of world insecurity and turmoil that the representatives of 50 nations met. Over 400 delegates gathered at the San Francisco Opera House on April 25, 1945. Two months later they had signed the complete charter. At last there was a world community working together to make this earth a better place in which to live.

Peace was promised by the following part of the preamble to the charter: "We the peoples of the United Nations, determined to save succeeding generations from the scourge of war which twice in our lifetime has brought untold sorrow to mankind * * * have resolved to combine our efforts to accomplish these aims." Their aims were to include maintaining justice, respect, peace, and tolerance, and promoting better social living standards for the world. To maintain peace and tolerance these nations were to develop a world community of friendly relations, international cooperation among international problems, and to keep the United Nations a center for harmonizing actions.

London was the site of the first General Assembly and it was there that Russia's dreadful use of the veto vote was first seen. The Second World War had created the organization; could Russia destroy it in such a short time? That was the way it looked then and the way it looks now. The United States was able to provide a suitable plan for the issue then. Can she again do it?

War, a dreaded word, had produced through an untold loss of human lives a world organization and now peace, a loved word. Now that this had been accomplished what can the future present for us the people of the world? Crises of many issues have been presented to both the Security Council and the General Assembly. Even today one can say that the United Nations is neither a success nor a failure. Neither can its value of success in the world today be measured, because only in time to come will we know its true value.

History is not to be judged today, the day it is made, but in later years when it is looked upon by the writers of history. So we cannot truly give a good picture of any of the crises in this brief time. I will, though, present to you two important issues of the United Nations. Countries of the Security Council and the General Assembly are daily arguing about the veto vote of the Security Council. Without it the United Nations could not exist but with it the Soviet Union has gained much control through the deliberate misuse of it. The United States, on the other hand, has only rarely used it and then only using it where it is necessary. At present the Big Four are allowed the vote whenever they desire to use it. Is there a need for a change of this policy?

The other existing problem is the question of a permanent police force for the world. The reasons given against it are: an aggressor nation would not cooperate, the cost would be too great, and there are other ways to meet any existing crisis.

A permanent police force would in most respects be able to insure peace and security as sparks of war could be easily extinguished by a force employed for observation, patrol, and guard. The force would be made up of men from each member nation, with each country supporting its own men but leaving control up to the United Nations.

Truly, if one such force could be set up on a permanent basis, it would be an existing symbol of the world's desire for peace.

Today we live in a world of Christianity, communism, Marxism, paganism, and many minority beliefs, each of which is large in its differences from the others. None can be compelled to give up its beliefs and practices. Neither can these same peoples' determination be altered by another will. Now as in the past, the cause of war has not been absolutely abolished. Yet there is hope for world security and peace; but it must rest on you, the citizens of the world. You can help to maintain it by giving to this great organization, the United Nations, your support.

As I prepare to leave you, I hope I have impressed on you at least one of the true roles and the importance of the United Nations and that each of you realize that no matter whether there is a "world town" or not, the danger of war will still exist.

You and only you, as citizens of this town, can provide for the future existence of the United Nations. The United Nations' true role in the modern world is not just one of preventing wars, but also of providing for you and the future generations a field of usefulness in order that we may all live in peace and harmony.

Tribute to Dr. Simon Baruch

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 22, 1959

Mr. THURMOND. Mr. President, a recent column by syndicated writer Jim Bishop which appeared in the Camden (S.C.) Chronicle, lists Simon Baruch as the "ideal immigrant." The life of Dr. Baruch is an inspiring one, and his love of freedom and willingness to protect this freedom found in the United tSates provides a lesson for all of us.

I ask unanimous consent that this column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

SYNDICATED COLUMN DEVOTED ENTIRELY TO DR. BARUCH, LATE CAMDEN DOCTOR

(By Jim Bishop)

No country in the world throws its arms open to as many immigrants as the United States. Millions have funnelled through the Narrows in New York. Of them all, I would select Simon Baruch as the ideal immigrant, the rare alien jewel.

You have heard of his son, and the deeds of the son have placed the father in the dark cool shadow of time. But Simon Baruch must not be forgotten. He had his own unique greatness.

He was born July 29, 1840. The place was Schwersen, now a part of Poland. Simon grew up wanting to be a doctor. He was still in high school when he saved enough money to leave Schwerson for America.

Like most immigrants he appreciated the value of an education more than the native-born Americans do.

Simon finished his medical training at the Medical College in Virginia, and served his internship in Charleston. He joined the Confederate Army as an assistant surgeon and, for the last 3 years of the war, saw service with the Army of Northern Virginia.

When the war was done, the South was not a prosperous place, but Simon Baruch loved it and set his practice up in Camden, S.C. He was a foreigner. He had an accent, but what the people saw in Dr. Baruch's eyes was commiseration and understanding. This was a signal they could read plainly.

He was almost 41 when he left for New York. Dr. Baruch made the move, not because he was dissatisfied with Camden, but because he had new and daring medical ideas, and, if they were to be accepted, New York was the place to try them.

In 1888, 7 years after his arrival in the metropolis, Dr. Baruch was known as a prominent surgeon. One of his radical ideas was that, in cases where appendicitis is suspected; one should not wait for a turn for the worse before trying surgery.

Surgery should be undertaken at once. Prior to this, treatment often consisted of hot water bottles and ice bags.

In 1890, Dr. Baruch began intensive work on the use of warm flowing baths in the treatment of certain emotional disorders and typhoid fever. This had been introduced by Winternitz in Vienna, but it took Baruch, and two books on hydrotherapy, to make it popular.

At the turn of the century, the immigrant was appointed a full professor at Columbia University. He was now 60, and he felt that he should devote more time to the poor. He opened the first free public bath in Rivington Street in New York in 1901. In a short time, there were 100 of these around the country.

He worked hard. Often he worked for no fee. He talked the State of New York into buying the mineral springs at Saratoga. When the springs were purchased Dr. Baruch returned to Europe, at his expense, and studied the cures effected at the famous spas. He introduced them in America.

This is not to say that he was too busy to lead a family life. On November 27, 1867, he married Isabel Wolfe, of Winnsboro, S.C., and as his children grew, he found time to impart to them his love of man and country.

Dr. Baruch believed that hard work never killed anyone. He proved it by working for as many hours as he could remain awake. The

hours became shorter and shorter and the clocks ticked nervously and swiftly. The doctor kept working until the last, and the last was June 3, 1921, just short of his 81st birthday.

The doctor has been forgotten, except in medical circles. He came here with very little more than a clean heart and an inquiring mind. He left a legacy of goodness and understanding everywhere.

Once, to my knowledge, Dr. Baruch committed to writing his feelings about the United States. What he wrote should be set in bronze for all to see:

"If I did not stand ready to consecrate heart and soul and all that I possess to the defense of my adopted country, I would despise myself as a scoundrel and a perjurer and regard myself as an ingrate to the Government which has, for 60 years, enhanced and protected my life, my honor, and my happiness."

The ideal immigrant.

Plight of Male Schoolteachers in Texas

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 22, 1959

Mr. YARBOROUGH. Mr. President, This age of science and satellites has graphically illustrated the vital importance of education. It is painfully clear that as far as the students in America's schools are concerned, what they do not know will hurt them—and us and the rest of the world as well.

I was interested to read a recent newspaper article which gave the results of a survey which revealed that two out of every three male schoolteachers in Dallas, Tex., need extra jobs in order to earn enough to support their families. These men work about 15 to 20 hours a week in outside jobs in addition to teaching. This cuts into time available for preparing lessons.

As a former teacher, I know how important out-of-class preparation is. Yet, instead of that preparation, many of this Nation's teachers are forced to find part-time jobs to make ends meet for their families.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Al Hester, staff writer for the Dallas Times Herald, printed in that paper Sunday, April 12, 1959, under the heading "Two Out of Three Work—Teachers Need Extra Job To Live, Survey Reveals."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWO OUT OF THREE WORK—TEACHERS NEED EXTRA JOB TO LIVE, SURVEY REVEALS

(By Al Hester)

Two out of every three male school teachers in Dallas have to work at extra jobs during the school year to make enough money to support their families, a Times Herald survey showed Saturday.

And nearly all men teachers and a large percentage of women instructors work during summer months to get extra money, teachers and administrators estimate.

Dallas public schools pay comparatively good salaries when other Texas schools are considered, but a beginning teacher is expected to make a living on $3,900 per year. The State minimum teaching salary for a beginning teacher with a B.A. degree is $3,204. The system employs 867 men teachers.

RETAIL STORE WORK

"The only thing which makes it possible for me to continue teaching is my part-time work with a retail store," a teacher with 10 years' experience said. He has to support a wife and three children.

"I know I'm taking time I need to use preparing lessons, but I have to work at an extra job to support my family," another teacher explained.

Ditchdigger, painter, restaurant waiter and service station attendant—these are all jobs some teachers hold outside school time.

The teachers generally try to choose extra jobs that don't make them sink too low in the opinion of their community. Examples of good extra jobs are retail store clerk, night school instructor, construction worker or encyclopedia salesman in the summer, they said.

JOBS NOT PLENTIFUL

"But sometimes you've got to take anything. Part-time jobs aren't very plentiful," a history teacher said.

One Dallas woman teacher had a job singing in a tavern until school authorities persuaded her she would lose status with the parents of her students and with the students themselves.

Interviews with teachers show the average extra job takes about 15 to 20 hours per week. The extra work cuts into any time available for preparing lessons, grading papers or just plain resting for the coming school week.

Some teachers feel guilty about holding extra jobs because they know they aren't doing students complete justice.

"The students or my principal may not sense my shallow preparation, but I know about it," a veteran biology teacher said.

One principal laughed at a conservative estimate a reporter made of the percentage of faculty men working during the school year.

SERVANT'S WAGES

"Ninety percent of my men teachers work on extra jobs," he sad. "And the community expects them to act and to dress professionally on a servant's wages," said another principal.

Dallas school leaders don't try to prevent a teacher from working extra hours on other jobs.

"But we tell teachers their extra jobs can't conflict with their teaching duties inside or outside school hours, however," a school administrator said.

A principal pointed out that the necessity for extra work shows most plainly how salary increases are needed for teachers.

The Dallas School Board is currently planning an extensive study of teachers' financial problems. A committee of teachers, top administrators, and principals was named last week to see what can be done about teachers' money problems.

Dr. Edwin L. Rippy, president of the Dallas School Board, said Friday, school leaders know about teachers holding extra jobs to eke out a living.

"We want teachers to be spiritually, physically, and morally ready for their school jobs, and we don't like to see them have extra jobs which detract from teaching," he said.

The board president has taken a leading role in setting up the study of salary needs for Dallas teachers.

Beauty and Strength From Poetry

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 22, 1959

Mr. RANDOLPH. Mr. President, in my home State of West Virginia there are many citizens who continue to make notable contributions in the field of literature.

One of these persons, known to many people in official national life as well as on the quiet streets in historic Charles Town, is Mrs. George W. Johnson, the widow of the former Member of Congress from West Virginia's Fourth District. This gentle and gracious woman now resides in Jefferson County, in the section in which her husband was born. Mrs. Johnson has written a poem of beauty and strength, "A Prayer," and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

God, give me willing heart
To understand Thy ways.
O teach me how to find
Some cheer in all my days.
To see each radiant dawn
And fading sunset fair,
To know the thrill of contacts
Wrought through friendship rare.
Of dear familiar loves
Help me to build a shrine,
With altar lit from flame
Of hearts that kindle mine.
Help me to wear the fetters
Of the deadly commonplace
More lightly and I pray
For special added grace
To count with thankfulness,
Thy answer to my needs.
For health, for comforts and
For neighbors' kindly deeds.
Teach me to heed each cry
Of mortals spent with pain,
To make the generous gift,
Without one thought of gain.
And, when my day is done,
May I find recompense
For stress of honest toil
In well-earned rest.

Mr. RANDOLPH. Mr. President, as a further indication of the persuasiveness of poetry at this period of the year, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial "How About April?" in the Parkersburg (W. Va.) Sentinel of April 16, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW ABOUT APRIL?

How about this April, anyway? Some month, isn't it? Full of promise, utterly delightful and often completely frustrating.

Our friend the poet, Jeannette Arnett Leeper, of Vienna, captures the mood of April in her latest verse "Who Knows April?" It reads like this:

A handful of sunshine, a handful of snow.
April says—stop. April says—go.
The golden trumpets tossing on my forsythia bush

Look reckless there, indeed, within the snowflake rush.
Japonica's red beauty, riding out the gale,
Derides this naughty April, refusing to turn pale.
But, oh my little peach tree, with pink just shaking out,
Be careful, Lady April, what you are about.
My precious little peach tree, with promise rich and gay,
Will I remember in September what April did this day.
Sunshine in one hand, the other filled with snow,
A smile that says, "Come on." A frown that tells you, "No."
April is too close to March, too far away from May.
Where's the man who can foretell an April day?

Mr. RANDOLPH. Mr. President, it seems to me that in these days of individual tenseness and national strain, we could do well to listen a little less to the discordant voices who clamor for our ears, and sit in an easy chair for at least a few minutes and read the verse which strengthens us for the grind of duties.

Prize-Winning Essays on "Hiring the Handicapped in Our Town"

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 22, 1959

Mr. WILEY. Mr. President, across the Nation there is widespread, commendable interest in promoting the practice of hiring the handicapped.

We recall that the President has appointed a Special Committee on Employment of the Physically Handicapped. In States throughout the country, including Wisconsin, special staffs or programs, too, have been established for this fine objective. In addition, a great many civic, fraternal, religious, and other organizations have made significant contributions toward providing greater opportunity for those among us who are, unfortunately, handicapped.

Over the years, special studies have proved that these workers—even though partially incapacitated—bring to their jobs, concentration, zeal, ambition, and enthusiasm that, in many cases, have proven them to be outstanding employees.

Recently, an essay contest for high school students was sponsored jointly by the President's Committee on the Physically Handicapped and the Governors' Committee. The theme was "Hiring the Handicapped in Our Town." The essays written for the contest illustrate that there is, indeed, an increasing awareness of the importance of providing such persons with opportunities to earn their living and to assume their rightful, responsible places in the social and economic life of their communities.

I welcome this opportunity to endorse most heartily the overall program and to congratulate not only the winners of the contest but also all participants who gave thought and study to its worthy objectives.

As an illustration of the fine and constructive thinking that characterized the contest, I call attention to the winning essay by Ruth Ellen Newman.

Although it is not possible to pay tribute to each contestant individually, I wish also to pay tribute to those who won first, second, third, and fourth places in the Wisconsin contest. In addition, I want to commend the persons, State agencies, and voluntary organizations who assisted in sponsoring the project.

I request unanimous consent to have printed in the Appendix of the RECORD the winning essay, as well as a list of those who contributed to the contest itself and to making it a success.

There being no objection, the essay and the list of names were ordered to be printed in the RECORD, as follows:

WISCONSIN GOVERNOR'S COMMITTEE PRESENTS 1959 PRIZE-WINNING ESSAYS "HIRING THE HANDICAPPED IN OUR TOWN"

Ruth Ellen Newman, first place; Elkhorn High School.

Jon Eric Bischel, second place; Racine, St. Catherine's High School.

Susan M. Rutkowski, third place; Kenosha, Mary D. Bradford High School.

Joan Catherine Maas, fourth place; Milwaukee, Holy Angels Academy.

Sponsored by Governor's Committee on the Employment of the Physically Handicapped, Gaylord A. Nelson, Governor; Ralph R. O'Connor, chairman; L. A. Mingenbach, first vice chairman; A. F. Trebilcock, second vice chairman; A. Leon Beier, executive secretary; Stanley R. Spencer, assistant executive secretary.

AWARD AND CASH PRIZE WINNERS, 1959

First: Ruth Ellen Newman, Elkhorn High School; Jack Refling, principal; Miss Martha E. Nihart, English instructor.

Second: Jon Eric Bischel, Racine, St. Catherine's High School; Rev. S. B. Witkowiak, principal; Sr. M. Evangelist, O. P., English instructor.

Third: Susan M. Rutkowski, Kenosha, Mary D. Bradford High School; Dwight D. John, principal; Miss Charlotte Moody, English instructor.

Fourth: Joan Catherine Maas, Milwaukee, Holy Angels Academy; Sr. M. Jacqueline, B.V.M., principal; Sr. M. St. Genevieve, B.V.M., English instructor.

HONORABLE MENTION

David Graves, Eau Claire, Memorial High School; David P. Barnes, principal; Mrs. Marie Chatterson, English instructor.

Ann Harycki, Stevens Point, Maria High School; Sr. M. Adalbert principal; Sr. M. Marietta, S.S.J., English instructor.

Alison Keith, Madison, West High School; Ralph O. Christofferson, principal; Miss Gretchen Holstein, English instructor.

Patricia McMahon, La Crosse, Aquinas High School; Rev. Robert H. Hansen, principal; Sr. M. Casola, F.S.P.A., English instructor.

Jan Schrader, Kenosha, Mary D. Bradford High School; Dwight D. John, principal; Miss Charlotte Moody, English instructor.

Margaret Zibell, Waterloo High School; Lloyd S. Qualley, principal; Miss Jo Ann L. Chinski, English instructor.

NATIONAL AND STATE EMPLOY THE PHYSICALLY HANDICAPPED ESSAY CONTEST

Sponsored by the President's Committee on Employment of the Physically Handicapped and the Governor's Committee on Employment of the Physically Handicapped.

State essay contest committee

A. Thomas Rose, chairman, Wisconsin State Employment Service.
Roy Dingman, A. O. Smith Corp.
Mrs. Marie Hoyer, Ted Hoyer and Co.
J. E. Linster, Employers Mutual of Wausau.
K. L. Svee, Wisconsin Easter Seal Society.

State judges

Dr. Darrell J. Inabnit, director, United States Armed Forces Institute.
Mrs. Ray A. Brown, past president, Wisconsin League of Women Voters.
Mr. Theodore M. Meloy, vice president, Bank of Madison.

Cash prize donors

State

Disabled American Veterans.
Military Order of the Purple Heart.
The National Foundation.
The United Cerebral Palsy Association.
Anti-Tuberculosis Association.
Association of the Deaf.
Easter Seal Society.
Manufacturers' Association.
State AFL–CIO.
State Chamber of Commerce.
Rehabilitation Asociation.

National

Disabled American Veterans.

Presentation luncheon sponsor

Wisconsin State Aerie, Fraternal Order of Eagles.

Screening Committee

Miss Doris Ardelt, Radio Station WHA, University of Wisconsin.
Robert S. Baldwin, State department of public welfare.
Mrs. Inez F. Belyea, rehabilitation division State board of vocational and adult education.
Dr. George B. Benson, Veterans' Administration hospital.
Gordon C. Boardman, department of public instruction.
Mrs. Charles Cornwell, executive office.
Paul Edlund, motor vehicle department.
Ralph J. Pearson, chairman, veterans' employment service.
Miss Carmen Elsner, Wisconsin State Journal.
Ronald R. Friberg, Wisconsin Easter Seal Society.
Mrs. Velma Hamilton, Madison Vocational and Adult School.
G. Earl Heath, Catholic War Veterans, Department of Wisconsin.
Thomas G. Hefter, Credit Union National Association.
Paul E. Kaiser, Disabled American Veterans, Department of Wisconsin.
Lowell E. Lueptow, the American Cancer Society.
Mrs. Carmelita Manley, Wisconsin Free Library Commission.
Miss Wanda Montz, television station WMTV.
Mrs. Ethel Parker, American Red Cross.
Ross B. Rowen, Wisconsin Education Association.
Alfred Schadde, State board of health.
Gerhardt A. Schueler, Wisconsin Department of Veterans Affairs.
Stanley R. Spencer, Wisconsin State Employment Service.
Trygve Thoresen, bureau of personnel.

FIRST PRIZE ESSAY

HIRING THE HANDICAPPED IN OUR TOWN

(By Ruth Ellen Newman)

"Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tossed, to me.
I lift my lamp beside the golden door." [1]

This is the promise which the Statue of Liberty beams to hopeful immigrants who

[1] Inscription on bronze plaque, Statue of Liberty, 1903.

approach our shores: a place of asylum, of respect for the rights and abilities of the individual, and of opportunity to work one's destiny, free from oppression. How much more, then, must you and I make sure that our own handicapped—the crippled, tubercular, mentally ill, deaf, cardiacs, mentally retarded, blind, and others—shall have a place of dignity and opportunity in your town and my town.

I live in "Christmas Card Town, U.S.A.," designated thus by the Ford Times for the beauty of our natural scenery and Christmas decorations. We do not put the Christmas spirit in cold storage when we take down our lovely Christmas decorations in the city park. Rather, we are the typical small American community where the Golden Rule is a way of life, not last week's memory verse at church school. We rarely speak of our neighbors and friends who have infirmities as handicapped, for handicapped loses its meaning when we consider the very real contributions so many of these people make to our community life.

Our Marty, a long-time victim of multiple sclerosis, is the "doll lady" to little mothers of broken dolls, and the dolls brought to her hospital are returned to their grateful owners in better-than-new condition, often with new dresses created and sewed by Marty with her wonderfully deep understanding of little girls' likes and dislikes. Certainly it was no surprising thing that our community, under the leadership of the Elkhorn VFW, should raise over $1,000 to finance Marty's trip to a far western hospital, which improved her condition somewhat, but could not cure.

Even the high school students of Christmas Card Town grant the handicapped their places according to the abilities they possess. Several important elective positions in our high school in the past few years have been filled by those who might have considered themselves handicapped. We, who voted for them, knew better though, and the records of their terms in office prove that they had real contributions to make, and they made them. In presenting a football letter to a recent polio victim, the Elkhorn football coach said: "Bob was a real fighter on the football field, and I know he'll show this same fight in licking his present problem." Bob is showing that same fight.

Yes, my town believes in employment of the handicapped. We believe, too, in the necessity of training them for the jobs they are capable of handling. We of Christmas Card Town are proud to be pioneers of the Nation in preparing the slow learners for a brighter tomorrow. Our Walworth County special school, established in 1950, accepts slow learners whose ages range from 8 to 17 years. A carefully planned curriculum includes much routine, which imparts security to those who are mentally retarded. The pupils are taught, along with the three R's, good grooming habits, courtesy, and, last but not least, vocational training, all of which will aid them when they seek employment. Girls are trained for domestic tasks, for they may, in the future, take their places as wage earners and taxpayers by becoming babysitters, nurses' aids, restaurant workers, or household helpers. Boys who are taught shopwork may become assistant carpenters, plumbers, or craftsmen. Because the mentally retarded enjoy routine, many of them become factory workers. If employers are patient and understanding, many of these youngsters become employees who are as faithful and dependable as the traditional hired girl who stayed with the family for 37 years. Educating the mentally retarded for their jobs is difficult and time-consuming, but the teachers in our special school feel richly rewarded in seeing their charges take their places in our own community and elsewhere. So successful have these teachers been that one, Miss Ruth Curran, was chosen in 1953 as a McCall's Teacher of the Year.

Yes, my town believes in employment of the handicapped, and it believes, too, in doing everything possible to assist in their rehabilitation if that is necessary. Good will drives, TAP, March of Dimes, and other campaigns of that nature are generously supported.

Our town is the county seat of Walworth County, Wis. Therefore, the county welfare department is located here. Counselors from this department work with physically handicapped persons to assist them with training and placement. They work closely with the State rehabilitation services to find abilities and to train the handicapped for satisfying, remunerative jobs. Our county aids financially by giving the money necessary for maintenance and traveling expenses during training periods. Many examples of rehabilitation accomplished by them are inspiring. One man, a professional person from a nearby city, had lost the use of his voice after a severe illness. Our welfare department sent him to a speech clinic for more than a year, and now he has returned to his work as a normal, productive citizen. He has the dignity of being self-supporting and taxpaying instead of dependent, and of knowing that he is again making a genuinely worthwhile contribution to society.

According to a bulletin of the New York Academy of Medicine, "Work gives significance to our life. * * * It allows us to create material and spiritual values without which life would not be worth living." My school, the special school, our welfare department, our town—all believe that it is far kinder to train a man to do satisfying, worthwhile work than to hand him charity of some sort. Yes; we believe in employment of the handicapped.

Franklin D. Roosevelt, perhaps our most famous American handicapped, wrote these words in a draft of a speech he planned to deliver at a Jefferson Day dinner: "Today we are faced with the preeminent fact that, if civilization is to survive, we must cultivate the science of human relationships—the ability of all peoples, of all kinds, to live together and work together in the same world, at peace."[2] Free people all over the world look to America for leadership, for they recognize that perhaps the most fundamental characteristic of our great American way is respect for the rights and abilities of the individual. Dwight D. Eisenhower said this: "For this truth must be clear before us: whatever America hopes to bring to pass in the world must first come to pass in the heart of America."[3] The people of my town and your town, are the heart of America. My town is called Christmas Card Town, but our policy in hiring the handicapped is not limited to a few sentimental sentences on paper. It is my town, and your town, which must set the good example for all the rest of the towns in all the rest of the world to see. I hope we're doing our part. Are you?

The Spirit of Moral Safety in Your Community

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 16, 1959

Mr. BOSCH. Mr. Speaker, I am sure that every Member of this Body shares my concern over the mounting traffic deaths each day, month, and year. We all are willing to cooperate in every effort to reduce or eliminate this menace.

One of my constituents has worked out a program which is being circulated by the Catholic War Veterans, United States of America, which, if practiced by all, would, in my opinion, go a very long way toward making travel more pleasant and certainly safer.

Under leave to extend my remarks, I include Mr. Leonard J. Demchak's letter and the highlights of this program:

THE SPIRIT OF MORAL SAFETY IN YOUR COMMUNITY

We are living today in a world that holds time and speed as the essence. Yet, this same speed and time has been responsible for more deaths to motorists and pedestrians than the combined casualties of the Korean War.

Thousands of years ago, when the world was moving at a much slower pace, God gave to Moses, for us, His Commandments which are the foundation of all law and order.

God in His infinite wisdom and goodness included in His Commandments one: Thou shall not kill. Wherein we are forbidden to take life unjustly.

We, therefore, ask of you, "Let God's speed guide you in your travels," and remember, that you have a moral duty to safeguard not only your life but the life of your fellow citizen as well.

Yours for a Godlike approach to travel and safety,

LEONARD J. DEMCHAK,
National Chairman, Catholic Action,
Catholic War Veterans.
WASHINGTON, D.C.

WHAT YOU CAN DO TO FOSTER THE SPIRIT OF MORAL TRAVEL AND SAFETY IN YOUR COMMUNITY

AS AN INDIVIDUAL

Do something to actively support the idea within your own family, circle of friends, and business contacts:

1. Have educational periods in your home to familiarize yourself with relations that God and morality have in safety and traveling (during the period, you can review the traffic laws, instruct your children what traffic signals and signs mean, how and when to cross streets, intersections, and driveways).

2. Every member of household should be made aware that your automobile can become an instrument of death through careless, reckless driving.

3. Members of household to report immediately any mechanical defects in cars, so that necessary repairs can be made.

4. Reports to local authorities of any traffic or street lights not properly working and any holes, washouts, etc., to roadways and any public garage, school, etc., which do not have the proper warning signs.

5. When using driveways, use great caution, look out for children, sound horn, if possible have someone direct you from garage.

6. Seek and support legislation to improve safety conditions.

AS A MEMBER OF A CLUB, ASSOCIATION, OR CHURCH GROUP

1. Help organize the membership in observance of a traffic safety program from a moral standpoint.

2. Ask religious leaders (pastors, ministers, rabbis, etc.) to actively support your program from the pulpit, emphasizing the commandment "Thou shalt not kill."

3. A "Traffic Sunday" can be designated during your campaign, at which time copies of CWV "Let God's Speed Guide You in Your Travels" pamphlet can be distributed.

4. Contact TV station to show CWV "Let God's Speed Guide You in Your Travels" slides with message.

5. Distribute CWV posters, postcards, pamphlets as referred to in program aids.

AS AN EDUCATOR OR LEADER OF YOUTH GROUPS (CYO, SCOUTING, YMCA, ETC.)

1. See that school area is adequately posted with traffic and safety signs.

2. Organize and instruct school crossing guards (your local government may be able to supply finances to hire mothers to perform as school crossing guards).

3. Instruct children that they are morally obligated to obey God's commandments not to endanger their lives through carelessness, etc.

4. Distribute this pamphlet and ask that it be taken home.

AS A BUSINESS OR PROFESSIONAL PERSON

1. Cooperate with the traffic safety committee by displaying and distributing the posters, postcards, and pamphlets.

2. Movie theater owners should include a safety film on their program.

3. Contribute prizes for safety contest.

4. Participate in parades with safety floats and displays.

God giveth (1) life, (2) a mother's love, (3) a father's care, (4) a little girl's smile, (5) a little boy's vitality, (6) fruits of earth, (7) colors of the rainbow.

Don't taketh away these precious gifts of God by (1) drunken driving, (2) careless and reckless driving, (3) crossing against traffic lights, (4) stepping out from behind parked cars, (5) crossing in midblock, (6) disobeying the traffic laws of your community, (7) not having your automobile free of mechanical defects.

Equal Justice for the Poor

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. UDALL. Mr. Speaker, one of the most serious shortcomings of our system of justice certainly relates to the question of the legal representation available to indigent defendants. Only last month a special committee set up by the New York City Bar and the National Legal Aid Association issued a penetrating report on this problem which was reprinted in book form and distributed to all Members of Congress. Unsuccessful efforts have been made in recent Congresses to remedy this defect, and only last August the Senate passed a bill, recommended by the Department of Justice, which would do much to correct this deficiency and provide meaningful equal justice in our courts. I refer, of course, to the optional public defender bill.

It is my hope that the House will have an opportunity to vote on this legislation during the current session. I am informed that the Judiciary Committee of the other body will, in all likelihood, vote this bill out again during the coming week, and the subcommittee of this body which has jurisdiction over this legislation has already scheduled hearings which will commence on May 6.

Strenuous support for this legislation has been marshaled this year by the National Legal Aid Association and the Junior Bar Conference of the American Bar Association. Also, Mr. Speaker, an editorial approving this proposal appeared a few days ago in the Washington Post endorsing this bill, and I present it herewith:

PUBLIC DEFENDERS

The inability of most of our courts to provide adequate counsel for defendants too poor to hire lawyers of their own is admittedly one of the weakest links in the judicial system. The right to counsel is now recognized as being firmly rooted in the Constitution. Yet in many instances the plans for designation of counsel for indigent defendants operate in a hit-or-miss manner, and adequate legal service is often denied.

The Department of Justice has properly asked Congress to meet this problem by authorizing the appointment of public defenders in the United States district courts. A recent study shows that 69 public defender offices are operating in the States. In general they appear to have given reasonably satisfactory service, but the plan meets with strong opposition in some communities. That has been true in the District of Columbia. The Commission on Legal Aid which brought in an elaborate report last year recommended, instead, a new legal aid society that would be financed by both public and private funds and governed by a board named by a panel of judges, officials, and lawyers.

The District's judicial council recently appointed a committee to put this plan into operation here. As it would provide legal aid in all criminal matters, and some others, it would serve the needs of the District far more adequately than a public defender operating solely in the district court. Congress ought to make certain that the public defender bill will not interfere with this overdue reform in the District and that adequate funds are appropriated to pay the public portion of the proposed legal aid society's budget.

Dixon-Yates Back in the News—The Case of Adolphe Wenzell and His Two Hats

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. PRICE. Mr. Speaker, the Eisenhower administration has been plagued with numerous conflict-of-interest cases, costly to the taxpayers—one of the most famous of which is the Dixon-Yates affair. This nefarious scheme, engineered by the Atomic Energy Commission in 1954, is likely to cost the Govenment in the neighborhood of a million and a half dollars.

But let an unbiased news source tell the Dixon-Yates story once again. Here it is, as related in Washington Atomic Energy Report of April 20, 1959:

THE CASE OF THE TWO HATS

(Probably no other event in recent years has had more official and political repercussions than the Dixon-Yates case. It rocked AEC and other Government agencies; upset the White House; agitated Congress. Another chapter is presented in the fact-finding report of the Commissioner of the Court of Claims on the damage suit filed by the Dixon-Yates interests over the cancellation of the controversial power contract. A news summary of the commissioner's report is published for the first time by the Washington Atomic Energy Report and Guideletter.)

In the celebrated Dixon-Yates affair, did Adolphe H. Wenzell wear two hats, one as a vice president of the First Boston Co., an investment house, which expected to finance the $110 million powerplant deal, and the other as a consultant of the Budget Bureau which initiated it?

In a 183-page report containing 246 findings of fact, U.S. Court of Claims Commissioner Wilson Cowen concludes that he did, both at the same time on occasion. The court must now determine whether it constituted a conflict of interest which, the Government contends, justified the cancellation of the Dixon-Yates contract.

The commissioner's report leaves the conflict of interest issue virtually the only one before the court in deciding the damage suit brought against the Government over the termination of the contract by Mississippi Valley Generating Co., et al, more generally known as Dixon-Yates. Commissioner Cowen in findings indicated that four other defenses to the suit raised by the Government are, at best, weak. There was no finding of fraud.

A tidy sum hangs on the outcome; also some personal reputations. Calculated from the commissioner's report, it is around $1,893,961. If the Government is found liable, some post-petition claims will be added.

The court recently considered arguments on the Commissioner's findings. Dixon-Yates interests took no exceptions. The Government took eight, all of them directed at the amount of the damages sought by various claimants.

Legal experts agree that the Court's decision will not be easy to reach, especially since the commissioners's report discloses that Wenzell's dual role was no secret to participants in the Dixon-Yates discussions. Wenzell's superiors in the Budget Bureau were aware of it, so were many others. Generally everybody seemed to know about it except the President who ordered the negotiation of the contract and its eventual termination.

The commissioner's report discloses that the President at a White House conference June 14, 1954, instructed AEC to proceed with the negotiation of a contract with Dixon-Yates for the construction of a power plant at West Memphis, Ark., to supply TVA with replacement power consumed by the AEC installation at Paducah, Ky. The report notes that conference was attended by Budget Director Rowland R. Hughes, AEC Chairman Lewis L. Strauss and unnamed "Congressional leaders." At that time, the report, Hughes, now deceased, knew that Wenzell had been wearing two hats in the preliminary arrangements. Strauss, Cowen reports, knew that Wenzell was a vice president of the First Boston Co., but denied knowing that he was representing the Budget Bureau in the Dixon-Yates discussions though their first meeting was arranged by Hughes, who was the Assistant Budget Director.

The commissioner's report on Strauss' knowledge of Wenzell's role assumes additional significance at this time when the Senate opponents of the former AEC Chairman have revived the Dixon-Yates case in a fight to prevent his confirmation as Secretary of Commerce, a position he is holding under a recess appointment. Of the first meeting between Wenzell and Strauss, the report states:

"Wenzell told Strauss he was there at the request of Hughes and was trying to get some background on the program and plan.

Strauss had never met Wenzell before, and there is conflict in the testimony of Wenzell and Strauss as to whether Wenzell stated he was connected with the Bureau of the Budget. The greater weight of the evidence shows that Hughes told Strauss that Wenzell was a banker connected with the First Boston Co. as an officer or a partner, and that Strauss was to acquaint Wenzell with the background and purpose of the meeting to be held on January 20, 1954.

"Strauss assumed that Wenzell was to attend the meeting to advise all concerned on matters within his competence. Strauss was aware that the cost of money, i.e., the interest rate on the securities which might be issued by the private utility companies, was an important element in the total cost to the Government of any facilities that might be constructed, Strauss stated that AEC was trying to move forwardly with the program that Hughes had outlined to Wenzell. Strauss also emphasized that it was important that the private utility companies give serious consideration to the matter to be discussed and that it be handled without delay. Wenzell told Strauss that he was a vice president of First Boston, and Strauss stated he was familiar with the firm. It was then arranged that Wenzell would discuss the matter the following day with Williams (Walter J. Williams, the AEC general manager)."

Elsewhere, the Cowen report further emphasizes that Strauss knew Wenzell only as an officer of First Boston, but nowhere is it mentioned that Strauss thought anything about the propriety of an outside investment banker sitting in on private Government discussions, though the fact was soon to bother First Boston, Dixon-Yates and Wenzell himself. Another curious finding in Cowen's report is that AEC officials all along regarded Wenzell as a consultant of the Budget Bureau, and that they did not know until much later of his First Boston connection through it was common knowledge among their opposite members in the Budget Bureau.

According to the commissioner's report, genesis of the Dixon-Yates case was in the President's state of the Union message of February 2, 1953, in which it was stated that the new administration's policy would seek to have either private enterprise or local communities provide power generating sources in partnership with the Government. Consequently, Joseph M. Dodge, then Budget Director, eliminated a TVA request for funds to build a new plant at TVA at Fulton, Tenn., to meet expanding TVA needs in the Memphis area.

Three months and three telephone calls later, George D. Woods, First Boston board chairman, came to Washington to see Dodge, said he was wholeheartedly in favor of the administration's policy, and volunteered his help in carrying it out. By coincidence, Dodge at the very moment had his mind on TVA subsidies and told Woods he was looking around for a man to study the subject. Woods said he just happened to have such a man available, Wenzell. Four days later Wenzell went to work for the Budget Bureau on a part-time basis as an unpaid consultant.

Wenzell finished the TVA study the following September. A major recommendation of his report to Dodge was that the TVA's power system be gradually turned over to private investors. The commissioner's report finds that Dodge was not impressed by Wenzell's recommendations and that his report was not a factor in the policy decision later communicated by Dodge to Strauss that AEC should contract for more private power to relieve the demands on TVA. However, Dodge wrote Wenzell complimenting him on an "extremely valuable constribution, not only for the material contained in it but its use as a foundation for further studies on the same subject." Dodge also told Wenzell that the report "has been examined by two important individuals whose reaction to your work equals my own." The individuals referred to, Commissioner Cowen says, were President Eisenhower and Ex-President Hoover. Wenzell was permitted to retain a copy of the report which he subsequently showed to Woods through the commissioner notes that he had no authority from the Budget Bureau to do so.

Wenzell returned to the Budget Bureau in January 1954. By that time the Dodge-Strauss program from which the Dixon-Yates deal later emerged was jelling rapidly, and Dodge, at the suggestion of Hughes, the commissioner's report relates, authorized Wenzells' return to work on comparative cost figures for the Fulton plant and the proposed private project with particular reference to the cost of money. He continued his connection with the Bureau until April 3, 1954, 10 days before the Dixon-Yates proposal was formally submitted to AEC. Meanwhile, he was a prominent participant in the preliminary planning, though he did not take part later in the actual negotiation of the contract.

It was not long after Wenzell's return to the Bureau that misgivings arose over his dual position. The Cowen report relates that Edgar H. Dixon, president of Middle South Utilities who put the Dixon-Yates program together, spoke to his counsel, Daniel James, about Wenzell's activities. At James' suggestion, Dixon mentioned the matter to Wenzell with the suggestion that he speak both to First Boston and the Budget Bureau about it, saying that it might be extremely embarrassing if First Boston was engaged to handle the financing of the West Memphis project.

The Commissioner's findings note that Wenzell, accepting Dixon's advice, first spoke to Hughes, who thought he was "exaggerating the importance of the matter" but said he should talk with counsel of First Boston about it and then talk to Dodge. A few days afterward Wenzell consulted First Boston's law firm, Sullivan & Cromwell, and was advised to resign forthwith though counsel indicated no conflict of interest was involved. If AEC officials working on the Dixon-Yates matter seemed not to have noticed Wenzell's two hats, it was generally known around the Budget Bureau. One associate, E. J. Donnelly, told him bluntly that he was "working both sides of the street," and was likely to get into serious trouble, the report asserts. Wenzell expressed his own concern to Dodge afterward telling an associate that the conversation was very satisfactory. Anyway, he never resigned.

Wenzell's own concern about his dual activities does not seem to have troubled him too deeply. A finding by Commissioner Cowen says that "he did not consider that he was advising parties whose interests were in conflict. He did not feel by his meetings, and telephone conversations with representatives of the sponsors (Dixon-Yates), by obtaining and giving to them First Boston's opinion on the cost of interest, by preparing and showing them the February 24 (1954) draft of an opinion on interest rates and by engaging in other activities * * * he was giving advice and assistance to parties whose interests were different from those of the Budget Bureau, because he felt that the sponsors' interests and the Government's interests in all these matters were common."

The report of Commissioner Cowen presents a chronological history of the tortuous route of the Dixon-Yates deal through the Government. Among many interesting things it discloses is the fact that TVA opposed the plan until Gen. Herbert D. Vogel became chairman on Sept. 1, 1954 and 2 days later joined AEC General Manager, K. D. Nichols in a public statement that the two agencies were pulling together. Hughes brushed aside objections of the city of Memphis to the project as irrelevant saying that the Dixon-Yates power would be sold to AEC and not the city. However, it was the announcement by Memphis officials that the city would build its plant rather than take power through Dixon-Yates that ostensibly caused the President to cancel the contract, though this was not the legal reason. It appears that at no time did AEC consult Memphis officials about the matter. AEC voted to accept the Dixon-Yates proposal as a basis for contract negotiations, 2 to 0. Strauss and Joseph Campbell, now U.S. Comptroller General, voted for it. Commissioner Murray abstained, as did Commissioner Libby, a newcomer. The contract itself was subsequently accepted by the Commission without a dissenting vote, the report notes.

During the course of the litigation, original claims for damages were scaled down in the amount of $1,468,352.86 by the withdrawal of several claimants. Claims withdrawn were those of Babcock & Wilcox, $204,216.40; Bowers & Wood Manufacturing Co., $15,978.72; Elliott Co., $11,890; Fisher Steel Corp., $14,949; Griscom-Russel Co., $5,961; Westinghouse Electric Corp., $1,208,743; and Worthington Corp, $6,613.

The commissioner's report finds the remaining claims generally fair and reasonable. In some cases, judgment has been stipulated by the Government should the Court of Claims find the Government liable. The claims are Dickman-Pickens-Bond Construction Co., $14,553 (stipulated); J. A. Jones Construction Co., $143,160, balance after payment of $100,000 on account by Dixon-Yates (costs have been stipulated as fair); Pandick Press, Inc., $43,338 for printing (Government contends all work is not proper item); Reid & Priest, legal services $7,097 (stipulated); House Moses & Jones, legal services $7,500 (stipulated); Arthur Andersen & Co., accounting services, $16,469.

Middle South Utilities, Inc., a parent company of Dixon-Yates, $4,455; Southern Co., the other parent company, $29,391 (Government disputes both items); Arkansas Power & Light Co., $7,484 (stipulated); First National City Bank of New York and White & Case, $500 each for trustee services (stipulated); Mississippi Valley Generating Co. (Dixon-Yates), $618,674 covering payments to Ebasco Services, Inc., in amounts of $216,559 and $183,861, and NVG's own charges of $218,254 (Government contends the $216,559 payment is unreasonable), Ebasco Services, Inc., $507,727.

Cahill, Gordon, Reindel & Ohl, $235,198; Winthrop Stimson, Putman & Roberts, $104,128; Wilkie, Owen, Farr, Gallagher & Watson, $75,878, and Milbank, Tweed, Hope & Hadley, $15,000. The last four claimants are New York City law firms which performed services in connection with the Dixon-Yates matter. The commissioner's report calls their claims fair and reasonable.

Ocean Vessels Dock in Chicago in 2 Weeks

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. O'HARA of Illinois. Mr. Speaker, it will interest my colleagues from other sections of our country to learn that in 2 weeks, beginning with the last days of April and extending into the first week

of May, no fewer than 38 large ocean vessels will sail through the St. Lawrence Seaway, dock at the terminal port of Chicago and from there proceed to ports in Europe, the Baltic, the Mediterranean, the Caribbean, and South America, the Red Sea and Persian Gulf, and the United Kingdom. Here is the schedule of Chicago ship sailings, as published in the Chicago Tribune of April 13, 1959, and proof conclusive that Chicago is well started on her way to become the first inland seaport of the world.

CHICAGO SHIP SAILINGS

CONTINENTAL PORTS

Ship and line	Sailing date
Francisca Sartori (Hamburg Chicago)	Apr. 26
Prins Willem III (Fjell-Oranje)	Apr. 28
Transontario (Poseidon)	Apr. 28
Alstertol (French)	Apr. 30
Erholm [1] (Swedish American)	Apr. 30
Lukseffjell (Fjell-Oranje)	Apr. 30
Rina (Nordlake)	Apr. 30
Virgilio (Hamburg Chicago)	Apr. 30
Weissenburg (Hamburg Chicago)	Apr. 30
Ville de Quebec (French)	May 6
Christa (Hamburg Chicago)	May 7
Fairwind (Hamburg Chicago)	May 7
Bykleffjell (Fjell-Oranje)	May 8
Ingrid Weide (Poseidon)	May 8

SCANDINAVIAN AND BALTIC

Fredborg (Swedish Chicago)	Apr. 27
Ravneffjell (Fjell and Fjord)	Apr. 27
Monica Smith (Swedish Chicago)	May 9
Lyngenfjord (Fjell and Fjord)	May 11

MEDITERRANEAN

Anglian (Ellerman Great Lakes)	Apr. 28
Pierre (Montship-Capo)	Apr. 28
Prins Johan Willem Friso (Niagara)	Apr. 28
Marquette (Fabre)	Apr. 29
Extavia (American Export)	May 5
Tamar (Zim Israel)	May 5
Michigan (Fabre)	May 9

CARIBBEAN AND SOUTH AMERICA

Clemens Sartori (Michigan Ocean)	Apr. 27
Santa Regina (Grace)	Apr. 27
Santa Alicia (Grace)	May 4
Heinrich Schulte (Transcaribbean)	May 8

UNITED KINGDOM ONLY

Fairhead (Head)	Apr. 28
Bengazi (Concordia)	Apr. 30
Manchester Faith (Manchester L.L.)	May 4
Beechmore (Furness Great Lakes)	May 5
Toronto City (Bristol City)	May 5
Signeborg (Niagara)	May 6
Manchester Prospector (Manchester L.L.)	May 9
Palermo (Ellerman's Wilson)	May 9

RED SEA AND PERSIAN GULF

Thunderbird (Cresent)	May 7

[1] Also Scandinavian and Baltic.

Mr. Speaker, I am extending my remarks to include the accompanying article in the Chicago Tribune of April 13, 1959, as follows:

(By Nick Poulos)

The historic moment Chicago has been waiting and preparing for in the last 5 years is rapidly approaching—the opening in a matter of days of the enlarged St. Lawrence Seaway.

Soon the first big oceangoing ships will sail through the vastly improved seaway route from Montreal into Lake Ontario, then lifted about 325 feet by the Welland Canal locks to the level of Lake Erie, race through Lake Huron and Lake Michigan, and head for the terminal port of Chicago.

And Chicago is ready.

COST $471 MILLION

While the $471 million seaway was being built by the United States and Canada—work began in the autumn of 1954—Chicago was busy preparing to assume its role as a new world port.

What are generally recognized as among the most modern and finest port facilities in the world have been built at Lake Calumet. Together with the downtown harbor development at Navy pier, Chicago, for the time being is ready to handle the expected traffic in 1959.

American-flag ships, for the first time, will join the foreign-flag vessels engaged in the Great Lakes-overseas trade.

Grace Line, Inc., was the first domestic steamship company, to be awarded a subsidy contract by the Federal Maritme Board to operate a shipping route between the Great Lakes and overseas ports.

OTHERS TO GET SUBSIDIES

Other U.S. lines are expected to receive operating subsidies to participate in the trade.

With this publication, the Chicago Tribune resumes printing of the sailing schedule of ships engaged in the trade. Departure dates of the ships from Chicago and their oversea port of call area will be listed each Monday throughout the shipping season.

The Tribune was the first Chicago newspaper to publish a Chicago ship sailings schedule.

Foreign-flag ships made a total of 365 calls at the port of Chicago in 1958, an increase of 35 percent from 1957 when 272 calls were made. They flew the flags of 11 oversea countries.

About 500 calls may be made at Chicago this season by ships engaged in the oversea trade.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

The Speaker's Views on Party Loyalty

EXTENSION OF REMARKS
OF
HON. JACK BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. BROOKS of Texas. Mr. Speaker, under leave to extend my remarks I would like to take this opportunity to call to the Members' attention a timely editorial comment concerning American political party loyalty.

The responsible operation of the two major political parties in our country is as fundamental to the contemporary operation of our Federal Government as the Constitution itself. Without responsible and dedicated leadership of our major political parties, violence, chaos, and catastrophe might well be the pattern set in our own country as it has been demonstrated in other countries where men have taken political obligations lightly.

Our Speaker has emphasized:

I have no patience with people who claim to be Democrats who say they want to run other people who claim to be Democrats out of the party. Let us differ; let us debate; let us struggle to have our views prevail in the party's council.

The Beaumont (Tex.) Journal has amplified the Speaker's forthright views and has clearly set forth the basis of political party loyalty for both Democrats and Republicans in their editorial of March 11, 1959. I heartily commend it to the attention of my colleagues:

RAYBURN RAPS DISLOYALTY

The Democratic Party is a many-splendored thing.

So infers Texas' Representative SAM RAYBURN—"Mr. Democrat" himself—in appealing for a united party to recapture the White House in 1960.

"I have no patience with people who claim to be Democrats who say they want to run other people who claim to be Democrats out of the party. Let us differ; let us debate; let us struggle to have our views prevail in the party's council."

House Speaker SAM is not simply sounding off when he makes this statement. He is trying to get across to the people in split sections of the party the fact that the party is a political platform and that the platform is broad enough and long enough to accommodate every last one of them.

One doesn't, as a usual thing, quit a particular denominational church because he doesn't like the pastor or feel that some other members are not pious enough to please him. He stays in the church until a new pastor, more to his liking, is named. And the same goes with the fellow members.

Unless he dislikes the church itself, it is a wise member who realizes that the church is bigger than its pastor or any given segment of its membership.

The same logic applies to a political party, whether it be Democrat or Republican. That is the message the durable SAM RAYBURN wants to get across to members of his party.

Address by Hon. Stuart Symington, of Missouri, Before Democratic City Committee of Philadelphia, Pa.

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 23, 1959

Mr. CLARK. Mr. President, on Tuesday of this week the distinguished junior Senator from Missouri [Mr. SYMINGTON] was the principal speaker at the annual Jefferson-Jackson Day dinner of the Democratic City Committee of Philadelphia, Pa.

Before an enthusiastic audience of 4,000 loyal Democrats, the Senator from Missouri delivered a splendid address dealing with many national problems, but in particular with the critical problems of urban affairs.

I ask unanimous consent that the text of the address may appear in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR STUART SYMINGTON AT DEMOCRATIC CITY COMMITTEE DINNER, PHILADELPHIA, PA., APRIL 21, 1959

Thank you for asking me to Philadelphia tonight. It is always a pleasure to be among Democrats; and I know there are no better Democrats in the world than those of Philadelphia and Pennsylvania.

It is good to see your able Representatives in the House from Philadelphia—BILL BARRETT; JIM BYRNE; BOB NIX; HERMAN TOLL; that very gracious lady KATHRYN GRANAHAN; and your very able city chairman, my old and good friend, BILL GREEN.

Over 14 years ago I used to appear before BILL'S committee in the Congress, and learned to respect his understanding and judgment.

It is a pleasure to be here with your outstanding mayor, and my old schoolmate, Dick Dilworth. I know Philadelphians will show good judgment this year by reelecting him. He has dedicated his energies to a better Philadelphia, and deserves to be reelected by a landslide.

It is a privilege to work in the Senate with another capable and courageous Pennsylvanian, JOE CLARK, who is making a fine record as a Senator. He and I are together on what is needed for the future of this country, and I am mighty proud to be his colleague.

And now, may I congratulate the people of Pennsylvania for their wisdom in electing as their Governor another old and good friend, Dave Lawrence.

Governor Lawrence has already begun building a record as Governor which bids to match his magnificent record as Mayor of Pittsburgh. He is uniformly acknowledged to be one of the outstanding Democrats of our time—and I am equally proud to be with him here tonight.

The people of Philadelphia and Pennsylvania are responsive to their Democratic government because that government has been responsive to the people.

That is not true of our national administration—and this, my friends, is the reason why, in 1960, the people will vote out the apostles of indifference, delay and retrenchment—and vote in a Democratic President.

We have been hearing over-much in the last few months about what the United States can and cannot afford. Judging by some of the pronouncements issuing from Washington, we are teetering on the edge of economic collapse.

As one who passed the better part of his lifetime in industry and business, I believe I know as well as the next man how to read a balance sheet and understand the dangers of living beyond one's means.

Let me, therefore, assert my firm belief that the issue, as it has been presented to the country by the Republican myth-makers, is as phony as can be.

The so-called split between "spenders" and "savers" is another Madison Avenue confection, served up to grab the headlines.

The issue is not solvency or waste, spending or saving. The issue is how our vast national energies will be divided and what priorities will be assigned to which tasks.

No one can look realistically at the state of the American economy and come away with any impression that we are bankrupt, or nearly so.

Never in the long history of mankind has one nation been so bountifully endowed with wealth and the means of producing further wealth. Never in history has a nation had so little cause to misdoubt its basic economic strength.

And yet within this picture of great good health, there are disturbing symptoms, not of overall weakness, but of selective sickness here and there in vital sectors of the economy.

Despite the great fuss and beating of drums in Washington 2 weeks ago, the fact is that more than four and a quarter million Americans are still out of work. And while I share the President's pleasure at the improvement in employment figures, I'm afraid it is a little early to recite a funeral oration over the dead body of the late recession.

We Democrats hope that the worst is over. But this recession has been a strange beast from first to last, and it seems to me that there are still some soft spots which need watching.

For one thing, this was not a uniform recession. Its effects were principally concentrated in a few key labor markets—Detroit, West Virginia, Pittsburgh, Scranton, Wilkes-Barre—to name some of them.

In several areas at one period unemployment topped 14 percent of the labor force. In these places, I regret to say, the recession is not yet over—whatever this Administration chooses to believe.

Furthermore, there are some worrisome clouds on the horizon. Our great steel industry is still below full capacity. But steel

inventories are piling up as buyers seek to protect themselves against a possible strike.

Nobody in his right mind wants a steel strike this summer. Yet, if there is no strike, will demand hold up or will there be another production slowdown and more layoffs? These are questions which trouble leading economists—everywhere, apparently, but at the Department of Commerce and the White House.

Meanwhile, the stock market continues its steady climb, oblivious to warnings that a stock certificate ought not to be confused with a parimutuel ticket.

Meanwhile, in the midst of partial recession, great riches, and wild speculation—we are short 140,000 classrooms and our great cities are in danger of being strangled to death by slums, traffic, rising costs, and declining incomes.

Unfortunately, the tendency in Washington has been to look at the wrong symptoms and to draw the wrong conclusions about the nature of the disease.

In the past year and a half, we have had prescribed for us a sirupy mixture of tight money and tidy slogans, and the one was as useless as the other was damaging.

I am persuaded that we have been approaching this situation from almost entirely the wrong direction.

We have been trying to contract the economy. We ought to be expanding it.

During the past 6 years our national economy has been growing at an average annual rate of about one and three-tenths percent. The Soviet economy during the same period has been growing at a rate two or three times as great.

In any case, the key question isn't how much growth but what kind.

A 50 percent increase in the production of chrome doodads can't be equated with national progress.

If we are to meet the Sino-Soviet challenge, what we need, among other things, is increased investment in our human resources through improvements in our educational system. We need more schools and more teachers. We need better colleges and better technical schools. We need more attention to training and retraining workers to the latest and most usable skills.

These needs are only illustrative. I am not making a talk this evening on what the United States needs to keep pace with Russia. The topic, I'm afraid, can't be exhausted in a sentence or two.

I do want to point out, however, that investment of this sort—in schools and colleges and in other public facilities—is not, as the Republicans contend, money taken from the pockets of private enterprise.

Quite the reverse.

Who builds our schools? Private enterprise. Who supplies the raw materials? Private enterprise. Who does the work? American labor.

If you put up a half million dollar school building on the outskirts of Philadelphia, you don't take that much cash, put it in a weighted sack and throw it in the Delaware River. You pay it to builders who pay it to employees and suppliers who pay it to still more employees and suppliers and so forth.

Economists who study these things say money invested in public works turns over about four times. They call this the multiplier effect. Which means, simply, that a billion dollars invested in schools adds about $4 billion to the gross national product.

So I don't accept the Republican dogma that all public spending is evil. Employed with careful attention to sound fiscal and tax policy, public investment could do a great deal to end this leftover recession with its terrible after-effects.

With this foundation, may I turn now, in the few minutes remaining, to the subject of metropolitan area needs.

It has been the custom during this administration to treat our great cities as if they were beggars with their hands eternally outstretched.

In face of the fact that about 15 million Americans still live in substandard housing—most of it in large cities—the administration has up to now successfully obstructed all efforts to provide an adequate slum clearance and urban renewal program. The current housing bill is menaced by the threat of Presidential veto.

So is the airport construction bill. So is the depressed areas bill.

If these bills do pass finally, it will probably be because they have been scaled down in advance to meet White House objections.

The Republicans claim—and I have no doubt that most do so sincerely—that they do not oppose these programs as such.

They oppose them, first, they say, because the programs are too costly and, second, because the cities ought to do the job themselves.

These are seductive arguments and they convince a lot of people. But they are just not true.

The cost argument I have already refuted. We can afford these programs a lot better than we can afford run-down cities and wasted human lives. Any business which allowed its plant facilities to deteriorate would soon be outstripped by its competitors. And the same applies to a government.

City problems do not stop conveniently at city lines. Since the end of World War II, the motor car has created a new metropolitan America. City and suburb are one and their problems are one. But their governments are many.

We have 180 metropolitan areas in the United States. These areas contain 60 percent of all our people. More than a third of them comprise two or more counties. Twenty-four cross State lines. Twenty-nine others are flat up against the borders of States.

These 180 areas contain nearly 16,000 individual governments, including about 3,500 municipalities and 2,500 townships.

Where does local responsibility fit into this picture?

It's there all right. I'm not suggesting that the Federal Government should be the source from which all things flow. But let's be careful how we toss around this concept of local responsibility.

We can't reasonably expect our cities to be responsible for things over which they do not have sufficient control.

Yet our Federal Government seems scarcely to recognize the existence of a metropolitan problem. In fact, of all the thousands and thousands of Federal programs now on the books, there is only one which specifically concedes the existence of such a problem. That one is a relatively modest planning assistance program in the Housing and Home Finance Agency.

The administration's almost total indifference to metropolitan problems has led some to suggest creation of a cabinet level Department of Urban Affairs. This suggestion deserves careful consideration.

Certainly some action is required in this field, and soon. Already a 600-mile long super-metropolis is growing together between Boston and Washington. Others are beginning to form between Los Angeles and San Diego, Seattle and Tacoma, Pittsburgh and Cleveland, Chicago and Milwaukee.

These problems, in other words, are in their infancy. Traffic will get worse before it gets better. Congestion is increasing. Urban renewal will demand more energy and more money instead of less.

The Federal Government cannot shirk its responsibility in this field.

The proposal your outstanding senior Senator JOE CLARK has made for a Hoover Commission-type study of urban and metropolitan needs deserves the support of every thinking American. Such a study is long overdue.

This ought not to be a partisan question. But there is no mistaking the fact that it is.

The Republican National Committee itself noted on April 7 that its election disaster in 1958 was administered largely by urban voters, who are bone tired of evasions and mealy-mouthed moralism.

The time has come for action.

I have long felt that there is no such thing in history as standing still. Either a nation moves forward resolutely and unafraid, or it falls. You cannot fight a successful delaying action against the future. You either master decay or decay masters you.

I'm convinced that our cities can be rescued from blight—given the proper mixture of ingenuity and resolution. The entire country knows what has been done here in the city of Philadelphia, in Pittsburgh, and in my own cities of St. Louis and Kansas City.

Given the support of the Federal Government in those needs where Federal support is indispensable, we can and will solve the problems of our cities.

And if there is no immediate victory in gaining this support, do not despair. It is of such defeats that future victories are born.

The President's Speech on the Berlin Crisis

EXTENSION OF REMARKS

OF

HON. JOHN SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, April 23, 1959

Mr. SPARKMAN. Mr. President, in the March 21 issue of the publication entitled "The Guardian," published by the 2d Battle Group, of the 6th Infantry, stationed in Europe, a young man from my State, J. Ronald Scruggs, of Gadsden, Ala., wrote a very interesting column, in the nature of an editorial, dealing with the speech President Eisenhower made relating to the Berlin situation. The article is entitled "Ike Stands Firm in Nationwide Speech." I ask unanimous consent that this thought-provoking article by a young soldier 19 years old, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IKE STANDS FIRM IN NATIONWIDE SPEECH

President Eisenhower's speech of March 16 examined the situation and told of our Berlin stand.

"In a divided world Berlin has been, for a decade, a symbol of freedom. But recently its name has come to symbolize, also, the efforts of imperialistic communism to divide the free world, to throw us off balance and to weaken our will for making certain of our collective security.

"The Soviets proposed a vague offer to make the western part of Berlin—though not the eastern part, which the Soviets control—a so-called free city. It is by no means clear what West Berlin would be free from, except perhaps freedom itself. It would not be free from the ever-present danger of Communist domination."

The President stated three fundamental choices we had in this situation.

The first choice of abdicating our rights is definitely unacceptable. The next choice

which we are compelled to face is the possibility of war. Though the West does not want war, for it realizes this could mean the destruction of civilization, history has taught us no nation has ever been successful in avoiding the terrors of war by refusing to defend its rights. Whatever risk of armed conflict may be inherent in the present Berlin situation, it was deliberately created by the Soviet rulers. Our final choice is negotiation, even while we continue to provide for our security against every threat.

There must be a clear understanding of what we cannot do.

We cannot agree to any permanent and compulsory division of the German nation, nor can we purchase peace by forsaking 2 million free people of West Berlin. We cannot recognize the asserted right of any nation to dishonor its international agreements whenever it chooses. We must not, by weakness or irresolution, increase the risk of war. Finally, we cannot accept any agreement or arrangement which would undermine the security of the United States and its allies.

Our position, then, is this: We will not retreat 1 inch from our duty. We shall continue to exercise our right of peaceful passage to and from West Berlin. We will not be the first to break the peace; it is the Soviets who threaten the use of force to interfere with such free passage. We are ready to participate fully in every sincere effort at negotiation that will respect the existing rights of all and their opportunity to live in peace.

West Berlin's Willy Brandt and Chancellor Konrad Adenauer were both pleased with the speech. The Berlin leader thanked the President for the firm attitude which he displayed and Adenauer stated he was gratified that Mr. Eisenhower did not leave any doubt about the U.S. determination to hold its Berlin position under all circumstances.

The East German press attacked the speech saying "Eisenhower threatens the Soviet Union," "Threatens unleashing of nuclear war," and "Eisenhower names conditions."

The week of April 6 finds the troop information topic "the Berlin story." It is vital to you, as a soldier, and as an American citizen. Every effort should be made to attend the class.

Schools Second to None

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 23, 1959

Mr. BYRD of West Virginia. Mr. President, last Saturday evening our distinguished colleague, the Senator from Texas [Mr. YARBOROUGH] delivered an address on education which I feel contains an urgent message for all Americans.

The Senator was speaking before the Texas Classroom Teachers Association at Dallas, and he addressed his remarks primarily to Texas school problems and Texas school attitudes. But I believe that his words conveyed truths which apply, not only to Texas, but to our Nation as a whole.

The Senator from Texas [Mr. YARBOROUGH], who is himself a former teacher and a present member of the Senate Education Subcommittee, spoke of the educational challenge which is facing America today, and he indicated what he believes must be our approach if we are to meet that challenge.

Mr. President, in order that all of us in Congress, and all others, may be apprised of the insight and understanding of the Senator from Texas in this matter I ask unanimous consent that his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD as follows:

SCHOOLS SECOND TO NONE

(Speech delivered by U.S. Senator RALPH YARBOROUGH at the Texas Classroom Teachers Association's annual convention banquet, Dallas, April 18, 1959)

Madam President, fellow teachers, fellow Texans, fellow Americans, you have paid me a great honor by inviting me to speak at the annual convention of your 23,000-member Texas Classroom Teachers Organization. On a broader plane, you really represent the highest ideals of all Texas classroom teachers, including those without your organization as well as those who are dues-paying members.

Vast as your influence over the next generation is, by your molding of the minds of that generation, you have not been content to leave your good works for fruition in the next generation alone. I came here in part to pay tribute to you for the privilege of working with you for the advancement of the aims and ideals of public education.

As a former classroom teacher in Henderson County public schools for 3 years and as a member of the Senate Education Subcommittee, I am deeply concerned about the progress and future of public education. I'm particularly concerned about it in Texas.

This does not mean that I am critical of you. On the contrary, the dedicated work you have done, despite inadequate pay and limited facilities, is magnificent. Thanks mainly to your devotion to duty, Texas has now, and over the past decade has generally had, better public schools than it paid for. It is a great credit to you and to our schools, that 56 percent of you—our active teachers—have earned a degree and 39 percent of you have your master's degree. Only two States, Arizona and Oklahoma, have a higher percentage of teachers who have earned degrees. Six percent of all Texans have 4 or more years of college—which ranks us 20th among the States in that category.

As a Texan I am proud that we have many outstanding schools and well qualified teachers in Texas—and that you graduate thousands of exceptionally well-educated students. But I believe we would fail in our public duty, if we did not take into account the rating of Texas public schools when compared with other States.

Our goal for Texas school children is "schools second to none." But we rank 33d, not first, in the percentage of our school-age children who are enrolled in school. Statistics show that approximately one out of every five of our school-age children is not attending school. We rank 39th, not first, in the average number of days attended per pupil enrolled in school per year. We Texans rank a poor 37th in the percent of selective service registrants disqualified by mental tests, and we rank 36th in the percent of population 25 years or older with at least 4 years of high school.

Texans—teachers, parents, and the majority of all our people—believe Texas schoolchildren should have schools "second to none."

What's more, I believe Texans can be counted on to support, financially and otherwise, efforts to strengthen our entire public school program. It is a matter of giving Texans the facts—of informing the man on the street of how, when, where, and why we need schools second to none. If we give the people the facts, Texans don't have to be sold such schools—they will demand them. But I don't believe the people of Texas will support a sales tax system to achieve these results.

A century and a quarter ago, our Texas forefathers revolted because of the failure of the General Government to establish a system of public education in Texas. Our proud State was ravaged by fire and by sword, her cities besieged, her towns burned, her heroes killed. But the right to a system of public education was won. Are we, the inheritors of those rights, to settle for anything less than the very best public education system for our children? Texans will not.

It is obvious that we have a long way to go to secure adequate funds for schools second to none. Your pay as teachers is completely inconsistent with the great responsibility that our democratic society places upon you. Within a few years schoolteachers' pay at elementary, high school and college levels should be doubled.

Proud, wealthy Texas is paying its classroom teachers an average of only $4,410 yearly, considerably below the national average. This is criminal neglect because the student is the casualty in the long run. As your representative in the Senate, I am working for substantial pay increases for you and for all teachers; raises in keeping with the dignity and responsibility of your task in and to society. Texas ranks 26th among the States in teacher pay. On the average, your pay is estimated to be $1,550 a year less than California teachers' salaries. We have a shortage in Texas alone of more than 2,000 teachers this year.

Many Texans, from widowed mothers to nationally known college professors, have written or phoned me of their shock and indignation at the action of the board of regents of our Texas State teachers colleges in refusing to permit students in five Texas State colleges to borrow funds from the Federal Government under the generous loan provisions of the National Defense Education Act of 1958.

The National Defense Education Act of 1958 was designed to start us on the road to higher educational achievement. The five colleges whose students were denied opportunities to seek that higher training were all established by the State of Texas to train teachers. The governing board of those colleges voted against the students, against the people of Texas, against the purpose for which it was created, and against its duty.

The regents of these five schools—Sam Houston State Teachers College, Southwest Texas State Teachers College, Stephen F. Austin, East Texas State, and Sul Ross College, have officially certified that they need $195,333 this year for student loans, these loans which bear no interest so long as the students are in college. The regents have turned their backs on the colleges they were appointed to serve. One of the great functions of higher education is to train teachers, who in turn, do so much to mold the character of the Nation.

The board has thrown up a roadblock against that training. Its order may jeopardize the opportunity of many Texas youths to continue college. Its order reminds me of a game warden caught shooting fawns, and out of season at that.

In denying these students their loans, on the specious grounds that it is Federal money, the board has shown a distrust of our Government unworthy of an official who has taken an oath to uphold that Government.

You cannot make democracy work by shooting holes in the American flag.

The board of regents of these colleges has made a decision which I would not want on

my conscience. If a single student drops out of a single one of these schools for lack of funds, the regents should be held accountable. Ironically, one of the colleges which the regents prohibited from participating in the loan program, has this statement of purpose printed on its letterhead:

"Founded to promote the advancement of the profession of teaching. Dedicated to the cause of better schools. Devoted to the welfare of children and youth."

It is my sincere hope that the board of regents of Texas State teachers colleges, for the good of the students, will reconsider its position on this matter. A total of $21,758 has been reserved out of the first moneys for the five colleges involved and more will be appropriated. If the regents finally deny this aid to their students, I shall make every effort to see that these funds are apportioned to other Texas students in other Texas colleges so that they will not be diverted to other States.

The Hale-Aikin committee study shows that in addition to higher teachers salaries, we need in Texas 3,373 new classrooms now for our rapidly increasing school-age population, and we will need 17,284 more classrooms by 1963. And in the Nation as whole, we need 140,000 new classrooms and need 135,000 more teachers now and the need is critical. Recent disasters have revealed that many classrooms are virtually firetraps that could easily turn into deathtraps for teachers and pupils.

To me the question is when, not where, we are going to get the money to meet these needs. The time is now. Educational opportunities missed by a child this year, may never return. Most Texans agree that we must and will maintain local control of our schools. We feel that wherever possible, schools should be supported by local funds. Where local funds are not available, the State should met the need. Where the State either cannot or will not meet the responsibility of giving Texas children superior schools, we should avail ourselves of Federal funds. We should be for all aid to education because the need for more funds in the field of education is so critical that revenues from local districts, cities, States and the Federal Government, all are required.

From all tax and private sources combined we spend only 4 percent of our gross national product on the education of our youth—not enough in today's competitive world.

We should also consider that Federal assistance to education might prove to be a far more preferable and fairer solution to our school fund problems than raising revenues through a State general sales tax.

It is time too that we dispel the myth that Federal assistance to schools has meant in the past, or will mean in the future, Federal control of schools. Despite the often-voiced fears from some quarters, Federal control of schools has never resulted from acts passed by Congress. And the acts pending in Congress expressly prohibit any Federal control.

In colonial days, schools were generally supported by the townships in New England, privately in the South, while the Middle Atlantic States had a combination system of church-supported schools, town schools, and private schools. There were no State colleges as such, though Massachusetts had established Harvard with public money in the 1630's.

Federal aid is no new fangled, New Deal, socialistic innovation. Such claims are based on ignorance of our history.

In 1790, the Father of the Country, George Washington, in his message to the First Congress of the United States said:

"Nor am I less persuaded that you will agree with me in the opinion that there is nothing which can better deserve your patronage than the promotion of science and literature. Knowledge is in every country the surest basis of public happiness. * * *

"Whether this desirable object will be best promoted by affording aids to seminaries of learning already established, by the institution of a national university, or by any other expedients will be well worthy of a place in the deliberations of the Legislature."

I have received some letters saying Federal aid to education would be unconstitutional. Well, George Washington was President of the Constitutional Convention which drafted the Constitution, and less than 1 year after it became effective he asked for Federal aid to education under it. I believe that George Washington knew as much about what the Constitution embraced as any modern opponent to a better educational system.

In 1862, the Congress passed the Morrill Land Grant College Act, setting aside Federal lands for the support of agricultural and engineering colleges—such as Texas A. & M. This is one example of Federal aid. And Texas A. & M. was the first public tax-supported institution of higher learning to open its doors in Texas.

Other examples of Federal aid without Federal control of education are schools built by the WPA in the thirties; educational benefits under the GI bill of rights, which I am working now to extend; grants-in-aid and research and fellowship programs such as those under the National Defense Education Act of 1958, which I cosponsored; public school milk and lunch programs which I am working to protect; funds for vocational education teachers, and others. Surely no reasonable person could say that these worthy programs have led to Federal domination of our schools.

The people should be informed of the history of American education. The principle of local financial support of schools grew out of the economic, political, and social ferment of the Jacksonian period during the struggle for universal public education. The truth is that local financial support of schools is not based upon any hallowed principle of democratic freedom, but is based to a great extent upon the reluctance of citizens of one community to pay taxes to help educate the children of another. This reluctance is understandable, but hardly worth considering in the light of our efforts to provide Texas youngsters with schools that are second to none.

I am old enough to remember when State aid to schools in Texas was begun on a large scale—many said it was socialistic and would destroy local control. Well, we are still electing trustees, and they are still hiring the teachers.

The demand of our democratic society for a higher degree of educational excellence grows with each passing day.

Some people seem to think that we can't afford to offer maximum educational opportunities in accordance with the inherent capabilities to all our youth. I say we can't afford to offer less. We cannot afford either having only half of our Texans educated, or having all Texans half-educated.

We hear a lot of talk these days about having to make a choice between quantity and quality in educational programs. It seems doubtful to me that any choice exists, for we must have both quantity and quality to survive. In this complex age of scientific advancement, we must have excellently trained specialists. But there certainly is no less demand for a generally informed people grounded in the humanities, who are prepared to make intelligent democratic decisions.

Like Ulysses in Tennyson's beautiful poem, our spirits must yearn—

"To follow knowledge like a sinking star
Beyond the utmost bound of human thought."

Basically, the cold war now raging between democracy and communism around the world is a struggle for the minds of men. Enlightenment has always been freemen's bulwark against tyranny. Education is the foundation stone of democracy, and it is an ever-increasing factor in the standard of living each man and his family can enjoy. Aristotle, when asked how much educated men were superior to those uneducated, answered, "As much as the living are to the dead." We cannot, we must not, and we will not continue to deny all our students an education of the first class.

Mass education of all the people, once an American monopoly, is fast coming to the whole world. We can maintain our leadership only by moving faster and working harder for educational progress than other countries now turning their efforts to mass education.

The parent, the teacher, the politician must all make up their minds that easy courses, little discipline, and stinted funds for education will never add up to high educational standards. They are more likely to produce mediocrity at a time when we must strive for educational excellence.

Never before in the history of man have the talents and the specially developed abilities of educated men been in more urgent demand. Never have the opportunities for educated, thinking, freemen have been so great. The next 10, 20, or 30 years will tell whether this Nation produces the large numbers of high-caliber citizens it so badly needs.

In the words of Abraham Lincoln, "We cannot escape history. * * * We will be remembered in spite of ourselves. No personal significance or insignificance can spare one or the other of us. The fiery trial through which we pass will light us down, in honor or dishonor, to the latest generation."

Here in Texas, where our State is making vast industrial and population growths, the need for more and better educated men and women is particularly great. We must meet this demand wherever we can by preparing our boys and girls for key roles in Texas destiny.

No other person has so important a role as you in meeting this challenge. The kind of greatness that Texas and this Nation produces in future years depends to a very large extent upon the learning and the values you will instill in our youth through our educational system. There is no more important job in the democratic way of life.

Education is the golden key that unlocks the barriers of poverty and prejudice, inequality and injustice. You are the keeper of the key which will give our boys and girls their greatest impetus in the pursuit of happiness.

You have done a remarkable job in the past, and I look forward to continue working with you toward our goal of Texas schools "second to none."

God bless you for your devotion to the cause to which you have dedicated your lives.

Proposed Civil Rights Legislation

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 23, 1959

Mr. TALMADGE. Mr. President, on Thursday, April 16, Georgia's able and distinguished young Governor, Hon. Ernest Vandiver, testified before a sub-

committee of the House Committee on the Judiciary in opposition to the so-called civil rights bills now pending before that body.

Governor Vandiver's sincere and eloquent presentation in behalf of the great rank and file of the people of Georgia constitutes a masterful declaration of, to use his words, the "mutual respect and common determination of Georgia people to fulfill Georgia's needs with Georgia resources within the framework of Georgia authority." The facts and figures which he cited stand as irrefutable proof of the impressive success which the State of Georgia is achieving in giving Georgia people of both races what he appropriately termed "the real civil rights—the right to be secure with knowledge—the rights which can be felt, used, tasted, enjoyed and enriched."

Governor Vandiver has thus made a significant contribution toward greater understanding of the problems, programs, attitudes and aspirations of the citizens of Georgia and the South; and his appeal for the rejection of "the malignant growth of sectional hatred, envy, and jealousy which permeates most of these bills" should be convincing to all who will read it with an open mind.

I ask unanimous consent, Mr. President, that his statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman and distinguished members of the House Judiciary Subcommittee, permit me to express to you gentlemen my appreciation for extending me the courtesy of appearing before your subcommittee.

I am aware of the fact that you are now completing studies on a number of proposals pending before you and that you will file your report shortly with the full committee.

It would be presumptuous of me today to discuss the fine legal point sof these proposals, their content, their history, and their genesis. I will leave this area to my distinguished colleague, Mr. Charles J. Bloch, a distinguished attorney and recognized constitutional authority, who has accompanied me here and who will speak to you at the conclusion of my remarks.

Mr. Bloch has appeared before many committees of Congress in the past and I am sure is a man who is known to many of you either personally or by reputation. He is the author of the splendid book on constitutional law "States' Rights—The Law of the Land." In addition, he is a past president of the Georgia Bar Association, a past chairman of the Georgia Judicial Council, a former member of the State board of regents of the university system of Georgia, a former chairman of the Bibb County Democratic executive committee, a member of the State Democratic executive committee, and a holder of many other posts of responsibility and honor.

It is to him that I will leave the task of presenting an analysis of the purely legal and broad constitutional issues involved in this proposed legislation.

Rather, it shall be my purpose to convey to you in very general terms some of the anxiety which is held by the people of Georgia regarding the harsh nature of some of these so-called civil rights proposals. And to inform you of the very grave doubts in our minds as to their constitutional validity, whether their enactment is really needed and whether, if enacted, they would serve the best intercats of the masses of the people of the Nation.

I shall not at this time trace the history of our country or of our constitutional development other than to say that Georgia was one of the Original Thirteen Colonies, the representatives of which met to forge the bonds which link us in common union.

I shall not go into the fact that Georgia was one of the first States to adopt the Constitution and did so even before the addition of the precious Bill of Rights.

But I shall point with pride to the heritage we share as Americans, the acute problems which beset us in all areas of our country and the almost absolute necessity that these difficulties be approached with patience and understanding.

And I add with emphasis that patriotic Americans of good will must look for solutions to these problems, not by locking horns as some would have us do, but by locking arms, determined to find through faith and hard work satisfactory answers within the framework of State authority and conditions and practicalities as they actually exist, not as we would fancy them to be.

We cannot find these answers by destroying the Constitution of the United States of America.

We cannot find these answers by destroying the reserved rights of the several States and by concentrating more and more governmental power in Washington.

We cannot find these answers through the enactment of dangerous, misnamed, civil rights legislation which, in its cunning provisions, destroys more rights than are created.

From what I have read, there are three major proposals now pending in the Congress which may be summed up by reference to the Johnson bill (S. 499), the seven-point administration bill (H.R. 4457 and S. 942, S. 955, and S. 60), and the so-called liberal bills, as exemplified in H.R. 3147 and S. 810.

Mr. Chairman and members of the subcommittee, speaking the overwhelming sentiments of the people of Georgia, I must inform you of their deep concern over these bills. Not over their alleged objective of reinforcing the rights of any American citizen, but over what they would do to our form of government, if enacted, and the shambles in which they would leave constitutional processes.

These proposals are all negative in their fundamental aspects.

They seek to suppress symptoms by intimidation instead of offering concrete programs of tangible benefit designed to solve the problems which exist in like measure all over this land of ours.

Rights cannot be secured when power is granted to commit an injustice in the name of justice.

Rights cannot be secured by a government of men or through the naked force of the unsheathed bayonet or the butt of a rifle.

The protection of the civil rights of our citizenry lies not in the enactment of a welter of confusing, contradictory and unconstitutional laws but in a strict adherence to the constitutional guarantees, processes and prohibitions which already are the law of the land and which, without question, are adequate to meet every requirement of those who are concerned about protecting the rights of the American people.

Let the sacred Bill of Rights stand—it can't be improved upon.

Allow me here to make this observation.

Last year when the overwhelmingly Democratic Congress was elected, the pundits and "seasoned observers" predicted that this 1st session of the 86th Congress was going to be composed of a bunch of wild-eyed, long-haired Members who were going to pass, at the drop of a hat, all kinds of extreme legislation.

Coming as your membership did, fresh from the grassroots of America, I doubted that this conclusion was either accurate or justified.

Every responsible citizen with whom I have talked in my State and in others is proud and happy over the fact that this Congress has not turned out to be irresponsible as many misjudged it might and that the legislative process in this country still is sound and that the best interests of the great rank and file of the people come first and foremost.

It is for the great rank and file of the people of Georgia that I speak.

I do not attempt to speak for the small, almost single, handful of professional agitators that invade every State from time to time to stir up trouble and strife and to profit from the misery and misfortunes of others without contributing a single constructive suggestion for improving their lot.

It is with a high degree of satisfaction that I tell you, Georgians of both races have shown good judgment in not falling victim to the siren songs of extremist agitators.

We are making progress.

Free of meddling and outside interference, it will continue.

There is mutual respect and a common determination among all our people to fulfill their needs with Georgia resources within the framework of Georgia authority.

For over a decade now it has been the policy of the State government to equalize and to improve educational, welfare, health, employment, economic, and other opportunities for all our people.

Colored citizens have shared heaviest in these new benefits.

Permit me to emphasize that Georgia leadership pushed this policy to successful culmination in our State, not because of any external compulsion, but because we considered it right from every standpoint.

All Georgians, regardless of varying shades of political opinion, laid aside their differences and put their shoulders to the wheel.

As a result, every citizen benefited from this spirit of self-sacrifice and cooperation. Manifold progress, far beyond our fondest dreams, was the result.

The achievement of which we are most proud in Georgia is the $300 million school building program carried on by State and local communities, the majority of which was made possible through financing of the State school building authority.

During the period July 1, 1952, to July 1, 1958, 150 county school systems and 36 independent systems saw their school plants transformed in many cases from rundown shacks to the most modern structures.

For your information, the breakdown on funds was approximately, as follows: State, $162 million; local participation, $5 million; 100 percent local, $100 million; Federal, $29 million.

In Georgia, we have in the public schools 654,592 white children and 305,819 colored children.

Teaching them, we have 23,286 white teachers and 9,943 colored teachers.

There is equalization of facilities and equalization of teachers' salaries with equal pay for equal experience and academic qualifications.

Since its creation in 1952 the Georgia State School Building Authority has underway or completed 481 new school plants, 354 additions to existing plants, 166 remodeling projects, all of which represent a grand total of 10,234 instructional units, costing $162½ million in State funds.

This does not include other similar structures built with purely local funds or Federal money in impacted areas.

It no doubt will interest you to know that of the total, over 50 percent went to provide entirely new buildings for colored children though the percentage of colored to the

total population is only slightly over 30 percent.

Additions and remodeling were confined largely to plants serving white children.

In Georgia, Gentlemen, we have solved and are solving our statewide school housing problem to the satisfaction of both races.

Our efforts must continue unchecked.

Nothing must be allowed to distract us from the task at hand.

Georgia is giving her people the real civil rights—the right to be secure with knowledge—the rights which can be felt, used, tasted, enjoyed, and enriched.

Neither race wishes to give up its buildings, its autonomy nor its teachers.

Steady advancement in job opportunities, personal incomes, housing, and other meaningful benefits accruing in everyday living is the Georgia civil rights program.

Now, in conclusion, let me recall here another day in our history when reason gave way to passions of the hour.

During the period of Reconstruction which followed the war between the sections, a series of laws were enacted so base that no American can read them now without a sense of shame.

It is regrettable that there are some striking parallels between them and some of the proposals of the present day, not as harsh, perhaps, but just as contrary to the language of the Constitution and just as inconsistent with the public welfare.

The Reconstruction era is referred to by historians as "the Age of Hate."

It was a time of hysteria in which the President, himself, for the sole "crime" of upholding the Constitution was tried for impeachment and acquitted by a single vote.

It was a time not unlike the last few years when no sooner was one harsh measure of oppression penned than another and a harsher one was joyously brought forward to punish a prostate people.

While all those about him lost their heads there was one man who kept his.

President Andrew Johnson's courage, rightness, patience and ability as a fighter foiled the conspiracy against himself, against the Presidency and against the Constitution.

While a man of moderate background—of the people—Johnson was better steeped in constitutional tradition than any other President save, only his predecessor. For, in reality, Johnson's fight was Abraham Lincoln's as the latter's policies just prior to his tragic death had invoked the wrath of the radicals both in his cabinet and in Congress.

Johnson's first message, delivered December 5, 1865, contained one of the best statements of constitutional philosophy ever written by a President.

The Constitution, he said, formed the chart for his policies, adding "Its authors intended the American Union to last as long as the States themselves might last" and that "the hand of Providence was never more apparent in mundane affairs than in its framing and adoption."

The government thus established, he wrote, "is a limited government and so is every State government a limited government." The States, with proper limitations of their powers, are essential to the life of the U.S. Constitution. The assent of the States gave vitality to the Union, and "the perpetuity of the Constitution brings with it the perpetuity of the States; their mutual relation makes us what we are, and in our political system their connection is indissoluble. The whole cannot exist without parts, nor the parts without the whole. So long as the Constitution of the United States endures, the States will endure. The destruction of the one is the destruction of the other."

President Johnson thus explained his views of the mutual relations of the Constitution and the States because they made plain the principles upon which he had sought to overcome the "appalling difficulties" which confronted him.

Lincoln's successor declared: "It has been my steadfast object to escape from the sway of momentary passions, and to derive a healing policy from the fundamental and unchanging principles of the Constitution."

It is one of the blessings of our history that this brave man did not die without complete vindication for his stand in defense of our form of government.

The life and dedication of this man of courage who placed his whole future and being in the scales of public conscience are an inspiration for those of us today.

Let us reject the malignant growth of sectional hatred, envy, and jealousy which permeates most of these bills.

Most of them are nothing but the moves of political chess players in the game of partisan politics.

And, the warning flag is hoisted high for all to see that this beloved country of ours is confronted with a far more serious threat than that presented by what the peoples of other nations might think of us because we do not destroy our institutions and strike down the reserved rights of the States.

This struggle is but one facet of the ever-present, underlying Communist plan to divide and conquer.

Instead of representatives from various States of our Nation being here today arrayed one against the other, instead of you and I spending our time discussing whether or not more legislation, punitive to the South, will be enacted, I suggest to you that we stand side by side as our forefathers did in 1776 and in other times of crisis when our Nation has been challenged.

I suggest to you that together we should be investigating the real genesis of this punitive legislation.

I suggest to you that we should be saying to the Communists in America and in Russia or wherever they may be: "You shall no longer in this beloved America of ours array brother against brother, group against group, and race against race."

Berlin Medical Center

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, April 23, 1959

Mr. WILEY. Mr. President, I believe my colleagues are well aware of the fact that, despite overwhelming evidence that the Western allies will continue to stand alongside our friends in Berlin, many people in West Germany and in Western Europe generally seem to require constant reassurance as to our intentions. This nervousness is quite understandable on the part of those who are most immediately exposed to the tensions created by Soviet belligerence.

For this reason, I am glad that we are in a position to underline the firmness of our stance by pointing to a few recent developments concerning Berlin. A week or more ago, there was heartening news that one of our major manufacturing firms had embarked upon a program of plant expansion in that great German city. Now we have notice of an event which again emphasizes our confidence and that of the West Berliners in the future of their city.

Plans for a new medical and teaching center for the metropolis were made public at a meeting of the Benjamin Franklin Foundation in Berlin last Tuesday. It will be remembered that this nonprofit binational foundation, concerned with broadening the cultural life of the city, was established in 1955 at the request of no less a person than John Foster Dulles. Two years ago, it carried to completion the building of a modern conference hall in Berlin. Now it is concerning itself with the need for medical facilities in a city where no new hospitals have been constructed for over 35 years.

The United States will share almost equally with the city of Berlin in providing the funds for this great new medical center. When completed, the center will provide room and the most modern facilities for an estimated 1,200 patients and 300,000 outpatients.

Obviously, we are backing up our words with deeds that concretely express our confidence in the continued freedom of West Berlin. Moreover, these deeds are concerned primarily with improving the well-being of all the people in the city. What a significant contrast between this humanitarian concern and the saber-rattling of the Soviet Union and its East German satellite.

Mr. President, I ask unanimous consent that the Department of State press release concerning the Berlin medical center be printed in the Appendix of the RECORD.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

BERLIN MEDICAL CENTER

At a meeting of the Benjamin Franklin Foundation in Berlin April 21, designs and plans for a modern teaching center for Berlin were made public. The design, which provides for all the newest features of a medical treatment, teaching, and research center, was developed by Arthur Davis of New Orleans with associated architects Moreland Griffith Smith of Montgomery, Ala., and Franz Mocken of Berlin.

The group of buildings will, when complete, provide room for approximately 1,200 patients and the most advanced examinations, therapeutics, teaching, X-rays, and operating facilities of the modern medical center, and will also provide for an estimated 300,000 outpatients.

The funds for this project will be provided by a joint arrangement with the Department of State and the city of Berlin. Stage I, which will be a self-contained operating unit, is expected to be completed by early 1961. The cost will be approximately $15 million. The funds for stage I from mutual aid will be somewhat under $7 million and, from the city of Berlin, somewhat more than $7 million (in Deutschemarks). The first stage, with building to be begun this year, will be a unit of approximately 600 beds with related services.

The second stage, which is planned to provide double the number of hospital beds with a variety of supporting facilities, is being planned as a part of the total project, for construction shortly after the first stage is completed.

This program, which is a part of the continuing long-term interest of the U.S. Government in the security and welfare of Ber-

lin, developed out of conversations between the American Ambassador to Germany, David K. E. Bruce, and the mayor of Berlin, Willy Brandt, who recently visited the United States to discuss this and other problems with appropriate American officials. The plans were the results of the urgent need for medical facilities in a city where no new hospitals have been provided for more than 35 years. It is designed to strengthen the medical teaching facilities of the Free University of Berlin which are not adequately equipped and which are not well located for coordinated teaching and research.

The Benjamin Franklin Foundation, which is exercising leadership in developing the program and design and in handling the financing for the project, was established in 1955 with the main purposes of constructing a modern conference hall in the city of Berlin, which was completed in 1957. The foundation, which has broad purposes related to the enhancement of the cultural life of the city of Berlin, is a nonprofit organization incorporated in Berlin under the chairmanship of Leon K. Chatelain, Jr., of Washington, D.C., a noted American architect. The other members of the foundation, 4 Americans and 4 Germans, are:

Mr. Albert I. Edelman, a lawyer in New York.

Mr. Bruce Baird, a Washington, D.C. banker.

Mr. Hugh Stubbins, a Cambridge, Mass., architect.

Mr. Howard S. Eichenbaum, a Little Rock, Ark., architect.

Mr. Otto Busack, of the Office of the Berlin Senator for Economics and Credit.

Mr. Gustav Schneevoigt, of the Office of the Berlin Senator for Building and Housing.

Mr. August Weltzien, former Berlin Senator for Finance.

Dr. Hans Busch, a high official of the Bonn, Germany. Federal Properties Ministry.

The work is carried on by the foundation in close collaboration with the authorities of the city of Berlin and the Department of State in Washington. A number of leading medical consultants have helped develop the plans, including Dr. Russell Nelson of the Johns Hopkins University Hospital, Dr. Paul Roessing of the Berlin city government, Dr. Jack Mazur of the National Institute of Health, Dr. Basil MacLean of the Blue Cross Association, and others.

The Benjamin Franklin Foundation was established in 1955 at the request of the Secretary of State, John Foster Dulles. Its first chairman was Ralph Walker, leading New York architect, who has been named the architect of the century by the AIA. Both Ralph Walker and Leon Chatelain are past presidents of the American Institute of Architects.

Good Advice for Americans Going Abroad

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, April 23, 1959

Mr. KEATING. Mr. President, as a firm supporter of programs—formal and informal—which promote face-to-face contacts between Americans and our world neighbors, I view the oncoming vacation season for Americans abroad with some apprehension. All too often, some of our citizens traveling overseas have, by their unthinking conduct, lost friends for our country. Nor, indeed, have all Members of Congress been entirely free from responsibility in this regard.

It is true, undoubtedly, that the image of the loud American tourist fomenting anti-American sentiment abroad has been overemphasized But it is important for us to keep that problem in mind and it is vital that each citizen who travels abroad be alerted to the dangers involved.

In a recent editorial published in each of his three newspapers which are published in suburbs of Rochester, N.Y., Andrew W. Wolfe dispensed some commonsense advice for American travelers. Going beyond the ordinary comments on vacationers, Mr. Wolfe counseled each person to ponder the responsibilities he carries on overseas travels. I ask unanimous consent that this fine editorial, which deserves wide reading, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LETTER TO THOSE GOING ABROAD

All you need to do is go to a supermarket or the drugstore and you'll meet someone who's just about to go abroad, just got back, or who's got a friend, or neighbor or relative who's planning an overseas trip.

The statistics on travel to other countries and continents planned for this Summer are fantastic—numbering into the millions. The weary travel agencies with unbelieving looks on their faces, tell you there's never been anything like this.

It's fun to think of all these Americans off, to enjoy themselves in foreign lands, clambering about ancient cities with enthusiasm, and often with terrifying disregard for life and limb.

But there's a serious side to all this travel.

For many of us it's long been an article of faith that travel is vital to international friendship and to the understanding of other nations. This summer these touring Americans can go a long way toward proving this hopeful assumption—or they can prove it's all wet.

These travelers can learn much of other lands—and perhaps more importantly they can teach other peoples much about America. We think that the caricature of the sloppy arrogant American careening through Europe in his huge car, serenely confident of himself, has been overdrawn. On the one hand we've seen quite, soft-spoken Americans do infinite harm overseas, and we've seen loud, slaphappy ones make a lot of friends for us.

The problem is more complicated than superficial appearances or manners, important though these can be.

Basically, we think everyone going abroad should sit down for just a few minutes and devote a little serious thought to the fact that while abroad he or she will carry a weight of responsibility. One doesn't have to behave like an ambassador, but you must realize that you will be judged as representing your nation.

You don't have to take yourself too seriously, but let's hope that each of you in your own way can add a little plus quality to our relations with friends abroad.

Bonneville-Central Valley Power Intertie

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 23, 1959

Mr. ENGLE. Mr. President, the Bonneville power intertie hearings, conducted 2 weeks ago—April 8 and 9—by the Subcommittee on Irrigation and Reclamation of the Senate Committee on Interior and Insular Affairs, have been followed with great interest in California. Federal and State agencies, defense installations, and local public districts are eager potential customers for the surplus Bonneville project secondary energy that could be sent south over a common carrier transmission interconnection with the Central Valley project at Shasta Dam.

One result is that a resolution has been introduced in the State legislature to request the Secretary of the Interior to withhold action on a proposed exclusive intertie contract with the Pacific Gas & Electric Co. These facts are covered in the Sacramento Bee in an editorial published on April 11 and a news article published on April 15. I ask unanimous consent to have both these items printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Sacramento (Calif.) Bee, Apr. 11, 1959]

OBLIQUE ATTACK

The proposal to sell surplus Bonneville power to the Pacific Gas & Electric Co. presents the threat of a back-door evasion of the Federal law granting public agencies preference in the purchase of Government power.

Under the terms of a tentative agreement between the Pacific Gas & Electric and the Bonneville Power Administration the energy would be sold to the privately owned utility and transmitted to California over a line owned by the California-Oregon Power Co.

The matter is of extreme interest to public agencies in California and to the State of California, which will be in a position to use the power in operating its State water plan.

The proposed contract with the Pacific Gas & Electric would block the State and public agencies from obtaining the power directly from the Federal Government and put a private power company "on the toll gate," pointed out by U.S. Senator CLAIR ENGLE, of California.

The intent of the Federal preference law would be thwarted.

What the Federal Government, by any manner of reasoning, should do is to construct a transmission line to link up the Bonneville plant on the Columbia River with the Central Valley project at Shasta Dam.

This would make it possible for Federal and State agencies, defense installations and public districts to buy the power directly from the Government.

Such an arrangement would be in keeping with the spirit of the Federal reclamation law.

[From the Sacramento (Calif.) Bee, Apr. 15, 1959]

DELAY IS URGED IN BONNEVILLE, PACIFIC GAS & ELECTRIC CO. POWER TIE

A resolution introduced today in the legislature by Assemblyman Jerome R. Waldie (Democrat, of Contra Costa County), calls upon Secretary of the Interior Fred Seaton to withhold action on a proposed contract between the Federal Bonneville Power Administration and the Pacific Gas & Electric Co. to tie in Pacific Gas & Electric Co. facilities in California with Federal power facilities in the Pacific Northwest.

The Waldie resolution, Assembly Joint Resolution 31, asks for the delay to enable a committee of officials of California, Oregan, and Washington and the U.S. Senate Subcommittee on Irrigation and Reclamation to complete investigations they have underway.

The Blight of Inflation

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 23, 1959

Mr. MUNDT. Mr. President, the April 21 issue of the Washington Daily News discusses in a most comprehensive and enlightening manner a recent statement by Secretary of the Treasury, the Honorable Robert Anderson, which deals with inflation.

In all the discussion of inflation and the disastrous effect it is having on our economy, I cannot recall a more clear analysis than that given by the Secretary in which he illustrates one of the major causes of inflation.

The editors of the Washington Daily News pointedly answer those who say "we are unduly alarmed" with the comment:

There is no way for anyone to beat inflation. Like a blight over the land, or a plague engulfing a population, it ultimately damages and sickens all it touches.

For those who believe a little inflation will not be harmful the Washington Daily News has this forceful statement to make:

There is no way to survive inflation except to stop it.

A little inflation is just as disastrous as a little war. Neither is intended to do much damage, but eventually both a little inflation and a little war reach points where they cannot be contained or stopped and everyone gets hurt, badly hurt.

Mr. President, I ask unanimous consent that the excellent editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BLIGHT OF INFLATION

Treasury Secretary Anderson, speaking yesterday in New York, used a little story to show how the Government creates inflation.

He said he had a visitor in his office who obviously didn't understand why Government borrowing helps kick up the price of everything everybody buys. So the Secretary said this to the visitor:

"Now suppose I wanted to write checks of $100 million starting tomorrow morning, but the Treasury was out of money. If I called up a bank and said, 'Will you loan me $100 million at 3½ percent for 6 months if I send you over a note to that effect?' the banker would probably say, 'Yes, I will.'

"Where would he get the $100 million with which to credit the account of the U.S. Treasury? Would he take it from the account of someone else? No, certainly not. He would merely create that much money, subject to reserve requirements, by crediting our account in that sum and accepting the Government's note as an asset. When I had finished writing checks for $100 million the operation would have added that sum to the money supply.

"Now certainly that approaches the same degree of monetization (creating money) as if I had called down to the Bureau of Engraving and Printing and said, 'Please print me up $100 million worth of greenbacks which I can pay out tomorrow.' "

The obviously startled visitor at once said he would be against printing the greenbacks. Because it would cheapen the value of all the money already in circulation. He should be against this kind of Government borrowing, too, because it is the same thing.

It is this monetary inflation (pumping artificial credit into the banking system) which over the years has led to a spiraling of wages, prices, and living costs, with special interests and pressure groups scrambling to gain advantages at the expense of others.

This seriously has affected the Government's credit, eroded the value of the people's savings and weakened confidence in our currency.

There is no way for anyone to beat inflation. Like a blight over a land or a plague engulfing a population, it ultimately damages and sickens all it touches.

There is no way to survive inflation except to stop it.

First step in stopping it is for the Government to quit spending money it does not raise in taxes—and to use some of its tax revenues every year to reduce the national debt.

Our Government has adequate tax revenues to pay for defense and pay interest and amortization on the debt. But it does not have a bottomless barrel of money to pay now for even many desirable undertakings that might prove supportable later.

We can no longer suffer demagogs to delude us that the Government can appropriate money it does not have to provide us comforts and security. The printed money they spend robs us of what we earn and save, and thus adds to our insecurity.

The wealth of our Nation is only what people produce. The capital to build our industries and services is only what people save. The common defense for which our Government was created can be provided only by taxes people pay.

"This country can," said Secretary Anderson, "have a bright economic future—it can have it without inflation.

"This country cannot have an enduring bright economic future with inflation."

That is the overriding issue before the country and Congress at this moment.

"Should we impair either military security or economic growth in our efforts to achieve both," said Mr. Anderson, "we shall have failed our trust."

And lost both.

Report on Small Business Administration's Courses in Management

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, April 23, 1959

Mr. JAVITS. Mr. President, as a member of the Select Committee on Small Business, I am familiar with the numerous activities of the Small Business Administration which was converted into a permanent Federal agency by the 85th Congress upon recommendation of President Eisenhower.

One of SBA's most interesting activities is its program of management and research assistance. Administrator Wendell B. Barnes, his associates, and the staff of the SBA are to be congratulated for trying to help and encourage small businesses and industries throughout the country in this way. We need to do much more, but progress is being made. In my own State of New York this program has been helpful to many hundreds of small business operators, and its popularity is growing with each year.

Administrator Barnes has given me a report and description of this activity. I ask unanimous consent that this report be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

Growth of the Small Business Administration's Management and Research Assistance Division is highly gratifying to the Agency. The activity has extended to every State and to Hawaii and Puerto Rico.

Starting with two exploratory courses in the school year 1954–55, the program in management education has grown to 155 administrative management courses for the year 1958. Only owners or managers are eligible. These courses, cosponsored by the Small Business Administration but actually offered by universities, colleges, and high schools, already have reached more than 14,000 owners of small businesses.

These owners pay $35 to $50 each for their course and they spend an average of 2 hours in classrooms 1 night a week for 8 to 10 weeks. For the first hour the speaker is either a professor, businessman, banker, accountant, management engineer or government official. During the second hour, lectures give way to discussion, much of which is exchanged between the participants themselves. One of the great values of the courses is this exchange of practical information.

As a result, two things are happening. First, educational institutions are now offering depth courses in specific subjects, such as the use of records for purposes of more profitable control. Second, many who have attended the classes are forming what might be called alumni associations with monthly or quarterly meetings which bring the businessmen-students back together for further discussion on subjects of current interest.

One important reason for the success of this program is that the subject matter, which is determined locally and usually by an advisory committee covers only administrative management. No attention is paid to problems of operation.

Though the Small Business Administration cosponsors the courses, the academic and financial responsibilities are assumed by the educational institutions offering the courses. Costs to the schools, for speakers, teachers, classroom rentals, etc., are covered by the tuition payments from students.

Some of the subjects covered include long and short term capital needs, policy organization and control, competition, human relations, operating at a profit, planning for growth, and many others.

At the conclusion of the courses, there are commencement programs and, in some schools, diplomas are awarded. The Small Business Administration and the cooperating institutions have kept close watch on evaluation forms which graduating students are required to fill out. These questionnaires indicate that 85 percent of the students have found the courses to be "good" or "excellent." A large majority found the courses relevant or vital to their own interests and management problems.

Taking New York State, for example, we find that 22 education institutions have cooperated with SBA in this program and 43 separate courses have been put on. Graduates number approximately one thousand. The fiscal year ending June 30, 1959, will show this activity greatly increased in New York.

The University of California in Los Angeles offers 42 different courses. It requires attendance at a general introductory course before businessmen can take the more advanced followup courses in financing and management. UCLA has started extension courses in several California areas. The University of Oklahoma is spreading its courses and the University of Pennsylvania has planned extensions for this year.

Classes average about 25 students, ranging from 15 in Seattle to 40 in Hawaii and Puerto Rico. The courses strike at management problems in which owners of small businesses have had the least training or experience. The goal for this program is 10,000 courses a year. Considering that there are more than 7 million small business owners, the Small Business Administration feels this goal is quite modest.

National Highway Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, April 23, 1959

Mr. WILEY. Mr. President, we recall that, in 1956, the Congress enacted the National Highway Act to establish a 41,000-mile network of roads throughout the country.

As a national program, it entailed one of the longest range jobs of planning and construction ever undertaken in this country.

Today this roadbuilding program is in trouble. Unfortunately, the age-old problem of "How do we pay the bills?" has cropped up again. As things look now, the highway program—if financing measures are not provided—may be seriously curtailed in the coming years.

According to Harold Plummer, chairman of the Wisconsin State Highway Commission, the lack of funds in the highway trust fund will result in serious curtailment of roadway construction work in Wisconsin. Throughout the Nation, this is also true.

According to the 1956 act, the Interstate System was scheduled to be completed in 13 to 15 years. Accordingly, State highway departments geared their operations to that schedule.

Under the original plans, Wisconsin was scheduled to receive an apportionment of Federal aid for the Interstate System for fiscal year 1961 an amount of $26 million; and for 1962, $23 million.

According to Chairman Plummer, recent estimates by the Department of Commerce indicate that, unless Congress acts to provide additional funds for the Interstate System, Wisconsin may receive nothing for 1961 and only about $5 million for 1962.

We recognize that this indeed represents a serious problem; not only in Wisconsin but in a great many other States of the Nation. In addition, it represents a cutback in our efforts to provide safer highways for commercial and pleasure traffic throughout the country. Too, such a serious cutback in highway construction will have serious economic repercussions in terms of loss of jobs, holding down community development programs, and a number of other adverse effects on the economy.

Today I received from Mr. Harold S. Gillette, vice president of the Gillette Publishing Co., publishers of Roads and Streets, an open letter to the Congress of the United States. This letter outlines what the editors of Roads and Streets feel will be some of the serious repercussions if Congress fails to act to keep the road construction program moving forward as originally planned.

I ask unanimous consent to have the open letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AN OPEN LETTER TO THE CONGRESS OF THE UNITED STATES

(By the editors of "Roads and Streets," national publication serving the highway industry)

Two and a half years ago the U.S. Congress—after months of penetrating investigation—drafted one of the most far-seeing internal improvement programs the Nation has ever witnessed. We refer to the Federal-Aid Highway Act of 1956, which put into being a sound, long-range national highway program. We believe that the roadbuilding program created by that measure (and strengthened by the act of 1958) was an admirable combination of reason and inspiration. It was a clear recognition of the expressed desire of the American people for a safe, up-to-date system of interstate highways.

That program is now in danger of being seriously violated.

The Bureau of Public Roads has reported that because of existing financial limitations, $2½ billion authorized for the 41,000-mile system of national interstate and defense highways for fiscal year 1961 cannot be apportioned to the States this summer, as originally planned. Furthermore, of the $2.2 billion authorized for the following year, only $500 million may be apportioned.

The object of this editorial is to call this problem to your attention and to point out what will be the inevitable result if corrective legislation is not enacted soon.

DO NOT BREAK FAITH WITH STATES

The effect on some State highway programs would be immediate. In fact, the interstate program would grind to a stop first in those States which have progressed the fastest and made the best record of quick and efficient use of the Federal funds. The first to be penalized would be those States which Congress has repeatedly commended for their progress—Ohio, California, Florida, New York, Louisiana, Illinois, Missouri, Michigan, and others.

Engineers would have no choice other than to shut down major interstate projects. Strips of pavement in some sections would lie half completed, a silent testimony to indifference. Rights-of-way cleared through urban areas and homes already emptied of families preparatory to construction would stand a witness to apathy.

These are very real possibilities.

A delay of 1 year's interstate apportionment would produce, not just 1 year's delay in specific projects but close to 2. It is impossible to just drop such construction projects and pick them up again without losing momentum. The nature of the work, seasonal limitation, advance planning, and the machinery of State contracting procedures are such that if Congress fails to assure the 1961 apportionment this summer highway departments would lose close to 2 years of production as a minimum.

FORTY-PERCENT DROP IN CONTRACTS FORESEEN

The effect of such a curtailment on the roadbuilding industry would be rapid and tragic. Objective statistics indicate that a cutback in Federal aid for the Interstate System from $2½ billion to nothing this year and from $2.2 billion to $500 million next year will force contract awards downward in a dismaying plunge. The Bureau of Public Roads foresees a 40-percent drop in contract awards starting next fall.

The uninformed may assume that the Federal-aid program has produced a surplus of work which could be shaved down for a year without any real harm to the industry.

This is not true. The big program has just begun to reach the construction stage in volume and the highway contracting industry is still working at only 64 percent of its capacity. Competition for existing jobs is aggressive, with a national average of 6.5 contractors bidding on every project.

This is not an industry in which a few huge firms dominate the field. The vast majority of America's thousands of contractors who do highway work head small organizations of men with specialized skills.

We agree with Gen. Louis W. Prentiss, executive vice president of the American Road Builders Association, that any curtailment of the national highway program would produce very real economic distress in the industry. And it would shake the confidence of these hardy businessmen in Congress' intentions of maintaining a long-range, balanced, soundly financed highway construction program.

"It will not be so easy, a second time, to find men who are willing to invest their money in roadbuilding capacity in the expectation of finding a place in an expanded program," General Prentiss points out.

The same might be said of the supporting industries. Equipment producers and materials suppliers have just begun to make the sales necessary to keep their plants on a reasonable level of production. It was only a few months ago that Life magazine ran a full feature story revealing the plight of people in Peoria, Ill., where the livelihood of so many families engaged in construction equipment production depends upon the continuity of the highway program. The same may be said for numerous other communities throughout the country. And some of these cities are already in depressed areas.

EFFECT ON LABOR

To put an unnatural stop to the interstate program would be to kill jobs in areas already suffering from unemployment and would stifle the come-back many equipment factories have just begun to achieve.

What about the effect on thousands of men and women whose livelihood is in highway construction work? Here is where a recession in the industry would be most painful. The Department of Labor has estimated that a billion dollars' worth of highway construction produces employment for 63,750 men per year on the project itself and another 78,750 men per year off the site. Cancellation of the scheduled $2½ billion apportionment this August and over $2 billion next summer would produce a loss of 641,250 man-years, according to one conservative estimate. This would ripple through the entire one-seventh of the national economy which lives directly or indirectly off of highway transportation.

It is unbelievable that the Congress would permit that kind of distress.

These are the hard facts that cause the roadbuilding industry concern. We recognize that although some of the problems which a curtailment of the interstate program would create are problems of the roadbuilding segment of the American business community, the effect goes far beyond this industry. We have confidence that Congress is interested in the welfare of every single segment of our economic life, large or small.

In the case of the national highway program, so many other Americans are affected, aside from those engaged directly in roadbuilding or equipment manufacturing, or materials production, that we feel we speak for a far greater number of Americans.

EFFECT ON COMMUNITY PLANNING AND INDUSTRIAL EXPANSION

What about the disruption of community planning? In many of the cities you represent, Mr. Congressman, urban renewal projects are intimately tied to the location and completion of proposed expressways. In every city where an interstate freeway is delayed this fall by lack of Federal funds, municipal planning for numerous other allied projects—such as new schools and housing projects—will be thrown out of gear. To delay the construction of these expressways would be to hang a cloak of uncertainty over the fate of many other community projects.

What about the expansion plans of private enterprise? One of the remarkable developments in the national highway program has been the desire it has created for small and medium industries to seek sites adjacent to or near points of access to Interstate System highways. The Nation needs all the industrial expansion it can encourage—to stimulate greater tax revenue, to provide greater employment. A delay in completion of new interstate roads means a loss in much needed revenues and a loss in local employment.

FOUR THOUSAND LIVES EACH YEAR AT STAKE

And most important, what about the curtailment of safety benefits which we know flow from the completion of modern highways. Safety engineers have testified that the opening up of the National System of Interstate and Defense Highways would mean a saving of 4,000 lives a year from traffic accidents. The early beginnings of the interstate program—creating modern highway segments two and one-half times safer than ordinary highways—has just begun to bring a small drop in the national traffic fatality statistics, according to the National Safety Council.

Who would want to delay the interstate program for a year, for any reason, if so many human lives were at stake?

This is the picture which, we hope, you as Congressmen will grasp, and in so doing, exert the leadership so sorely needed to carry the national highway program through a period of disagreement over interim financing measures. In the light of these sobering facts, some financing plan, even if temporary, must be enacted.

Too much is at stake to permit the interstate highway program to falter even for 1 year for lack of temporary financing.

In Memory of Daniel A. Reed

EXTENSION OF REMARKS
OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. HIESTAND. Mr. Speaker, I have just received a very eloquent letter from a former pupil of our greatly esteemed late colleague, the Honorable Daniel A. Reed, which I am happy to submit for the RECORD, of this great man:

IN MEMORY OF DANIEL A. REED—A MAN I WILL NEVER FORGET

(By Frederick E. Emmons)

When I read the nationwide announcement that the Honorable Daniel A. Reed, a U.S. Congressman for 40 years, had passed to the Great Beyond, my memory went back more than half a century to an autumn day in my senior year at Cornell. I was walking across that beautiful campus as the September breezes were rustling the rapidly changing maple leaves and the ever-blowing westerlies were ruffling the blue waters of Lake Cayuga far below to the west.

As I approached the library the chimes were ringing out the "Vesper Song" from the lofty tower far above me. Sometimes even today in my dreams I still hear them. After all these years I would not trade with anyone. I stopped for a moment when a voice called out to me: "Hey, big fellow. Wait a minute." I turned and saw big Dan Reed, our new football coach.

"Why aren't you down at football practice?" he asked.

"I don't want anything more to do with Cornell football after my experience in my freshman year," was my reply.

"What was that?" Dan asked.

"I'll tell you. I went out for the freshman team and played on the first eleven every afternoon, without missing a day, although at the time I was waiting on table for my board, taking care of a professor's furnace, and some other duties for my room on the third floor; and every Friday night typing a book, "The Clays of New York," for another professor, at 25 cents an hour.

"In spite of my daily practice and my enthusiasm for the game, and being the biggest man on the team, when the interclass game was played to determine the championship between the sophomore and freshman classes, I was relegated to the benches and neither I nor any other nonfraternity player got into the game, although many substitutes, good, bad, and indifferent, were called into the game. As a result the bench warmers did not get their class numerals.

"Then and there I declared: 'No more football at Cornell for me.' "

As Coach Dan listened to my story, he smiled and said: "I can hardly blame you for your attitude. You come out for practice. I'll see that you get a square deal."

The next day I appeared for practice. He tried me at guard and tackle. After a good workout he called: "Emmons. Go run around the field until I tell you to stop."

The teams left the field for the locker rooms and showers. The practice continued. Twilight began to fall. The teams left the field for their own locker rooms but no one called to me to stop. I continued to lope along as best I could. Twilight lengthened. The players came out and then the coaches. Dan saw the shadowy figure across the field.

"Hey, you. What are you doing?" I came up to them. "I was trying to run until you would call me to stop." He laughed as did all the other coaches. "I'm sorry. I forgot all about you. Go on into the showers. You've done enough for today." I had. As they walked away laughing, I could only grunt a thanks.

That settled me with "Dan" Reed. He gave me every consideration. He used me in every game but one. Later in Philadelphia for the annual Thanksgiving game with University of Pennsylvania, a game we had never won in 11 years, I recall Dan's pep talk.

"Fellows. We have been coming here for 11 years. They have always put us in the coldest room in this building. We usually froze to death before we even got into the game. Maybe that is why we lost. I don't think so. We just didn't play the game as we could. Now you're going out to win for the first time. I know you can do it. Let me see what you are made of and if I have done my job as coach."

It was snowing as we shivered and went out on the field. We were determined to show Dan and those guys that Cornell could win. The game was tough and uncertain. It was nearing the middle of the second half. I was worried, that once more I would lose, as I had to play in this game or forget a Cornell "C." Suddenly Dan called for me to get into the game. "Now let me see what you can do." He knew that if he had not called me into the game I never could win my letter.

Cornell won. Dan Reed had kept his word with me. As sometimes I look at the little gold football with my name and a red enamel "C," and the old red turtleneck sweater, now little more than a rag, as it was worn during all the passing years by two sons, both graduates of Cornell and both called back to lecture there, I think of Dan Reed. How could I forget a man, later to be a friend for all my life. If it had not been for Dan Reed I doubt if I would have received my first job as teacher of Latin and football coach, then principal of a city high school, because the president of the board of education wanted a man who could coach football, then high school coach to win New York championship. All through those 25 years ending in a city school superintendency, Dan Reed was always interested in my success. Those years with more than 40 summers in world educational travel gave me a life that has been the envy of more than one educational friend. I am sure that Dan Reed's record at Cornell would show that he lived up to the motto on the arch at the entrance to the campus: "So enter that thou mayest become more learned and thoughtful."

When he graduated back there in 1898, the year I entered, he must have passed through that same arch on his way to a life of service in the legal profession and many years in the Halls of Congress. As he looked up at the arch he must have read: "So depart that thou mayest become more useful to thy country and mankind."

Surely those who have known him and his career of honest, square, sometimes stubborn ideals, will agree with me that in Daniel A. Reed, God made a "Man to match our mountains."

Soviets Report Rise in Production

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. LEVERING. Mr. Speaker, under unanimous consent I insert in the Appendix of the CONGRESSIONAL RECORD two news items from the April 14, 1959, issue of the Christian Science Monitor, relating to the Soviet rise in production in the first quarter of this year.

When we consider that Allen Dulles, Director of the Central Intelligence Agency, recently reported that our own rate of industrial progress is averaging a little more than 3 percent a year, we can understand more of the significance of these startling production increases on the part of Soviet Russia.

We, in this country, seem to be giving priority these days to higher and stiffer interest rates, which actually stifle consumption and production. It may be true, as some have charged, that this makes the rich richer and they are able to invest more in speculative stocks to become still richer, but it is a sad development for the overall economy of the United States, for it causes economic distortions.

The sad fact is that our economic growth is far behind what is needed to take care of the expanded population. As a result, we are having increased crime, increased poverty, increased failures among homes and businesses, and Soviet Russia continues to make enormous strides. In the opinion of many trained economists, if Soviet Russia makes the strides in the next 10 years that that nation has made in the past decade, and we do not increase our own economic growth, our Nation will be far outstripped in the battle for industrial supremacy. I surely hope that this will not be the case.

The articles are as follows:

SOVIETS REPORT RISE OF 11 PERCENT IN PRODUCTION

Moscow.—The Soviet Government has reported that in the first quarter of 1959, Soviet industry produced 11 percent more than in the same period of 1958.

A communique issued April 13 by the Central Statistical Administration said the plan for industrial production was overfulfilled by 5 percent during the first 3 months of the year.

The communique asserted that, notwithstanding introduction of a shorter working day in the coal mining, steel, and some other industries, labor productivity measured in output per worker increased by 7 percent in the first quarter of this year as compared with the corresponding period of last year.

Here are the figures of output given for the first 3 months of this year for a number of basic items: pig iron, 10,500,000 metric tons; steeel, 14,500,000 tons; rolled steel, 11,400,000 tons; iron ore 22,600,000 tons; coal 126 million tons; petroleum 29,800,000 tons; electricity 56,800,000 kilowatt-hours.

While painting a general picture of success, the communique also noted that passenger-automobile production fell in the first 3 months of this year to 84 percent of last. The drop was charged to a model changeover. Truck production was slightly below that of the first quarter for last year—by nine-tenths of 1 percent.

Window-glass output fell by 2 percent, while there were some production failures noted in the chemical industry, the chemical-equipment industry, and the electrical-equipment industry.

SOVIET GAINS TOLD

The Soviet Union continues to gain on the United States in the production of four basic industiral items: steel, coal, petroleum, and electric power.

The U.S.S.R. still produces less than half as much steel as the United States and slightly less than one-third as much petroleum and electricity. It produces nearly half again as much coal as the United States currently mines.

These conclusions emerge from analysis of the latest statistical report issued by the Soviet Government in Moscow April 13.

FIGURES GIVEN

The dynamic aspect of the production competition between the two nations consists in the fact that despite rapid American recovery from the recent recession and recent new peaks of output in American industry, the Soviet Union continues year after year to increase steadily its output of basic industrial commodities. Taken over a long period, the Soviet Union continues to creep up on the United States in output of these commodities.

The Central Statistical Administration in its regular quarterly report on Soviet economic progress gave figures on the output of many items during the first 3 months of the current year. These give a first opportunity since the demise of the U.S. recession, which put the United States at a disadvantage in comparisons, to see how the two countries stack up in important economic fields.

Here is the picture in current rates of output and also, for comparison, the situation in 1955:

Soviet production as a percentage of U.S. production:

	Percent
Steel:	
1955	43
1959 (current)	47
Coal:	
1955	87
1959 (current)	147
Petroleum:	
1955	21
1959 (current)	32
Electricity:	
1955	27
1959 (current)	30

Mr. Kean a Good Choice

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, April 23, 1959

Mr. WILLIAMS of New Jersey. Mr. President, as a fellow New Jerseyan, I am indeed proud of the signal honor which has come to one of our outstanding citizens. I refer to Secretary Flemming's appointment of former Representative Robert W. Kean to organize a White House conference to consider the problems of the aging. Our preoccupation with world crises abroad cannot blind us to one of the great problems facing us on the domestic front: the needs of our senior citizens. I therefore think it most fitting that the man on whose shoulders this great responsibility will rest is one who has devoted 20 years to public service. His record of accomplishment will give new hope to all our aging citizens.

I compliment Secretary Flemming on his splendid choice, and I ask unanimous consent to have an editorial from the Asbury Park Evening Press of Tuesday, April 21, 1959, printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. KEAN A GOOD CHOICE

Secretary of Welfare Flemming made an excellent choice when he appointed former Representative Robert W. Kean to organize a White House conference to consider the problems of old age. During his 20 years in the House of Representatives Mr. Kean became recognized as an authority on social security and he is well equipped to handle this arduous and important assignment.

The lengthening of the average lifespan is adding each year to the percentage of our people who have reached that time of life vaguely defined as old age. Many of them are beset not only with financial problems but with the maladjustments that so often arise when age forces upon us drastic changes in our mode of life. For when the passing years prevent a citizen from following the pursuits in which he has engaged there develops a need for new interests and new associations. And the development of such interests and associations has become one of our most pressing social problems.

Mr. Kean's long experience in the House of Representatives and his record as an authority on social security make him an ideal choice to organize the proposed White House conference. When he was defeated in his bid for the Senate last year there arose the fear that his valued services would be lost. Fortunately, his new assignment erases this fear.

AFL–CIO Legislative Department Analysis of Provision in McClellan Amendment

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Thursday, April 23, 1959

Mr. McNAMARA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an analysis of the provisions in Senator MCCLELLAN's amendment, prepared by the AFL–CIO legislative department.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

AFL–CIO LEGISLATIVE DEPARTMENT ANALYSIS OF PROVISIONS IN SENATOR MCCLELLAN'S AMENDMENT

This amendment undertakes to regulate the internal operations of unions in great detail. It largely destroys the historic concept of a union as a voluntary association. Even if the premise were accepted that unions should no longer be treated as vol-

untary associations—a premise the AFL–CIO rejects—the particular provisions of their amendment are unreasonable.

Handled in an ambiguous and almost hidden way in the amendment is the matter of admission to union membership. Probably few members of the Senate realized when they voted that this amendment had any provision on this subject, for it is found at the very end in a section revising certain definitions in the Kennedy bill. As its final provision, however, the amendment defines "member" as including "any person who has fulfilled or tendered the lawful requirements for membership." It is not clear what this provision means. Apart from this amendment, no Federal law prescribes "lawful requirements" for union membership. A proviso to section 8(b)(1)(A) of the Taft-Hartley Act provides that that section shall not impair the right of a labor organization to prescribe its own rules with respect to the acquisition or retention of membership therein."

Whether this amendment is intended to overturn this long established legal doctrine and require unions to admit all applicants is not clear. Senator McClellan's original bill, S. 1137, did, in its main portion (sec. 101(2)) specifically require unions to admit all qualified applicants, but this amendment treats the subject with deliberate ambiguity and hides it in a section on definitions.

If this definition means anything—and it certainly was inserted for a purpose—it is to open union membership doors to all, including some persons completely repugnant to the majority in the union. For example, some unions today bar from membership known Communists or other totalitarians. This aendment would negate that bar. It would likewise compel unions to admit convicted felons, even those whose crime was against the union such as embezzlers, and known company spies.

Section 101(a)(2) provides that every member of any union shall have the right to express "any views" or opinions regarding any matter respecting the union without being subject to penality, discipline, or interference of "any kind" by the union. Under this provision a union member who advocates a wildcat strike in violation of the union contract cannot be disciplined by the union. Neither can a member who advocates that the union follow the Communist Party line.

This is an invitation to union leadership to be irresponsible. Not only would wildcat strikes be increased because of lack of disciplinary power but, in order to avoid political repercussions by vociferous irresponsible minorities some union officials might well abandon mature restraints in collective bargaining and demand conditions which could lead to disruption of peaceful labor-management relations.

Section 101(a)(3), entitled "Freedom of Assembly," declares that union members shall be entitled to meet with other members for the purpose of exchanging views and reaching decisions with respect to any matter pertaining to the unions without being subject to penalty, discipline or interference of any kind by the union.

At first glance this language appears innocuous yet it would appear to protect such activities as forming a caucus within a local union to promote disaffiliation from its international and affiliation with a rival union—a clear invitation to intraunion disputes disruptive of peaceful union-management relations. While persons are, of course, entitled to carry on such activities they are hardly entitled to carry them on within and as members of the union they are preparing to desert.

Again, the bill's language seems to protect the right to function within a union, even of a group which seeks the unions' dissolution—perhaps at the instigation of an employer. Surely a union should be allowed to expel such dissident and traitorous elements.

Section 101(a)(6) lays down certain safeguards against improper disciplinary action. It provides that no member of a union may be fired, suspended, expelled, or otherwise disciplined by the union except for breach of a published written rule or the organization, and that disciplinary action may not be taken unless the member has been (A) served with the union constitution and by-laws which must incorporate the safeguards of this bill; (B) been served with written specific charges; (C) given a reasonable time to prepare his defense; (D) afforded a full and fair hearing; and (E) afforded a final review on a written transcript of the hearing by an impartial person or persons. This latter provision in effect requires outside arbitration, since it provides that the impartial person or persons shall be either agreed upon by the union and the accused or designated by an independent arbitrator or mediation association or board. It brings the doctrine of compulsory arbitration, which the Congress has repeatedly rejected in labor-management relations, into the internal operations of a trade union.

This provision reflects total ignorance and disregard of the nature of union disciplinary proceedings. Automatic suspensions after 3 months dues delinquency is common union practice, but it is made criminal by this bill. Often disciplinary proceedings are usually wholly informal, and result in nothing more serious than a reprimand or a fine of not more than $5 or $10. The requirements for a written transcript and a review by outside arbitration would, because of the expense, mean that unions could not act at all except in the most serious cases.

The most serious consequence which can conceivably result to a union member even from expulsion from a union is that his job opportunities will be adversely affected. However, the National Labor Relations Act now provides, in section 8(a)(3), that if a union member is expelled for any reason other than for nonpayment of dues, the union may not seek his discharge.

The provision that a union may take disciplinary action only for breach of a published written rule can have fantastic results. Probably few unions have a published written rule against murder, or even against embezzlement.

Section 101(a)(7) provides any candidate for union office, or his agent, the right to inspect and reproduce membership lists, not regarding the fact that the Kennedy-Ervin bill already provides adequate protection for the democratic rights of candidates to solicit the membership for votes. The provision in the McClellan amendment does not protect the union again a pro forma candidate who is in reality a company spy or a Communist agent, who pretends to union candidacy for the sole purpose of obtaining the membership list for more nefarious purposes. Less damaging, but nonetheless a problem to legitimate unions, would be the lack of protection for its membership rolls from the pro forma candidate whose only purpose was to sell the list to commercial agents who now regularly and unsuccessfully seek such lists for sales purposes.

The enforcement provisions of the bill are as extreme as the substantive. Section 102 provides that any officer or agent who "through use or abuse of authority * * * or otherwise wilfully interferes or attempts to interfere with the exercise by any member of any right protected under the amendment shall be fined not more than $10,000 or imprisoned for not more than 2 years, or both." Thus any officer presiding at a local union meeting who undertakes to rule any speaker out of order will do so at the risk of fine and imprisonment. The amendment also provides in section 103 that the Secretary of Labor may bring suit in Federal court to prevent or redress violations of the bill's provisions.

Section 101(a)(1) provides that every member of a union shall have equal rights and privileges within such organization. This would outlaw the provisions, customary in union constitutions, that a candidate for union office must have been a member for a year or two.

What consequences it would have, cannot be foretold. The Kennedy bill itself abundantly protects the rights to vote and run for union office, subject to reasonable qualifications uniformly imposed. Certainly unions, like all democratic organizations, should have the right to impose conditions for qualification for office seekers.

Hungarian Puppets at the U.N.

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 23, 1959

Mr. SCOTT. Mr. President, I should like to call to the attention of the Members of the Senate the illogical situation where representatives of the Hungarian puppet regime at the United Nations are permitted to participate fully in the deliberations of the U.N. General Assembly, although their credentials have not yet been accepted or rejected.

I ask unanimous consent to have printed in the Appendix of the RECORD a letter I received from the Committee for Collective Security, 90 John Street, New York.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMMITTEE FOR COLLECTIVE SECURITY,
New York, N.Y., April 9, 1959.

The Honorable HUGH SCOTT,
Senate Office Building, Washington, D.C.

DEAR SENATOR SCOTT: Under the present procedure of the United Nations the delegates to the General Assembly take their seats with the privilege of debating and voting before their credentials have been approved by the Credentials Committee which has not been reporting until the end of the session. A case in point involves the delegates representing the Hungarian puppet regime whose credentials have been neither accepted nor rejected by the Credentials Committee. Nevertheless they are permitted to sit in the Genera lAssembly and to debate and vote on all issues, including the validity of their own credentials.

It is illogical and indefensible that the Hungarian delegation, or any other delegation, should have the right to vote unless its credentials have been approved. A situation might arise when such a delegation might cast the deciding vote on an important resolution. The legality of such a vote might subsequently be challenged by a member state and be referred to the International Court of Justice for adjudication. Regardless of whether the credentials of the representatives of the Hungarian puppet regime should be accepted or rejected or whether they should be permitted to enter the debate in the General Assembly, they should certainly not be allowed to vote unless their credentials are approved. The General As-

sembly should take immediate steps to correct this illegal and dangerous procedure.

COMMITTEE FOR COLLECTIVE SECURITY,
GOODHUE LIVINGSTON, Jr.,
Chairman, Policy Committee.

Revised Marine Rules End Drill Brutality

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Mr. Homer Bigart which appeared in the New York Times of Sunday, April 12, 1959:

REVISED MARINE RULES END DRILL BRUTALITY—POLICY SINCE DEATH MARCH PUTS STRESS ON PERSUASION

(By Homer Bigart)

PARRIS ISLAND, S.C., April 9.—On a dark, moonless April night 3 years ago, Sgt. Matthew C. McKeon, a drill instructor, led a platoon of Marine rookies on a disciplinary march into a tidal creek. Six drowned.

Sergeant McKeon was convicted of negligence and drinking in barracks. The Marine Corps undertook a rigorous investigation of its recruit training methods. Steps were taken to eliminate sadism and brutality in a system that seemed shockingly harsh to the Nation.

The changes at Parris Island boot camp since the uproar over the McKeon incident have appalled some veterans of the Corps. For although the depot commander, Maj. Gen. Robert Burnstone Luckey, insists that the corps was not stampeded into basic changes in the Marine training philosophy, he has sternly suppressed practices offending against human dignity.

For example, an instructor can no longer slug a recruit. Nor can he inflict mass punishment. There will be no repetition of the death march of April 8, 1956.

Today the drill instructors, all of them sergeants, speak like psychiatrists. One hears them discuss a recruit's poor hostility control and antisocial attitudes.

A depot order forbids them from touching the person or clothing of a recruit, either directly or by use of a material object except when correcting the recruit's position, correcting his movements, fitting or correcting the arrangement of his clothing or equipment, conducting a lawful examination or inspection of his person.

This corrective touching must be gentle, for the order goes on to say that "any fracture, concussion, contusion, abrasion, or welt upon a recruit shall be considered prima facie evidence of excessive force."

Hazing is also banned. Activities specifically prohibited include:

"Causing recruits to run unnecessarily up and down ladders or in and out of buildings.

"Causing recruits to ingest more food and/or beverages than their normal requirements.

"Causing recruits to ingest any paper or other foreign matter not commonly used as food for human consumption.

"Causing recruits to march or drill with ballast in pockets or pack.

"Causing recruits to participate in an assault against each other.

"Causing recruits to inflict unnecessary pain upon themselves or to collide unnecessarily with physical objects such as causing them to run against a wall.

"Causing recruits to stand in unnatural positions for undue length of time such as doing 'wall bends'."

NO MORE CONTRIBUTIONS

In the old days, a drill sergeant needing money occasionally invited a recruit to contribute. But the new order says:

"No permanent personnel shall relate to any recruit any tale, story, or incident, whether or not true, indicating infinancial distress or a need for funds for himself, his family, or any other permanent personnel."

With all these new restrictions, the drill instructor would seem as defenseless as a scoutmaster with a party of truants.

He can't find release in swearing: Placards in the messes inveigh against profanity, and this makes conversation difficult.

He may, if sufficiently provoked, upbraid his charges as "hoods" and "bums." But he must watch his adjectives: nothing stronger than "doggone."

A crowd of sergeants at the drill instructors school insisted they could mold the recruits by persuasive leadership.

"Thumping (beating a recruit) is a lazy man's way of doing it," said Acting Gunnery Sgt. James B. Southall. "We must be patient and persuasive and teach by repetition."

"It's like training a dog," said another sergeant, mildly.

Candidates for drill instructors are put through a 5-week course so tough that until recent, fewer than half of them passed. Now the attrition rate has dropped from 52.5 percent to 39.6 percent, following an order last September stiffening the requirements for assignment.

HEAVY DRINKERS BARRED

Depot psychiatrists had found that candidates suffering from situational difficulties brought about by extreme financial problems were apt to lack the inner harmony necessary to become an effective instructor.

Consequently, the corps directed all commanding officers to rule out men who had a record of habitual failure to meet financial obligations as well as heavy drinkers and those with an unhappy family life.

Other new requirements call for emotional stability and reliability: The absence of any traces of immaturity as shown by a record of unauthorized absences, offenses involving moral turpitude or negligence in the performance of duty.

The candidates must have demonstrated ability to conduct close order drill and possess a strong, clear voice unhampered by any heavy accent.

There were 41 men in the present drill instructor's class when it began. The average man was 27 years old, had completed 8 years in the Marines, and was married, with children. Slightly more than 75 percent had combat experience in Korea or World War II.

This class is in its third week. Already 8 of the 51 have been declared unsuitable for drill instructors by the depot's psychiatric observation unit. "Immature and quite lacking in judgment," said the notation on one card.

"Excitable and ineffective; has a history of many neuropathic complaints and lacks motivation," said another.

"Little hostility control and a possible maltreatment risk," said a third.

THE JOB IS EASIER

But once he gets through the course, the new drill instructor finds his job easier in some respects than in the days of Sergeant McKeon.

Today there are three drill instructors assigned to a recruit platoon instead of two as in 1956. This gives the drill instructor more off-duty time to spend with his family. Housing is better. Also, the worst goof-offs among the recruits have been segregated in a motivation platoon.

Fat recruits always bruise the hostility control of a drill instructor, but these, too, have been segregated. They are put in a conditioning platoon, fed on a stark diet of 1,500 calories and subjected to two steam baths a day and 4 to 5 hours of weightlifting, swimming, and calisthenics. They are trained by drill instructors handpicked for understanding and patience.

"They come from overindulgent homes, but have a good background," one instructor explained. "They are rather like a baby, crying, moaning, and groaning the first few days. But later we have to slow 'em down."

In the "strength platoon," where weaklings are segregated, there are more malingerers and "sickbay commandos," the instructor said.

"They have had no physical exercise in their lives, no sport whatsoever, and most of them come from the city," he explained.

Finally, there is a "proficiency platoon" for slow learners who are barely literate or know little English.

The segregation of these problem units has eased the drill instructor's task.

General Luckey wants to lighten it still further by improving the preliminary screening of applicants at recruiting stations.

He has asked Washington to increase the minimum age for recruits from 17 to 18.

"The 17-year-old kid is a little too young, a little too immature," he explained.

To stiffen the screening, Dr. Charles Herlihy, head of the depot psychiatric unit and a lieutenant commander in the Navy, cautioned recruiters to eliminate "potential risks" when the following traits were noted:

"Marked inability to accept and respond to authority.

"Stormy emotional response to stress, e.g., blowing up in temper tantrums or rages; frequent crying spells and/or moodiness or depression; childish view of the responsibilities of people in the applicants' age group.

"Inability to measure up to the demands of situations or to maintain sustained performance commensurate with the applicant's ability; e. g., frequent job shifts, fired from jobs, school failures.

"Marked effeminate mannerisms or characteristics, noncompetitiveness, no dates or rarely, excessive concern with health.

"Marked self-isolating tendencies, quarrelsomeness and pugnaciousness, suspiciousness of others and their motives, inability to participate in group activities; notable eccentricity of appearance, speech, manners, etc.

RECRUITS INTERVIEWED

To a group of educators from the New York area, Dr. Herlihy explained that all recruits were interviewed by the psychiatric unit upon arriving at Parris Island.

"The interview lasts from 2 to 2½ minutes per man," he said. "The aim is to spot evidences of immaturity, of poor hostility control, of poor social attitudes."

As part of the interview, recruits are asked to draw a picture of a person. From this drawing, Dr. Herlihy said the unit could learn much about the recruit's "internal harmony" by finding out "how people look to him."

He recalled one case: a "benign, passive youngster" who drew a nude woman with a dagger protruding from her back.

"Unconscious factors at work here," said Dr. Herlihy. "We never did reach his layers of hostility. He lasted only 2 weeks and was sent home."

PHILOSOPHY IS THE SAME

Between 16 and 20 percent of recruits are suspected on the basis of the first interview, he said. They are ordered back for a second

interview, at which most are cleared. The discharge rate is currently 4½ percent.

"One in 300," he said, "is admitted directly to the psychiatric ward as already unsuitable for service. One in 500 goes to Naval Hospital, Charleston, as a really mentally sick person."

Parris Island is the reception depot for recruits east of the Mississippi. They stay here 12 weeks for physical hardening and basic training.

"We enforce harsh discipline, but allow nothing that degrades or physically upsets any youngster," General Luckey said. "No drill instructor touches them. We would court-martial and relieve him in 2 seconds if we caught him doing it.

"But the basic philosophy of Marine training hasn't changed much. We take kids who don't have the slightest conception of discipline and make them into guys you can take to war.

"We weren't stampeded by the McKeon incident. The changes we made were sensible. We're turning out recruits the Marine Corps wants—and doing the parents a hell of a big favor."

The Peril of Inflation

EXTENSION OF REMARKS

OF

HON. JOHN H. RAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. RAY. Mr. Speaker, I place in the RECORD an editorial which appeared in the New York Daily News for April 22 and the coupon which accompanied the editorial. The editorial and the coupon are a forceful reminder and suggestion for action with respect to inflation.

THE PERIL OF INFLATION

"This country can have a bright economic future; it can have it without inflation.

"This country cannot have an enduring bright economic future with inflation."

That statement was made in New York Monday by Secretary of the Treasury Robert B. Anderson, at the annual Associated Press luncheon.

Mr. Anderson thus pinpointed inflation as the No. 1 domestic threat to this country's continued soundness and prosperity. We buy that analysis.

The News for years has been doing its best to keep readers alert to the peril of inflation—the continuous shrinkage of the dollar's buying power, because of Government extravagance and deficit financing, wage increases not geared to increases in productivity, unjustified price boosts, and public apathy toward most or all of such things.

It is encouraging to see the Eisenhower administration fighting inflation to the best of its ability, and with some success. Up to now, at least, the Democrat-controlled 86th Congress hasn't got up the gall to defy the President's solemn warnings against crazy spending programs.

We'd like to report in this connection that our colleague, the Chicago Tribune, also has been warring on inflation for years.

The Tribune's latest offensive in that war is now in progress. It consists of a series of articles on what inflation has done in post-World War I Germany, post-World War II Italy and France, and present-day Egypt—and on what creeping inflation has done to millions of Americans and can do to almost all of us if it is allowed to creep far enough.

The things inflation does are all bad, ruinous. And economists who think inflation can be held to a creep and kept from jumping to a gallop have been proved wrong time and again.

Along with these articles, the Chicago Tribune has printed coupons which readers opposed to inflation could clip and send to their Senators or Representatives in Congress.

Some 65,000 of these have streamed already into the offices of Illinois' two Senators—EVERETT M. DIRKSEN, Republican, and PAUL H. DOUGLAS, Democrat—to say nothing of additional thousands sent to Senators and Representatives from Indiana, Iowa, Michigan, and Wisconsin.

Below we print a replica of the coupon run by the Chicago Tribune. If you are worried about the rack and ruin to which inflation can drive you and/or your children, you might clip the coupon and send it to your Representative or one of your Senators.

"Dear ———: People in many countries have been ruined or impoverished by inflation caused by excessive government spending. I am worried about inflation in the United States and depreciation in the value of the dollar. If our Government keeps spending more than it takes in, we certainly will have more inflation and prices will keep on going higher.

"If this happens—

"☐ My savings will be worth less
"☐ My insurance will be worth less
"☐ My pension will be worth less
"☐ My bonds will be worth less
"☐ My income will buy less
"☐ My social security will buy less.

"I hope that you will vote only for essential expenditures, and against waste and appropriation bills favoring special interests. If we are to survive as a strong nation, we must avoid further inflation. Let's keep the dollar sound.

"Sincerely,
"(Signature) ----------

The Farm Situation

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following comments which were sent to me by Mr. W. J. Brake, of Lansing, Mich., regarding the farm situation. Since Mr. Brake is an active member of the National Farm Grange, I felt his comments were worthy of being brought to the attention of all Members of the House.

It is not practical to let farmers compete on an economically pure free enterprise system when all other segments of the economy have various aids such as tariffs, minimum wage hours legislation, and all the various devices to aid that particular segment.

Nor it is practical to subsidize farmers so that they can produce cheap food for consumers.

With a number of commodity organizations the grange has worked out details of plans which would enable commodity groups to handle their own surpluses with a minimum of Federal funds. These plans are more practical than those we have seen in operation for the last 30 years.

The major function of Government is to protect its citizens from aggresssion, economic as well as physical. Farmers have suffered from an economic problem, and I do not feel that Government can solve this problem and protect farmers by merely saying, "Let supply and demand rule," when since the second bill passed by Congress to the present we have continually sought to circumvent the law of supply and demand for other segments of our economy.

National Budget Can Be Balanced

EXTENSION OF REMARKS

OF

HON. R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. RIEHLMAN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Syracuse (N.Y.) Post Standard of April 22, 1959, entitled "National Budget Can Be Balanced":

NATIONAL BUDGET CAN BE BALANCED

Robert B. Anderson, Secretary of the Treasury, is 100 percent right on the need for a balanced budget to stop inflation.

Further, there is good evidence that he has the support of most of the country's people.

They will do their part to stop the endless rise in prices that is making the dollar cheaper year after year.

They know there is nothing in it for them but grief and an eventual lower standard of living.

Secretary Anderson, speaking Monday before the Associated Press meeting in New York, called not only for a balanced budget, but also for financial policies that would produce a surplus.

Even more effective, he hit those who say a little inflation is good for the country. Deficit spending, he pointed out, is similar to debasing the money of the country by printing press methods.

It adds to the money supply by creating larger amounts of credit.

There are several reasons why the Eisenhower administration can expect support of the country's people in balancing the budget.

First, President Eisenhower has been an advocate from his first year in office of two great national goals—a military defense second to none and a healthy, strong economy at home.

He has always had the support of the people in these aims because they recognize them as sound and right.

Second, the people of New York State—as a cross section of the Nation—bluntly showed their opposition to further price rises in their opposition to Governor Rockefeller's new tax program based almost entirely on the need for money to meet advancing costs.

This same opposition has been noted in other parts of the Nation.

Third, there has been a distant softening of the spending proclivities in Congress. Leaders both of the Democratic Party in control, and the Republicans, have quietly opposed heavy spending.

There are no loud, repeated calls for deficit spending in either the Congress or the country, except perhaps in the military field where there is discussion of whether the defense program is adequate.

The country's people, not the Congress or the administration, hold the secret of building up prosperity in the Nation.

They can do it without adding to a national deficit by means that are sound and sure.

First, they can invest their money in at least one big home project this year.

Second, they can invest more in Government savings bonds, which keep Government from borrowing from banks and adding to credit available.

Third, by this means they will provide work for the unemployed and more revenue for the Treasury, in this way adding to buying power and helping to balance the budget.

This program, simple and direct, already is working in one big field, that of automobiles, which are selling well this year. It can be extended to others and would soon create a demand for employment of the 4,600,000 persons without work.

One big project in each home, whether it be a new car or repainting the house, decorating a home's interior, installing a new kitchen or bathroom, or any one of a hundred projects, would achieve the goal of full employment, a hustling economy and a balanced budget.

That is a goal worth achieving.

The American people have the savings and incomes to do the job. It's the quickest and best way. Let's get at it.

William A. Brockwell

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. AUCHINCLOSS. Mr. Speaker, after some 18 years of faithful service as manager of the restaurant in the House of Representatives, William A. Brockwell is retiring, and his courteous manner and efficient management will be missed by everyone. His term of service has been noted by a rapid growth in the restaurant services in the House side of the Capitol, and this business expansion was met under Mr. Brockwell's leadership with conspicuous ability. His qualities of leadership are emphasized when it is remembered that the expansion was carried on under the devastating handicap of very limited space available for restaurant facilities.

When Mr. Brockwell started, in 1941, there was only 1 restaurant unit on the House side of the Capitol, which served about 500 meals daily, with gross yearly receipts of $110,000, while today about 5,000 meals are served each day, with gross yearly receipts of over $500,000—truly a remarkable growth, not only in operations but also in responsibilities of management. During this period of operation, Mr. Brockwell established in 1942 a new cafeteria, seating 125 people, in the New House Office Building, which was subsequently enlarged in 1944 to a seating capacity of 180. Later, in 1947, the coffee shop in the basement of the Capitol was put into operation, as well as the Members' private dining room in the Capitol. These two new developments provided an additional combined seating capacity of 108. Snackbars were installed in each of the two House Office Buildings in 1953; and when the cafeteria in the New House Office Building was closed in 1959, the new modern restaurant in the courtyard of the New House Office Building, with a seating capacity of 525, was put into operation.

To manage such an ever-expanding project and to contend with the many problems attendant thereto required great patience, farsighted planning, courage, and real ability of an unusual sort. Mr. Brockwell combined all these attributes, and he added to the job his quiet, sincere, and honest personality, which insured success.

The best wishes of his many friends go with him during the days to come; and if he retires to his farm to enjoy its bucolic serenity and to indulge in a bit of hunting and fishing, we feel sure he will find contentment in the knowledge that he did a good job and has earned a rest from the strenuous life he has led in satisfying the gastronomical demands of Congressmen.

United States-Berlin Flight Proves Wisdom of Dulles Policy

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Russell Brines.

UNITED STATES-BERLIN FLIGHT PROVES WISDOM OF DULLES POLICY

WASHINGTON.—John Foster Dulles doubtless appreciated the ironic symbolism of the incident.

As illness forced him from the office of Secretary of State today, an American plane was proving his official philosophy—toughness with communism pays off.

The plane, a C–130 transport, made the third test flight through an East German air corridor above the 10,000-foot level the Russians are trying to enforce. This time, watching Soviet fighters made no attempt, as before, to buzz the American craft.

URGED KOREA ACTION

Long ago, as traveling Republican envoy for the Truman administration, Dulles outlined his philosophy to me in Japan. The only way to handle the Communists, he said, is to block them or threaten them with power at every turn.

He then was selling to nervous Asian nations the idea of nuclear containment of Russia and negotiating the necessary defense agreements to carry out this policy.

It was not generally known that Dulles, from Japan was one of the first influential officials to pressure Washington to send U.S. troops into action when the Korean war exploded.

In 6 years as Secretary, Dulles conducted a running headline feud with Moscow. It was carefully designed to make sure the Russians did not miscalculate their way into war.

STIRRED CRITICISM

More significantly, Dulles was instrumental in winning from Congress a virtual blank check to go to war in defending Formosa and friendly Middle Eastern nations. This marked a profound change in domestic U.S. policy.

These moves, loudly publicized with propaganda in mind, made brinkmanship into an epithet. They stirred domestic political criticism, often frightened allies and confused neutrals.

But Dulles never wavered from this central policy. Supported by President Eisenhower to an unusual degree, he put his own broad stamp on American foreign policy.

He gave many other facets, notable skillful negotiation, to a regime that will be assessed both for successes and failures.

But the toughness—the brinkmanship—probably will be remembered most. For the Dulles' resign was a period when, until possibly now in Iraq, communism made no territorial gains.

Hiring the Handicapped in Our Town

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. THOMPSON of Louisiana. Mr. Speaker, each year a national essay contest is sponsored by the President's Committee on Employment of the Physically Handicapped among 11th and 12th grade students. This year a young lady residing in my congressional district, Miss Margaret O'Meara of Lake Charles, La., has won fifth place in the 1959 national essay contest with an excellent article entitled "Hiring the Handicapped in Our Town." I believe this essay indicates the alertness of the people in our areas to national problems and is worthy of being printed in the Appendix of the RECORD:

HIRING THE HANDICAPPED IN OUR TOWN

In our town, in your town, in all the towns and cities of America, there is a certain tenseness and urgency in the air. In the cold war, which has engulfed the world, the American people see a threat to their democratic way of life. Danger to life and liberty lurks over the horizon, and a blanket of wariness covers the globe.

The victor in this war will be decided, not in battle with a bomb, but in the factory, the stock exchange, and the proving ground. On these strange fields of battle the weapons are not tanks, planes, and ships, but living standards, production records, and scientific accomplishments. The most important weapon in the cold war is manpower. The threat of Russian superiority in manufacturing, agriculture, and trade, which is the Soviets' acknowledged goal, must be met. All available manpower must be utilized if our economic system is to survive. An invaluable source of manpower to our country, in our town and in yours, is the physically handicapped.

In 1950, 7 million handicapped workers were employed in the United States. Since that time the number has steadily increased. These people are a reservoir of untapped resources and will, in days to come, play a large part in the theater of the cold war. Employment of the disabled will be one of our most efficient weapons.

Employing the handicapped is a fairly new idea in our town. In past years the potential offered by the handicapped lay unnoticed. These people were dependent on their families and on public charities. They were dead weights, unable to support themselves. There just did not seem to be

a place for them. Because their physical and mental facilities had been idle for so long, they began to lose interest in life. They no longer had the desire to become skilled in new fields and to regain confidence in themselves.

A few farsighted businessmen changed all that. They saw what was being done in a nearby pioneering firm and followed its example. As in many places, the idea needed only a little shove to get it going in our town. It soon met with the approval of other businessmen in the area, and employment of the handicapped grew rapidly. Persons who had been discouraged by hearing repeatedly, "We're sorry; we can't use you," were given new hope by seeing their fellow handicapped find employment. There was a new interest in vocational rehabilitation programs. Job seekers, who had given up, regained the incentive to try just once more.

Local businessmen were impressed with the results of hiring the handicapped. These workers had proved their worth. They had shown time and time again that it was good business to employ them. The outcome of hiring the disabled in our town corresponded with similar results all across the Nation.

Employers were found, as it has been found in nationwide surveys, that impaired workers as a whole have slightly higher production rates than workers without a handicap. Certain individual handicapped workers had performed exceptionally well, either because of or inspite of their disabilities. They were often put in a department to spur others on to greater achievement through their example.

Businessmen were delighted with the conscientiousness of the handicapped, who exercised safety precautionary measures to such an extent that a smaller number of serious injuries occurred to them than to unimpaired persons.

Employers who feared that insurance costs would rise were pleasantly surprised. Insurance surveys showed that disabled workers were not more likely to have accidents than unimpaired persons. Premium rates were not determined by the kind of workers hired, but by the hazards in a firm and its accident record. Contrary to what many misinformed employers believed, the handicapped were insured without penalty.

As employment of the disable became more widespread, it was discovered that persons in certain occupations were given definite advantages by their handicaps. The blind were well suited to inspecting parts in an assembly line. Deaf persons had an advantage in situations where noises were so intense that persons with normal hearing were distracted. Amputees found that their artificial limbs facilitated certain precision work.

In our town much can still be done, but a start has been made toward hiring the handicapped. The disabled have made it known that employing them is good business. The idea is steadily growing. By proving their capabilities and effectiveness, the handicapped on the job have opened the door to employment for millions like themselves. They have supplied proof that the handicapped are not handicapped at work. The employed impaired workers are helping themselves and helping others. They have boosted their own morale and lifted the courage of other disabled persons.

Employers who take the extra time needed to place a man where his disability is unimportant are making a sound, businesslike move. They are gaining a steady, dependable employee whose enthusiasm and interest often spread to his coworkers. The employers receive favorable publicity for their firms by promoting programs of hiring the handicapped.

Wise business practices win battles in the economic war. Making the handicapped self-supporting leaves them no longer dependent on the Government for aid. They become taxpayers instead of tax consumers. The impaired worker gladly becomes a taxpayer. He is eager to be on his own, to pay his debt to the Government. He soon returns in taxes all that was spent on his rehabilitation.

The consensus in our town today is that handicapped persons have the right to employment. As an American citizen, the handicapped person enjoys the privilege and responsibility of supporting himself and living his own life. The modern employer has ceased to be influenced by prejudices left over from times when the handicapped were ridiculed or remanded to institutions. The launching of Russia's 10th planet has shown our town's businessmen a further important reason for hiring the handicapped. They know now that only by using all available manpower can we successfully meet the challenge of the cold war.

In our town, hiring the handicapped has grown out of the experimental stage. The experiment was an overwhelming success. The disabled workers have taken their places as valued, trusted employees, and comprise an indispensable segment of our working force. They are contributing to America's welfare as citizens and taxpayers. They are beside us fighting in the economic war.

Because the people in our town were wise businessmen who believed in the American idea of a fair opportunity for all men, no matter what their abilities or disabilities, they tried hiring the handicapped. It worked in our town; it will work in all other towns.

Schoharie County Joins in Opposing Award of TVA Turbine Generator Contract to Foreign Firm

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. STRATTON. Mr. Speaker, my mail continues to include expressions of formal disapproval of the recent action of the Tennessee Valley Authority in awarding a contract for a 500,000-kilowatt turbine generator to a British firm, in spite of the heavy unemployment being experienced in areas where American manufacturers constructing such machinery do business.

I hope that these expressions of opinion, presented here formally in the RECORD, may help to impress upon those in authority at the TVA that their action at this critical time in our economic life was unwise and contrary to the best interests of the Nation.

I am sure that the action of the TVA in this regard has not contributed toward public confidence in this agency in many sections of the country, and I think that the leaders of the TVA may soon realize that what they have done in the name of economy will have a long run damaging effect on the future of their organization.

I include herewith the resolution unanimously adopted by the Schoharie County Board of Supervisors and forwarded to me as the Representative of the district which includes the great General Electric turbine manufacturing plant:

RESOLUTION 41, SUPPORT OF LOCAL INDUSTRY

Whereas an agency of our Federal Government has recently awarded a contract for a large steam turbine generator to a foreign firm; and

Whereas many of the employees of the Schenectady plant of the General Electric Co. are residents of Schoharie County; and

Whereas the economy of this country and of all other areas adjacent to Schenectady have been adversely affected by the aforesaid award, and would be adversely affected by any future awards of this nature; and

Whereas the defense effort and capability of our country will be deterred by any future awards of this nature: Therefore be it

Resolved, That it is the opinion of the Schoharie County Board of Supervisors that appropriate legislation be adopted whereby agencies of our Federal Government would be required to confine the award of contracts to domestic firms when such action will be in the best interests of the economy and defense of our country; and be it further

Resolved, That the clerk of the board of supervisors be and he is hereby directed to forward copies of this resolution to Hon. Dwight D. Eisenhower, President of the United States; Senator Jacob Javits; Senator Kenneth Keating; Congressman Ernest Wharton; Congressman Samuel Stratton; and to the clerks of the boards of supervisors of the Counties of Schenectady, Albany, Montgomery, Rensselaer, Saratoga, Fulton, Otsego, Greene, and Delaware.

Dated: March 20, 1959.
Filed: March 20, 1959.

STANLEY A. FRANCE,
Clerk.

Approved as to form and legality.

JOHN S. MAUHS,
Schoharie County Attorney.

Credit Unions: Their Purposes—the Organized Movement

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. HUDDLESTON. Mr. Speaker, on March 28, 1959, Mr. J. Orrin Shipe, assistant managing director of the Credit Union National Association, delivered an address before a group of industrial leaders who were meeting at Alabama Polytechnic Institute in Auburn, Ala. With the thought that Mr. Shipe's address would be of interest to the Members of the Congress, I am privileged to insert the speech herewith in the CONGRESSIONAL RECORD under leave heretofore granted:

CREDIT UNIONS: THEIR PURPOSES—THE ORGANIZED MOVEMENT

(By J. Orrin Shipe, assistant managing director, Credit Union National Association, presented at Alabama Polytechnic Institute, Auburn, Ala., March 28, 1959)

My job here today, as I understand it, is to give you a general picture of credit union history and the organized movement so that in later sessions you will have a better

understanding of what credit unions are and how we all work together to help people help themselves.

First of all, I'd like to preface my remarks with a few facts about the textile industry and credit unions. They are by no means strangers to each other. Some of the very first credit unions formed in the United States were among textile employees in New England. So when I talk about credit union history, I am not referring to groups of people with whom you have no connection or interest. The textile industry has shared in a large part of the advances that have been made in the history of the credit union movement in this country, and many of our ideas have come from textile employees.

At this time, there are at least 176 credit unions serving textile industry employers and their workers. Sixteen of these textile employee credit unions are located here in Alabama, and 19 of them serve employees of textile mills in Georgia. Chances are you are familiar with many of the plants which have credit unions.

My remarks today will never replace such action-packed classics as "Treasure Island" and "Tom Sawyer," but they do tell a story of adventure. Perhaps this tale should have even more meaning to us than yesterday's fiction stories because it deals with real people, doing real things, in a real world. The main characters are men—like you and me—who grasped hold of an idea, planted it in the minds of other people, nurtured it, and watched it grow, bigger and more mature, until today—like the shade of a spreading chestnut tree—that idea is providing an ever increasing amount of comfort to an ever-growing segment of the world's population.

To start the story, we have to go back more than 100 years to a little farm village in southern Germany, called Flammersfeld. The year was 1849. Times were bad in Flammersfeld and throughout all Germany. The country was deep in a general depression. Cities were crowded with unemployed. Men who before had been able to earn their bread with honest toil were reduced to begging, destitution, and actual starvation. To make matters worse, a drought struck, and ruined the farmers' crops 2 years in a row. The people were desperate. To keep from starving, many of them had gone hopelessly in debt to unscrupulous moneylenders whose interest rates were extortionate.

Fortunately, the people of Flammersfeld had elected as their mayor a man who was destined to take his place in history with other champions of the common man's cause. His name was Friederich Wilhelm Raiffeisen, and he became the father of the credit union movement. Raiffeisen was sick at heart over the plight of his people. He approached the wealthier people of his town and beseeched them to help the starving people, but it was immediately obvious that charity was merely a stopgap solution to the problem. Raiffeisen finally decided that the only way his people could help themselves was by getting together and helping each other.

The idea grew into one of the world's first credit societies. In setting up the society, Raiffeisen draw up three conditions he considered imperative to the success of the organization. They were (1) that only people who belonged to the credit union should borrow from it, (2) that loans would be made only for provident and productive purposes, and (3) that a man's character would be the most important security for his loan. These three conditions still are the foundation of the credit union movement.

The next most important figure in credit union history, as far as Americans are concerned, was Alphonse Desjardins, a Canadian court reporter, who shared Raiffeisen's interest in the economic welfare of his neighbors. Desjardins became interested in credit societies in the late 1800's. The situation in his hometown of Levis, Quebec, was similar to that which confronted Raiffeisen a half century earlier. The people were poor, times were bad, and Desjardins was appalled at the exorbitant rates of interest they had to pay to obtain credit.

After years of studying European credit societies, Desjardins organized in 1900, the first credit union in North America, among the poor fishermen and farmers in his hometown. It was a very modest beginning. The first savings deposit made was only a dime. The first collection among the members netted only $26. Desjardins, however, was not discouraged. He persevered, and within a short time his small credit union was providing its members with more comfort and financial independence than they had ever had.

Meanwhile, the credit union idea had spread to other parts of the world. The first American to become genuinely interested, picked up the idea while on a trip to India.

That American was the great liberal merchant, Edward A. Filene, of Boston, who made a fortune because of his progressive ideas in merchandising, and then used that fortune to promote progressive ideas in many other fields of human activity.

Filene's interests were limitless, but they all had one common goal—the creation of a better economic and civic life for men and women who toil for a living. He was a man who if he had never done anything else but be a merchant would have been outstanding.

Filene's first contact with credit unions came while on a trip to India in 1906. While in a Calcutta hotel, Filene met, by accident, an English civil servant who was paying visits to little Indian villages to help them form credit societies. His curiosity aroused, Filene accompanied the Englishman on one of these trips. That accidental meeting and short trip was enough to instill in Filene a boundless enthusiasm for the development of credit unions, which stayed with him until the day he died.

In 1909, a combination of events took place, sewing together the net that was to eventually draw Filene into a long and active association with the promotion of the credit union idea. One of the most important of these events was a study being made of unauthorized banking practices in Massachusetts by Pierre Jay, then banking commissioner of that State. Jay discovered about a half dozen cases where employees of a business organization had organized themselves into a savings and loan association to receive deposits from one another and in turn to lend them to one another.

To Jay's way of reasoning, here were a half dozen associations, serving a useful purpose in the field of personal loans, but operating with no authority of law. He had to decide whether they should be supervised and perhaps restricted, or encouraged and multiplied.

To help find the answer to this problem, Jay went to the Boston Public Library. There he stumbled across Henry Wolff's book on "People's Banks." In it Jay found about similar organizations which were performing, under a variety of names, the same services in many European and Asiatic countries. Jay also learned of the work Alphonse Desjardins was doing in Quebec.

Jay wrote to Desjardins, and a flood of correspondence began to flow between the two men. As a result, in 1908 Jay recommended that Massachusetts not only authorize but put its prestige in back of these little savings and loan associations by providing for their incorporation and admitting them to the brotherhood of banking institutions in Massachusetts.

Jay's next step was to prepare a bill which would provide a State law authorizing the organization of these groups. To help with its preparation, Desjardins came down from Quebec for a few days. A public hearing was set on the bill by the banking committee of the Massachusetts Legislature. It was at this point that Edward A. Filene added his support to the credit union idea—an action which gained for him the title of father of the credit union movement in the United States.

Up to the point at which Filene entered the scene, most of the testimony before the banking committee came from the Canadian, Desjardins. He was questioned closely by the committee, but, being a citizen of another country, his testimony didn't carry much weight. As Desjardins finished Filene voluntarily appeared before the committee as an interested citizen. Interest immediately picked up. Here was a prominent Massachusetts man who had actually seen credit societies in operation.

Needless to say, Filene's testimony cinched passage of the bill. The Massachusetts Legislature enacted the law in 1909.

On this same journey to Massachusetts, Desjardins made a side trip to New Hampshire, and while there organized the first credit union in the United States in a church parish. Credit unions were now a reality in the United States, but their growth and development during the next 12 years was anything but spectacular, mostly because of the lack of effective credit union laws.

Two things happened in 1912 to help change this, however. The Massachusetts law was improved, and a Federal Commission returned from studying banking practices in Europe. As a result, President Taft wrote a letter to all State governors encouraging them to have credit union law enacted in their States.

Several States followed President Taft's advice, but it wasn't until 1921, when Edward A. Filene again stepped into the credit union picture, that the credit union idea gained the impetus and support it needed if it was to ever be of help to more than a handful of people.

Realizing that the development of credit unions was at a standstill, and would remain so unless proper steps were taken to develop better laws and more leadership, Filene established the Credit Union National Extension Bureau.

The purpose of the Bureau was to seek enactment of effective credit union laws in all States, promote the organization of new credit unions throughout the United States, and to actively organize new credit unions. To accomplish these goals, Filene selected a young Boston attorney to head the Bureau. This man, Roy F. Bergengren, was to become the voice, the heart, and the working mind of the credit union movement for many years to come.

When Filene and Bergengren began their work, there were only 4 workable State laws and 199 credit unions. In the next 13 years, up until 1934, Filene poured more than $1 million of his personal wealth into the development of the credit union idea, and Roy F. Bergengren devoted his full time and energy to the realization of that goal.

Two major accomplishments in 1934 climaxed these two men's crusade. A Federal Credit Union Act was passed, making it possible to organize credit unions the length and width of the United States, and in its possessions; and the Credit Union National Association was established to take the place of the Filene-financed Credit Union National Extension Bureau. The time had finally come for the credit union movement, which preached self-help to stand completely on its own feet.

The growth of credit union service since 1934 has been truly spectacular. At the end of 1934, there were less than 2,500 credit unions in the United States. Today there are 20,000. There were less than one-half million credit union members. Today there

are more than 10 million. Total credit union assets in 1934 were $40 million. Today there are well over $4 billion. Since the end of World War II, we have been the fastest growing financial institution in the world, and at our present rate of growth, it is apparent that we will continue to hold that record for some years to come.

By this time though, you're probably wondering when I'll get around to explaining just what a credit union is. I'm sure many of you already know something about us, but perhaps I can clear up some of the cloudy images.

Credit unions are really a very simple institution. As defined, a credit union is an organization of people, with a common bond, who pool their savings and use these pooled savings as a source of low-cost loans for provident and productive purposes. Each credit union is owned and operated by its own members, and is chartered and supervised by States or Federal Government.

A credit union is one thing to one person, and something entirely different to someone else. To one man it's a source of low-cost loans. To another it's a good investment place for his savings. To one businessman it's a boon to his business. To another businessman it's unfair competition. To a teacher it's a wonderful way to teach people how to save regularly and use their credit wisely. To a sociologist, it's a perfect outlet for group participation. To one employer, it's a useful organization which saves him time and money, by reducing garnishments, wage assignments, pay advances, and company loans. To another employer, it's a headache, and an un-American group that doesn't pay taxes.

So, you can see, a credit union is many things to many people. Which of these are right and which are wrong you will learn in this seminar today.

Next, you might ask what benefits an employer will receive from the operation of an employee credit union. The question is a fair one because in order to succeed the credit union will need the moral support of your company.

CUNA recently conducted a survey of some 2,000 industrial concerns, about half of which had credit unions and half which did not. In each case, the questionnaire was directed to the company's personnel director, and he was asked to give the management's viewpoint on the operation of their employees' credit union.

The responses were exceptionally enlightening, and they substantiated to a large degree, our belief that credit unions are just as helpful to an employer as they are to his employees.

I won't bother to go into full detail about the survey, but let me give you a thumbnail sketch of its results.

Among the companies with credit unions, the concensus was overwhelmingly in their favor. Ninety percent agreed that they were a worthwhile part of their employee relations program, while only 3.5 percent said outright that they did not think credit unions had any value from an employee relations point of view. The other 6.5 percent either did not answer the question or said they did not consider the credit union as part of their employee relations program because credit unions are operated entirely by the employees and not by the company.

Other returns showed that 77 percent of the companies believed that credit unions protected their employees from high-cost moneylenders; 65 percent felt they improved management-employee relations; 58 percent said credit unions eliminated or reduced garnishments, pay advances, wage assignments and employee loans, and 32 percent believed credit unions improved workers' efficiency and safety records.

Although there was no 100-percent agreement on any of these items, the percentages I have just given you do not mean that the rest of the companies said their credit union did not help in these matters. In each instance, there was a large percentage of personnel officers who did not answer the question because they either didn't know or weren't sure of the exact effect their credit union had on these management problems.

As these figures show, the credit union has become a permanent and integral part of the lives of many millions of people. Each year that has passed since 1909 has brought the credit-union movement added strength. What gives it this strength? The answer is a combination of things. In the first place, the credit-union ideas combine man's idealism with the world's realism. His credit union is not just another sounding board for impractical ideas, but a practical and sound solution to a real problem. If it didn't provide a solution, the idea would have died years ago.

The credit-union idea puts into practice the religious principles man has been taught for centuries, and it puts into action the democratic ideals that man has sought for centuries. It creates a situation where no one man can profit at the expense of others, but where all men can profit with the help of others. Although, strictly speaking, there is no profit in the business sense of the word, since all credit unions are nonprofit organizations.

To share in a credit-union's benefits, a member gives up nothing and gains everything. His individual rights are not surrendered, rather they are strengthened, because his share in the benefits is in direct proportion to the amount of effort he, as an individual, puts into his credit union.

In the day-to-day operation of his credit union, a member attains the fruition of his religious principles and democratic ideals in a number of ways.

As an officer or committeeman, he performs the regular duties of a company executive without pay. He gives freely of his time and energy to bring about the proper management of his credit union, and to fulfill his responsibility as a trustee of the funds the credit union's members have deposited in it. Of the elected officials, only the credit-union treasurer is allowed, by law, to accept any pay, and most of the treasurers refuse to accept any pay until they are asked to take on the duty as their full-time job. This voluntary service is the very backbone of the credit-union idea. Without it, credit unions would be unable to operate with their low rate of interest, and would be unable to pay their members a fair dividend on their savings.

As an active participant in his credit union, a member achieves the fruition of his religious principles and democratic ideals through his participation in the credit union and its affairs. He knows that when he deposits $10 he is making it available to his fellow credit union members who may need it more than he does at that particular time. He also knows that when he borrows $100 from his credit union he is not only helping himself obtain a good buy on credit terms, but that his interest payments will help provide his fellow credit union members with a fair return on their savings. He also knows that when he exercises his right to vote at the credit union's annual meeting that he is practicing his undeniable right to share in the control of his own economic destiny.

The strength of the credit union movement, then, as you can see, comes from a number of sources, both through group and individual action. In addition, the credit union idea gains strength simply because it was born of just plain good commonsense. In acting on this good sense, a credit union member is no different than a good businessman.

If one of you needed a product for your company, you would first of all shop around for the best possible buy. If you couldn't buy it at a reasonable price, you either wouldn't buy it at all, or you would try to find other means of obtaining it, possibly by producing it yourself.

This is exactly what credit union members have done. First of all, they shopped around to find a good buy to answer their credit needs. When Raiffeisen started his first credit union, such a product was not available. In fact, such a product is not available to millions of people today, and that doesn't mean only in the so-called underdeveloped areas of the world, but right here in the United States in our own cities and rural areas.

The only course left to Raiffeisen and all of the credit union leaders who have followed him was to produce their own low-cost source of credit. This they have done, for 13 million people, through the 25,000-plus credit unions now operating throughout the world.

Low-cost credit, however, is not the only need credit unions are filling for their members. They also are actively helping their members develop regular thrift programs. They are constantly educating their members in the wise use of their money. And they are helping their members obtain democratic control of their money.

In so doing, credit unions are not only contributing to the economic welfare of their members, but they are contributing to the economic prosperity of Alabama, Georgia, the rest of the United States, and many other parts of the world.

During the half century they have been operating on this continent, our credit unions have helped their members build their savings, from the original 10-cent deposit in Desjardins' first credit union to more than $4 billion. At the same time, these credit unions have provided their members with additional billions of dollars in insurance benefits, have helped their members to buy many more dollars worth of real goods by saving them useless interest charges, have helped them infinitely to improve their standard of living, and have taught them the real meaning of cooperating with their fellow man.

Kansan Seeks End to CAB Stalling on Airline Service Application

EXTENSION OF REMARKS

OF

HON. DENVER D. HARGIS

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. HARGIS. Mr. Speaker, the unexplained delay in a decision by the Civil Aeronautics Board on an 18-month-old application for establishment of airline service to certain Kansas and Oklahoma cities is causing considerable concern to officials of the cities involved. On April 16, I received a telegram from representatives of 17 Kansas communities, including Pittsburg, Parsons, and Independence in my home district, protesting any further delay or continuance in this case, known as the Kansas-Oklahoma local service case, docket No. 5482, et al. Feeling that these citizens indeed had legitimate grounds for protest, and knowing the urgent need for a substantial increase in the area's airline

facilities, I immediately wrote to the CAB, urging an early decision. The case for such action in the Third Congressional District of Kansas is summarized clearly, and in blunt, plainspoken language that makes the causes of dissatisfaction readily apparent, in an editorial that appeared in the April 20 issue of the Independence (Kans.) Reporter, under the title "God's Mill Grinds Slow." The editorial follows:

"GOD'S MILL GRINDS SLOW"

It's been well over a year now, in fact 18 months, that the Civil Aeronautics Board has been considering what airline is to serve a three-State area.

For a longer period than that even, communities in southeastern Kansas—notably Independence, Parsons, Coffeyville, Neodesha, and Cherryvale—have been asking for service at what would be called the Tri-City Airport located northeast of Cherryvale on U.S. 160.

Josh Lee, a former United States Senator from Oklahoma and former chairman of the CAB, was engaged to represent the area communities involved. After careful study it was decided to request that Central Airlines of Dallas be awarded the service at Tri-City.

If approval had been granted by the exemption method, Central planned to make two round trip north-south flights daily between Tulsa and Kansas City via Bartlesville and Topeka. If another application was reecived from any other airline, however, it meant a long and costly hearing.

Because the CAB chose to lump all applications for service similar to the southeastern Kansas group's into what has been known as the Kansas-Oklahoma case other airlines did make application and a long, drawnout, costly hearing has sure enough followed.

And so we here in this area have been delayed in getting this air passenger, freight and mail service while the CAB sits on its collective fannies and twiddles its thumbs.

Whoever it was once wrote, "God's mill grinds slow" apparently never thought there would be anything like governmental bureaus. If the rest of the quotation "but sure" applies, all well and good.

It would be well for the CAB to make their decision now with dispatch instead of additional delay so residents of the area can receive the benefits of commercial air service that has been far too long in coming.

Lewis L. Strauss

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. HOSMER. Mr. Speaker, one of the most honorable gentlemen, courageous and patriotic men, able and dedicated public servants it has been my privilege to know is Lewis L. Strauss. He is gentle; he is kind; he is humble; he possesses the quality of greatness that in our history such rare men as he have given as a heritage to the Nation. At the moment he is enduring a prolonged and difficult personal trial. It is good that those who know, admire, and respect him speak words of encouragement at this time.

A Centennial for All Americans

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. TUCK. Mr. Speaker, our former colleague, the Honorable Dewey Short, Assistant Secretary of the Army, whom we greatly admire, delivered a notable and inspiring address in Richmond, Va., on Thursday, April 16, 1959, on the occasion of the Second National Assembly of the U.S. Civil War Centennial Commission. Under leave to extend my remarks in the CONGRESSIONAL RECORD, I am pleased and privileged to include the following text of Mr. Short's address:

Mr. Chairman, my fellow Americans, ladies, and gentlemen, when I first received an invitation from my good friend, Karl Betts, to address this group tonight, I experienced a series of various emotions. I was honored as well as pleased but nevertheless a little bit frightened. Naturally I felt honored because these meetings are for the purpose of launching our centennial planning. I was pleased because Karl, in his great wisdom, was perceptive enough to know that the ideals and plans of this Commission are objects of some of my fondest dreams. And still I was somewhat frightened because I knew I would be addressing an audience of experts and nothing scares an old political campaigner more than that.

However, my fears are a bit allayed because no expert has yet been born who understands fully the causes, operations, and results of the Civil War. The best and most impartial historian finds it difficult, if not impossible, to plumb the fathomless depths and accurately assess the true meaning of this most terrible of fratricidal strifes. A great philosopher once said, "The day is deep and deeper than the day can dream." Life is deeper than logic and the heart has reason that reason knows not of. Perhaps this is why a study of the War Between the States is so interesting, challenging, and absorbing. As a youngster I was a voracious reader of the accounts of this conflict and the older I grow I become more avid in my study of it. Sometimes I feel the more I know, the less I know about it. In puzzling moments one is tempted to give up in despair, but always there is a tug and a pull that draws one back to the severe task of trying to understand its meaning and profit by its lesson.

In thinking about this speech and this meeting, I was struck with the significance of our meeting place. It seems to me that I first heard about Richmond, Va., about the time I began learning about American history. The more history I learned, the more I grew to know and respect Richmond. It is a city of rich historical significance. It was a little less than 200 years ago at St. John's Church here in Richmond that a dedicated American patriot, Patrick Henry, consolidated the thoughts of all loyal Americans when he proclaimed to the world, "Give me liberty, or give me death." Then 85 years later this country was severed by those who doubted that a loose federation of States could endure and, as a result, Richmond, Va., became the seat of the Confederacy. The people of Montgomery, Ala., still consider their city the capital of the Confederacy and look upon you as Yankees from the North.

Richmond's history is rich with the contribution of great men and women, and the city has been the scene of stirring events. The incomparable author and poet, Edgar Allen Poe, grew up here; Capt. Sally Tompkins became the first modern-day angel-of-mercy during the Civil War hero; and two great armies met in grim deadlock to fight some of the most relentless, daring, and furious battles of history near this city in the spring of 1862 to the spring of 1865. One thing at least is certain: Gen. U. S. Grant III found it much easier and far more pleasant to enter Richmond today than did his grandfather on that April day in 1865. Now we have taken Richmond without firing a shot and Richmond has taken us over completely with her characteristic southern charm and generous hospitality. These mutual bonds of understanding and affection with a unity of heart, mind, and purpose is the richest legacy the Civil War has bequeathed to us.

This week we are gathered here to plan a centennial to commemorate that war. By meeting in Richmond we necessarily must be more sober in our efforts. The weight of history is inescapable in this city and this realization will do much to instill within us the fact that this must be much more than an ordinary centennial; it need be and must be a centennial of commemoration and dedication for all Americans, for out of the drama and strife of the Civil War we may find lessons that will guide us today.

One hundred years ago this Nation was plunged into civil war. Though 1859 was still 2 years away from actual battle, the decision had already been made and America was hopelessly, helplessly, yet manifestly, and inevitably moving toward war. This decision, it is obvious, had been reached sometime before; when no one can say. No specific incident nor event can be singled out for this condition.

Some would point to William Lloyd Garrison, others to John Brown; still others to the intractability of the slaveowners of the great southern plantations. Yet, no man, nor any single event can be named as the causal factor for the dread decision. The decision was the product of the time; a time when America was growing up—bursting as it were, its seams in boundless expansion—a time when America was beginning to realize that individuals must cooperate if this mighty union of States was to assume a position of preeminence in the world. It was inevitable that the Nation should have growing pains in such times; it was unfortunate that they resulted in war.

But out of the holocaust, heartbreak, misery, terror, and tragedy of civil war came unity. Never before had so much hell—both during the war and after—been endured for an accomplishment so magnificent. Never before had America understood and respected herself so well. That this Nation was to become a world power was part of its destiny; that this Olympus was achieved with such honor, integrity, morality, and right is testimony to the strength and determination of the American people.

A century has passed. Today, our problems are much the same as they were then. The details are different, the disputes not the same; yet, the mosaic of events is strikingly similar. Today, we do not have Bleeding Kansas or John Brown's raids, but today we do have Berlin, Korea, Indochina, Lebanon, Matsu and Quemoy, and Hungary.

Today, our outlook is based on a framework of nations within the world structure rather than a community of states within a single nation. But today, the question at issue is the very same that it was a century ago. And that question—as then—is freedom. Before the Civil War it was freedom of men, freedom of States apart from the national whole, and freedom of sections to determine their own ends. In this fight each side believed sincerely, deeply and emotionally that its individual arguments were

completely valid. The South was convinced that it should be allowed to secede from a union it no longer understood and whose laws and attitudes were working to disrupt a system long held honorable and viable. The North, just as determined, believed that a nation deemed for leadership should not be divided at a time when history was preparing the dawn of greatness.

Many historians have sought different explanations for the mighty conflict. This is not the time or place to argue the causes of the Civil War. They were many, complex, and imponderable—but the chief cause, no doubt, was the fight for the unlimited extension of the slavery system. After his election to the Presidency in November 1860, Lincoln wrote to Alexander H. Stephens, of Georgia, with whom he had served in Congress during the Mexican War and who later was to become Vice President of the Confederacy: "You think slavery is right and ought to be extended, while we think it is wrong and ought to be restricted. That, I suppose, is the rub. It certainly is the only substantial difference between us." This same sentiment was clearly, forcibly and unmistakably expressed in Lincoln's first inaugural address.

Today, we are locked in a struggle with an ideology that is attempting to destroy the concept of freedom. When we look at the Russian leadership in the Sino-Soviet bloc, we see a completely uninhibited dictatorship. And when I say uninhibited, I mean just that. There is no act however vile, no risk however great, no course however repulsive that they are not willing to take in order to carry out their avowed intension to bury us. Their philosophy, to our way of thinking, refutes itself before it fully matures into a philosophy. We know and understand that a philosophy with no consideration for humanity is a philosophy that cannot exist.

America's philosophy is one that we have had since the begining of our country. It is a philosophy that we share with our allies today, and it is a philosophy that we can believe in and trust fully. The belief that every man and every country should be free to chose its own course is one of the most basic, yet most noble verities of the world. It is a belief that we have entered war to uphold. And when I think of our Civil War, I think the most magnificent aspect of it was that each side, in its own way, was fighting to uphold the principle of freedom.

The brilliance, the determination and the courage of such men as Lee, Jackson, Lincoln, and Grant must inspire us as we recall their efforts. Often as I sit in my office in the Pentagon, I find myself glancing up at the fine portico of General Lee's mansion to recall the difficult decision that he made there and the strength of character, patriotic devotion, and the great spiritual resources he brought to that trying moment. Certainly for these traits and for the brilliance and humanity of his leadership, he deserves his sacred place in the hearts of all Americans. For these were values found on both sides of the conflict, even when the division it symbolized was at its deepest. That these men and these values should be applauded and held up as truth by this Nation is something that is as fine as it is unlikely. There were few in the Civil War who are now remembered as villains. The unity that derived from conflict had no room for villains; it does have a place to honor great men who were fighting justly and honorably for a cause that they believed in sincerely and deeply.

But these characteristics went well beyond the minds and souls of the war leaders; they extended, to a large degree, to every man engaged in the Civil War. Be they generals or privates, be they one man fighting for the Union and his brother cast as a rebel, be they great thinkers or determined farm boys; they all felt the religiously emotional impact of this struggle. At Seven Pines, the Wilderness, Manassas, and Bull Run, they were compelled by this impact and they fought battles whose description is at once horrible and magnificent.

But, though we can admire and praise the many fine things that sprang from the experience of Civil War, we must never forget that this was America's great essential tragedy. As do all great tragedies, it bred false hope in the form of 90-day enlistments and picnic atmosphere. "One rebel can kill six Yankees any day," they cried in the South, and in the North the people of Washington loaded up picnic baskets to witness the Union easily defeat the South at Bull Run. With banners flying, fifes shrilling, and spirits soaring they touched off what was to become the most horrible war in history. Through incredible hardship, near starvation, and gruelling warfare the men of the North and South fought a war for 4 years that they were promised would be over in 6 months at most. They saw two generations of Americans lose half of its number to death or injury; they saw families split, towns wiped out, traditions wrecked, and records lost. They saw the democratic process losing its force, and in doing so, wrecking the dreams of this country's ancestors. They knew that "war is hell" long before William Tecumseh Sherman told them that it was, for they could see in this war the tragedies of great men becoming doomed and a nation finding itself smashed on the rocks of malcontent.

America, which had historically been so strong, was lost. The fabric of union had been irreparably rent and no one could be found to weave an acceptable pattern. But more than this our Nation was caught up in a conflict that in many ways made no sense, had no pattern or justification. At its nadir it was an emotional experience comparable to the Dark Ages of Europe. There was little hope and less reality. This was compounded by the fact nearly everyone in this country felt the real, personal effects of war.

There were very few in this country that did not have a personal stake in the Civil War. Be it father, brother, husband or nephew; nearly everyone had kinfolk that were day after day risking their lives for something that in many ways because of its scope and impact was confusing and unreal to the American mind.

The totality of this experience shocked America to the point that the memory of the war was indelibly engraved on the American mind. The people of this Nation looked back and saw a 4-year ordeal that might have been avoided, and they avowed that this country would never again become involved in an emotional experience that would lead to the hell that is civil war. Out of ashes, out of terror, out of confusion this country once again became bound together. The weavers of union used a much more viable thread this time and wove a fabric that has withstood the greatest financial crisis, the most devastating depression, and the greatest two wars of history. America entered the Civil War an adolescent and came out mature. She felt the impotence that is war and determined that America could no more afford such folly. The mature America gathered strength and confidence and in a relatively short time parlayed her position of unity and stability into a position of world power. This she has been ever since, and this she became because the Civil War taught her to combine, unify and mature.

Today, America is nearly six times as large in population as she was 100 years ago. In spite of the mass of opinion and fact that has been written about that war, there are still people in this country who are unaware of the implications and lessons of our Civil War. What are the implications and lessons of this darkest chapter in our history? The most astute and renowned historians would perhaps say there are not and can not be any final and conclusive answers as to what the war really meant. As Bruce Catton has so well stated: "We are brooding over a deep, haunting enigma; over a riddle that can never quite be solved." We do know, however, that slavery and secession were the great bones of contention before this savage struggle and we also know that today slavery has been abolished and that the Union has been preserved. Slavery no longer exists, the Union does.

Often I have said, and I still believe, that all beauty is born of pain and that the deepest understanding in life comes through suffering. I hope no one here will think me sacrilegious when I say that at times I feel that the Civil War was America's Gethsemane and Calvary. Of course, there were hotheads on both sides of this conflict, but many good people, both in the North and the South, wanted to avoid bloodshed and earnestly prayed that this cup of woe, if it be God's will, might be taken from them. Yet, if it were necessary to abolish a great evil and particularly if it were necessary to preserve the Nation and save the Union they were willing to go through the tortures of war, the agony of the cross, in order to achieve these goals.

Anyway, the war came with its thrilling and saddening story of heroism and meanness, of wisdom and folly, where the best and the basest in men were born. Through the fiery furnace of the Civil War much of the dross in our national life was destroyed and on the hot anvil of armed conflict were forged the hard links in a chain of unity born through a common suffering and loss. All discord did not disappear with cease firing, but through a shared sacrifice which both sides well understood, there came a sympathy and understanding never known before. Appomattox may have spelled the end of the Confederacy, but it also gave birth to a new united and stronger nation. After the crucifixion came the resurrection of a new purified, unified, and glorified power. The greatest victory General Grant ever won was when he turned back to Lee his sword and their horses to his men. Never before or since in history has the vanquished been treated by the victor in so noble a manner.

So the Civil War that was begun rather gaily and lightly, which many thought would soon be over, was ended only after 4 long years of bloody struggle which had led more than 600,000 men through disillusionment, pain, and hardship, to death. The war did not divide this country because the country was already divided; in a strange, inexplicable any mysterious way the Civil War actually united the North and South through a great common sacrifice and tragic experience. Nations, like individuals, must suffer before they really understand; they must die before they truly live.

Tonight as we meet to exchange ideas about the best method to commemorate the centenary of this war, it seems evident to me that our first task must be to communicate to all Americans these lessons. We must cast our commemoration in the same die that the war was cast. It must be a sober affair; one that will try to define the intensity and tragedy of that great war. We must fight those who would wish to clothe the Civil War in a gown of romance, because if this were to happen we would be prostituting and destroying one of this Nation's finest experiences. We must try to recreate the emotion and intensity that went into this effort and try to explain that the horror of war came because our country was unprepared to tackle the problems that confronted her squarely and honestly.

By following these rules I feel we can achieve a double purpose. First, we will be

commemorating the Civil War in a way which will reflect judgment, sobriety, and determination of purpose. We will be doing much to destroy false notions about the war, and we will replace them with a conception that will give strength and dignity to the event as well as to the people of the Nation. No one can ask, no one will ask, more of us than this.

And by achieving this first purpose we will necessarily achieve the second. I mentioned earlier that we are facing today many of the problems that confronted this country at the outset of the Civil War. We face an enemy determined in purpose; and that purpose is our destruction—moral, economic, physical and intellectual. In this struggle we have the strongest weapon of war—conviction. With conviction weak nations have wrecked mighty empires; without conviction great states have fallen.

America added conviction to her arsenal after she found unity from war. In binding together, in founding an ever stronger nation, she proved to herself and to the world that, by God, under God and with the help of God our American Constitutional Republic in the finest form of government the world has yet seen. Of this we are convinced.

In our centennial, then, let us insure that all Americans learn how we gained this conviction; by doing so we shall be shoreing the foundations of our country at a time when we need all the strength and unity we can muster. We have learned our lesson—and at what a price. Today America is "liberty and union, now and forever, one and inseparable."

Ladies and gentlemen, we have a great and noble task before us; a task that in many ways will help to strengthen this Nation in her purpose and perspective. Surely it is worthy of our most profound effort. God help you and me to preserve America because America is God's best chance to save the world.

Thank you.

High Taxes Cramp Business Growth

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following article by our colleague, THOMAS B. CURTIS, of Missouri, which appeared in the April issue of Nation's Business. Mr. CURTIS is a distinguished Member of the House Ways and Means Committee and I believe his article will be most interesting and helpful to all Members of the House.

HIGH TAXES CRAMP BUSINESS GROWTH—LAWMAKER SAYS TAX SYSTEM, IF NOT SOON REFORMED, COULD CAUSE NEW RECESSION

(A Nation's Business interview with Representative THOMAS B. CURTIS)

High taxes are stunting America's economic growth.

That's the opinion of U.S. Representative THOMAS B. CURTIS, Republican of Missouri and an influential member of the tax-writing House Ways and Means Committee.

Mr. CURTIS, interviewed this month by Nation's Business, says that unless we move soon to reform our Federal tax system we face increasing unemployment and the prospect of a fourth postwar recession in the early 1960's. He is optimistic that such reform can be achieved despite strong opposition in Congress. His views are shared by a growing number of Members of the 86th Congress.

A Representative since 1950 from Missouri's Second Congressional District (St. Louis), Mr. CURTIS also serves on the Joint Economic Committee.

Following are the questions asked of Mr. CURTIS, and his answers:

"Congressman CURTIS, do you believe the present tax structure is damaging economic growth and progress?"

"I certainly do. I feel that the last recession to a large degree came as a result of our tax structure.

"To illustrate: The cutback in economic growth seemed to lie in two areas: business inventory and plans for business expansion.

"Much of the cutback seemed to be in small and growing businesses which rely heavily on retained earnings. Small businesses have faced—in fact, all American business has faced—a situation where our Federal tax structure, corporate income tax, plus inflation, has resulted in a capital levy.

"To illustrate, depreciation allowances in the corporate income tax permit a business to take only the original cost of a piece of machinery, not the replacement cost.

"Say a machine cost $100,000 in 1940. You are only allowed $100,000 depreciation, and yet, because of inflation, to replace that machine you need $200,000. So American industry has to have additional capital for replacement, let alone for growth.

"This is one area where I see the Federal tax structure impeding economic growth.

"The second area involves the impact of inflation.

"The point is that our local communities, school districts, sewer districts, and so on, depend essentially upon real estate taxes for their revenues. The real estate tax in turn is based upon real estate assessments. Most real estate assessments in any county were put on the books before the inflated dollar.

"The cost of wages and materials that the sewer districts, school districts, and municipalities have to pay for has gone up. Their revenue has not gone up the same way. They can't adjust it by increasing the rate of the real estate tax, because all of the new real estate that has gone on the books since 1950 is measured in the inflated dollar, and you would unfairly tax them.

"One way out—although politically difficult to do—is to reassess all real estate.

"The second way, unfortunately the easier of the two, is to ask the Federal Government to help finance community facilities. Communities have come to Washington because the tax structure impedes their growth."

"Do you believe that the Federal tax rate can be so high that increased rates mean less revenue?"

"Yes. I think this exists in many instances in our present tax structure. For instance, the $10.50 a gallon tax on liquor, in my judgment, is largely responsible for the increase in bootlegging. If we would reduce the rate, I suspect we would get more revenue, because we would be cutting into the bootlegging industry, which pays no taxes.

"Such examples are easy to understand. I feel that the rates in our personal income tax and our corporate tax also are beyond the point of diminishing return.

"Rates are so high that they destroy incentive. A great many business decisions are made, not on the basis of good economic judgment, but upon what the tax effect will be.

"To the extent that this is done we are interfering with normal growth and normal operation of the private sector of our economy.

"I might also say this: A 52-percent corporate tax means that the Government is the major partner and business the minor partner.

"If we just reduced the corporate rate to, say, 49 percent, where business would be the major partner, we would have more business decisions made on the basis of sound business judgment."

"Broadening the tax base has been suggested in connection with tax reform. What would this involve?"

"There are many ways of broadening the tax base. The basic way is to have private enterprise performing the services and manufacturing the goods for our people. That is an important point. We have seen Government going into business in a great fashion in recent years.

"When the Federal Government goes into business, it withdraws an operation from the tax base. In 1929, to illustrate, there was $9 in private investment for each dollar of Federal investment. That ratio has declined to a little less than 5½ to 1.

"But that private capital investment is essentially the tax base. If we could broaden the base back to 9, let's say, we could have a tax rate of 3 and a tax take of 27, but if you have a base of only 5½, you have to have a tax rate of more than 5 to produce the same take.

"That's one way of broadening the tax base.

"Another way is by plugging the tax loopholes. Whether a tax exemption is a loophole or a legitimate exemption is a question. The word loophole actually begs the question, but I think there are areas of tax favoritism. If we equalize the tax burden, and eliminate favoritism, we will broaden the base.

"Furthermore—and I am happy that the administration has made a recommendation—some methods of doing business seem to be escaping full tax burden. For instance, the cooperative method. I am not talking about the small farm cooperatives; I am talking about these big co-ops that have gone way beyond any concept of the little farm co-op. The co-op method of doing business certainly should not receive the tax preference it does over the corporate method of doing business.

"That would be another way of broadening the base."

"Would broadening the base raise revenue?"

"Yes, because we immediately apply the going rate to the base. I think we can compute tax revenue in a simple formula: It's tax base times tax rate times what I call a collectibility factor, and it's an important concept that has to be put into the formula.

"Our tax collection system is essentially a voluntary one. Our people cooperate in paying taxes. But when the tax rates become burdensome, we find this factor of collectibility becoming less and less.

"So we gain from increasing the base and reducing the rate, and collectibility is increased."

"Will more business incentive be created if the base is broadened?"

"Yes, because there is more equity. People are willing to put up with burdens if they think everyone else is carrying the same burdens. That bears on incentive."

"If rates are not reduced, do you believe economic growth will be stunted?"

"I think economic growth is being stunted.

"In Western Europe since 1952 the rate of economic growth has been almost twice that of the United States. I believe our tax structrue is the primary villain.

"I would predict that we are going to have more of this slowing down unless we revise our tax structure."

"Do you see recession as possible in the near future?"

"Not in the near future. It is likely that 1959 and 1960 will be the most prosperous years we have had. But I see in all of this the seeds of future recessions because of the burden being placed upon incentive and capital formation.

"Furthermore, I see the seeds of more inflation. As we have more inflation, the impact I have previously described upon business investment—replacement of capital assets—and upon municipalities in areas important to economic growth will be felt.

"I might mention a third area that is causing stagnation. That is this so-called locked-in investment. It's a result of inflation. A holding of common stocks worth, say, $100,000 in 1940 is now worth $200,000 in the deflated dollar. If a person sells, he is subject to a 25-percent capital gain, although it's a fictitious gain. As a result, people do not sell. This investment should be turned over constantly as individuals decide what is a better investment.

"If we are going to have more inflation, locked-in investment will be further accentuated."

"Does the high tax rate contribute to the unemployment rate?"

"There is no question that it does.

"Jobs come from economic growth. When there is economic stagnation, you don't have new jobs. Furthermore, as we advance technologically, and can do more with fewer people, we must find new jobs for those who are displaced.

"To do that, we need capital investment. The only place we get new products, really, is from money invested in research and development. That means more jobs all along the line."

"Are taxes being used for purposes other than raising revenues?"

"Yes, and to me it's one of the most dangerous things in our tax structure. The higher the tax rate, the more economic effect it has.

"Through high tax rates you can actually control the economy. It's a great temptation for lawmakers to use the tax structure for producing supposedly desired social objectives.

"I see more of that every day in the Ways and Means Committee, where we should be thinking primarily in terms of revenue."

"Would you predict whether taxes will be used more and more as regulatory devices?"

"If I predicted that, I would be saying that my own work will not be successful, because I am fighting it. But let me put it this way: The forces I see in motion to bring about the use of the tax structure for regulatory reasons are strong. Unless more people take the view I do, it's going to be used more and more to regulate."

"Would many men in Government like to keep tax rates high to hold on to the tax power to regulate?"

"I feel that some would. I don't think they are a large group, but they are an astute group.

"By increasing the tax rate, you can stunt growth and the private sector of the economy is unable to administer to the people's social needs. That in turn creates pressure for the Government to perform these services. As Government does more for the people, more taxes are needed. This is a vicious circle."

"These people would like to see the tax base narrowed?"

"I think they demonstrate they would prefer to see it narrowed. Any time they can get the Federal Government to do something that private enterprise was doing before, they will do so.

"The tendency of this group is to go to the Government first to solve problems, instead of trying to see if we can solve them through the private sector.

"If we can do the job through the private sector, we keep it in the tax base. If we do it through Government we remove it from the tax base and at the same time have to raise revenue to meet the cost of those social needs."

"Can you expand this idea of using taxes to control the economy?"

"Let me give you a good example.

"During and after the Korean war certain defense industries were granted certificates of necessity to let them write off the cost of new facilities at a faster-than-usual rate. What would a certificate of necessity mean if the tax rates were low? With the tax rates high, to be able to amortize some new equipment rapidly is of tremendous value. So just by using certificates of necessity you can funnel tremendous sums into a given area or take them away.

"Maybe the certificates of necessity are examples of things where the immediate economic results are good. On the other hand, clearly they illustrate the use of the tax structure to obtain what the Government thinks is needed."

"If, in the judgment of these people, the GNP is expanding at a rate which they consider too fast, all they have to do is to raise the taxes and slow it down?"

"That's right.

"If it is going too slow, they can lower rates and speed it up. In fact, they are before our Joint Economic Committee all the time urging exactly that. Last year they urged that we give tax reductions across the board.

"I didn't think that tax reduction was a good idea at the time, because they were thinking of tax reduction in terms of the consumer dollar. I said the way you get jobs for people is tax reduction in the investment dollar area, putting money into economic growth.

"If we wanted to help the people who were hurt in the recession, we would have been thinking in terms of tax relief that would create jobs. I sponsored a small business tax bill that would have done exactly that. My bill said that the only basis upon which small business could get a tax credit was to put that money into economic expansion, which meant more jobs."

"Will increased taxes on insurance companies retard their growth?"

"That is the key issue, in my judgment, particularly as we have the Federal Government going into the same field of providing for the retirement and disability of our people, through social security.

"If we stunt the insurance industry through taxes heavier than the industry can bear, it cannot go ahead in providing for the retirement and disability of our people, the premiums charged the people will have to be too high. That will create pressures on Congress to provide protection through the Treasury."

"Will revenue raised in this manner be significant?

"Yes. We are talking about possibly increasing the tax on life insurance companies from about $300 million to more than $500 million.

"This would have a far-reaching impact on the insurance companies, but no particularly significant impact on total Federal revenue.

"But this $200 million could ultimately cost the Treasury more than we would take in.

"Pressures already are great on the Federal Government to expand and increase social security benefits. If the insurance companies don't continue to expand, the pressures will be such that the Federal Government will extend social security benefits.

"Another thing—and this is a collateral issue but nonetheless important—the States have been permitted to use this industry as a method of raising revenue. States have been getting almost $300 million out of insurance companies through premium payment taxes. I have urged the Treasury Department and the staff of the Ways and Means Committee to bear that in mind, because we have to figure the total tax burden that we place upon any industry, not just that at the Federal level."

"Do you consider social security in competition with the insurance companies?"

"Yes, and the more we raise the wage ceiling on which the social security tax is levied, the more it gets into the field that our private insurance companies are in."

"Do you expect this kind of competition to increase?"

"I hope that it will decrease, but the pressures are such that it will probably increase.

"Not enough people recognize these dangers.

"The challenge is certainly there. In my judgment it does no good to talk about belief in private enterprise unless a person is willing to get down to details, analyze what private enterprise is, and then fight for it."

"Do you expect social security benefits to be broadened further?"

"Yes. I think there is sufficient pressure in this Congress to do it. I hope if we increase benefits we can increase social security taxes. This is the only way we can keep the social security fund solvent. I regret to say the history of the Congress, though, isn't so good. You will find only two or three instances where Congressmen had the courage to increase the social security tax as they increased the benefits. As the tax gets higher and citizens begin to feel the bite of it, Congress is going to be even more reluctant to vote increases.

"I question whether we really can be complacent about the solvency of the social security fund.

"Inflation also robs the social security fund. Therefore, all people who are counting on social security in their old age need to resist inflationary pressures."

"For the years ahead, do you expect the user tax concept to be broadened?"

"Yes, it is being broadened. Increasing user taxes I see as a good method of handling some of the cost of Government. After all wherever it is feasible we should have the people who use a particular Government service pay for the use. If we can increase user charges we will then be able to reduce the general tax rates."

"How do you think Government corporations and institutions such as TVA ought to be financed?"

"I question whether many of them should be in existence. TVA started out as a flood-control project involving dam construction. Some hydroelectric power would be available from the dams, and it would be economic waste not to use it.

"Then it was found that hydroelectric power fluctuates seasonally. Because power users have to have a constant source of power, TVA requested permission to build steam plants to supplement hydroelectric power. Now we find that 70 percent of the power generated in the TVA is from steam.

"Here is a good example of the Federal Government being in a business that is not in the tax base.

"I am suspicious of any Government corporation and feel that the existence of each one should be openly and fully justified.

"But you asked me how they should be financed. I suspect that few of them should be financed other than in the private sector of the economy."

"Do you see any danger in the use of earmarked taxes?"

"I see a grave danger. We think highways are important, so we earmark taxes for them. We think retirement of our people is important, so we earmark social security taxes for them. We think unemployment compen-

sation is an important social function, so we earmark taxes for that.

"You can go down the list of things that are important in our society, and start earmarking taxes, and you will end up without sufficient taxes for the one thing we know our Federal Government must provide—adequate defense. If we keep on with the earmarked tax formula, we can easily get to the point where we will have inadequate funds for defense.

"Although I said that I thought user taxes were good, let's not forget that it's easy to convert a user tax into an earmarked tax—I shouldn't say user tax; user charge is a better expression."

"What principal danger do you see in the growing Federal debt?"

"The principal danger is its inflationary effect. The Federal debt is additional credit imposed upon our economy. It simply means more money, and if you have excess money in a given economy, you are going to have inflation."

"Is inflation inevitable?"

"No. I think that proper fiscal policies can keep inflation from coming about. I think we can have stability, but I think the only way to achieve it is through proper Federal budget and debt management. We are going to have to pay off some of the Federal debt. It is too large now, and it is the primary inflationary force in our economy today."

"Can we pay off some of it in the foreseeable future?"

"The budget we are considering now is based upon the prospect that 1959 or 1960 will be the most prosperous years in history. Yet we are not reducing the debt.

"Surely if we can't do better than that in our most prosperous years, we will have deficit financing again when we get a less prosperous year. The only way to reduce the debt is to put a certain amount in the budget each year to be paid off."

"Would reduction of the corporate tax rate bring in more revenue?"

"I am convinced that if we reduced it, say, to 49 percent, it would increase the revenue. It would increase incentive. More business expenditures would be based on economics than tax consideration."

"Would anything be gained by granting tax exemptions for retained earnings plowed back into capital investment?"

"Very much, particularly in the area of our smaller and medium-sized businesses.

"We get our basic economic growth from small and medium businesses. Traditionally they finance growth through retained earnings.

"If we will permit our businesses to retain a certain portion—not all of it, just a tax credit for what they put back into economic growth—we are going to create more jobs. That is what economic growth is.

"I suggest a third area which is almost as important. Stop uneconomic mergers and acquisitions, where big companies buy up small companies—to a large degree because of the tax structure, and because these smaller concerns, through their inability to finance growth, are helpless.

"I am satisfied that this would do more to stimulate healthy economic growth and bring in more Federal revenue than eliminating the tax loopholes, important as that is, too."

"Do you expect Congress to grant tax deductions for the cost of higher education?"

"I hope so. The budget already includes an expense item for Federal aid to education for loans, scholarships, and so forth. We are already spending the money. I suggest: Instead of the Federal Government spending it and setting up a bureaucracy to figure out how to spend it, let's grant a tax deduction to families willing to send their children to college. It doesn't matter from the standpoint of a balanced budget whether we decrease income by $200 million, or whether we increase expenditures by $200 million.

"I suggest you get more education from allowing individuals to spend the $200 million than from letting the Government spend it."

"Will the depreciation laws be liberalized?"

"I am afraid they won't. They should be, in my judgment. We need liberalization for two reasons. First, the impact of inflation is still heavy. Actually we have a capital levy assessed against American business. Second, in today's rapid technological advancement, a machine is replaced not because it's worn out but because a better machine is developed."

"Will laws involving expenditures for research and development be liberalized?"

"No. I wish they would be. The Federal Government is spending increasing sums directly for research and development. I suggest a more efficient way of spending money is to grant tax deductions for research and development."

"Do you expect the principle of tax averaging to be extended to individuals?"

"No, but it should be. That would again help economic growth."

"Will the tax-exemption features of retirement programs be extended to self-employed individuals?"

"I'm afraid not. I regard this as a short-sighted attitude toward all of these proposals for letting the people rather than the Federal Government spend the money.

"There is tax exemption for corporations providing for the retirement of people, but this same privilege is not extended to individuals who work for themselves. If this unequal process is continued, we will badly damage the professions."

"What is the prospect for tax reform in the foreseeable future?"

"It won't be good until, in my judgment, more people realize that taxes have economic effects, and that we must evaluate our tax laws in terms of economics. We cannot keep the short-range view of looking at specific taxes and saying our revenue depends on the tax rate.

"The tax formula, I repeat, is revenue as the result of the tax rate, times the tax base, times the factor of collectibility. If more people will only agree that this is the formula for revenue, we might get somewhere toward a real fundamental tax revision.

"I am optimistic that as time goes on more people will understand the basic reasons for economic growth. Then we can move toward real progress."

Statement of Postmaster General Arthur E. Summerfield Before the House Post Office and Civil Service Subcommittee Investigating the Mailing of Obscene and Pornographic Material, April 23, 1959

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Postmaster General Arthur E. Summerfield:

I deeply appreciate the opportunity and the courtesy of this committee for its invitation to appear at this opening session of the first public hearings and inquiry into the very serious matter of the use of the U.S. mails in the wholesale promotion and conduct of mail order business in obscene and pornographic materials.

Certainly this is not only a matter of joint concern and responsibility, but it is one of vital importance to all decent Americans—particularly the parents of teenage children.

The Post Office Department is gratified that Chairman MURRAY of the House Post Office and Civil Service Committee has appointed this subcommittee composed of such able members and headed by a Congressman possessing the sensitivity and good judgment of Representative KATHRYN E. GRANAHAN, to inquire into this important subject.

It is my deep conviction—frequently expressed to individual members of this committee, religious and educational leaders, newspaper editors, and citizen groups that one of the most serious morale and social problems in the United States today is the multi-million-dollar mail order traffic in obscenity.

The records show quite clearly that the Post Office Department, over the years, has diligently tried to keep the mails clear of indecent matter, even though it has been subjected frequently to attack and ridiculed by those who hope to profit personally from unrestricted mailings, or by those who, confusing liberty with license, unwitingly give them assistance.

Ruthless mail order merchants in filth are violating the homes of the Nation in defiance of the National Government. They are callously dumping into the hands of our children, through our mail boxes at home, unordered lewd material, as well as samples soliciting the sale of even more objectionable pictures, slides, films and related filth. Unquestionably, these large, defiant barons of obscenity are contributing to the alarming increase in juvenile delinquency, as many noted authorities have publicly observed on repeated occasions.

Complaints which are flooding the Post Office Department at the rate of at least 50,000 annually come from leading clergymen, parent-teachers associations, high school principals, college presidents, newspaper editors, and alarmed parents by the thousands. All are appalled by the social blight which every American citizen wants stamped out, and which the Post Office Department is determined will be stamped out.

As I am sure this commitee knows, Congress first saw fit to enact legislation March 3, 1865, making it a Federal offense to mail matter of obscene nature. An expanded version of this basic law was embodied in the great Postal Reorganization and Codification Act of June 8, 1872. These were criminal laws. In each of these legislative actions the Post Office Department has lent it fullest support.

Since World War II, commercialized pornography has reached an alarming intensity within the confines of certain geographical areas of this country. It is estimated that $500 million is realized annually in mail order pornography and obscenity.

There appear to be two basic reasons for the increasing volume of filth in the mails. First, the tremendous profits realized from a relatively small capital investment; and second, the very broad definition of obscenity handed down by certain courts, including those in certain metropolitan areas—notably Los Angeles and New York, where most of the mail-order business in obscenity and pornography originates.

These liberal rulings have established, over a period of time, virtual sanctuaries in which dealers in obscenity have operated with impunity and in defiance of the Post

Office Department's best efforts to bar their use of the mails or bring them to justice.

As this committee well knows, prior to last year, controlling decisions of the courts held that prosecutions under the pertinent statutes could be effected only in the district where the office of mailing is located. As this committee further knows, and as the legislative record will show, the Post Office Department strongly urged for the past several years the enactment of legislation which would grant prosecutive venue at intermediate offices and offices of address, where the actual damage undoubtedly occurs. Such legislation in the form of an amendment to section 1461, title 18, U.S.C., was passed by the 85th Congress and signed into law by President Eisenhower.

We are convinced that this new legislation provides an effective weapon for dealing with those dealers in filth who have heretofore operated with little interruption and with comparative security from certain large cities.

The Post Office Department is pressing the use of this new legislation to the fullest possible extent. The first case presented following passage of the amended legislation was at Boise, Idaho, and related to mailings made in California and Oregon, addressed for delivery at Grace, Idaho. The offenders, a man and his wife, each received a 10-year prison sentence and fine. Other cases of similar nature are now pending before U.S. attorneys from whom positive responses have been received.

In order that this committee and the public as well may be fully informed of the fact that the Department has been alert to its responsibilities, and has been bending every effort to meet the challenge of those who use the mails to corrupt, I should like to call your attention to the fact that during fiscal year 1958, postal inspectors conducted 4,000 separate investigations relating to the mailing of obscene and pornographic matter and caused the arrest of 293 persons. This is an increase of 45 percent over the previous year and is the highest of record. Investigations and prosecutions during the current year to date are substantially higher than those of last year. During the same period of time, fiscal year 1958, the General Counsel issued 92 unlawful orders under section 259(a), title 39, United States Code, barring use of the mails.

Within the past 10 days, three simultaneous raids made by U.S. marshals and postal inspectors upon the New York headquarters of three of the reputed largest eastern dealers in obscenity and pornography resulted in the seizure of approximately 15 tons of films, slides, photographs, and trashy literature, and the arrest of the operators. One mailing list alone contained 100,000 names. These dealers have been identified in numerous previous cases. Unlawful orders have been issued against two of them in particular on various occasions. They have been involved in local arrests resulting in negligible fines or other sentences, and they have promptly and defiantly renewed their activities under changed names.

On Friday of last week, the premises of a Santa Monica, Calif., dealer in especially objectionable films and photos were raided. A large number of films and considerable volume of other material were seized, and the operator was arrested. He had been identified only a few days previously through mailings reaching the east coast.

In our determined efforts to clean up the mails, we are receiving increasingly valuable assistance from the public: However, it is clear that there must be a greater, expanded public awareness of the seriousness and the demoralizing results of the wholesale distribution of filth to the children of this country, if we are to deal with this matter in a completely effective manner. It is my opinion that the greatest single need today is widespread and concerted public support of this program, which relates to such a remarkable degree to the welfare of each home in the country, and I feel, too, that an awareness on the part of the courts of the real dimensions of this situation is absolutely essential.

The principal problem facing the Post Office Department today in its efforts to clean up the mails is ruling upon the acceptance of material which is widely regarded as objectionable without violating leading court decisions, which obviously are more liberal in their definition of obscenity than are the views of many thousands of patrons of the postal service.

For example, certain nudist and other magazines are today granted second-class mailing privileges by the Post Office Department, consistent with Supreme Court rulings. Some of these second-class mailing permits are granted only after extensive litigation. in one such instance, the Department's refusal to grant a publisher of a magazine a second-class mailing permit resulted in a court decision holding that the law does not authorize the refusal of mailing privileges upon future, unpublished issues of a magazine, despite the fact that past issues contained allegedly obscene matter. Along with these decisions comes the inevitable, cleverly designed propoganda by dealers in filth, who will cite one or more of the less aggravated cases to argue that the Post Office Department is attempting to set up a censorship, to restrict freedom of expression, or to suppress the distribution of art.

While these allegations are so ridiculous as to require no denial, they point to the problem involved in attempting to meet our responsibilities as we see them, to an American public who, through their urgent and sometimes pitiful protests by the thousands, indicate quite clearly that they have no difficulty in distinguishing between filth and art.

Section 1461 of Title 18, USC, the obscenity statute, provides penalties for the mailing of "every obscene, lewd, lascivious, indecent, filthy, or vile article." Courts in interpreting the intent of Congress have stated in effect that (1) nudity in itself is not obscenity; (2) that a publication is not obscene unless the general content is devoted to what may be termed obscenity; and (3) that obscenity must be evaluated in relation to contemporary community standards. Thus, it appears clear that among such other legislative steps as may appear necessary, the intent of Congress as to what constitutes obscenity is essential, along with a public assertion as to the standards of morality for which it stands.

In spite of the frustrations and the legal complications, and even the court decisions, I feel a responsibility to the public to attempt to prevent the use of the mails for indecent material, and to seek indictments and prosecutions for such offenses, even though it may be argued that it falls in the category of material concerning which there have been previous rulings favorable to the promoters. It seems to me that only by this method can the dimensions of this problem become clearly established before the courts and the Congress and the American public.

The type of material to which I refer can be exhibited to this committee in great volume, and I invite the committee to visit the department for this purpose.

It is our intent to continue to pursue this program to the fullest extent of our investigative and other resources, and the genuine interest of the Congress and the House Post Office and Civil Service Committee, and this subcommittee in particular, has been, and I am sure will continue to be of tremendous assistance.

Is It Just?

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. McINTIRE. Mr. Speaker, the Cooperative Extension Service of the State of Maine periodically publishes a report entitled "Economic Facts Significant to Maine Agriculture."

Contained in a recent report was an article bearing the title of "Is It Just?" which vividly points out how potato farmers unjustly are the victims of their own productive genius. Because the theme of this article has application to the plight of all farmers in America, I submit it to the RECORD:

IS IT JUST?

William Schrumpf, agricultural economist, who does the deeper and more scientific digging into the economic facts and figures of the potato business for the University of Maine, has just come up with the information that in recent years farmers have averaged less for their potatoes (in real value) than they did back in those bad depression years before World War II.

This is true for the entire country as well as for Maine.

In dollars of 1951–57 value, the average price farmers of the United States received for potatoes in 1934 to 1940 was $2.59 a hundredweight. For 1951–57 crops the average price was $2.16. The price had dropped 43 cents a hundredweight.

Maine figures tell a similar story. Figured this way, the prewar price was $2.26. For the last 7 years it has averaged $1.89—a drop of 37 cents per hundredweight.

Comparable figures for a few States are (in 1951–57 dollars):

	Hundredweight		Price drop
	1934–40	1951–57	
Maine	$2.26	$1.89	$0.37
New York	2.84	2.02	.82
Idaho	1.74	1.67	.07
North Dakota	2.24	1.72	.52

Mr. Schrumpf points out, though, that yields have increased so much that the value of the crop per acre has increased while the value per hundredweight was dropping.

Here are some values per acre computed in the same 1951–57 dollars:

	Value per acre		Increase
	1934–40	1951–57	
Maine	$368	$463	$95
New York	219	380	161
Idaho	231	306	75
North Dakota	114	215	101
U.S. average	186	341	155

The yield increases that made the gains in value possible are:

	Hundredweight per acre		Increases	
	1934-40	1951-57	Hundred-weight	Percent
Maine	163	245	82	50
New York	77	188	111	144
Idaho	133	183	50	37
North Dakota	51	112	61	119
United States	72	158	86	119

AGRICULTURE NOT ALONE

What are the lessons to be drawn from all this? Undoubtedly there are many. But first it is worthwhile to remember that what has happened to and in potato production has, to varying degrees, happened to and in nearly all U.S. farming. There has been an amazing increase in productivity while the real value per unit of product has gone down.

We can all be proud of the increase in productivity. It has kept the wolf from the door. It has been indispensable to our boasted national material prosperity.

But at the same time, the figures show that agriculture has not shared equally in that mounting prosperity. That would be possible with this decreasing real value per unit of product only if agriculture's efficiency were increasing at a rate far faster than the progress of other industry. Proud as we are of agriculture's tremendous forward strides, the farming segment makes no claim to be outdoing others.

Frankly, figures like these show U.S. agriculture still suffering from a basic injustice—from a failure to be paid fairly in the marketplace for the work and fast mounting skills that it devotes to the national well-being. In many fields of farming just as in potatoes, agriculture has actually lost ground economically if you measure by whether farming returns have gained at a rate equal to that of the rest of the economy.

Captain Courageous

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, on May 8 former President Harry S. Truman will reach his 75th birthday. I take this opportunity to pay a personal tribute to Mr. Truman, whom I believe will go down in history as one of our great Presidents. He was truly a man of the people.

Championing the cause of the common man always brings sharp criticism from powerful special interest groups. Few Presidents during their terms of office had a more hostile press than Mr. Truman. Like other great Presidents, he was a target for all kinds of slander and abuse.

Other Presidents less strong, less able and courageous have been glorified by the special interests and by those who control the major sources of news and information. But history has a way of bringing out the truth and the real character of a man. I am sure that when passing time washes away, as it always does, the mud and whitewash from our Presidents, Harry S. Truman will stand high among our Nation's great.

With each passing day the stature of Mr. Truman grows. His rightful place as a people's President is assured. May he and his good wife enjoy many more years of health and happiness. He has well earned the respect and admiration that has so abundantly increased since he left the White House.

Under leave to extend my remarks, Mr. Speaker, I include herewith a salute to Harry S. Truman from the current issue of the Democratic Digest:

CAPTAIN COURAGEOUS

Among the great human assets of the democracy there stands out in living legend the sunny person of our party's premier statesman. He approaches his fourth quarter-century with the ebullience of a colt, the vigor of a champion, the warmth of—well, the warmth of Harry Truman.

Here in one keen intellect and roomy heart are personified the achievements and aspirations of the party, which pays tribute to him once more on this May 8th as he turns 75.

The Nation's debt to Harry Truman, the debt of free men everywhere, is vast. But he wears his honors, like his years, with no trace of pomp. Pride he rightly owns, but not vanity. Self-importance could hardly overtake a man who referred to himself, in the glare of adulation at the White House, as "the two-headed calf" and "the Cardiff Giant."

Nobody expects Mr. Truman at 75 to take to the rocking chair and enjoy a tame serenity among his memories. But what memories.

Of the Missouri boy, turned down by both West Point and Annapolis because of short eyesight, who fought in World War I as captain of artillery and wound up as Commander in Chief.

Of the county official who hoped to be a Congressman, and was drafted to run in 1934 for Senator instead.

Of the Senator, hotly challenged for renomination in 1940, who (in his own words) "went to bed defeated" on primary election night and was awakened in the middle of his sleep to be told he had won.

The memories shift to a larger arena. In 1944 Senator Truman was pledged to support James F. Byrnes for the vice presidential nomination, and was thunderstruck on being informed at Chicago that F. D. R. wanted him, Harry Truman, as running mate. He protested to National Chairman Hannegan "that I wanted to stay in the Senate, and that I would not take the nomination." Hannegan told Mr. Roosevelt by telephone, in Truman's presence, that "he had never been in contact with as mulish and contrary a man." F. D. R. said a few words about "letting the party and the country down in the midst of a war," and Mr. Truman yielded.

According to the late Harry Hopkins, Mr. Roosevelt had had his eye on Senator Truman for a long time. The record of the Senator's Defense Investigating Committee was good—he'd got himself known and liked around the country—and above all he was very popular in the Senate.

There came April 12, 1945, and an urgent summons to the White House. Mrs. Roosevelt, as Mr. Truman described it, "stepped forward and placed her arm gently about my shoulder, 'Harry,' she said quietly, 'the President is dead.' For a moment I could not bring myself to speak. 'Is there anything I can do for you?' I asked at last. I shall never forget her deeply understanding reply. 'Is there anything we can do for you?' she asked. 'For you are the one in trouble now.'"

Mr. Truman's lifelong self-education in history paid rich dividends now. His detailed familiarity with the lore of past Presidents, and of history in general both ancient and modern, gave him a perspective such as few if any other tenants of the office have possessed. This, and his experience as chairman of the Defense Investigating Committee, helped him to absorb quickly the many secret problems of war and world politics which came pressing upon him. Of these secrets the greatest was, of course, that an atomic bomb was in the works.

Vast events unrolled at a breathtaking pace. In a single 4-month period Germany surrendered, the United Nations Charter was signed at San Francisco with Mr. Truman in attendance, he met with Churchill and Stalin at Potsdam, A-bombs were dropped on Hiroshima and Nagasaki, Japan surrendered, and the President submitted in a message to Congress the 21 points of the doctrine that came to be known as the Fair Deal.

The decision to use the A-bomb was, Mr. Truman wrote later, "up to me. Let there be no mistake about it." The decision was supported by his top military, scientific, and governmental advisers, and by Winston Churchill. "I did not like the weapon," Mr. Truman said. "But I had no qualms if in the long run millions of lives could be saved."

The Fair Deal message went up on September 5, 1945. That date lives in Mr. Truman's memory as a symbol of "my assumption of the office of President in my own right. It was on that date and with this message that I first spelled out the details of the program of liberalism and progessivism which was to be the foundation of my administration." The years of uneasy peace were studded with presidential achievements. In his first term Mr. Truman took bold measures that kept the Communists from engulfing all Europe—the Truman doctrine, which rescued Greece and Turkey; the Marshall plan, which lifted free Europe from postwar despair to prosperity; the great Berlin airlift, a cosmic thumbing of the nose at Russian treachery. He brought about unification of the Armed Forces; improvement of social security; advances in civil rights; progress in slum clearance and housing.

The Republican-dominated Congress of 1947–48—the notorious 80th Congress—gave his progressive program little more than the back of its hand, for which the GOP was to get a well-earned comeuppance at the polls. The 80th passed the Taft-Hartley Act over a veto in which Mr. Truman called it "bad for labor, bad for management, and bad for the country." It passed, also over a veto, a tax-relief bill stacked in favor of the well-to-do. It rejected his plans for giving the farm economy more stability. It refused to let him control runaway prices.

HELL FROM A WHISTLESTOP

Then came 1948—a red letter year in any Democrat's memory book, and for Harry Truman a bona fide beaut. Almost everybody—press pundits, poll-takers, politicos—saw an easy victory for Dewey. But Harry Truman had other ideas.

In earlier days he hadn't considered himself much of a speaker. But as President his effectiveness on the rostrum improved—especially when he spoke without formal text. His 2 a.m. acceptance speech at the Philadelphia convention in 1948 was full of fight, and in a hard personal campaign he gave 'em hell before whistlestop crowds and larger rallies over an itinerary that exceeded 30,000 miles. After 356 speeches in 35 days, tearing into the iniquities of the 80th Congress and exhorting labor and farmers to repudiate it at the polls, he went home to Independence. The prophets still said Dewey.

In the late afternoon of election day he sneaked off to a resort hotel in Excelsior Springs, Mo., had a Turkish bath, a ham sandwich, and a glass of milk, listened by radio to the early eastern returns, which showed him a few thousand votes ahead, and went to bed.

TRUMAN VERSUS KALTENBORN

He woke up at midnight and heard H. V. Kaltenborn report Truman leading by about 1,200,000 but still about to lose the election. At 4 a.m., he recalled later, Kaltenborn had Truman 2 million ahead but was still betting on Dewey. It was 10:30 in the morning before the President got Dewey's wire of congratulation.

Although STROM THURMOND'S States' Rights Party made off with four Southern States, Mr. Truman won by 303 electoral votes to Dewey's 189. His popular-vote victory was 24,179,623 to 21,991,290. The prophets have never been quite as glib since, and the President's famous impersonation of Kaltenborn's voice of doom is one of the party's treasured mementoes.

President Truman's inaugural address in 1949 launched point 4—the program for technical help enabling other peoples to help themselves. The second term also saw creation of the Atlantic Pact and NATO, to give military cohesiveness to the free world. And it saw tragically, the Communist invasion of South Korea. The President's instant decision to resist that arrogant incursion was made with vivid awareness of Washington's refusal in 1931 to do anything about Japan's aggression in Manchuria. He felt that prompt action over Manchuria might have averted World War II, and that failure to defend Korea could bring on world war III. Historians tend to agree with him on both counts.

Memory, searching through the years, becomes a kaleidoscope.

"I only had one sweetheart from the time I was 6. I saw her in Sunday School at the Presbyterian Church in Independence * * * and afterwards in the fifth grade at the Ott School in Independence, where her Aunt Nannie was our teacher and she sat behind me. She sat behind me in the sixth grade, seventh, and high-school grades, and I thought she was the most beautiful and the sweetest person on earth—and I am still of that opinion. * * * I am old fashioned, I guess."

The oilfield enterprise he abandoned on going to war—which eventually panned out and could have made him a millionaire; election as grand master of Missouri Masons.

His devotion to music and books—Mozart, Beethoven, Chopin; Plutarch's Lives and Shakespeare and the Bible. (He had a little grudge against Dickens for "dimming the luster of one of the great Biblical names—Uriah" by creating "a character named Uriah Heep, a sniveling hypocrite.")

The loss of his haberdashery business when "old man Mellon's wringing-out process came along." (He and partner Eddie Jacobson eventually cleaned up all their debts.)

The Roosevelt funeral services at the White House, Robert E. Sherwood recalled: "When President Truman came into the East Room nobody stood up, and I'm sure this modest man did not even notice this discourtesy or, if he did, understood that people present could not yet associate him with his high office; all they could think of was that the President was dead. But everybody stood up when Mrs. Roosevelt came in."

The White House "back porch" that he installed over some shrill objections. The total rebuilding of the crumbling Mansion's interior. The attempt on his life while he was quartered across the street in Blair House.

The journey to Wake Island to talk with Gen. Douglas MacArthur; and, later on, the recall of MacArthur because of an inability to take orders from the Commander in Chief. But this could go on ad infinitum.

RETIREMENT

Harry Truman did not seek a third term, although the two-term amendment exempted him. He went into retirement, if you want to call it that. Wrote two fat volumes of memoirs, kept up a heavy schedule of correspondence and newspaper articles and public appearances (but declined a gridiron dinner invitation because "I will not sit at the same table with NIXON"), campaigned lustily for Adlai Stevenson, and became a grandfather—among many other things.

His party remains close to his thoughts. He wrote to Senator HUBERT H. HUMPHREY not so long ago: "I am always glad to do anything I can to help the Democratic Party, whether in marbles, money, chalk, or time."

At 75—or 85, or 100—Harry Truman will be a hard man to keep in a rocking chair.

On the Oregon Trail

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. PORTER. Mr. Speaker, the 20th century On to Oregon Caravan is rolling across country. As my able colleague the Honorable A. S. J. CARNAHAN, of Missouri, reported in the April 20 RECORD, the wagon train was given a proper sendoff by former President Harry S. Truman and hundreds of others, including several from Oregon's Fourth Congressional District.

Four planes carried On to Oregon Cavalcade officials to Independence, Mo. Two were furnished by the Morrison-Knudsen Construction Co. and two by the U.S. Air Force.

Traveling east for the departure ceremonies were Dick Smith, Roseburg, president of the On to Oregon Cavalcade; Eldon Caley, vice president; and Dr. Verner Anderson, secretary. With the group were three directors of the cavalcade, Alan Knudtson, Del Mobly, and Ivan Hoyer. Two Douglas County newsmen, both editors, made the trip to report back to readers. They were Charles V. Stanton, editor of the Roseburg News-Review, and Lowell Anderson, editor of the Drain Enterprise.

Oregonians fortunate enough to attend the Independence celebration saw the cavalcade wagons parade, heard Mr. Truman, participated in a buffalo barbecue and street danced. Sunday, the 19th, they joined the wagon train for a 6 a.m. breakfast and a church service. The wagons rolled westward shortly thereafter.

EARLY TREKS RECALLED

The modern wagon train trek evoked considerable interest. It also pricked memories and many Oregonians recalled stories of the early wagon train trips to Oregon.

One such story was written for Oregon papers last week by Howard Applegate, United Press International reporter, himself the great-grandson of Charles Applegate, who migrated to Oregon in 1843.

His report information was supplied by Mrs. Annie Applegate Kruse, of Yoncalla, Oreg., whose grandmother was in the 1843 migration.

YOUNG AND VIGOROUS AT 83

Annie Applegate Kruse, a young and vigorous 83, is active in community and political affairs of her State. She has a great zest for life. She has a good sense of humor. She is proof that age is no positive single basis for retirement.

Under leave to extend my remarks in the RECORD, I include Howard Applegate's report which appeared in the April 15, 1959, issue of the Coos Bay (Oreg.) World:

HUNGER, NOT INDIANS, BOTHERED OREGON TRAIL PIONEERS

(By Howard Applegate)

YONCALLA, OREG.—Not all the wagontrains which came to Oregon more than 100 years ago experienced trouble with the Indians.

Mrs. Annie Applegate Kruse, whose "grandmammy" crossed the plains in the great migration of 1843, said today not a single shot was fired in anger between white men and Indians on the covered wagon train which was among the first to bring women and children to the Oregon country.

She referred to the "Cow Column" train, captained by her uncle, Jesse Applegate, then 32 years old. Jesse and two of his brothers, Charles and Lindsay, traveled with their families on that train, which left Independence, Mo., in May of 1843 and arrived in what is now western Oregon about 6 months later.

Mrs. Kruse, a spry 83 years, holds in her mind a vivid picture of the trip as it was told to her by her grandmother, Mrs. Melinda (Charles) Applegate. She was 12 years old when Melinda died in 1888 and as a girl spent many hours listening to accounts of the migration.

FRICTION RECALLED

The "Cow Column" train had separated from other wagons after leaving Independence because of friction among those who had cows to herd on the trail and those who did not.

"There were about 1,000 persons in the cow column," she said, "including 280 men." Four oxen pulled each of the wagons.

"They took along an extra wagon loaded with flour and bacon," Mrs. Kruse said. "At Fort Hall they paid tribute to Indian chiefs who allowed them to cross their land."

At night, as her grandmother related to her, the wagon train would form in the familiar circle and Indian campfires could be seen in the distance. "They often came to the train seeking food."

DR. WHITMAN OFFERS PRAISE

But the food still was among the biggest problems confronting the 1843 pioneers. "The single men would ride ahead on horseback during the day and hunt food and camping sites. My grandmammy and her daughters gathered greens along the trail and cooked them at night. Dr. Whitman told her she had done more for the health of the train than anyone else."

The Dr. Whitman to whom she referred was Dr. Marcus Whitman, famed missionary who had settled near Walla Walla 7 years earlier. He had been back to Washington, D.C., and joined the 1843 pioneers at the Platte River, Mrs. Kruse said.

The trip had plenty of hardships despite lack of Indian fighting. Charles lost a wagon full of supplies when it overturned in a fast river. Tragedy struck the families

of Jesse and Lindsay Applegate after the party reached The Dalles on the Columbia. It was decided to build barges and float the wagons downstream. Then, before the present-day dams, the river was full of rapids. One of the barges capsized. Jesse and Lindsay each lost a 9-year-old son by drowning.

THROWN APPLES MISSED

Mrs. Kruse recalled a pathetic moment after the party reached Fort Vancouver, across from Portland. Food supplies by then had run short and a sailor on an anchored British ship threw down apples to a boat carrying members of the party across the Columbia. "Aunt Lucy (a daughter of Charles) was 13 at the time and missed catching the apples. There were hungry children in that boat. She never forgot that moment."

Mrs. Kruse's grandmother told her that at the end of each day Jesse would dictate to her an account of the day's trip across the plains. "But those notes were later lost," she said.

The Applegates spent that winter with Dr. John McLoughlin in Oregon City and later settled near Dallas. Charles and Jesse came here after the latter had helped locate the Applegate trail which went south from Fort Hall, Idaho, and crossed northwest Utah, northern Nevada, and the Klamath Basin into southern Oregon.

Mrs. Kruse, who said she'd like to go on this year's wagon train "if I felt a little better," recalled a humorous incident after her ancestors moved here.

"There was an Indian called Jollysides," she said, "who visited the log cabin. He had never seen a stove. When he came into the cabin he sat down on the stove. He never came back."

Remarks of the Governor of the State of Alabama Before the Civil Rights Subcommittee of the House Committee on the Judiciary at Hearings on Proposed Civil Rights Bills, Wednesday, April 22, 1959

EXTENSION OF REMARKS

OF

HON. GEORGE W. ANDREWS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. ANDREWS. Mr. Speaker, the Federal Government has destroyed 100 years of progress in race relations in my State of Alabama. The greatest part of this destruction was caused by agents of the Civil Rights Commission in their investigations last fall. On April 22, in testimony before the Civil Rights Subcommittee of the House Judiciary Committee, Gov. John Patterson voiced the objections of the people of Alabama to all Federal intervention, and I would like to include his speech in the Appendix of the RECORD:

Gentlemen, my name is John Patterson. I am Governor of the State of Alabama and I am presently serving a 4-year term which began January 19, 1959. Prior to that date I served as Attorney General of Alabama from January 18, 1955, to January 19, 1959. As attorney general I was the chief law enforcement officer of the State. As attorney general, and now as Governor, it was and is presently my duty to see that the laws of the State are properly administered and enforced, and that law and order is maintained.

I appreciate the opportunity to testify before your committee and I wish to thank you for permitting me to do so. I am here to express opposition to H.R. 3147, H.R. 3148, H.R. 4457, and the numerous other bills setting forth more or less similar proposals as those embodied in the bills enumerated.

First, I would like to state that we enjoy good law enforcement in Alabama. We have a clean State. We are free of organized vice and crime. Our State and local officials are carrying out their duties in a legal and proper manner. The laws are being enforced diligently, equally, fairly and impartially. Our citizens are law abiding and peaceful, and have a deep and abiding respect for law and order. Gangsters and hoodlums are not allowed to operate in the State of Alabama. Vice and corruption will be stamped out wherever it rears its head. The citizens of Alabama will not tolerate mob rule or mob violence in any form. We are making tremendous progress in Alabama in all fields and we are proud of it. I want to make it clear to you that I, as Governor of Alabama, guarantee that the laws will be enforced and that law and order will be maintained at all times. Our splendid record of law enforcement in Alabama speaks for itself, and if you gentlemen check you will find Alabama to be one of the cleanest States in the Nation. We in Alabama resent deeply any inference or accusation by anyone that we are not law-abiding people.

The relationship between the members of the FBI and our State and local officials has always been excellent. The FBI agents have cooperated to the fullest with our local law enforcement agencies in the interest of crime detection and law enforcement. The agents of the FBI have been courteous and cooperative at all times, but I cannot say the same for the agents of the Civil Rights Commission. They made no effort to cooperate with us, but, on the contrary, seemed to go out of their way to harass and intimidate our officials. They obviously were seeking publicity instead of facts.

I am proud to say that Alabama has an excellent public school system. It is one of the best in the United States. Relying on decisions of the United States Supreme Court prior to 1954, that separate but equal school facilities were constitutional, we invested billions of dollars in a modern, up-to-date public school system for both races on a segregated basis. Had the schools not been segregated, it would have been impossible to have had a public school system at all. The Negro schools are as good as the white schools and in many localities are better. Our Negro school teachers are well qualified and receive a higher average pay than the white teachers. The Negro has made tremendous progress in Alabama in recent years. No one can dispute that. In fact, the Negro has made more progress in the South in a shorter length of time than any other minority race in the entire world. However, now the advancement of the Negro is being hindered by the actions of the Federal Government in the field of race relations. If the present activities of the Federal Government continue along the course it has taken in recent years in trying to force integration of the races upon the people of the South, the Negro will suffer irreparable injury and the splendid progress that he has been making might well come to a halt.

We have always enjoyed good race relations in Alabama. The white and Negro citizens have worked together in harmony over the years for the betterment of our State. However, due to the school segregation cases decided by the United States Supreme Court in 1954 and subsequent Federal court decisions striking down as unconstitutional the State laws and city ordinances requiring segregation of races in public transportation, golf courses, swimming pools, parks, and beaches and other action taken by the Federal Government to force integration of the races in public schools, race relations have deteriorated to a sad state. Trust has been replaced with distrust and understanding with suspicion. The relations between the races in Alabama today are worse than at any other time in my lifetime. The breach between the races is widening every day and there no longer is any common ground upon which the leaders of the races can meet and work out their difficulties.

This unhappy state of affairs has been brought about by the questionable decisions of the Federal courts and other actions of the Federal Government. The Federal Government obviously encourages the activities of race agitators and such organizations as the NAACP, who have done nothing for the Negro in the South, but, in fact, have seriously damaged his cause. Good race relations can be brought about only by local people working together in a spirit of cooperation and good will without outside intereference and agitation. The customs, mores and traditions of the people cannot be swept away overnight by legislation, court decrees and Federal troops. The instruments to force integration of the races upon us, which are embodied in these so-called civil rights bills pending now in Congress, will be as ineffectual as trying to sweep the ocean back with a broom. The people will not do that which their conscience tells them not to do. In the final analysis that which the overwhelming majority of the people want will be the law of the land.

No one can question the fact that the people of the South have dealt with the race problem with more patience and tolerance and good will than any other people on earth who have had a similar problem. The people of the South should be commended for the manner in which they have handled this problem. We should not be condemned by those who attempt to sit in judgment over us who know nothing of our problems and who have far more serious race problems in their own localities which they have not attempted to solve. I do not feel qualified to sit in judgment over the citizens of the State of New York or Illinois. They have far greater race problems, in my own opinion, than we do in Alabama. I feel that they are better qualified to handle their own affairs without interference by me.

If the Federal Government continues its present course of trying to force integration of the races in public schools in Alabama and in other States of the South, the relations between the races will grow worse and our public school system will be destroyed. The citizens of my State will not tolerate or support an integrated school system. If the Federal Government attempts to integrate our schools by force, we will have chaos, disorder, possible violence, and we will be forced to close our schools. If such occurs it will be a calamity. Our Nation will lose in the long-run because our children will suffer the consequences. The people of Alabama will turn to private schools. In fact, moves are underway already to do so, and if such occurs the Negro will find himself in a very bad position. The overwhelming majority of the Negro citizens are opposed to the integration of the public schools in our State, and they realize better than anyone else that their schools will be destroyed if the Federal Government continues to press for integration. Most white citizens could afford a private education, but few Negroes could do so. In spite of this threat of destruction of our schools, we are going ahead in Alabama and embarking upon a new and progressive school program for the coming 4 years, trusting that our national leaders will see the error of their ways before it is too late, and not

destroy our school system. However, I want to make this clear—the citizens of Alabama will scrap their public school system rather than submit to integration of the races.

The operation of public schools is purely a local function. The Federal Government has no authority to interfere with the State and local governments in the operation of their public schools. Our schools are financed chiefly by State and local funds, and no school can survive and carry out its proper function of giving the students the best education possible without the support and good will of the citizens in the community where the school is situated. The proposals set forth in H.R. 3147 and S. 810 constitute an unwarranted interference by the Federal Government in the domestic affairs of the States. Such interference can only lead to disorder, chaos, distrust, and disintegration of the school systems. This is just another example of the unlawful encroachment of the Federal Government into a field reserved exclusively to the States.

Even though these bills are aimed at the South today, every person in the United States should be worried and concerned, for there is no end to these types of force measures once the barrier is let down. The proponents of these bills are today trying to ram integration of the races down the throats of the southern people, but tomorrow they will be trying to use the same devices to ram something else down the throats of citizens of other sections of the Nation. When the Federal Government arrogates unto itself powers such as are proposed in these bills and attempts to take away the right of the citizens to manage their own local schools, every individual in the Nation suffers and loses a little more of his freedom.

No school could possibly operate and benefit the students with such interference as is proposed in S. 810, H.R. 3147 and related bills. H.R. 3147 and S. 810 attempt to give the U.S. Attorney General power to force integration of the races in the public schools through the courts. If you pass this bill and the Attorney General attempts to carry out its provisions, public education in Alabama will come to an end. You will destroy our public schools. You must bear the responsibility. The power which H.R. 3147 and S. 810 attempt to give the Secretary of Health, Education, and Welfare constitutes an unwarranted meddling in our domestic affairs. We do not want or need his help in operating our schools. The bill seems to be an attempt to pay us to integrate. We cannot be bought. There is not enough money in the world to get us to integrate our public schools. Surely the Federal Government does not intend to operate and finance our schools. It has no authority to do so, and in any case such a plan would result in utter failure.

The constitutionality of section VI of said bills which authorizes the U.S. Attorney General to institute legal action to vindicate rights of individuals or legal action against individuals to redress alleged wrongs is questionable. Similar provisions of the Civil Rights Act of 1957 were struck down as unconstitutional by a Federal court in Georgia last week. In any case, this attempt to give the Attorney General such broad and sweeping powers is contrary to our laws and borders on socialized law. This provision attempts to put the Attorney General in the position of practicing law on behalf of individuals and is another example of the encroachment of the Federal Government onto the rights of the citizens.

It is fundamental in our law that every individual who wishes to accuse his neighbor must stand up and make his accusations publicly. Every accused has a right to be confronted by his accuser. One reasons for this is that a person is less likely to bring false or malicious charges against another if he must make his charges openly and in the eyes of the public; however, this bill is designed to make it possible for individuals to bring their charges and not disclose their identity and not have to account to the community for their conduct. Such a law would not be in the best interest of the people of this Nation and is contrary to the principles of American jurisprudence. It smells of a secret police force where the citizens inform on each other to the Government and where the citizen accused may never know who his accusers are nor even what he has been accused of. This portion of the act comes very close to creating a Gestapo system.

I am opposed to the passage of S. 810, H.R. 3147, H.R. 3148, H.R. 4457,, S. 955, and other similar and related bills, and I urge this committee not to give these measures favorable consideration.

I am absolutely opposed to the extension of the life of the Civil Rights Commission created under the Civil Rights Act of 1957 or the establishment of any new Civil Rights Commission. S. 960, S. 435, and H.R. 4457 provide for the extension of the life of the Civil Rights Commission. The recent actions of the Civil Rights Commission seriously damaged race relations in the South and further injured the already strained relations between the Federal and State Governments. The Commission failed to do anything constructive, but, on the contrary, further widened the breach between the races. The action of the Commission in Montgomery, Ala., was reprehensible. It harassed and intimidated our State and local officials. It attempted to sit in judgment over the manner in which our officials conducted their offices. It interfered with the operation of our courts and our judicial officers. The actions of the Commission have made it difficult to get people to want to serve in public office. In fact, due to the actions of the Commission we do not have a board of registrars in one county and are finding it difficult to get responsible people to want to serve on this board and on boards in other counties.

The Commission attempted to arrogate unto itself powers which it did not and could not constitutionally possess. It claimed to be a roving grand jury with the powers of a common-law grand jury—a position absolutely untenable. We all know that the grand juries came from the English common law and belonged to the people. Historically, the grand jury has served two purposes—first, to investigate and indict for crimes; and, second, to protect the people from tyrannical actions of the government. The Commission attempted to go on fishing expeditions in the records of judicial officers, and it subpenaed our State officials to hearings in Montgomery, Ala., and put them on the witness stand under spotlights and before batteries of nationwide television cameras. No room or seats were provided in the hearing room for counsel of the public officials and the Commission would not even allow attorneys for the officials to make objections. In effect, the State officials were placed on trial and publicly harassed and intimidated. The Commission attempted to go far beyond its factfinding powers, and the hearings were conducted in a circuslike arena, and no semblance of due process was accorded our State officials.

I want to make it clear that our officials have done nothing wrong and have carried out their duties in a legal and proper manner. I know this to be a fact. They have treated both white and Negro equally, fairly, and impartially. They have nothing to hide. They resented the unwarranted and unlawful actions of the Civil Rights Commission. They felt as I felt, that we could not as citizens of this country sworn to uphold the Constitution and the laws of this Nation, stand idly by and allow the Civil Rights Commission to trample on our rights and attempt to exercise power not granted to it by the Constitution or any law.

I wish to point out that members of the Board of Registrars in Alabama are judicial officers and constitute a part of the judicial branch of the government. The attempt on the part of the Civil Rights Commission, an agency of the executive branch of the Government, to seize the voting registration records and interfere with these judicial officers was an unconstitutional encroachment by the executive branch on the judicial branch. Under the laws of Alabama, as in most States, if a person is refused the right to register to vote by the board of registrars upon proper application, he can appeal to the circuit or district court, where he will receive a trial. In Alabama he can appeal within 30 days and is entitled to a jury trial. If he loses in circuit court he can appeal to the State supreme court. If he loses there, he can appeal to the U.S. Supreme Court. In all cases the rights of the individual are protected, and through the courts, and that is as it should be. I know of only one such case during the last 5 years in the whole State of Alabama where a person has appealed the decision of a board of registrars and that was a white person. The U.S. Supreme Court has held that class actions cannot be brought to vindicate voting rights and that each individual case must stand on its own facts.

In view of these decisions, the purpose of the civil-rights legislation becomes obvious. It is to use the injunctive device to force the Boards of Registrars to register large groups of Negroes whether they are qualified or not. This use of the injunction to force registration of Negroes is designed to get around the prohibition of class actions in voting cases. Congress and the Federal Government is trying to do in this manner what the courts have held cannot be done. This action on the part of the Federal Government in interfering with our registration machinery is nothing more than an indirect attempt to force integration of the races upon us. In bringing actions to force county Boards of Registrars to place the names of Negroes on the voting lists, US ht e.A .tt Cawan ie the voting lists, the U.S. Attorney General is attempting to substitute his judgment for that of our State officials charged with the duty of passing on the registration of voters.

If the Federal Government continues its present course, a breakdown in our whole election machinery might result. The actions of the Federal Government in this field are only creating a feeling of bitterness and hostility between the State and Federal governments. I can see no useful purpose to be served by the continuance of the Civil Rights Commission, and I strongly urge the committee not to give favorable consideration to the extension of the life of the Commission.

I am strongly opposed to the passage of the pending measure designed to prohibit any opposition to Federal court decrees pertaining to school integration. Adequate laws are now on the books for courts to enforce their decrees. It is obvious that these measures are aimed at ramming integration down our throats and gagging us so that we go to jail if we raise our voices in protest. I doubt the constitutionality of these bills, and if anyone thinks that such measures would bring about integration of the schools of Alabama, they are sadly mistaken. It seems strange to me that anyone would advocate such a measure and not include prohibitions against obstruction of all types of court decrees, including labor decrees. The fact that these measures are restricted just to integration decrees shows that it is punitive legislation, political in nature, malicious and

aimed at destroying the customs and traditions of the people of the South. The manner in which the bills are drawn shows that it is just another crude attempt to use the South as a whipping post for political reasons.

Alabama, as well as all States, has strong laws punishing persons convicted of willful destruction of public and private property. Any person apprehended for committing such an offense in Alabama will be prosecuted and punished to the full extent of the law. There is no necessity for additional Federal laws in this area. It should always be remembered that law enforcement is a local problem and is largely a matter of local responsibility. We are carrying out our duty in reference to enforcing the law and we do not need any more Federal interference.

Under Alabama law any person who willfully sets off or explodes dynamite or other explosives in, under, or near any public or private building which is inhabited or occupied by another person shall on conviction be punished at the discretion of the jury by death or imprisonment in the penitentiary for not less than 10 years (title 14, sec. 123, Code of Alabama, 1940). If the public or private building is not occupied by another person, upon conviction the accused would be subject to imprisonment in the penitentiary for not less than 2 years nor more than 10 years. These laws are adequate to protect the lives and property of the citizens in this State, and I assure you they will be strictly enforced. Title 18, section 1073, U.S.C.A., as amended April 6, 1956, chapter 177, section 1, 70th Statutes at Large, page 100, provides as follows:

"1073. Flight to avoid prosecution or giving testimony. Whoever moves or travels in interstate or foreign commerce with intent either (1) to avoid prosecution, or custody or confinement after conviction, under the laws of the place from which he flees, for murder, kidnaping, burglary, robbery, mayhem, rape, assault with a dangerous weapon, arson punishable as a felony, or extortion accompanied by threats of violence, or attempts to commit any of the foregoing offenses as they are defined either at common law or by the laws of the place from which the fugitive flees, or (2) to avoid giving testimony in any criminal proceedings in such place in which the commission of an offense punishable by imprisonment in a penitentiary is charged, shall be fined not more than $5,000 or imprisoned not more than 5 years, or both.

"Violations of this section may be prosecuted only in the Federal judicial district in which the original crime was alleged to have been committed or in which the person was held in custody or confinement. As amended April 6, 1956, chapter 177, section 1, 70th Statutes at Large, page 100.

This statute has proven very helpful to us in apprehending felons who commit crimes in one State and flee to another to avoid prosecution. This statute enables the FBI to enter a case when the felon has fled from the State where the crime was committed and assist in apprehending the felon who is usually returned to the State where the crime was committed for prosecution.

There is pending at the present time before the Committee on the Judiciary in the Senate, bill S. 124, which is designed to amend title 18, section 1073, supra, so as to include within said section crimes involving the "willful destruction or damaging of any building or structure." I do not know what the attitude of the U.S. Department of Justice will be toward this amendment; however, I feel that S. 124 should be given favorable consideration. Such an amendment would be helpful to us in bringing persons to trial in the State courts who might unlawfully destroy or damage public or private buildings and flee from the State to avoid prosecution. Such an amendment will enable the FBI to assist us in tracking down the guilty parties and returning them to the State for prosecution.

In conclusion, I wish to state that I do not think that the aforementioned so-called civil rights bills are in the interest of the citizens of this Nation. They will certainly do nothing to better the lot of the Negro citizens in the South. They are not in the interest of national unity or solidarity. They are not in the interest of eliminating crime. They will bring further chaos and disorder and possible violence to the South. They will destroy our public school system. The brief history of the operations of the Civil Rights Commission in the South has proven that it has utterly failed.

I urge that these so-called civil-rights measures be given unfavorable consideration by your committee.

In 1957 I testified before the House Judiciary Committee in opposition to the so-called civil-rights bills pending at that time and many of them were similar to the bills before us today, and I stated at that time:

"It is my opinion that if these so-called civil-rights bills are passed and the Attorney General of the United States proceeds to enforce them in the terms that they are written he will meet with failure. There will be considerable discord and unrest. We will have a reluctance on the part of State, municipal, and county officials to want to serve in office if all of their actions are reviewed by the Attorney General of the United States and by the Federal district courts. I doubt the wisdom of giving the Attorney General of the United States and the district courts this tremendous supervisory power over our State and county officials."

What I had to say then in reference to the creation of a Civil Rights Commission came to pass. I reiterate and reaffirm that statement again today. I do not claim to be a prophet; however, I do feel that I know the feelings of the overwhelming majority of the people of my State, and I have tried today to convey to you their feelings and the facts as I believe them to exist. I believe that it is my duty to speak to you truthfully and frankly and that I have done to the best of my ability.

Thank you.

Passover

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. WOLF. Mr. Speaker, today is the first day of Passover. It is celebrated by the Jews for it marks their deliverance from Egypt by Moses. Through the generations the Passover has taken on even greater significance. It has become a solemn reminder of the struggle of a people for intellectual and religious freedom against oppressors whether their names be Pharaoh, Torquemada, Hitler, or Stalin. Passover should be a solemn reminder to all of us whether we are Christian or Jew to fight against oppression and bigotry while championing the cause of freedom, equality, and justice for all men regardless of race, creed, or color.

Federal Crop Surpluses Not Due to Irrigated Acreages

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, April 23, 1959

Mr. NEUBERGER.. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful and persuasive editorial from the Oregon Daily Journal of Portland of April 20, entitled "Our Surpluses Are From Dry Land." This able editorial effectively punctures the old argument that Federal reclamation projects contribute to national crop surpluses. It quotes La Selle E. Coles of Prineville, Oreg., national vice president of the National Reclamation Association, to the effect that the surplus commodities such as cotton, corn, and wheat do not result from impounding water and diverting it to the soil.

I believe this editorial should be printed in the RECORD for the information of both friends and foes of the Federal irrigation program.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR SURPLUSES ARE FROM DRY LAND

When La Selle E. Coles, of Prineville, vice president of the National Reclamation Association, finished speaking at the Portland Chamber of Commerce forum the other day, a member rose and asked why, in the face of tremendous agricultural surpluses, it is necessary or wise to bring additional lands under irrigation.

Coles had already answered the question, but the fact that he needed to repeat his answer is indicative of the high degree of misunderstanding which exists in the minds of many people. And his explanation deserves wider distribution than is possible in a single audience.

Most of the crops which are in surplus, such as wheat, corn, short-staple cotton, and tobacco, come from dry lands, he said. Overproduction of these commodities is not the result of putting more water on our soil.

The fact is, additional reclamation in many instances removes some of these lands from the production of surplus crops. Irrigated land is of too high value to be devoted to wheat, for example.

The crops which come from irrigated land are mostly those needed for human consumption and are not in surplus. The rapid rate of population growth insures an expanding market. At the same time tremendous acreages of agricultural land are being removed from production by the spread of cities and towns, the construction of freeways, military bases, and other land-consuming installations. Reclamationists are convinced there wil be no letup in the need to bring life-giving water to more and more western lands.

Portland's stake in this is clearly seen, for the wealth which has been brought to eastern and central Oregon, eastern Washington, and southern Idaho through reclamation is an essential part of the wealth of a region which is Portland's trading area.

Many smaller Oregon communities close to irrigation projects owe their economic well-being to the existence of these projects,

and so does Portland. Our own Willamette Valley, as well supplied as it is with rainfall, will not reach its full agricultural potential without irrigation.

Coles and other reclamationists believe that the soundness of reclamation's future lies in the establishment of what they call a Pacific Northwest account plan whereby power revenues from Federal projects could be used on a regional basis to help pay reclamation costs.

This is a question which we have not fully resolved in our own minds, but no one in this city should have any doubts as to the part which reclamation plays in our own economic good health and as to the need in turn for the future good health of reclamation.

John Foster Dulles

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. AUCHINCLOSS. Mr. Speaker, there is not much more that can be said about the great loss our Nation has suffered and, indeed, the entire civilized world by the resignation of John Foster Dulles as Secretary of State, but I cannot resist the temptation to express my feelings concerning this great man, and his service to our country. I have known Foster Dulles for a number of years, and was not at all suprised that a man of his great attainments and consecration to duty should finally be recognized as the outstanding statesman that he is. He came to the service of the Government with an extraordinary mind, keen perception and knowledge of human nature, trained in the law and experienced in human relationships. He gave of these talents unstintingly and without reserve and with it all showed a determination and a spirit of courage which will always be an inspiration to everyone. The record shows clearly that he was highly respected by those who were in disagreement with him because of the incisiveness of his arguments, backed by a determination and conviction of the righteousness of his cause, he became unconquerable in the field of diplomacy. It would be hard to find any former Secretary of State with such a positive and strong personality and there is no man in the history of our country who ever even approached the same wholesome, determined and brave spirit which he has shown so conspicuously.

At the same time during this period of change, men and women everywhere who believe in the cause of freedom and justice may take heart in the knowledge that Christian Herter is a worthy successor to Foster Dulles. Practically all his life Christian Herter has been engaged in the operations of international diplomacy and political activity and because of this training he brings to the Office of Secretary of State a contribution which is unique and of great significance.

It is not often that a Secretary of State is endowed with the qualities that Mr. Herter has and his lifetime experience brings much confidence to the future handling of our international affairs. Cordell Hull was a great Secretary of State because he was a keen politician though he was not noted for his knowledge of diplomacy. Dean Acheson was blessed with an agile mind trained as a lawyer and was proficient in international law but as a politician he did not qualify at all. Even Foster Dulles, great Secretary of State that he was, never had the politician's training others have had and certainly he is not to be compared with Christian Herter in that category. The new Secretary of State was at one time a member of the State Legislature of Massachusetts and speaker of the house; a Member of the U.S. House of Representatives for 10 years; Governor for two terms of the Commonv ealth of Massachusetts; an active member of former President Hoover's Food Administration in the distribution of relief after World War I. A constant student of international problems all over the world and endowed with a brilliant mind and a sterling character, he will protect the best interest of our country and will promote the cause of peace with honor throughout the world.

Employment of the Handicapped

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. EDMONDSON. Mr. Speaker, recently a young high school student in the Second Congressional District of Oklahoma, which I represent, received an award for writing an essay entitled "Hiring the Handicapped in Our Town". This young lady, Miss Conchita Cantrell of Stigler High School, has done a beautiful and moving job of capturing in words the spirit of her subject and pinpointing to her own community not only the contributions of the handicapped, but also the need for more fully utilizing their abilities and for providing them with greater opportunities.

Due to the high merit of this essay, I should like to insert in the RECORD at this point an article which appeared in the Oklahoma Legionnaire for April 1959. This article includes the text of this essay by Miss Cantrell, and I personally recommend it as being good reading for anyone.

EMPLOY THE HANDICAP LEGION AWARD WON BY STIGLER GIRL

Miss Conchita Cantrell, Stigler High School student, was named third place winner of the Governor's committee on employ the handicapped statewide essay contest to be the recipient of the American Legion's $100 bond.

A number of organizations in Oklahoma provide the incentives for high school students to participate in the Governor's committee contest of which the American Legion awards a $100 bond to the third place winner.

Department Commander Tom B. Clark presented the bond to Miss Cantrell at a meeting of the contest winners and the Governor's committee in the Blue Room of the State capitol on March 25.

The American Legion salutes Miss Cantrell for the outstanding essay which reads as follows:

"HIRING THE HANDICAPPED IN OUR TOWN

"The name of our town is Stigler, and we are its people. Although our town is small, we have our share of the disabled. Most of us are beginning to understand that it doesn't matter what a person has lost, but it is what he has left that counts. It is the beginning of a new era for us, as well as for the handicapped. Once these impaired people could not get a job; instead they had to depend on charity which no one enjoys. Today, they can pay their own way. Most of us in our town are giving the handicapped a chance to live a normal life. These people came to us not asking for pity, but for a chance to prove their ability to compete with others.

"As people come to our town, they see our handicapped at work. They see that in charge of the meat department in our largest super market is a young man disabled by polio. They go to our school and see that one of our teachers has a crippled arm. When they go into the court house, they see that our county clerk is handicapped with only partial use of both legs. Until recently our State senator was a man who suffered a severe spinal injury causing him to be paralyzed in both legs. The voters in our district showed their belief in his ability by electing him to this office until his death. Yes, anyone can see that in Stigler the handicapped are taking their rightful place in society.

"Someone passing through our town might ask us why we hire the handicapped. In reply we say, 'As the blind, the deaf, the crippled, and the mutes come to us, we know they are people.' Maybe fate has made them different in some respects, but they are people that must earn a living, too.

"We put the disabled to work. Soon we discovered that they are among our best employees. We couldn't ask for more loyal, courageous, or determined workers. Their work means everything to them; nothing is good enough but their best. These people are not only good workers but also good people. For most of them, their disability did not take from them their happiness, hope, or faith in God.

"Then after answering the visitor's question, we in turn ask one, 'Why shouldn't we hire the handicapped?' Not many can give an acceptable answer.

"Most of the people in Stigler know that there is no reason why we should not hire the handicapped. To us these people have proved themselves fully capable of doing the job they have been trained to do and doing it as well as anyone. We feel that we are doing ourselves a favor by hiring these brave people who we admire.

"In spite of the good qualities of the handicapped, there are some in our town who will not hire the disabled worker. These people are still blind to the fact that the handicapped are capable. As time goes on, more and more of the people of this town will wake up and see the opportunity of acquiring qualified and capable workers in the handicapped. Then more people will hire them. Soon everyone will know that the handicapped are no longer helpless people. They will see just how much our handicapped are contributing to the American business, science, politics, and American way of life.

"To the people in our town who will not hire the disabled, we say, 'We are all a part of a great nation which was founded on the belief that all people are created equal. Who has the right to turn away one of these less fortunate than we just because that person cannot walk, talk, hear, or speak? Ability is not measured by physical qualities alone but by a person's capability and determination to succeed.' "

Consecration of New Methodist Church at Kingston, Pa., Replacing One Destroyed by Fire 2 Years Ago

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of Saturday, April 18, 1959, and a newsstory from the same newspaper on Monday, April 20, 1959:

[From the Wilkes-Barre Record, Apr. 18, 1959]

CHURCH CONSECRATION

A chief event on Wyoming Valley's religious calendar is scheduled for tomorrow. Members and friends of First Methodist Church of Kingston will have the satisfaction attending the consecration of the new edifice. It is a triumph of abiding faith and generous giving.

The beautiful Georgian colonial structure, built at a cost of nearly $700,000, replaces a building destroyed by fire on February 5, 1957. From the beginning supporters of the church have never faltered in their determination to build a new home worthy of the proud history and enduring service of the congregation. As a result the edifice represents architecturally the last word in its field.

At the services tomorrow, the first of a series continuing all next week, will be those recalling that the congregation stems back to 1790 when a small band of Christian people worshiped in homes and barns of members. The first church built in 1841 was destroyed by fire in 1872. A new church was dedicated in 1874 and lasted until the fire of 1957. The congregation has worshiped in Nelson Chapel of Wyoming Seminary while the new church was being erected.

The new edifice will be consecrated on Sunday with the minister, Rev. Dr. Alfred L. Crayton, preaching at 9:45 and Bishop Fred Pierce Corson, head of the Philadelphia area, consecrating the church at 11:15.

Many must share the credit for the successful reconstruction effort. Among other leaders, Arthur L. Strayer, building committee chairman, had the untiring support of many loyal aides.

[From the Wilkes-Barre Record, Apr. 20, 1959]

NEW CHURCH AT KINGSTON CONSECRATED—BISHOP F. P. CORSON OPENS METHODISTS' WEEK-LONG PROGRAM

Kingston Methodist Church congregation yesterday morning opened and consecrated its new church on Market Street. A capacity attendance of members and friends participated in the opening services of a week's program of consecration.

The congregation began its 9:45 a.m. service at Nelson Chapel of Wyoming Seminary, where it has worshiped since the church was destroyed by fire on February 5, 1957. After a hymn and prayer, a procession was led by clergy, church officials, and the choirs to the new church. An opening ceremony was held at the main entrance.

Bishop Fred Pierce Corson, of Philadelphia area, together with Dr. Wilbur H. Fleck, chairman of the trustees, and Arthur Strayer, chairman of the building committee, participated in the act of consecration at the 11:15 service. A large class of young people and adults was accepted into membership at the early service, and infants were baptized at the 11:15 service.

Speaking about the sacrifice of all who had part in building of the new church, Bishop Corson asserted responsibilities make things, such as a new church, much better.

He told the congregation, "What you have done is another symbol of the hope of the world. The most important institution in the world is the church of Jesus Christ.

"Unless we live up to our responsibilities, there is no hope," the bishop declared.

The church was filled to capacity for both morning services. Some of those attending sat in rooms near the sanctuary and heard the service over a public address system.

Rev. Dr. Alfred L. Crayton, pastor, preached on God's temple at the 9:45 service. Quoting the Apostle Paul as saying, "Ye are God's temple," he reminded the congregation that Paul at that time was critical of the people of Corinth for having split into factions, forgetting Christ. The minister said, "We now have a beautiful building, and it is up to us to make it a church."

Rev. Dr. Crayton thanked people of the community of all faiths who gave to the church at the time of the 1957 fire. He noted that at a time of emergency, people forget about differences and aid the afflicted persons.

Rev. Dr. Crayton led the call to worship at the early service. Rev. Dr. Milton F. McKenney, associate minister, read the responsive reading and Rev. Dr. Ralph W. Decker, president of Wyoming Seminary, read the Scripture lesson. Pastoral prayer was by Rev. Dr. Leon W. Bouton, Wilkes-Barre District superintendent.

Rev. Dr. Decker gave the call to worship at the 11:15 service. Rev. Dr. McKenney led the responsive reading and Rev. Dr. Bouton read the New Testament lesson. Rev. Dr. Norman W. Clemens, superintendent of Binghamton District, gave the pastoral prayer.

The choirs sang special music at both services, the Junior Choir singing "Thanks Be to Thee" by Handel and the combined choirs singing "Psalm 150" by Franck. The quartet sang "How Lovely Is Thy Dwelling Place" by Brahms at the 9:45 service. Arlene Biesel Rood was organist and Helen Harding was pianist.

Knights Templar service of worship was held last night at the church with a capacity attendance. Rev. Dr. Crayton, grand prelate of the Grand Commandery of Pennsylvania, preached the sermon on "Bless the Lord, O My Soul." He stressed the importance of home, church and school, all of which are supported by the Knights Templar as part of their principles.

Approximately 120 uniformed Knights Templar from seven commanderies as well as members of the auxiliary and 40 DeMolay members in their capes attended the service. David M. Schooley, potentate of Irem Temple, and his Divan were present representing the Shrine.

A 40-piece band directed by Peter J. Kleinkauf played an offertory, the processional and recessional. Rev. Dr. Bouton gave the call to worship. William L. Laude, PC, prelate, led the responsive reading. Greetings were extended by B. Everett Lord, commander.

Walter Marriott, Jr., representing Susquehanna chapter, Order of De Molay, presented Christian and American Flags to the church.

Those at the service included Robert W. Michael, Scranton, right eminent grand commander, Knights Templar of Pennsylvania; Mark L. Raymond, grand marshal; Peter G. George, commander of 11th division; Frank T. Ely, commander of 13th division; Harry Younger, commander of Coeur de Lion Commandery, Scranton; Russell Radler, commander of Wyoming Valley Commandery, Pittston. B. Everett Lord, commander of Dieu le Veut Commandery and also an accepted supply in the Methodist church, pronounced the benediction.

Service of prayer and thanksgiving will be held tonight at 8 at the church. Rev. Dr. McKenney will preach the sermon at the worship which will be followed at 8:45 by a reception in the fellowship hall. Members of Methodist Churches in Wyoming Conference, former ministers of the Kingston Church and district superintendents will be special guests. Official board members will be hostesses at the reception.

Community day in appreciation of gifts and services will be held Tuesday. Service will be held at Wyoming Seminary Chapel at 11 a.m. Public tours of the new buildings will be held at 7:30 p.m., and a reception will be held at 8:15 in the fellowship hall.

Greetings will be extended at the reception Tuesday by Rev. Dr. Crayton. Responses will be by Rev. Herbert E. Pickett of Kingston Presbyterian Church, Rabbi Abraham D. Barras of Temple Israel Synagogue and Rev. Dr. Decker. Special guests will be representatives from Wyoming Valley Churches of all faiths, trustees of Wyoming Seminary, Independent Hose Co., and Columbian Hose Co. members. Building committee and trustees will be hosts and the Women's Society of Christian Service will be hostesses.

Return Visit

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria, Ill., Journal Star:

RETURN VISIT

What may have much more effect than a summit conference in the improvement of relations between Soviet Russia and the United States is the visit Vice President NIXON is going to pay to Moscow in July.

The Vice President ostensibly is going to Russia to officially open an American national exhibition but his visit is likely to have a much greater impact than that.

It is, in essence, a return of the visit Deputy Premier Mikoyan paid to this country a few months ago and which both Russia and the United States must have considered a success. It is unlikely that the Russian man in the street will have as much contact with Mr. NIXON as Americans had with Mikoyan or that the Vice President will be given as free an opportunity to contact Russians as Mikoyan had in this country. He will be able, however, to form an impression of Russia which he can't gain reading official reports in Washington and the very fact that some Russians will meet the United States

No. 2 man should be helpful in an improvement of relations.

The Vice President will be a more effective public servant for having come in close contact with Premier Khrushchev and the hierarchy of the Kremlin.

The possibility that a visit to Russia will help his presidential chances also probably played a part in the decision to send him there. Senator Humphrey got quite a bit of mileage out of his chat with Khrushchev; Nixon might reap a similar profit.

It is a good idea, anyway, to send a high official to Russia as long as we are conducting diplomatic relations with them. The NIXON visit may help to prepare the way for the summit conference, not that anyone should expect much to result from that.

Mr. NIXON and the United States and possibly Russia all should profit from his visit to the Red capital. If they all come out ahead the cause of peace will have been advanced.

Firm Bipartisan Berlin Policy Already Paying Off

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. STRATTON. Mr. Speaker, the other day, together with other members of the House Armed Services Committee, I returned from an inspection trip of our military defenses in Western Europe, Western Germany, and specifically Berlin, with a view toward surveying our readiness to meet any developments that may occur as a result of the May 27 ultimatum which the Soviet Union has directed against us.

Because the Berlin situation is such an important matter in our overall foreign policy, it may be that some members of this House would be interested in the observations of one member of this group. For that reason, I request unanimous consent to insert an article which I published recently on this Berlin trip and on my views as to the effectiveness of American policy toward Berlin in the Appendix of the RECORD.

FIRM BERLIN POLICY PAYING OFF, RETURNING REPRESENTATIVE SAYS

(NOTE.—Representative STRATTON, former mayor of Schenectady, has just returned from a flying trip to Berlin. With nine other members of the Armed Services Committee, he went to get a first-hand look at the crisis area. The Congressman is unusually qualified to write this exclusive report for NANA. He is a military intelligence expert. A combat intelligence officer on the staff of Gen. Douglas MacArthur during World War II, he was recalled to teach at the naval intelligence school during the Korean emergency.)

(By Hon. SAMUEL S. STRATTON, Representative from New York)

Berlin is a fantastic city. Four days there and I came away convinced that the status quo can be beautiful. I returned not only impressed by the high degree of training of our troops in Germany, but also by the obvious fact that the American policy of standing firm is the soundest possible policy and is in fact already paying dividends.

There's far less agitation about the Berlin crisis in Berlin than in Washington. But this calmness is no accident. It is based first on a conviction that America means what it says about standing firm. Already Berliners are convinced the May 27 deadline set by Soviet Premier Nikita Khrushchev will pass without any thing unusual happening.

That doesn't mean that the Berlin crisis will be over. But it does mean that the firm U.S. position has already forced an adjustment in Soviet policy and has at the very least postponed any actual showdown. As far as Berliners are concerned every extra week of living successfully under Soviet pressure without cracking is another step in the right direction.

Also behind this unexpected calmness in Berlin, as we found, are some of the finest fighting troops that America has stationed anywhere in the world.

ESSENTIAL SHIELD

We saw these troops, talked with them, and watched them carry out their combat maneuvers, not only the two battle groups located inside West Berlin, but also the five American divisions poised along the Iron Curtain line in West Germany and ready to go, if, as they say in Europe, "the balloon goes up."

These ground troops are performing a highly essential function in West Germany as important elements of our so-called NATO shield. Their job is to keep the Soviets from overrunning Germany in the event of war until we can bring our superior nuclear power to bear against an aggressor.

I came back from Berlin just a bit concerned about what the current efforts to economize in the field of national defense might do to those NATO shield forces. Certainly we can't possibly permit any reduction in American forces in Western Germany now, whatever happens to overall Army strengths. Many of us were frankly disturbed to learn that budget cutting at home already has forced some reduction in the regular training alerts and maneuvers of these forces, which is, in my judgment, considering the circumstances, a very dangerous brand of economy. Even our normal rotation policy has created some problems; for example, when a large number of trained soldiers wind up their 2-year hitch together and move back home to civilian life. New men are moved in quickly to take their places, of course, but there is still an uncomfortable delay before the unit as a whole can be brought back up to the same combat-ready pitch.

For myself, I'd feel a lot better, and I think some of our field commanders would too, if we had at least one and maybe two more American divisions in West Germany as strategic reserve. If our ground forces are going to play any role in our defense picture, Europe is the place they are most likely to play it. Five American divisions, even highly trained, still have their hands full facing 20 or 25 Soviet divisions. We need at least another reserve division to back up the forces already committed along the border.

OUR DEPENDENTS OVERSEAS

One question that bothered some of us when we left Washington for Berlin was the status of American dependents in that exposed outpost. Shouldn't we perhaps evacuate them all well before the May 27 deadline? After talking with Army officers, men, and with many of the dependents themselves, I came away convinced it would be a mistake for us to undertake any evacuation of American dependents, except as a last-minute and extreme measure. In fact, I was amazed to find that there's almost no desire on the part of any of these people to return home.

These folks are firmly convinced that the future of our country is closely bound up with holding onto this great free city. They wouldn't want to be the first to betray any nervousness at carrying out American overseas commitments. If we were to begin to move back our dependents, this would be an immediate signal that Americans had decided the future of Berlin was hopeless, and that is one thing we certainly don't intend to do.

Atcually, Berlin is more a war of nerves rather than a war of guns. That's why I am so convinced we can win just by standing firm on the status quo. And yet what about the future? Can we live with this kind of situation indefinitely? Even assuming that the West weathers the May 27 deadline, isn't there always the chance of another crisis any time the Russians feel like crying "wolf"?

You can get one clear-cut answer to that question from the youthful, able, and highly impressive mayor of Berlin, Willy Brandt. We had an hour's talk with him. Mayor Brandt says Berlin's position is anomalous, tied in economically, emotionally, and (eventually, he hopes) politically, with West Germany 110 miles to the west. Yet he points out that there have been anomalous political situations like this before which have continued indefinitely. He points to Pakistan, divided into two sections on the continent of India. If Pakistan can survive, he says, why not Berlin? Indeed, one thing that keeps Berlin alive today is the hope that some day she will again be the capital of Germany.

PATIENCE IS NEEDED

But perhaps the best answer of all to this question of the future of West Berlin came from an American officer stationed there. He put it to me this way: "Let's not get impatient and feel that we've got to find overnight some neat and simple and easy solution to this Berlin problem. These apparently neat solutions, arrived at around the conference table with the Soviets, can often spell disaster. Maybe we've spent too much time reading those fairy stories where people get into trouble, then somehow resolve the troubles, and everybody lives happily ever afterward.

"That isn't the way life goes these days," my officer friend went on. "We can't expect to live happily ever after in today's world. We're going to be facing Communist tensions and pressures for a long time to come. Our job is not to try to find some easy, fairyland solution that will let us 'live happily ever after,' but rather to prepare to live with the tensions and pressures of this real world of ours without letting them get us down."

I think my officer friend was right as we talked that last night in Berlin. The Russians are betting we can't stand the heat. But when you've seen Berlin, as we saw it, you know in your heart that we can't possibly abandon this fantastically attractive outpost of freedom 110 miles inside the Iron Curtain and continue to hold up our heads. If Berlin ever goes, then Western Europe goes with it. I'm convinced of that.

Challenge to America

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, Postmaster General Arthur E. Summerfield made a significant address before an overflow audience at the Ro-

tary Club luncheon in Seattle on April 15. I believe his comments deserve careful reading by every thoughtful American.

He discussed four great problems and called for firm public opinion and action on them in the best interests of all Americans. They are the need to resist the Communist threat to our national safety; the need to intensify our battle against inflation and extravagant Government spending; the necessity of curbing the destructive monopoly power now lodged in the hands of a few union leaders, and finally, the desirability of progressive tax reform to encourage incentive and provide capital expansion to assure more jobs for more people.

Mr. Summerfield urged businessmen and community leaders to devote more of their time and effort to unselfish politics, directed to the greatest common good, to assure government for the people and not government by pressure groups.

Mr. Speaker, under unanimous consent, I ask that this courageous speech be printed in the RECORD as part of my remarks:

It is a great pleasure to come to Seattle, and to have the opportunity to meet with this distinguished group of business and civil leaders.

I am always fascinated by the scenic beauty of the State of Washington. And more, I am deeply impressed by the development and growth that have taken place.

All my life, I have thrilled to the story of the pioneers who opened this great Pacific Northwest. Nothing could stop them from gaining the better life they saw for themselves and their children. They left a magnificent heritage for you—for all Americans—to ponder and to uphold.

Today, you are a dynamic region. You have assumed great responsibility in this Nation's economic and political leadership. You face opportunities that are virtually unlimited in scope.

But this you also know—that the very essence of real opportunity is challenge. And meeting today's challenge is so fundamental to the progress you would make, so basic to the ends we must achieve as a nation, I am deeply anxious to talk with you about it. I want to bring to you, today, a clear picture of the urgent nature of the challenge we face, and how we can meet it.

Earlier this morning, I spoke as your Postmaster General. I had the privilege of announcing major improvements, providing next-day first-class letter service for almost 2 million people throughout the Seattle metropolitan area, embracing the cities of Seattle and Tacoma, and 14 nearby counties. This improved mail service is now being given in 25 major metropolitan areas throughout the country. It serves nearly half of the people in the United States. Ultimately, every major metropolitan area will have this service, and we shall mark a long step forward in our goal of next-day delivery of a letter anywhere in the United States.

This noon, however, I want to speak to you, not just as your Postmaster General, but as a member of President Eisenhower's Cabinet and a member of the President's Cabinet Committee on Price Stability for Economic Growth.

I come with firsthand knowledge of the problems facing our Nation, and the steps your Government is taking to solve them. But I come with more than a report. My purpose, above all, is to talk with you about action. For, my friends, we are at an extremely crucial stage in the progress of America. We have a choice of paths to follow. We have momentous decisions to make.

The ultimate responsibility for these decisions is with the American people. And I am confident that, if the people apply their real genius, and determination, and devotion, the final decisions will be the right ones.

There are four specific problems I should like to discuss today, and then, if I may, I should like to suggest the vital part you can play in meeting each of them. They are:

1. The Communist threat to our national safety.
2. Our battle against inflation.
3. The destructive monopoly power of a group of union leaders.
4. The urgent necessity for tax reform.

All of these, of course, are interrelated.

Our national defense depends upon a strong economy, and our economy is acutely responsive to what we do about inflation, about production costs and prices, and about taxation.

The Communist challenge is many-sided. It is military, political, spiritual and economic. We and our allies have steadily rebuffed the military and political threats. Wherever the Communists have probed, they have found us standing firm—at Lebanon, in the China Sea, in the unity of our NATO alliance, and now in the Berlin issue, we have met the challenge with unmistakable evidence of the strength of our purpose.

We shall continue to keep our military power equal to any test. Our overall might in planes, missiles, ships, and other equipment must always be capable of deterring—and if ever necessary, defeating completely—any attack upon us.

We shall continue to meet the Soviet political challenge. We shall lead the way in exploring every avenue of reasonable hope for justly solving the issues that divide the world.

In the battle of spiritual values, we cannot lose so long as we preserve the freedom and moral strength on which our way of life is built. The Soviets know all this very well. Why, then, are they as confident of ultimate victory as ever? Because they are concentrating on all-out economic war, and they believe they can defeat us in such a war without risking their own total destruction. They intend to become the world's one first-class economic power, forcing us into second-class status. And for us, such an outcome would be just as tragic as nuclear devastation.

We are well in front now. But they believe we have not the system or the will to maintain and expand our economic strength. They expect our economy to explode, while theirs continues to grow.

And, my friends, let me say that we dare not look lightly on their great expectations. For here we do indeed stand at the crossroads of decision. The soundness of our economy is threatened by deadly forces that have wrecked other nations in the past. They are the forces of inflation and onerous taxation, and we have not united as a people to overcome them. I suggest to you that there is urgent reason for us to do so.

Let us look at some basic facts about inflation. I am sure we all agree on what inflation is and what it does. Certainly we have had ample opportunity, over 20 years, to see it in action.

To most Americans, inflation means higher costs of living. It means more and more struggle to try to make ends meet. We have inflation when the cost of what we buy keeps rising while the value of the dollars we have to buy it with keeps dropping.

Since 1939, our cost of living has more than doubled. The value of our dollar has dropped until the 100-cent dollar of 1939 is now worth just 48 cents. How much lower would you say we dare to let it go?

Inflation feeds on the income and the savings of every individual, every enterprise in America. It eats away the savings we cherish for family's security. It robs us of the real value of the dollars we earn. It destroys the will to work and the desire to save.

I suspect almost everyone in this room knows of someone whose savings, or insurance, or social security—carefully nurtured through half a lifetime—now is tragically inadequate to meet his needs. As businessmen, you are only too well aware of what inflation brings in rising costs and stifling taxes.

And finally, I would point out that the problem affects, in equal measure, the cost of maintaining the operations of the government.

In short, inflation puts every part of our society in deepening jeopardy—the individual, our business enterprise, and our Government.

Now, what are we doing to meet this deadly force? We are waging a battle, led by the President of the United States, which in the past year has succeeded in bringing the rise in the cost of living under control.

We are fighting to accomplish the stability of the dollar we must have to go forward soundly. We are striving to continue our economic growth at the rate of which we are capable, with its expanding opportunity for every citizen.

But we are also facing tremendous pressures for a resumption of the inflationary process. There are vast pressures for extravagant government spending, and for a sharp new uptrend in the spiral of wages and prices. Amazingly, these spending drives are actually being led by some Members of the Congress—and by some leaders of State administrations.

They are practicing government by pressure group rather than for the people. And they will only be dissuaded by public opinion strong enough to impress its will upon them. For this reason, it is vitally important for our people to understand some plain, straight facts.

Government, in our system, is constituted to serve the people. It must meet all the legitimate needs of all its citizens. It must do all it can for the good of the people, within the means the people are willing and able to provide.

But there are those in and out of government who stoutly observe that we are a big Nation of great wealth, and therefore, we should put no limit to what we do in public projects, whether or not the people are able to pay the bills.

Nothing could be more crassly misleading—for the fact is, the people have no choice. Who else will pay?

The Government has no wealth of its own. It is the agency of the people. And when it spends more than it collects in taxes, every citizen has to pay the excess, in one way or another. If it is not in higher taxes, then it is in suffering the inflation that deficit financing by any government inevitably brings.

More than 7,000 bills have been introduced in this session of the 86th Congress by the people's representatives, including your own. Only a small handful of these are major measures of broad national interest. The vast majority would provide benefits of one kind or another to individuals or groups. And in no instance are new taxes proposed to offset these new costs.

Their backers are encouraged by the fact that the spending majority of the present Congress is committeed to Federal spend-

ing—and to deficit financing—as an economic policy.

Chairman BYRD of the Senate Finance Committee, has noted, with alarm, that the effects of that policy already are plain. The Senate, he reports, has voted to increase President Eisenhower's budget proposals by 24 percent, and the House has voted increases averaging 12 percent. These increases represent billions of dollars.

The third problem we face—the effect of the huge economic power exercised by union monopoly leaders—must also be solved if we are to have sound economic progress. This is a power that ranks among the highest accumulations of vested interest to be found in history. It is a monopoly that draws upon huge financial resources, that permits a few perennial labor leaders to spend millions of dollars of dues money for political purposes, exactly as the leaders see fit, with no choice given the men and women who pay the dues. It is a power capable of imposing at will an ever-rising cost of living upon our people.

There is no question but what the legitimate function of every labor leader is to ask for, to negotiate for, higher wages. This is a rightful purpose of union leadership.

But union members—with all other Americans—have every reason to insist that their leaders, as well as the leaders in management, exercise a high order of responsibilities and statesmanship. It is up to union leaders to recognize that if they use their monopoly power to force wage increases and employee benefits too high, they bring about fewer jobs and greater unemployment, and thereby miserably fail in their duty to their members.

Why do excessive wage costs have such powerful impact upon inflationary forces. Because, after exclusion of all taxes, up to 83 percent of all income generated in the national economy goes to the payment of labor.

For a $3,000 automobile, for example, the required steel costs about $290. Even this price at the steel mill, in turn, includes labor cost as its main component.

What this means is that an unearned rise in employment costs has four times as much inflationary effect as a corresponding rise in all the remaining costs of production put together.

With this in mind, let us note that 154 major wage contracts come up for negotiation this year, including the steel industry, with its nearly 1 million workers. The cumulative effect of excessive wage-cost increases on this scale I leave to your imagination. There would be no way to describe it other than to call it a national calamity. Everyone would suffer. The blow, as we have noted, would fall hardest on the millions whose incomes have not gone up, the people on salaries, fixed incomes, and pensions.

But let none assume that he would escape—least of all the wage earner himself. He would soon find that the newly won increase had evaporated in higher living costs. Worse, he could find that even his job is gone because the product he makes has been priced out of the market, no longer able to compete effectively at home or abroad.

We should—and do—look to the increasing of job opportunities here at home through the expansion of our production capacity. We should take every step to encourage, not sap, the growth power of industry and business.

But we can hardly say we are giving full encouragement if we permit wage-push inflation that deprives our industry of adequate earnings to plow back into new products, equipment, and plants.

Every thinking American, I believe, will agree that the decline has gone far enough when the ratio of profits to sales, for all industry, drops from 7 percent in 1948 to 4.8 percent in 1958.

Especially is this true when we recognize the burden our taxation is placing on the accumulation of capital for investment, and on the personal incentive and earning power of every citizen.

The tax foundation tells us the average earner of $4500 a year works 22 days each month. Seven days of this total—nearly one-third of his working time—is taken from his income in taxes. And as he may succeed in building his income, he can look forward to the tax chunk becoming larger. We need to relieve this stifling tax load being carried by the individual citizen and by our business system.

Our population is growing rapidly. Business can create new jobs to meet this growth only as billions of dollars are invested in new tools and capacity. Now, where is this money to come from?

Today, Federal taxes alone can take more than half of many companies' net income. Then follow State and local taxes. There are over 100,000 taxing authorities in our country. Their weight can literally crush the ability of business to meet its job-creating capital needs.

Our present tax structure is seriously outdated. It is a set of laws reflecting largely the conditions of the past, especialy World War II, when the goal was the confiscation of war profits, not the building of a sound peacetime economy. A sensible, equitable, dynamic tax program is needed in its place. Such a program will keep revenues up, not by taxing away incentive and means of growth, but by steadily increasing the tax base.

These problems I have discussed this noon can be clearly stated. But how clearly do we see the answers that can be given to them? This is our task.

And I believe we cannot emphasize too heavily the answers that are being provided by our national leadership, and by leaders in many States. These answers add up to a program of full employment with stable prices and tax reform, a program offering greater opportunity for every American.

It is because we have pursued such a program that our economy has bounded back from the recession to a dynamic new level. The signposts are clearly visible and our program is well underway.

First of all, we have established a sound and sensible philosophy of government. The set of principles we are following deserve enumeration. They are:

First. Agree on sound and productive fiscal policies. Set realistic budgets and stick with them.

Second. Meet the full needs of our defense program.

Third. Meet all the legitimate needs of our people.

Fourth. Refuse to give away taxpayer money to nonessential projects, lavish spending schemes, and welfare state activities intended to curry favor with special groups rather than to meet the needs of all the people.

Fifth. Operate government on a pay-as-you-go basis. Avoiding the fatalistic deficit philosophy so easy to get in but so desperately hard to shed.

Sixth. Encourage a higher order of statesmanship in union-management wage negotiations—create public opinion so that union leaders work for the real welfare of their members and the Nation, rather than trying to outdo each other in wringing inflationary wage packages from industry.

Seventh. Establish adequate laws to control abuses of union leader monopoly power. Such laws were established for business, correctly and firmly, when some businessmen abused the public trust in years past. Give union members their rights to pass on the action of their leaders and the use of their dues.

And, finally, move forward as rapidly as possible to achieve progressive tax reform.

I believe that heartening progress is being made in all these eight areas.

The sound fiscal program of the President, with his insistence upon balancing the budget, is rapidly gaining wide support.

In the wage-price area, we can only hope that the statesmanship we so urgently desire will be forthcoming. It is not immediately apparent in the announced intentions of demands we have seen. It is clear that union members themselves want responsible union leadership—responsible to their welfare and to the national welfare. With the great majority of the public at large, they want laws that will help to assure responsible leadership.

In regard to taxation, we are working to carry forward a program of tax reform and reduction. The President's stress on a balanced budget is related directly to this goal. Steps in the right direction already have been taken with the Revenue Act of 1954.

The time is approaching for another bold and imaginative breakthrough on tax policy that will benefit and encourage all taxpayers, large and small. Obviously, this program cannot call for immediate and sharp reduction in all income tax rates. It calls for gradual reform. And it calls for equitable reduction for all taxpayers.

The public, more and more, is rallying behind the President in his fight to maintain a balanced budget, to achieve tax reform, and to bring the extravagances and excesses that feed inflation under control.

But let me not overstate this premise. The battle is far from won. The special interests bent on spending, taxing, and deficit financing still are riding high—still have the ears of the majority of our Federal legislators and State administrations. Washington is swarming with representatives of the special interest groups, each concerned with favoring legislation for his pet project.

The fight for fiscal sanity is being waged by the President, members of his administration, and some Members of the Congress. It is this group—almost alone—that is bearing the brunt of the battle.

My appeal to you today, and to the American people, is to join this battle, to meet this challenge.

Remember that, in the struggle with Russia, we are strong militarily, we are strong politically, we are strong spiritually. We must continue to strengthen ourselves economically. We can no more appease inflation than we can appease Soviet aggression. I believe we shall continue to build the strongest, freest way of life the world will know.

But I also believe that, to do so, America must maintain a sound economic philosophy, and sound policies firmly based on that philosophy. We must never accept the premise that our fiscal problems cannot be solved.

Inflation, deficits, high costs of living, and oppressive taxation all are man made. There is nothing sacred about them or the destructive monopoly power of a group of union leaders.

By attacking these problems with intelligence, determination, and perseverance, we shall overcome them. May there be a reassertion, by all of us, of the courage and strength and faith of the Americans who opened the great Northwest.

I am confident that the business leadership of the State of Washington, which is so well represented here today, will play a vital part in keeping our free-enterprise system strong.

As civic leaders in a key city and State, your views and actions are vitally important to your own progress, to your State, to the Nation, and to the world.

I would dare to suggest that you assess what you are doing individually. If you

believe that we must attack the causes of inflation and onerous taxation and union monopoly firmly and intelligently, ask yourself if you are doing all you can to support that belief. Your belief in America can be effective only as you let it be known.

I urge you to take your place among those who will speak, work, and fight for sound policies and a stronger America in the years before us.

There is nothing more important to you, your family, your future, and your Nation than that you take your stand now. Speak up; let your representatives in Congress know what you think. Let them know you understand that a Government big enough to do everything for its citizens from cradle to grave is also big enough to take everything from them in taxes during the same time.

Every businessman must understand that the political party of his choice is what he makes it, either by his participation or lack of participation in its affairs and in its choice of candidates.

Unless responsible businessmen and citizens devote more of their time and effort and organizing ability—as well as their money—to unselfish politics, directed to the greatest common good, government by pressure groups will continue to grow.

Only by universal participation can we be sure that the Government will serve all the people—not some special interest—and assure the greatest opportunities for all our citizens.

My friends, this is the banner of true liberalism. Advancing under it, we shall meet the Communist economic challenge as surely as we shall meet the military and political challenge.

We shall assure that the golden era of unlimited opportunity lies ahead.

We shall preserve the great free and growing economy which is the foundation of all our freedoms, our security, our prosperity, and our future, in a strong, free, and better world.

The Memorable War

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. EVERETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following reduced version of an address delivered at the annual luncheon of the State Historical Society in 1958, by Dr. Bell Irvin Wiley. Dr. Wiley is a native of Halls, Tenn., in my congressional district and is now a professor of history at Emory University in Atlanta, Ga. He is a member of the Civil War Centennial Commission and on April 13 was presented here at the Press Club the Gold Medal award by the Civil War Round Table of the District of Columbia. He is one of the outstanding authorities of this country on Civil War history and has achieved many honors not only in the field of history but in literature as well. Dr. Wiley served in World War II and was awarded the Legion of Merit in 1945, and was discharged at lieutenant colonel in 1946. In view of the coming Civil War Centennial, I feel that the following is timely and appropriate:

THE MEMORABLE WAR
(By Bell Irvin Wiley)

Specialists in the field of the Civil War are frequently asked, "Why all this interest in a conflict that took place a hundred years ago?" and "Isn't the current interest in the Civil War something that has been artifically worked up by writers, dramatists, and others who have a vested interest in keeping the memory of that struggle alive?"

First, it should be noted that interest in the Civil War is not something new. A trip to that part of the Library of Congress where books about American wars are shelved will reveal several times as many volumes about the Civil War as about all prior American wars combined. According to a recent estimate, which can be no more than a rough guess, over 100,000 volumes and pamphlets exist which relate in some manner or other to the Civil War. From the early 1860's down to the present the Civil War has had tremendous appeal for Americans, and many people, some of much talent, other of little talent, and still others of average ability, have written about it through the medium of reminiscences, scholarly history, popular history, fiction, plays, and music. Now a comic strip, "Johnny Reb and Billy Yank," is running in many of our newspapers.

Lincoln is the most written about of all Americans. A bibliography published in 1945 litsed 3,958 books and pamphlets concerned in major part with Lincoln's life. A steady outpouring of writing in the past 7 years has raised the aggregate of Lincoln books to a figure that must be in the neighborhood of 5,000.

Undoubtedly there is a revival of interest in the Civil War dating back to the late 1920's. Publication of Stephen Vincent Benet's "John Brown's Body," Douglas Southall Freeman's excellent books on Robert E. Lee, and especially Margaret Mitchell's "Gone With the Wind," which has outsold any other book in the history of American publishing, are partly responsible for this resurgence of interest.

But the seed planted by these and other authors would not have produced bumper crops if it had not fallen on good ground. In other words, the reading public was receptive. Their minds were ready. American participation in World War II assisted the revival, as the 14 million Americans who donned the uniform in that struggle had a natural curiosity about participants in former wars, and the complexity of recent conflicts made people yearn for the simplicity of an old fashioned war. Revival of interest also coincides with the growing popularity of automobile travel, and among the favorite resorts of the tourists are picturesque and beautifully preserved battle sites such as Gettysburg, Shiloh, Vicksburg, Kennesaw Mountain, and Chattanooga.

Interest in the Civil War is growing, as witnessed by the enormous popularity of MicKinley Kantor's "Andersonville" and the proliferation of "Civil War Round Tables," which now number about 70. This interest will probably continue to mount, certainly through the centennial years, 1961–1965.

The attraction of the subject for talented writers has undoubtedly helped to build up interest in the Civil War. But the roots of this interest reach so deep into the American character and tradition that it is improper to regard it as something which has been artificially worked up by gifted writers.

What, then, are some of the reasons for this deep-seated and continuing appeal of the war of the 1860's for today's Americans?

In the first place, the Civil War was an all-American war, or, as R. S. Henry has aptly put it, "it was our war." The war was fought by Americans over American issues. It was waged on American soil. The battle sites are here and, thanks to the splendid work of the National Park Service, these sites have been well preserved. They are attractive places. Shiloh is a beautiful site. If one goes there in April, the month when the battle was fought, he will note woodland and open fields, hills and valleys, and an atmosphere redolent with the fragrance of peach blossoms. And he will ponder the irony of Americans, of similar background and culture and speaking the same language, choosing this beautiful scene in which to slay each other in what was at that time the biggest and the deadliest battle that had ever been fought on the American continents. Beautiful also are many other battlefields that help to commemorate this great conflict of the 1860's, and in 1957 over 6,500,000 people visited 25 Civil War battlefields, memorials, and forts maintained by the National Park Service.

This war was and is an intimate affair for Americans. Many, if not most, present-day northerners and southerners have close ancestral ties with people who fought in the war and have learned from oral accounts or from reminiscences, letters, or diaries the experiences of kinfolk in that terrible conflict. These experiences have helped to impress the memory of that struggle indelibly on the American mind and have made it a prominent part of our living past.

The heroes of this great war are ours, and they occupy a conspicuous place in the hall of our memories. Those of Southern background cherish with deep affection and enormous pride the names and deeds of Robert E. Lee, Stonewall Jackson, Jeb Stuart, the two Hills, Nathan Bedford Forrest, John Morgan, and the gallant Pelham. Those of Northern origins recall with equal reverence the names and exploits of Abraham Lincoln, U. S. Grant, Phil Kearny, John B. McPherson, and David Farragut.

In the second place, the Civil War was a big war—bigger in most respects than any that the world had ever known. It was big with respect to the distances involved. The land operations extended over a vast area. Naval operations were even more farreaching. One Confederate cruiser, the *Alabama*, was sunk by a Federal ship, the *Kearsarge*, in the English channel; another, the *Florida*, was captured in the neutral harbor of Bahia, Brazil.

It was large with respect to the number of engagements. The U.S. Government's chronological list of battles enumerates more than 2,200 engagements, and a Bureau of Pensions compilation extending to minor actions contains over 6,800 separate contests.

The Civil War was big in terms of the number of participants. About 3,500,000 men served on one side or the other. It was also very large in terms of casualities. In all the major American wars, beginning with the Revolution and coming on through the recent Korean conflict, excepting only the Civil War, some 606,000 Americans lost their lives from battle and nonbattle causes. In the Civil War alone more than 618,000 American servicemen lost their lives. In other words, more American servicemen perished in the Civil War than in all our other wars combined. This is a startling fact.

An interesting commentary on camp conditions of the time and on the backward state of medical science is afforded by the fact that more than two men died of disease for every one that died of hostile bullets. In World War II nearly three times as many Americans died from enemy action as from other causes.

Civil War battles—the major ones—were big battles. At Shiloh on April 6 and 7, 1862, for the first time on the North American continent as many as 100,000 men were assembled for battle. Lee's and Burnside's forces at Fredericksburg totaled about 200,000. At Austerlitz, on the other hand, the

contending forces aggregated only 150,000 and at Waterloo only 170,000.

Casualties in the principal Civil War engagements were astoundingly large. At Balaklava the Light Brigade, whose charge was immortalized by Tennyson, suffered a loss in killed and wounded of only 37.7 percent. But at Gettysburg the First Minnesota Regiment sustained a loss of 85.5 percent, nearly all of which came in an assault the second day; and at Antietam the First Texas sustained a loss of 82.3 percent. During the war 63 Union and 52 Confederate regiments suffered losses of more than 50 percent in a single battle.

Moreover, the American conflict of the 1860's was the last of the old-fashioned and the first of the great modern wars. It was the last war in which participants observed on a large scale such niceties as borrowing shovels from the opposing side to bury the dead, as the Confederates did at Munfordville, Ky., in the autumn of 1862; succoring wounded foes lying helplessly between the lines, as occurred in a number of engagements; cheering acts of bravery on the part of enemy combatants, as did the Federals who watched the Confederate charge on Cemetery Ridge at Gettysburg, July 3, 1863; joining together in songfests and swimming parties; calling informal truces to enjoy the luscious berries ripening in the "no man's land" separating entrenchments, as at Vicksburg; getting together of the men in blue and the men in gray to swap coffee for tobacco or northern for southern newspapers or to gamble, drink, or just gab, as was done from time to time on every front.

One writer has referred to the conflict as the "polite war," and numerous acts of chivalry on both sides indicate the appropriateness of the term. When George E. Pickett of Gettysburg renown became the father of a boy late in the conflict, Grant and other northern leaders who had known Pickett in the old army sent him a message by flag of truce, offering congratulations on the arrival of the "young recruit." And when Lewis Armistead died at Gettysburg his watch and his spurs by his dying request were sent to his old friend, Winfield Hancock of the northern army, who received these tokens of an undying affection as he was being borne wounded from the ridge at which the Confederate assault was directed.

But this was also a modern war in which factories, railroads, the telegraph, and many other developments of the industrial revolution played a conspicuous part. It was the first conflict in which a battleship was sunk by a submarine; in which ironclad men-of-war participated; and in which a soldier was killed by a machinegun. Other modern devices employed in this struggle include flamethrowers, rockets, incendiary shells, repeating rifles, land mines, grenades, and observation balloons. Not all of these were new with the Civil War, but they had much more extensive use during this conflict than ever before.

Several questions of a similar type are often raised in regard to the war. Is it not a mistake to keep alive the memories of this war? Does not all the writing and the talking about the conflict of the 1860's tend to perpetuate intersectional hatred and rub salt in old wounds? Would it not be better for North, South, and Nation to forget the whole business?

The answer to these questions is an emphatic no. It is good for the Americans to study this war and to keep alive and active the memory of it. The Civil War was a time of greatness for the North, for the South, and for the Nation. Both sections were called upon to make enormous sacrifices, and the manner in which the people—especially the common folk—endured the hardship and suffering reflected great credit on them and the society of which they were a part. Johnny Rebs and Billy Yanks both displayed enough gallantry to enable descendants to look back with tremendous pride on their participation.

Contestants on both sides were sincere in their motives and purposes. It is a pity that Americans deemed it necessary to resort to arms to settle their differences, but since the fact of their having done it is a matter of history and since the people of both sides sustained their causes with great earnestness, sacrifice, and heroism, it is right and proper that we should commemorate their deeds.

Americans are far enough away from the war now so that they should be able to regard it with a certain degree of detachment and, while it is right that they should deplore the hatred which preceded and accompanied it, the cost in blood and treasure that it involved, and the bitterness that came in its wake, there is no reason why all of them should not derive great satisfaction from the good that came out of it.

The Civil War settled the question of the nature of the American Government. It decided the issue of National and State sovereignty. It determined that the United States would be one great country rather than a loose confederation of many separate and competing entities. The American nation came of age with the Civil War.

The Civil War also settled the issue of slavery. It brought to an end the outmoded and wrongful practice of men holding fellow human beings in bondage. Southerners of the 1860's and since have denied that slavery was an issue of the war. Letters and diaries of Union soldiers indicate that very few—no more than 1 in 10—of those who wore the blue were fighting primarily for the emancipation of slaves. The dominant concern of the Federal soldiers was the preservation of the Union. The letters of many Billy Yanks indicate a deep devotion to the ideal of union. Even so, it is difficult to believe that this war which cost so much in blood and suffering and property would have ever taken place had it not been for the institution of slavery.

The Civil War, as Prof. Allan Nevins has pointed out, marked the emergence of modern America. Enormous demands of the war caused North and South to increase their productive capacities. People became accustomed to new ways of thinking and acting. The war stepped up industrialism, urbanization, mass production, and other developments that are a part of what we know as modern America.

The Civil War was without question the most dramatic and most outstanding episode in the career of the American Nation. We, as Americans, North and South, would be remiss in our responsibilities if we did not keep the memory of the war alive and observe on a large scale and in a constructive and impressive manner the 100th anniversary of this momentous and thrilling chapter in our history.

Late Victor Herbert Honored by American Society of Composers, Authors, and Publishers at Washington Dinner

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following splendid address made by Mr. Paul Cunningham, president, American Society of Composers, Authors, and Publishers, at a dinner held in Washington, Monday, April 20, 1959, in honor of the late Victor Herbert. Mrs. FLOOD and I were privileged to have attended this most impressive affair.

The address follows:

My friends, distinguished guests, on this dais, and in our audience, fellow songwriters, ladies and gentlemen, it is a double honor that the American Society of Composers, Authors, and Publishers enjoys tonight. We are honored in the privilege of offering reverent tribute to the greatest name on the roll of our membership, a name that will live as long as there is a song in the heart of mankind. And we are honored by the presence in our midst of the distinguished music lovers and lawmakers who have joined us in paying homage to the glorious memory of Victor Herbert.

It is, I believe, quite appropriate that this centennial commemoration of this great American's birth is being held in our Nation's capital; and it is equally appropriate that there is, in this assemblage, a notable representation of the most prominent lawmakers of our country. Because there is, in fact, a kinship of purpose and accomplishment between those who write the Nation's laws and those who write its songs. Laws are created for the weal and welfare of humanity, to promote the well-being and happiness of those who live by them. Music, likewise, is created by those blest with heaven's gift to give it form and expression, to enhance and augment the happiness of mankind, to give voice to the joys of life, to bring comfort and solace in moments of sorrow and sadness. Without laws society would revert to the barbarism of the jungle; without music, man would be without the charms that sooth the savage breast.

There is yet another reason why the writer of laws is a befitting and most welcome guest at the festive board of the writer of songs. Because it is by virtue of the lawmaker's appreciation of the musicmaker's contribution that the musicmaker is able to pursue his art and live by the fruit of his labors. Without the beneficent protection afforded him by the laws of copyright, the composer and his collaborator, the lyricist, would have no incentive to struggle and strive in the precarious calling of wooing the capricious muse. And their fellowmen would be listening in vain for the sound of songs born without wings. Without the lawmaker's bestowal of the copyright, our great Victor Herbert might today be lying like some mute, inglorious Milton in the churchyard of Gray's "Elegy." It was that copyright which fostered and encouraged the genius of Victor Herbert by the promise and assurance of due reward for his efforts; and that thereby brought to the American public, and to the entire world, the joy and happiness that countless millions have found, and will continue to find everlastingly, in his glorious, immortal music.

History records that from time immemorial the rulers of government have been the patrons of the composer and the lyricist. It was under the sponsorship of King David, himself, as the Bible records, a musician, that the Psalms were written and set to music by the lyrists and composers sheltered in the royal court of ancient Israel. Skipping over the pages of history to a less distant era, we find that the genius of Mozart, Schubert, and other such composers, budded and bloomed under royal patronage in the many kingdoms which dotted the map of Europe. With the advent of constitutional government, the fortuitous benevolence of the monarch was replaced by legislative acts of copyright, which, I might observe, today in European countries favor the

songwriter much more generously than we do here in the United States. It was in 1790 that the Congress of the United States enacted its first law for the protection of the American songwriter. I am happy to report that since then there has been, and is, a continuing progression in the interest of our lawmakers in that direction. And it was the man whose memory we honor tonight, a great, unselfish genius whose love of his calling embraced a warm affection for the lowliest of his fellow craftsmen, who played an important role in augmenting the scope of our copyright laws.

Let us take a glance at this master of melody who is our unseen guest of honor. All of you have tasted the luscious fruits of his illustrious talent. What heart in this audience has not, at some time or other, thrilled to the sweet sound of "I'm Falling in Love With Someone," or of "Slumber On, My Little Gypsy Sweetheart"? How many yearning eyes have exchanged meaningful glances to the strain of "Sweetheart, Sweetheart, Sweetheart, will you love me ever"? How many lonely lovers have found the voice of their own longing in the wistful refrain of "When you're away dear, how weary the lonesome hours." And how many lips have sighed tenderly to the rapturous plea of "Kiss me, kiss me again." Perhaps, in other, younger days, or nights, some of you who are here whispered that plea to the accompaniment of Herbert's music. If you did, I'm sure the result must have been gratifying.

Many of you doubtless enjoyed, and still recall nostalgically, those wonderful evenings in the theater when you saw and heard Fritzie Scheff in "Mlle. Modiste," Montgomery and Stone in "The Red Mill," and the many, many other great stars in those 40 unforgettable musical comedies—like "Naughty Marietta," "The Only Girl," "Eileen," which Victor Herbert composed on that Broadway of bygone days to which he added such luster and brilliance. Some of you gentlemen who have long served your country in its Senate and House of Representatives doubtless remember him personally, for he came to Washington frequently on pilgrimages in the interest, not so much of himself, as of the lesser members of his craft. Victor Herbert needed nothing for himself. His success was as great materially as it was artistically. He wanted only fairness and justice for the men and women who labored in the same vineyard and he did and who were not so fortunate as he was.

And if you remember Victor Herbert, you recall a robust, handsome, jolly good fellow, with a warm smile of affection for everyone, a smile that reflected the ardor and tenderness of his music, such music as could come only from a heart overflowing with love for all mankind.

Those of us who pleasurably trace our ancestry back to the Land of the Shamrock are prone, as are all sons of Erin, to claim a bit of a shore in every Irishman's glory; and sure no one will begrudge us the morsel of pride we take in the fact that Victor Herbert was born in Ireland. And we like to think that the melodious ripple of the waters of the Shannon and the lilt in the gentle waves of the lakes of Killarney are echoed in the music that came from the lad born with the blessing of Saint Cecelia, Ireland's patron saint of music who put a song into every Irishman's heart and a tenor voice into his throat. For what Irishman is not a man who loves or makes music? If he isn't, we strongly suspect some sort of shenaningans somewhere in his ancestry. Who but a most ardent lover of music could detect melody and harmony in the skirlings of an Irish bagpipe? And what Irishman doesn't sing—especially on Saturday nights?

It is the town of Dublin that boasts of being the birthplace of Victor Herbert—a hundred years ago on the first of last February. He was born to an artistic heritage. His maternal grandfather was Samuel Lover, a man of diverse talents, equally famed as a painter, composer, and author. At the age of 7, Victor's well-to-do parents sent him to Germany for his education. So far as is known, he suffered no serious consequences—except that he spoke German fluently with an Irish brogue, and acquired an understandable fondness for Pilsener beer. Herbert's parents hoped that their little Victor would become a great doctor of medicine. Instead, he became a cellist. Needless to say, a very excellent one. At the age of 23 he was already first cellist in the famous Strauss Orchestra in Vienna. And 4 years later he was playing his favorite instrument in the Metropolitan Opera House in New York City. Thereafter, he rapidly climbed the heights in the realm of symphonic music as a cello soloist, as a composer of symphonies and rhapsodies, and finally as a great orchestra conductor. Many of you, I am sure, recall the magnificent Victor Herbert Concert Orchestra which was heard in every large city in the United States.

I shall not attempt to name his numerous symphonic masterpieces. Herbert was a prodigious worker and a prolific writer in a wide range of composition. He composed two notable grand operas, "Natoma" and "Madeline," both of which were successfully produced at the Metropolitan.

But the public at large remembers him best and loves him most for the delightful, enchanting music which he composed for the musical comedy stage—those beautiful songs which devotees of classical music, and those whose preference is for the popular song can enjoy together. Victor Herbert loved the theater, perhaps more than he loved the concert stage. He loved its people, its glamour, it life, which he lived joyously and expansively, in the picturesque Broadway of the gay nineties and the first two decades of the present century. I believe one of his happiest tasks was composing the music for a Ziegfeld Follies, a task which he shared with a former singing waiter from Chinatown, our equally beloved Irving Berlin.

Classicist that he was, famed and successful as he was, Victor Herbert was not above associating himself with the lowliest writer of the so-called popular song. Many of us who wrote the humble rhymes and tunes of Tin Pan Alley can, individually and collectively, give testimony to that fact. The world may sing Victor Herbert's songs. We sing his praises and our blessings to his memory. Without Victor Herbert, there might never have been an ASCAP; without an ASCAP many a songwriter today would be without sustenance.

There are nine names on the list of the founders of the American Society of Composers, Authors, and Publishers. Ladies and gentlemen, it has been my great privilege to occupy the chair of president of that society for 3 years, and, based on my knowledge and experience in that office, I say, without hesitation or fear of contradiction, that the first name on that list is, and forever will be, that of Victor Herbert. Yes, even above the names of our great legal strategist, Nathan Burkan, and the unforgettable Gene Buck.

It is Victor Herbert's spirit—his humaneness and benevolence, his love and concern for the welfare of his fellow composers and authors, that pervades the aims and purposes of our society today. It was that spirit which brought him into the struggle to obtain for the songwriter a just and due reward from the public performance of his songs in theaters, cafes, and other places of amusement—and today on radio and television. Victor Herbert did not live to enjoy the full fruits of his efforts. Radio was in its infancy when he died in 1924. He never saw a television show. But those of us who knew him knew that he made the good fight so that others might not be deprived of what had been denied him. His dream was twofold: to establish for the songwriters the right to compensation from public performance, and to have that compensation collected and distributed by an organization in such manner as to protect the composer and author from the wavering fortunes and oftime violent financial vicissitudes of his career.

Not so many years ago, but before there was an ASCAP, the raggedly attired and pain-wracked form of a songwriter was carried into Bellevue Hospital. In his pockets were 26 cents and a slip of paper on which was scribbled the title of an unwritten song. He died a few days later, a lonely, friendless stranger in the big city. The name on his burial certificate was Stephen Foster.

Ladies and gentlemen, because of men like Victor Herbert, ASCAP is dedicated, unswervingly, unchangeably, to the cause that such tragedy shall never happen again—to anyone, whose talents, great or small, are embodied in the notes and syllables on a page of music manuscript. Ours is a most unique association. From the handful of 9 founders in 1915, ASCAP has grown to a membership of more than 5,000, and is growing rapidly—as rapid as the birthrate of our country. Every visit of the stork brings a potential songwriter and member of ASCAP.

Perhaps some of you in listening to the radio, or viewing television, have of late frequently heard a song which has attained high popularity. The title of that song is "It's All in The Game". And I think you will be surprised to learn that its melody, presented in the prevailing popular idiom, is from a classic composition penned by a former member of the Cabinet of the United States—the late Secretary of the Treasury William H. Woodin, who served under President Franklin D. Roosevelt, and who was a member of ASCAP. This is indicative of the vast divergence in the personalities which make up our membership. No one is immune to the urgings of the Muse of Music. And I mention it—only as a word of encouragement to all in this audience. Perhaps, between sessions of the Congress, and the calls of your constituents, some of you Senators or Congressmen may find time to give expression to a long latent talent. Wouldn't it be wonderful to hear a great popular song which would be a most harmonious blending of the words of a Democrat and the music of a Republican.

We are proud to number among our members not only the most successful writers of popular songs and musical comedies, but also the composers of America's increasingly important contribution to the classic music of the world—such illustrious names as those of Deems Taylor, a former president of our Society, Dr. Douglas Moore, Leonard Bernstein, Norman Dello Joio, and others. But the names of most of our members, those who gave you so many songs that are enshrined in your hearts and memories, are far less well-known and, in fact, totally unknown. Everybody knows that Irving Berlin wrote "Alexander's Ragtime Band" and that George Gershwin wrote the "Rhapsody in Blue". Widespread is the fact that Richard Rodgers and Oscar Hammerstein gave you "Some Enchanted Evening" and that Hammerstein and the late Jerome Kern penned "Ole Man River" and that Cole Porter wrote "Night and Day". Anyone who has been enchanted by the music of "Blossom Time" and "The Student Prince" is aware that they were composed by my dear, departed friend, Sigmund Romberg. But who remembers who wrote "Down By The Old Mill Stream"? "Dear Old Girl"? "Missouri Waltz"? "Sweet Adeline"? "Meet Me Tonight In Dreamland"? and all those other great old songs that you used to harmonize in those merry moments at your club or down at the corner tavern;

songs that your grandchildren are singing today; and that their grandchildren will sing in the years to come? Our million-song treasury contains hundreds of such beloved songs, and it is for these little-known or unknown songwriters that ASCAP exists, as well as for their world-famed colleagues.

For such writers, ASCAP collects the royalties for public performances and distributes these royalties to them or to their heirs. The money is distributed to afford them an income not only in the immediate present but in the somewhat dubious future, in the lean years that every songwriter is inevitably confronted with. And how is this done? In a most extraordinary manner. I don't believe there is another agency in the whole world that functions as ASCAP does.

Our membership is divided into classes based upon the number of public performances. And, ladies and gentlemen, the top echelon, such members as those I have named, and others like Jimmy McHugh, Harry Warren, Johnny Mercer, Otto Harbach, Ira Gershwin—and about 60 more—voluntarily, I repeat, voluntarily, accept a limitation on their earnings, so that a goodly share of their money can me distributed among the less successful songwriters in the lower classes. I am tempted to tell you how much Irving Berlin, of his own volition, gives up each year, but he would prefer I didn't. The fact is that 73 members of our society each year deprive themselves of a substantial share of their earnings and permit their dollars to roll down the ladder into the pockets of their less fortunate brethren. To the age-old question, "Am I my brother's keeper?" ASCAP's answer is an emphatic, unalterable "Yes."

To compute how much is due each member there are I. B. M. mechanical devices—machines with a so-called brain. We have and use these machines with a brain. But ASCAP has what no machine has or ever will have. ASCAP has a heart—a heart which is the heritage left to it by Victor Herbert and the other great souls who founded our society. Yes, my friends, if I may repeat myself, you sing Victor Herbert's songs. We songwriters sing his praises and our blessings to his memory. And, especially now, as we affectionately commemorate the centennial of his birth, we bow our heads in deep reverence to our great, immortal colleague, and say, "Happy birth year, Victor. Rest in peace. And for all you did for the happiness of mankind with your music—and for all you did for your fellow writers in ASCAP, from the bottom of our grateful hearts—we thank you."

And for so patiently listening to me, ladies and gentlemen, I thank you.

Some Right and Wrong Thinking About American Foreign Assistance

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an informative and well-balanced discussion of some of the common charges and countercharges one frequently hears or reads regarding the mutual security program and its projects and personnel in other countries. The address was given before the American Association at Bangkok, Thailand, on January 27, 1959, by Mr. Thomas E. Naughten, Director of U.S. Operations Mission in Thailand of the International Cooperation Administration:

SOME RIGHT AND WRONG THINKING ABOUT AMERICAN FOREIGN ASSISTANCE

(By Thomas E. Naughten, Director, U.S. Operations Mission in Thailand, International Cooperation Administration)

I believe that it would be profitable and timely to discuss some of the philosophy involved in American foreign assistance generally, not merely in Thailand. This idea of nations working together for economic and social advancement is perhaps the most important development in international relations in several hundred years. The concept is still new, although it has become a firmly imbedded policy of most governments and of international bodies. But we have much to learn about it. We are still engaging in a lot of right and wrong thinking about it. That is what I'd like to discuss today.

I want to speak to you as an American discussing matters of vital interest with fellow Americans. I am glad that so many of our friends of other nationalities are here to listen in, and I hope that this will interest them. It is our habit to discuss public problems in public, because we believe that truth will find acceptance in a free marketplace. A philosopher once said that when the public thinks long enough about something it usually thinks right. My purpose is to have us all think together about some matters that concern us all.

Most of American foreign assistance today goes into what we call—for want of a better term—the "developing nations." This term has the merit of giving credit to the efforts being made by these nations to overcome whatever has held them back and to make better use of their resources for the benefit of their people.

Americans in general have consistently supported technical and economic assistance to the developing nations since we began it some 16 years ago. They have supported it for many reasons; indeed, each of us has his own personal reasons. It may be simply that we feel an obligation to share our own abundance with countries that have been less fortunate than we. It may be a sense of our duty to work for the common good of all people. It may be a feeling that this is the best way to prevent communism from taking over weaker nations. It may be that higher levels of economic activity throughout the free world mean more prosperity for all nations. It may be that it is a small price to pay for insuring against a major war.

For whatever reasons we offer assistance to other nations, we must have objectives and principles to guide us or we shall simply fritter away our resources and no one will be the better off for what we have done.

The United States has gradually evolved an objective in its foreign assistance programs. It did not come all at once, and even now it is not entirely clear to all Americans. I shall try to put it in a few words, although it deserves a fuller statement than this.

Our objective is to help other countries develop political and economic systems of their own which will achieve enough dynamism to create the human and physical resources to sustain further progress under their own power. These systems should be based upon the desires and participation of an ever-widening circle of people in each country. They should lay the foundation for stability, and they should tend to strengthen the common defense against aggression of any type.

The problems come when we try to work out meaningful connections between this broad objective and the specific actions that might be taken to attain it in a given country.

One of the first problems is to find and work out with the government of each country common objectives which we both seek. This always involves a certain compromise between what we Americans think should be done, or done first, and what the cooperating government wants to do.

Another problem in working out a program of cooperation is that we wish to help the country become economically independent—less dependent upon our assistance, not more dependent. Sometimes a government, when assured of American support, tends to relax its own efforts, seeking more help from us, doing less itself. We encourage governments to employ American assistance as a tool, not as a crutch.

SOME MISUNDERSTANDINGS

We not only have problems in the operation of our foreign assistance programs. We have problems that stem from misunderstandings about it among the American people themselves.

As you know, our Congress reviews the entire foreign assistance program each year and appropriates money for it, with some policy guides as to how it shall be spent. Congress reflects the attitude of the whole American people.

I have pointed out that the American people have supported these programs for many years. Nevertheless, there is opposition to various aspects of foreign assistance; and many people who support the grand principle of helping other nations have strong opinions about how we do it and what we do.

It is not surprising that there is opposition. What is impressive is that the bulk of the American people have supported foreign assistance year after year, costing billions of dollars which they must pay out of their own pockets.

Some of the criticism stems from misunderstanding. Some comes from people who have been misled by false information or wrong thinking of one kind or another. And, of course, some comes from people who oppose it simply because it costs a lot of money. Misunderstanding and misinformation are widespread, even among Americans overseas and close to the program, and extending even, I am afraid, to people employed in the program itself.

I wish to deal with some of these misconceptions.

There is a widespread belief among Americans that all human beings are motivated mainly by aspirations for a better life and that they will pursue these aims steadily and with good sense when the opportunity is offered to them. This ignores the fact that there are passions in men which are more powerful than the simple aspiration for a better life—passions based upon religion, nationalism, pride, prejudice, tradition, and so on. More of the world's conflicts arise out of emotions than out of economics. War itself is very bad economics. Still, we cannot seem to get it through our heads that offering people a chance to improve their standard of living does not in itself cause them to behave consistently in a purely rational manner. Man is not content with material things alone, and economic opportunity is only one of his aspirations.

Closely related to this is our tendency to believe that a rising standard of living produces political stability and steady growth of democratic institutions. We have been shocked time and again by outbreaks of violence in countries we have been assisting and by the setback of democratic processes, if only for a time. It is necessary to have an expanding economy and rising standard of living in order to support strong democratic systems which will in time produce political stability. But an expanding economy does not by itself produce these ideals—particularly in its early stages—any more than dem-

ocracy or political stability by themselves produce a higher standard of living.

In fact, progress comes about through a process of conflict, sometimes peaceful, sometimes not. A certain dissatisfaction is essential to progress, but it cannot always be controlled and channeled. It takes time and discipline for social dissatisfaction to direct itself into democratic action. We must remember this and not lose patience. Above all, we must not feel that our efforts to help nations improve themselves have failed merely because they do not produce immediate and steady progress toward democratic political stability.

Another widespread misconception among the American people is overestimating the extent to which our assistance can influence the course of event in a country. Actually, our oversea programs are not intended to produce specific political results. One of the virtues of American assistance is that we do not attach political conditions to it. There is a vast political awakening going on in the world today. Millions of people have suddenly become politically aware and politically active—people who for centuries have had little more on their minds than their farms, their shops, and their families.

Most of these millions are in countries that have lagged behind the industrialized nations for one reason or another, and they are impatient to catch up. They have a natural distrust of the rich and powerful nations. They have an intense desire to attain nationalistic as well as personal aspirations. This inevitably results in impulsive, popular actions, some of which may seem to us against American and free-world interests.

It is the process of learning to find one's own way. Nations as well as individual persons learn self-reliance only by practicing it, and this involves making some mistakes and even resenting people who try to help if they interfere with self-expression.

ECONOMIC ADVANCEMENT REQUIRES TIME

That brings me to one more source of misunderstanding, which is the tendency to underestimate how long it takes to accomplish significant results through foreign assistance. When you are dealing with the accumulated problems of centuries, it takes more than a couple of years to start a steady progression of economic and social advancement. At the root of this is the fact that we are not dealing primarily with economic problems. It is necessary to deal with the organization and functioning of a society in every aspect of its existence. It is not only physical resources that are needed, although these needs may be large. Even more important is the necessity of transmiting ideas and atitudes and having them accepted and, along with this, the building of institutions and the training of individuals to carry on the process of selfpowered growth. This is a sound approach, but it takes time. Some years may be devoted to institution-building and training before dramatic results are seen, either by Americans or by the people we are helping.

Recently a book has appeared which bears directly on what I have been talking about. This book, called "The Ugly American," is causing many Americans to do some heavy thinking about our foreign programs. From this point of view, the book is doing a good thing. We ought to be thinking about our oversea efforts quite seriously. There are imperfections in our programs, and we should constantly examine them to see where we can improve them, where we are doing wrong.

If this book merely started you thinking, I would say no more about it, other than to urge you to read it. Unfortunately, many people will let the book do their thinking for them, and the book is quite unsatisfactory for that purpose. It presents only one point of view, most unfavorable to all we are doing. It gives no opportunity for balanced judgment, and it contains many egregious errors of thinking and of omission. I cannot say that it contains errors of fact, because the authors say the book is fiction, while they also claim it is true. It is difficult to disprove anything which is offered to you under the labels of both fiction and fact.

My greatest concern about this book is that it seems calculated to destroy some of America's confidence in itself. It keeps repeating that our representatives overseas are incompetent, even stupid. It insists that all the good Americans working abroad are defeated and frustrated by the bad Americans and that all the career people in foreign service are bad people. It shouts that we have failed, the Communists are winning everywhere. We must quit. Asia is lost.

In summing up the argument of the book, which is directed primarily against our foreign assistance, our information program, and our diplomacy in southeast Asia, the authors make a major point that 700 million people have been brought under Communist domination since World War II. That is regrettably true, but it is not clear what this proves about our foreign aid, information, or diplomacy. The fact is that of all these people, the only ones who had received any economic assistance from us were the Chinese—and the argument has been going on ever since that we did too little too late. This was one reason for stepping up our assistance and information programs throughout the Far East, and not one single area where these programs have been operating has come under Red control. This may not prove that our efforts have insured the survival of these free nations, but it certainly does not prove that our efforts have failed.

I think it might be said here that as far as America is concerned any nation of people who want communism can have it. But we shall not stand by and see communism forced upon any country from outside or from within. Our assistance is offered to free nations whose governments and people wish to remain free. If they do not wish to remain free, that is their business. If they wish to maintain their independence and they want help and need help to do it, we will assist them, and not merely because of a threat of communism. We do not try to dictate their form of government, nor force them into military agreements, nor interfere in their internal affairs.

Let me remind you that we are not engaged in a popularity contest with anyone. If America simply wanted to be popular with Asians, we might spend less money in quite different ways—on lollipops and games and circuses and free trips around the world. No, we are engaged in a much more serious business. Bringing economic and social progress to millions of people is a hard job, without drama and with little sign of progress from day to day.

It has been argued that we should put our Americans out in the villages where they can work with the people directly. This sounds appealing, but there are 40,000 villages in Thailand alone—in the whole of free Asia there are well over 1 million. How many American technicians would it take to reach them all? How would they cope with nationwide problems such as malaria, electric power shortages, the lack of highways, the vast needs for teacers to man the schools, the lack of hospitals, the absence of marketing facilities? The officials now in the villages lack resources to cope with such problems. Where would the Americans obtain them? I am sure that the village people would respect an American who devoted his life to helping them, but I do not believe that hundreds of such Americans could make a significant improvement in the economy of Thailand or of Asia in many years.

RUSSIAN AID VERSUS U.S. AID

It has been argued that the Russians have made a bigger impact with their aid in one country by giving things like a sports stadium, a hospital, and a graduate school for doctors and engineers. Actually, the Russians have given Asian nations very little but have for the most part only extended credits for doing such things, for which they expect to be reimbursed. These offers create excitement for a few weeks, which might be taken for a great propaganda victory.

American aid is less noisy, but it is considerably more generous and the benefits spread farther and last for many years. For example, the United States has actually donated to Thailand large quantities of hospital equipment; every province in Thailand has received some. We are building a new medical school at Chiengmai, having already given a lot of help to Siriraj and Chulalongkorn medical schools, and we are making a major contribution to the new graduate school of engineering at Chulalongkorn University under the auspices of SEATO. We have not built a sports stadium, and I doubt if the Thai people—especially those 18 million in the rural areas—would be grateful to use if we did do so. On the other hand, we have built many, many other things—a technical institute in Bangkok that now has 5,000 students, many new buildings for Kasetsart Agricultural University, three regional technical institutes, a new highway to the northeast, a railroad extension to the Mekong River, water systems in six northeastern towns, scores of water tanks in the northeast, any number of laboratories, teacher training buildings, concrete bridges on major highways—the list is almost endless.

Why do some people say that when we do such things it is stupid and wasteful, but whatever the Russians promise is clever and effective?

I think that what angered me most about "The Ugly American" was its failure to acknowledge that our efforts had done one single bit of good. That is why the American who lets this book do his thinking for him will believe that we have failed in all our efforts.

No honest and intelligent man could look at the free nations of Asia and Africa today without seeing verywhere enormous evidence of the effectiveness of American cooperation.

We have not done all we would like to do, not even all we have tried to do. We are glad to have criticism that will help us do a better job. But there are certain principles from which we cannot expect either the American taxpayer or the Thai people to depart.

First is that the U.S. Government extends its technical and economic cooperation through the cooperating government, not directly to the people. The Thai Government has a responsibility to fit American economic assistance into Thailand's own plans where it will do the most good. We try to help the Thai Government prepare itself better to deal with its problems in the future—better equipped, better trained, better organized.

INSTITUTION BUILDING

Second, we aim at institution building. This means improving the existing organizations of the country or helping establish new ones. For example, it is not enough to bring American teachers to Thailand merely to add their services to the 90,000 Thai teachers. Instead we concentrate upon strengthening the Thai Ministry of Education so it can improve the educational system throughout the kingdom. We follow the same principle in working with many other agencies of the Thai Government.

Instead of accomplishing a little and claiming all the credit for it, we help the

agencies of Thailand accomplish a great deal more, and we share the credit with them.

A third principle is that American assistance should be devoted mainly to projects which require outside help. The Thai Government naturally prefers to do with its own resources the things it can do and to use American assistance for things that need equipment, skills, training, or commodities that are not available in Thailand.

This leads me to a fourth principle: The projects we are working on are projects the Thai Government itself selects and wants. There is nothing gained by our undertaking a project just because we think it is a good idea, if the Thai do not think so too. The Thai Ministries propose projects, and they are screened by the Thai Technical and Economic Committee. We select those we will help carry out; we may modify them in discussions as we go along. We need to obtain the full cooperation of the Thai Ministries in carrying out the work, to assure that the Thai will carry on, extend, and improve these projects in the future after American aid has ceased.

Fifth, the emphasis in all our efforts is on training executive, technical, and professional people. In cooperation with the Thai Government, we have sent more than 1,500 Thai abroad for specialized and advanced training. Together, we have provided opportunities in Thailand itself for training many more than this; for example, most of the teachers in Thailand have received some type of special inservice or preservice training as a result of Thai-American cooperation. Every American technician will, we hope, some day be replaced by many Thai who are better trained as a result of his efforts.

There are other principles that guide us in working with the Thai Government to devise the best application of American assistance, but there is only one more that I wish to single out for special attention. That is, that we are dedicated to the broad economic advancement of Thailand. We want to see the whole economy of Thailand grow, and we want it to grow soundly, steadily, and in good balance. If we were simply engaged in doing good, this principle would not matter. If we were trying only to promote friendship, this would not matter. But we are trying to do some real and lasting good for all the country. If we can do this, we can count upon friendship that will endure for generations, not just a transitory period of good will.

The economic and social progress of a nation is a complex thing in which every element is dependent upon others. For example, for the farmer to make more money he must produce more; to produce more he must be able to sell it; to sell more he must have better marketing facilities; to have wider markets he must have highways and communications; to build these there must be industries; for industries there must be capital, equipment, and skilled manpower to run them; for skilled manpower we need more and better schools; for schools we need more and better teachers; and for all of this to work, the people must be in good health.

The interconnections of an advancing economy are almost endless. We cannot deal with all of them. We would reach the point where our efforts were so scattered and spread so thin that they would do little good. We must keep them concentrated on the main things, but these are necessarily varied and diverse, because Thailand's aim is a balanced and diversified economy that will insure a better life for its people.

I think you could say that all of our activities must meet at least one of two tests: They must contribute directly to the increased productivity of the nation, or they must result in improved public services and better Government. Our aim is to help Thailand reach a degree of self-reliance in which she will not be dependent upon any outside assistance.

America is a hardheaded, practical Nation. It is also a generous and sentimental country. It is a country that has confidence in its strength and does not lack for courage, but it has a soft heart. It wants to be liked and it wants to be respected, too. What it really longs for is a world of nations among whom there is understanding, prosperity, friendship, and mutual confidence. Our foreign assistance program is a part of our effort to be a true friend and a good neighbor to other nations of similar good will.

I ask you to think about these things and to judge our work with Thailand and other countries in the light of the basic principles and objectives I have talked about. If we all think about these matters, I feel confident of better understanding, and with better understanding all Americans and all people can work togehter more effectively for the kind of world we all seek.

Retirement From Naval Service of Comdr. Ann A. Bernatitus, of Exeter, Pa., First To Receive Legion of Merit

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story which appeared in the Wilkes-Barre Times Leader of April 8, 1959:

LEFT CORREGIDOR BY SUB—NAVY NURSE RETIRES; HAS LEGION OF MERIT

Comdr. Ann A. Bernatitus, Nurses Corps, U.S. Navy, a Navy nurse who served through the battles of Bataan and Corregidor, escaping from each of the Philippine strongholds just before their fall, retired after 23 years service on April 1 at the U.S. Naval Hospital in Philadelphia.

Those many months spent in the Philippines earned Miss Bernatitus the Legion of Merit and made her the first person in the naval service to receive the then newly created award.

In July 1940, Miss Bernatitus arrived in Canacao, Philippine Islands, for duty, and was on duty at that station at the outbreak of the war. As the war progressed, she was sent with an operating team into the Manila area to aid the wounded soldiers. She retreated to Bataan with the Army units and was later evacuated to Corregidor.

When Corregidor was on the verge of surrender, a submarine, the U.S.S. *Spearfish*, came through enemy defenses and she was taken aboard. Seventeen days later she arrived in Australia, having made the entire journey with the submarine submerged. She was later transferred back to the United States and served at various naval hospitals.

While serving at the naval dispensary in New Orleans as a lieutenant (jg.), on September 10, 1943, Miss Bernatitus was awarded the Legion of Merit, the first person in the U.S. naval service ever to receive the honor. The presentation was made for her "courageous and outstanding performance of duty during the Manila-Bataan campaign, December 1941 to April 1942."

Commander Bernatitus was born at Exeter, January 21, 1912, and resides at 334 Battle Avenue, Exeter. Attending public schools in Exeter, she graduated from high school in 1928. Entering nurses' training at the Wyoming Valley Homeopathic Hospital Training School here in 1931, she graduated in 1934. Shortly after she took a post-graduate course in operating room technique at the University of Pennsylvania Graduate Hospital at Philadelphia and continued duty in that hospital in a surgical assignment.

In September 1936, Miss Bernatitus was appointed to the Navy Nurse Corps, and ordered to duty at the Chelsea Naval Hospital, Mass. Two years later she was reassigned to Mare Island, Calif., and served aboard the U.S.S. *Chaumont*. In July 1940, Miss Bernatitus arrived in Canacao, Philippine Islands, and assigned to the naval hospital there.

During her 23 years as a Navy nurse, Miss Bernatitus served at various hospitals and on hospital ships during World War II. She reported for duty at the U.S. Naval Hospital, Philadelphia in October 1954 and served as Chief of the Nursing Service.

On April 1, 1959, Miss Bernatitus received her orders transferring her to inactive duty on the retired list, ending a truly illustrious career. She will reside at Exeter.

Washington Board of Trade Anniversary Week

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. McMILLAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include a statement by the Commissioners of the District of Columbia concerning the Washington Board of Trade anniversary week.

I should like to state that the Washington Board of Trade is one of the outstanding organizations in the United States, and I presume that its membership includes more of the leading citizens of the Nation's Capital than any other one organization. Practically all the members of this great organization are property owners and taxpayers here in the District of Columbia and have a deep interest in the city government.

I have leaned heavily upon this organization for information and advice during the 20 years I have served as a member of the House District Committee and especially during the 10 years I have served as its chairman.

I hope every Member of Congress will take time to read the following statement and will also check the activities of the board of trade in connection with District affairs here in the Nation's Capital:

WASHINGTON BOARD OF TRADE ANNIVERSARY WEEK, APRIL 15–22, 1959: A PROCLAMATION BY THE COMMISSIONERS OF THE DISTRICT OF COLUMBIA

Whereas on Wednesday, November 27, 1889, a small group of prominent Washington businessmen met at the Ebbitt House to discuss the need of a civic association; and

Whereas 1 week later on December 2 the Washington Board of Trade was incorporated with a membership of 200 under the leadership of Mr. M. M. Parker, first president of the organization; and

Whereas for the past 70 years, the Washington Board of Trade has kept pace with

the growth of the community and numbers in its membership over 7,000 public-spirited citizens and business firms of metropolitan Washington; and

Whereas the members of this outstanding organization have unselfishly dedicated themselves to the improvement of the District of Columbia and have been instrumental in assisting in the successful conclusion of regulations and projects beneficial to all as witness a few of their many achievements: formulation of original zoning laws, establistment of the public library system, establishment of a family court for the District of Columbia, construction of the National Airport at Gravelly Point, initiation of the successful program for the new stadium, the establishment of the District of Columbia General Hospital, and the authorization for a cultural center; and

Whereas because of the phenomenal growth of metropolitan Washington, and in the interest of the entire citizenry, the Washington board has now expanded its activities and maintains 32 standing committees dedicated to solving the complex problems confronting the area, as well as its promotion, such as: adequate traffic control, water pollution control, port improvement, the Cherry Blossom Festival, tourist visitations to the Nation's Capital and new businesses for metropolitan Washington:

Now, therefore, we the Commissioners of the District of Columbia, in recognition of outstanding meritorious service in the public interest do hereby declare the week of April 15 to April 22, 1959, Washington Board of Trade Anniversary Week in honor of the 70th anniversary of this outstanding, dynamic organization and add our personal felicitations for its continued growth and progress.

ROBERT E. MCLAUGHLIN,
DAVID B. KARRICK,
A. C. WELLING,
Commissioners of the District of Columbia.

Sterling Silver Week in Connecticut

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. KOWALSKI. Mr. Speaker, I call the attention of the House to the fact that the distinguished Governor of Connecticut, the Honorable Abraham A. Ribicoff, has designated the current week as Sterling Silver Week in my home State.

I take particular pleasure in Governor Ribicoff's action because my home city of Meriden is proudly known as the Silver City.

Sterling silver products of the skilled craftsmen of Meriden and its adjoining sister town of Wallingford are famous all over the globe. The silver industry is one of the most important in our State, providing employment for thousands of men and women. The industry has grown with our State, and since colonial days it has maintained the high standards of excellence which have made Connecticut silver a treasured family possession in every corner of the globe.

I am happy to insert in the RECORD news accounts of the proclamation of Sterling Silver Week from two of New England's outstanding daily newspapers, the Meriden Record and the Meriden Journal:

[From the Meriden Record, Apr. 18, 1959]

RIBICOFF HONORS SILVER INDUSTRY

HARTFORD.—The silversmiths of Meriden and Wallingford were honored yesterday morning when Gov. Abraham A. Ribicoff proclaimed the week of April 19 to 26 as Sterling Silver Week at ceremonies in his office at the State capitol.

Attending were John B. Stevens, vice president of the International Silver Co., Meriden, and Donald W. Leach, executive vice president of Wallace Silversmiths, Inc., Wallingford, who gave the Governor a pair of sterling silver candelabra to commemorate the occasion.

The sterling silver industry, one of Connecticut's, and America's, oldest industries, was given a brighter polish in the proclamation issued by the Governor.

CENTER OF TRADE

Governor Ribicoff pointed out that fine craftsmanship, as typified by silversmithing, is traditional to Connecticut industry, and that three centuries after the craft was introduced in America, Connecticut remains an important center of silversmithing contributing greatly to the comfort and grace of American life.

Governor Ribicoff cited the industry as intertwined with our Commonwealth's historic past and our progressive present."

Date for the opening of the week coincides with the 184th anniversary of the ride of Paul Revere, America's most famous silver craftsman.

The silversmith's industry today employs about 5,000 men and women in the State. Among them are craftsmen whose skill takes years of apprenticeship, for sterling today combines mass production methods with the touch of the artisan.

AVAILABLE TO ALL

Sterling silver, which once graced only the tables of the wealthy, has become, in 352 years, a combined mass production artisan industry to the extent that sterling has become the hallmark of gracious living in all walks of American life.

In 1607 when Capt. John Smith set sail for the New World, his small band of colonists included two silversmiths. The name "sterling" was derived from the name given to the silversmiths in England in the 12th century. Because these smiths came from eastern Europe they were called "easterlings."

Usage wore off the first two letters of the name "easterling," but the product itself defies time. In fact, the longer sterling silver is used the more beautiful it becomes. Usage improves the patina, the soft, lustrous finish silver acquires through the years.

In a statement issued yesterday, Bernard D. Kasack, president of the Meriden Chamber of Commerce, said:

"The chamber of commerce salutes the silver industry which accounts for two-thirds of the manufacturing jobs in Meriden.

"During Sterling Silver Week, the people of the Silver City of the world, should note the blessings which the silver industry has brought to Meriden. Our schools, parks, and so many of our civic assets come from the taxes and payrolls provided by this industry.

"We wish our silver industry well and during this week we pledge our most diligent efforts to serve it and to help it prosper."

[From the Meriden Journal, Apr. 18, 1959]

STERLING SILVER WEEK PROCLAIMED BY GOVERNOR

Gov. Abraham Ribicoff yesterday proclaimed the week of April 19-26 as Sterling Silver Week, bestowing honor on the silversmiths in Meriden and Wallingford at ceremonies held in the Governor's office.

The ceremonies were attended by John B. Stevens, vice president of the local International Silver Co., and Donald W. Leach, executive vice president of Wallace Silversmiths, Inc., Wallingford.

The two silver officials gave the Governor a pair of sterling silver candelabra to commemorate the occasion.

Governor Ribicoff cited the silver industry as "intertwined with our Commonwealth's historic past and our progressive present."

In a statement issued by Bernard Kasack, president of the Greater Meriden Chamber of Commerce, the chamber expressed its best wishes to the silver industry.

Foreign Aid Programs

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I include an interesting compilation by Paul O. Peters, well known to most of us as a skilled analyst of Government affairs, revealing the tremendous cost of foreign aid:

Report on wartime and postwar foreign aid programs of the United States, period, July 1, 1940, through Mar. 31, 1959

WORLD WAR II PERIOD

Fiscal 1941:	
Grants	$203,000,000
Credits	115,123,052
Dollar outlay	274,443,834
Total	592,566,886
Fiscal 1942:	
Grants	6,205,122,095
Credits	476,699,333
Outlays	1,273,716,986
Total	7,955,538,414
Fiscal 1943:	
Grants	9,165,977,760
Credits	47,894,356
Dollar outlays	2,730,758,500
Total	11,944,630,616
Fiscal 1944:	
Grants	16,650,353,676
Credits	122,948,106
Dollar outlays	3,827,988,633
Total	20,601,290,415
Fiscal 1945:	
Grants	15,758,641,526
Credits	90,818,352
Dollar outlays	2,926,153,103
Total	[1]18,775,612,981
World War II totals	[1]59,869,639,312

POSTWAR FOREIGN AID

Fiscal year 1946:	
Grants	3,288,535,118
Credits	1,412,400,910
Other	2,203,186,778
	6,904,122,806

Footnote at end of table.

Report on wartime and postwar foreign aid programs of the United States, period, July 1, 1940, through Mar. 31, 1959—Con.

POSTWAR FOREIGN AID—continued

Fiscal year 1957:	
Grants	$2,074,982,401
Credits	4,766,374,998
Other	1,682,120,213
	8,523,477,612
Fiscal year 1948:	
Grants	2,583,000,000
Credits	2,802,000,000
Other	1,702,000,000
	7,087,000,000
Fiscal year 1949:	
Grants	5,169,000,000
Credits	1,138,000,000
Other	1,295,029,206
	7,602,029,206
Fiscal year 1950:	
Grants	4,617,000,000
Credits	405,000,000
Other	1,316,536,000
	6,338,536,000
Fiscal 1951:	
Grants	4,280,286,000
Credits	419,000,000
Other	1,925,000,000
	6,624,286,000
Fiscal 1952:	
Grants	4,440,000,000
Credits	658,000,000

Total to March 31	2,681,582,350
Postwar foreign aid to March 31, 1959	80,812,033,974

Footnote at end of table.

Report on wartime and postwar foreign aid programs of the United States, period, July 1, 1940, through Mar. 31, 1959—Con.

SUMMARY ON FOREIGN AID

Grants and credits World War II period	$59,869,639,312
Grants and credits postwar period	80,812,033,974
Total reported cost	140,681,673,286

[1] NOTE.—Dollar outlays include sums spent by our Government and its agencies for materials and equipment for foreign allies during the war period.

Against the gross foreign aid there were allowable deductions consisting of reverse lend-lease amounting to approximately $3 billion and repayment of credits for surplus property and installments on loans of approximately $8.5 billion.

Not to be overlooked in the total cost of foreign aid is the interest on the moneys borrowed during periods of deficit financing to carry on the foreign aid programs. The interest cost from the beginning to the present time is estimated conservatively at $20 billion total.

This bulletin compiled from statistics issued by the Office of Business Economics, and predecessor agencies, in the Department of Commerce.

"Ket" Kettering Said: "Think of the Future"

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. LEVERING. Mr. Speaker, one of the most significant statements ever to come from the pen of any man was written by Charles Francis Kettering—better known as "Boss" Kettering to many at General Motors and as "Ket" to his friends in my 17th Ohio Congressional District—and I want to repeat it now:

We should all be concerned about the future because we will have to spend the rest of our lives there.

I thought of this when I read an article in the new magazine section—known as Weed-End magazine, in the Mansfield (Ohio) News-Journal last Sunday, April 19, 1959, written by my good friend, Ken Woodman.

In this "Memo for Americans," Ken Woodman, who knew "Ket" well, gives a little-known episode in the life of the great inventor and industrial genius, of whom our district is so proud. As you and I know, Mr. Speaker, not only is my district proud of "Boss" Kettering's life and works, but the whole Nation is indebted to him in many ways. A tree is best measured when it is down. Although Mr. Kettering has been dead for many months, it is obvious that he has not been forgotten and that his memory will continue to inspire and to help this generation and generations to come.

Under leave granted me, I am inserting the story by Ken Woodman in the CONGRESSIONAL RECORD.

MEMO FOR AMERICANS
(By D. K. Woodman)
CHALK ONE UP FOR BOSS KETTERING

An old, old friend of the late C. F. "Boss" Kettering tells this story about the intrepid inventor.

Boss Ket had just perfected in his laboratories in Dayton a new quick drying paint for automobiles. On a trip to Detroit he described it to his friends at General Motors, explaining that it would save many hours in the time required to complete a passenger car for delivery.

GM and Ket had worked together closely for years. It was agreed that a top GM official would go to Dayton with a group of paint experts and look over Ket's newest invention. The man selected a good friend of Kettering's. He was also highly skeptical.

When the VIP's arrived at his laboratory, Ket made them welcome and explained his new product brusquely and thoroughly as was his wont.

It soon became obvious that the visitors were not impressed. They felt that either the paint could not possibly dry as fast as Ket claimed or that if it did, it would not make an enduring car finish.

So Ket simply changed the subject. In a short time he excused himself for a few minutes and when he returned suggested that they make a social day of it. They did. They toured all the labs, listening to Ket's stimulating ideas for new inventions.

They had a fine lunch followed by good cigars and some business chitchat with no mention of paint.

At 4 p.m. Ket suggested that since it was a long drive back to Detroit the men might want to get an early start. They all strolled out to the parking lot.

"My car," the top GM executive exploded. "It's gone."

"What kind was it?" asked Ket.

"A black Cadillac."

Ket sighed, "Too bad. But you've got lots of Cadillacs at General Motors. Besides your wife told me once she was tired of black cars. She's like a nice pale green—like this one." He pointed to a newly painted green Cadillac on the lot.

"Why, you * * *." The GM executive stared, and broke into a grin. It was his own car, newly painted and dried during the time Ket had been chatting idly with him about other matters. He examined the paint job carefully. His experts were even more careful.

General Motors adopted Ket's quick drying paint and the executive announced he would never again let Ket excuse himself from a conference without having him followed.

Rev. Placid Hennessey, O.F.M.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of Monday, April 6, 1959, upon the death of Rev. Placid Hennessey, O.F.M., of St. Joseph's Monastery at Georgetown, Wilkes-Barre, Pa.:

REV. PLACID HENNESSEY

It has been written that man takes with him when he dies only that which he has

given away. Under those circumstances, the Reverend Placid Hennessey, O.F.M., of St. Joseph's Monastery at Georgetown, left on the last journey with untold treasure, for he had given away during the past 36 years as a member of the Franciscan Order everything he had, including his life. He devoted his entire career to religion and to charity in keeping with the teachings and example of St. Francis of Assisi, founder of the order, known as Friars Minor.

In the 13 years he was stationed here, Father Hennessey became one of the best known men in the community, evidence of the success of his mission. As director of novenas and charitable works, he labored diligently in line of duty.

But he was not satisfied to limit his ministry to the formal discharge of his church obligations. He took an interest in the Red Cross, serving on the board of directors and as representative of the Wilkes-Barre area, in which capacity he acted for the organization in emergencies. He also found time to lend a helping hand to sports, especially professional basketball.

His kindness, generosity, and unselfishness were matched by a keen sense of humor. A life, dedicated to good works, came to an end all too soon, so far as this community was concerned. And it is safe to say other towns, where he labored, shared that sentiment.

To Live Within Our Means

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following article from the Chicago Daily Sun-Times of April 22, 1959:

TO LIVE WITHIN OUR MEANS

A straight-from-the-shoulder and timely lecture on inflation, economics, and morality was given by Treasury Secretary Anderson to 1,250 newspaper publishers and editors assembled in New York Monday.

We were gratified to hear him lay down a tough anti-inflation line—one with which we have been in complete agreement.

He rejected the false assumption that a little inflation is good for economic growth. He rejected the twin false assumption that putting the Government deeper into debt does not cause further inflation.

Some Congressmen reject the economic principle that creating printing press money by deepening the Federal debt causes inflation. Some go so far as to say that it is necessary for the Government to spend more than it takes in to keep prosperity going.

Anderson rejected these notions for both economic and moral reasons. He pointed out that the Nation is presently enjoying high incomes, record production and unprecedented business profits.

"If, in a period like this we say to ourselves and to the world that we cannot live within our means, everyone has the right to ask why," he said.

In periods of high prosperity, he went on, the Nation should do even more than balance the budget and break even. It should try to achieve a surplus to pay off some of the national debt.

"To ignore the obligation of paying off some part of our debt during prosperous times is contrary to all of our American traditions of good faith and performance," he reminded. "Failure to reduce any of our debt when we can means passing on the problems of the debt to another generation which I verily believe we have no moral right to do."

President Eisenhower has said that those Congressmen who want to spend more money than he has budgeted should have the courage to levy higher taxes, Anderson carries this a step further; he is saying that in good times spending should be reduced or taxes raised so that an attack on the mountain of Government debt can be made.

These are fundamentals of economics that were subscribed to as axiomatic by those who advocated deficit spending to ease the depression of the thirties.

Deficit spending must not become an accepted part of the American way regardless of the business climate. Anderson's voice of reason must be heeded.

The Hidden Dangers of Increased Trade With Soviet Russia

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. SMITH of California. Mr. Speaker, it has now been several months since Soviet Deputy Premier Mikoyan visited the United States. I think there are some facets of his visit which have been overlooked. For this reason, I want to direct the attention of my colleagues to what I consider a most important danger arising from his grandiose plea for increased trade between the United States and Russia.

We remember Mikoyan. There he was—a smiling, dashing, mustached man from Moscow, speaking sweet words and displaying broad smiles. Everywhere he went he exuded friendship, telling of the glories of Soviet communism and urging Americans to accept him as an apostle of peace and good will.

His words were so enticing—to those who did not know the truth. The Soviet Union, he said, is gradually being "democratized." "Now there are no arrests for political reasons." The Iron Curtain is a "fable." We stand for "peace," "freedom" and "brotherhood."

Mikoyan did achieve a considerable propaganda success in this country. He was accepted by important business leaders and select social circles. He gained audiences with high political leaders. One reporter, commenting on his visit to the west coast, stated:

The 63-year-old Russian official has been winning friends and influencing people all over the place.

Hundreds of students, for example, at a university warmly greeted him. One coed ran up to shake his hand. Other students followed. His interest in education was praised by the university president. After lunch at a fashionable restaurant, Mikoyan went to a movie studio, there to inspect the plant and meet some of the actors and actresses. Later, as featured speaker at a dinner arranged by business officials, this faithful disciple of Stalin waxed eloquently on how America was botching up international relations.

From all the publicity and showering applause, you would think that a conquering hero from a friendly country had come to our shores—a hero whose ideals of government and personal living were similar to ours, a hero whom we could admire and incorporate into our national consciousness.

Rather this individual is one of the world's highest-ranking Communists, the No. 2 man in the notorious and iniquitous tyranny of Soviet Russia. He is the sworn opponent of everything we cherish and hold dear. His so-called hand of friendship is a hand stained with the innocent blood of literally millions of men and women. The smile—which captivated so many in the United States—is actually a satanic smirk which smugly watched entire families liquidated by the Communist secret police. The Soviet democracy he so blithely hails is the democracy which has made all Russia a prison house—where freedom of speech, thought, and the press are muzzled. Let us make no mistake: Mikoyan, despite his genial smiles and gracious outward demeanor, is a deadly enemy of America and our democratic way of life. Not to recognize him as such is to jeopardize our security.

I should like to call to the attention of my colleagues an important but generally overlooked aspect of Mikoyan's visit—namely, the dangers to the internal security of the Nation inherent in the Soviet Deputy Premier's call, among other things, for closer trade relations between the United States and Communist countries. Increased trade may have some beneficial aspects for America, but we would be foolish not to recognize that it will also pose severe problems for agencies of our Government, such as the FBI, charged with protecting the internal security of the Nation.

One of these problems, most frankly, would be the increased danger of Soviet espionage. Over the years the Soviets have systematically used trade contacts, business relationships and other commercial transactions as covers for illegal espionage activities. This remains true today. Any Soviet trade organization established in the United States automatically becomes a workshop for espionage. We must recognize that to allow more Russian technicians, business experts and trade consultants into our country will greatly multiply the FBI's problems.

Let us look at a few facts and see how the Soviets—ever since the Bolshevik Revolution—have manipulated trade contacts for spy purposes.

In March 1919, for example, an individual by the name of Ludwig C. A. K. Martens arrived in New York City. As told in Don Whitehead's most excellent book, "The FBI Story," Martens was ballyhooed as the official trade representative of the Soviet Union. He set up an office in New York City, even though the United States did not diplomatically recognize Moscow. Under this trade "cover," the very first Soviet espionage

was conducted—very crude and inept, of course, as compared with later Soviet efficiency, but already the first prick of the knife blade of treason into our national life. Very interestingly, an individual by the name of Arthur Alexandrovich Adams was a member of Martens' staff. This same Arthur Adams was later to be identified as an espionage agent in atomic matters during World War II.

In 1921, Martens and his staff were deported from the United States. The Soviets, however, already were working to perfect the technique of using commercial activity as a cover to steal valuable information from this country. In 1924, a Soviet Government trade agency by the name of Amtorg was set up in the United States. Ostensibly this organization existed for commercial purposes, such as purchasing American products for delivery to the Soviet Union. Under this cover, Russians were able to travel, make contacts with Americans, gain access to industrial facilities and gather intelligence data from business firms, trade journals, and so forth.

Most important, however, Soviet espionage for the first time had a legal base in the United States—legal in that the Soviets now had a legal cover—Amtorg was officially recognized by the American Government—for their nefarious activities. Amtorg, which still exists, served for many years as the backbone, so to speak, for Soviet espionage in the United States. After diplomatic recognition of Russia in 1933, Soviet spies started operating from diplomatic establishments, supplementing the work of Amtorg undercover agents.

The importance of Amtorg is reflected by a comment made in 1926 by G. Bessedovsky, defected Russian official in Paris, to the effect that Gen. I. Berzin, a key leader in Moscow's espionage apparatus, had stated that the Russians were operating two illegal organizations in the United States and that Amtorg's offices served as a means of contact with them.

The activities of Gaik Badalovich Ovakimian, one of Moscow's master spies, reflect the extent of Amtorg's involvement in Soviet espionage. Ovakimian was associated with Amtorg. His chief activity, however, until his arrest by the FBI in 1941, was the operation of an extensive group of espionage agents. These spies gathered industrial information of all types, as well as military, economic, and political data.

Amtorg also helped recruit Soviet espionage agents. Take the case of Simon A. Rosenberg. Born in Poland, Rosenberg came to the United States in 1925. He accepted employment with Amtorg in 1930 and the next year went to Soviet Russia as an engineer. These were the days when Russia was trying desperately to increase industrial production. While in the Soviet Union, Rosenberg was contacted by the secret police who threatened to kill his sister, who was living in Russia, unless he agreed to become a Russian agent on his return to America. Rosenberg agreed and for the next 6 years he served as a spy collecting information for the Soviets. The master spy of his operation was none other than Ovakimian.

The story of Amtorg and Ovakimian has tragic overtones for America—leading, for example, to some of the Russians' most active espionage rings. Ovakimian was in contact with Jacob Golos, another Russian master spy. Golos operated World Tourists, Inc., like Amtorg, a commercial front for the Russians. World Tourists, like the U.S. Service and Shipping, Inc., another firm headed by Golos, was ostensibly a legitimate business—namely, a travel agency. Actually it served as a legal cover for Russian espionage. Among its notorious activities, for example, was the recruitment in late 1930's of Americans for military service in Spain for the Abraham Lincoln Brigade. Associated with Golos was Elizabeth Bentley, self-admitted courier for an entire ring of Communist agents in Washington, D.C., such as Nathan Gregory Silvermaster.

The influence of Amtorg can be directly traced in the theft of our atomic bomb secrets, culminating in the Harry Gold-Klaus Fuchs-Julius Rosenberg cases. Ovakimian, while employed at Amtorg, recruited Thomas Lessing Black who in turn brought Harry Gold into contact with the Russians. During World War II Gold was to serve as the intermediary between Fuchs, German-born atomic scientist, and the Russians. Most revealing is the fact that Semen M. Semenov, one of Gold's Russian superiors, had himself been an employee of Amtorg. This trade organization indeed sowed seeds of treason which brought bitter fruits against the United States.

Examples of how the Russians have exploited trade relations for espionage are many. I want to mention, however, just one more—the name of Andrei V. Schevchenko, a Russian aviation expert who arrived in the United States in 1942 assigned to the Soviet Government Purchasing Commission. This commission, established during World War II, ostensibly was a Soviet agency designed to promote Russian purchases for the war effort. However, like Amtorg, it was a cover for Russian espionage.

Schevchenko was assigned as a contact between the Soviet Purchasing Commission and Bell Aircraft Corp., Buffalo, N.Y. At this time Bell Aircraft was carrying out top-secret experiments in jet propulsion for air travel.

In pursuing his legitimate duties, Schevchenko was also alert for any possibilities of gathering information to which he was not entitled. He frequently used the company library and gradually made the acquaintance of the librarian. Step by step he indoctrinated her in the glories of Russia—and, then came the request for classified information. The librarian and her husband, fortunately, contacted the FBI—and that efficient investigative agency carefully supervised contacts between Schevchenko and the librarian. The Russian was even paying for information he could have secured free of charge.

The point, however, is that the Russians—though they were guests of this country and receiving vital lend-lease help—did not hesitate to steal information from our factories. In this instance, as so often happened, their cover was a Soviet trade mission.

In Mikoyan's plea for increased trade lurks the hidden danger of Soviet espionage. This danger is not something theoreitcal, but a concrete fact, substantiated by 40 years of Soviet exploitation of trade relations for illegal espionage purposes. So-called Soviet trade experts arrive in the United States. Among them, you can be sure, will be trained espionage agents, instructed to carry out prearranged contacts. They will endeavor to develop new subagents, new sources of information, new techniques of communication. Experience, moreover, has taught that trade fronts, such as Amtorg, provide the Russians with mail drops, a chanel for financing and opportunities of infiltrating legitimate American firms.

Victor A. Kravchenko, former employee of the Soviet Purchasing Commission in Washington, D.C., who later defected from communism, in testimony before the House Committee on Un-American Activities in 1947, identified Mikoyan, then Russian Foreign Trade Minister, as engaging in economic espionage against the United States. He told how Mikoyan sent a secret order, by Soviet diplomats, to Russian officials in this country on this subject. Kravchenko adds:

> This document was delivered to special secret agents in Washington and, it goes without saying, was delivered thanks to diplomatic immunity.

Kravchenko continues:

> In the same way, secret party orders were delivered to Washington from the central committee of the party.

Hence, when calls are heard from Americans for expanding our trade with Russia and other Communist countries, we must face up frankly to the security problems which automatically will arise. Not to do so is to live in a fairy land of dreams and fable.

Camp Drum Should Be Kept Open Year Round

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. STRATTON. Mr. Speaker, Camp Drum in New York State is one of the most famous and most important military installations in our country. It has served the national defense throughout our Nation's history and continues to occupy an important part in our overall training picture.

I have been greatly disturbed to learn that the Defense Department has gradually cut back its utilization of these important facilities and that further cutbacks are being contemplated. In my judgment, this is not only an unwise move, but is poor economy and may even jeopardize the training which our forces ought to receive in northern areas of our country where the climate is more

nearly like that which might be encountered in future operations abroad.

For this reason, I believe that Camp Drum should be utilized on a year-round basis, and am happy to include here the resolution formally adopted by the State Legislature of the State of New York urging Congress to take action to insure that this camp remains open on that basis.

The resolution follows:

RESOLUTION 89

Concurrent resolution memorializing Congress to provide for the utilization of Camp Drum in Jefferson County on a year-round basis

Whereas in recent years the facilities of the United States Army installation known as Camp Drum in Jefferson County in New York State, have been utilized only during certain months of each year; and

Whereas the commanding general of the First Army and the commanding general of the Continental Army of the United States have recommended that training troops should be stationed at Camp Drum during the entire year; and

Whereas the above-mentioned commanding generals as well as many other army officers who are familiar with the situation have stated that the above stationing of troops at Camp Drum would not only be beneficial to the morale of the officers and troops who are trained there but would also improve their training and efficiency; and

Whereas the carrying out of such recommendation would eliminate much shifting and transportation of troops and would not involve any increased expenditure of funds: Now, therefore, be it

Resolved (if the senate concur), That the Congress of the United States be and it hereby is respectfully memorialized to take such action as may be necessary to provide that the above-mentioned Camp Drum shall be utilized and kept in operation during the entire year; and be it further

Resolved (if the senate concur), That copies of this resolution be transmitted to the President of the United States, the Secretary of the Senate, the Clerk of the House of Representatives and the Secretary of the Army and to each Member of Congress duly elected from the State of New York.

By order of the assembly:

ANSLEY S. BORKOWSKI,
Clerk.

Concurred in, without amendment.

By order of the Senate:

WILLIAM S. KING,
Secretary.

Kennedy's Bogey

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. DEROUNIAN. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial which appeared in the Washington Daily News of April 21, 1959. This editorial in plain language tells you who is trying to fool whom, and I agree with it:

KENNEDY'S BOGEY

Senator JOHN F. KENNEDY, principal author of the union-reform bill now being debated in the Senate, has cut loose with a blanket slur on every Senator who thinks the Kennedy measure needs tightening.

He says categorically that such lawmakers simply are out to destroy labor unions.

We don't think the Democratic Senator directly would so accuse Democratic Senator JOHN L. MCCLELLAN, chairman of the rackets investigating committee, who advocates far stronger legislation, but Senator KENNEDY's generalization obviously includes him too.

The truth is:

That any legislation which fails to protect union members against hoodlums, embezzlers, and betrayers falls short of the needs.

That any legislation which fails to protect the public against blackmail, violence, and freedom of commerce doesn't do the job.

Senator KENNEDY's bill attempts to reinforce the inherent rights of union members. But it is not the answer to corruption, collusion, and abusiveness which Senator MCCLELLAN's committee has been spreading on the record for 2 years.

This scare talk about curbing honest union leaders is hot air. No honest leader would think of engaging in the practices a strong bill should curb.

The surest way to destroy labor unions is to let known criminals and thugs continue to run some of them. No legislation which broadens the power of members to control their own unions will destroy unions. Nor will any law which protects the public from the widespread abuses which have been exposed.

The difference between the attitude of Senator KENNEDY and the attitude of Senator MCCLELLAN lies in the difference of their aims. Senator KENNEDY is a candidate for President and Senator MCCLELLAN is not. Therefore, Senator KENNEDY is currying the support of union labor's bosses. Senator MCCLELLAN is not. One wants votes, the other wants reform.

Address by Representative Emanuel Celler

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. ANFUSO. Mr. Speaker, our distinguished colleague from New York, the Honorable EMANUEL CELLER, surely needs no introduction to the Members of this House nor to the people of America. He enjoys a national reputation because of his wise leadership, his ability as a parliamentarian, and most of all because of his sagacious views and opinions on matters of national interest.

To us, his colleagues from New York, he is the beloved dean of our delegation in Congress to whom we all look for guidance and counsel. His service in Congress—and that means service in the best interests of the American people—extends over a period of 37 years. This is exceeded only by our distinguished Speaker, the Honorable SAM RAYBURN, and the distinguished chairman of the Armed Services Committee the Honorable CARL VINSON.

MANNIE CELLER, as he is affectionately known to myriads of people, is a warmhearted person and a great humanitarian. Even as chairman of the House Judiciary Committee he is not the stern individual that many would expect of a person in that position, but friendly and cooperative in every way.

Recently, Congressman CELLER was the recipient of a Gold Medal Award presented to him at a dinner in his honor by the Jewish War Veterans. This took place last Saturday evening, April 18, at the Statler-Hilton Hotel in New York. On that occasion he delivered an address which, I am sure, all of our colleagues would enjoy reading because of the views expressed and the philosophy of life of this present-day sage. I deem it a privilege to have his address inserted into the RECORD so that the American people may have the opportunity to read it and enjoy it for its wisdom and ripe thoughts.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of Congressman CELLER'S address:

STATEMENT BY REPRESENTATIVE EMANUEL CELLER BEFORE THE JEWISH WAR VETERANS, APRIL 18, 1959, STATLER-HILTON HOTEL

How can I thank you? Yet, in a measure, this award, which I both proudly and humbly acknowledge, belongs to all the gallant and fighting men of the Jewish War Veterans. For that which the Jewish War Veterans have accomplished in the years of its existence and which I, in response to the inspiration of the Jewish War Veterans, have in my own small way done derive from the same source, and that source is the Bible. The Jewish War Veterans have fought for the preservation of civil liberties; for the preservation of liberty itself; for equality of opportunities for all peoples; for civil rights; for liberal immigration policies. The Jewish War Veterans have done this, not only by way of pamphlets and resolutions, but in the very frontlines of war—in the trenches, in the air, and on the seas. And in so doing, they echoed and reechoed the living words of the Testament.

I am not a student of the Bible; only a reader. And yet as I read I find with considerable excitement—always—that those questions that agitate us in this age—in this very day—have been explored in the Book. All around me, particularly in the work I do as a Member of Congress, I find the influence of Jewish law—not recognized as such, but unquestionably so—bears with great impact upon the way of the free world.

Lest I become too abstract, let me illustrate. Take the question of civil liberties and civil rights, with which we are wrestling today. It is a commonplace to trace the beginings of the battle for individual rights—that is, protection against the tyranny of the state—to the Bill of Rights, then through many centuries to Anglo-Saxon law, woven into the first 10 amendments to our Constitution. Yet this concept appears again and again in the Bible. It is not amazing that the concept of the dignity of the individual should be grounded in Western civilization, but it is truly amazing that in the culture of Biblical days, such concept should have been formulated and carried forward throughout the centuries. For example, listen:

Leviticus, chapter 25, verse 10: "And ye shall hallow the fiftieth year, and proclaim liberty throughout all the land unto all the inhabitants thereof: it shall be a jubilee unto you; and ye shall return every man unto his possession, and ye shall return every man unto his family."

Hearken also to Leviticus, chapter 19, verse 18: "Thou shalt love thy neighbor as thyself."

Interesting is the fact that this voice of Leviticus is engraved on our Liberty Bell in Independence Hall, Philadelphia.

How well the members of the Jewish War Veterans must understand this holy injunction. Thus, began a line reaching into the

present, a line which marks today the struggle between democracy and totalitarianism.

I want to quote one more passage which goes to the very heart of freedom, equality of opportunity, the American traditions of asylum and charity. These traditions have roots and the roots reach far down. We find them in Deuteronomy, chapter 24, verses 17 through 22:

"Thou shalt not pervert the judgment of the stranger, nor of the fatherless; nor take a widow's raiment to pledge. But thou shalt remember that thou wast a bondman in Egypt, and the Lord thy God redeemed thee thence; therefore I command thee to do this thing. When thou cuttest down thine harvest in thy field, and hast forgot a sheaf in the field, thou shalt not go again to fetch it; it shall be for the stranger, for the fatherless, and for the widow; that the Lord thy God may bless thee in all the work of thine hands. When thou beatest thine olive tree, thou shalt not go over the boughs again; it shall be for the stranger, for the fatherless, and for the widow. When thou gatherest the grapes of thy vineyard, thou shalt not glean it afterward; it shall be for the stranger, for the fatherless, and for the widow. And thou shalt remember that thou wast a bondman in the land of Egypt; therefore I command thee to do this thing."

The Jewish War Veterans forget neither the dead nor the living. When my bill to incorporate the Jewish War Veterans National Memorial became Public Law 903 of the 85th Congress, it was for me a proud moment. It was not an earth-shaking piece of legislation; it could not, of course, have the national impact as did the passage of the Celler Civil Rights Act of 1957, but it was a little bill, big in meaning, but a little bill, nonetheless, which I had nursed through to enactment. There was no widespread interest, but you and I know it honored the dead and how it inspired the living to dedicate themselves anew to the freedoms for which these brave souls had died.

You will forgive, I know, the reminiscing of a man of threescore and ten who, during his 37 years in Congress, bears the scars of many a lost battle and the healing memory of the few that were won. When I first came to Congress, prohibition was the burning national issue. How young, how naive, how uncomplicated that era seems now, despite our having fought only 6 years ago a World War. And the 6 years that followed were years of abandon, too many running riot to catch up with the easy money, the real estate booms in the swamps. Six years they were of flagpole sitters, marathon dances, the flapper, and the Charleston. But the tests of our maturity, unforeseen by most, were marching forward—the crushing depression, the rise of Hitler, World War II, the Korean war, and now the cold war with its day to day crises. We have known few moments of ease since 1929. But what we lost in ease we gained in conscience. And this is the central point. And through organizations like the Jewish War Veterans, we gave voice to that conscience both collectively and individually. The spur of conscience is not easy to live with, but having once come alive, we cannot put it to rest. For all is not well in this best of all possible worlds, and the severest tests are yet to come, tests of patience, understanding, and even sacrifice. I talk this openly to you because I know from our years of association together, the Jewish War Veterans will meet these tests with the same courage they have met them before. The roots of this courage, as I said a few moments ago, lie deeply embedded in racial memory and whether consciously or subconsciously—I do not know which—the poetry, the strength, and the depth of the Great Book are with you.

I have had a life full of content. It has been an existence of much happiness, not however, unmixed with some sorrow and suffering. But when trouble came I drew upon the Great Book once more and repeated the words of Job, "Thou shalt forget thy misery and remember it as waters that pass away."

Long ago, an Eastern monarch palgued with misfortune and harassments called his wise men together. He asked them to invent a motto containing a few magic words that could help him in his time of trial. He wanted a motto small enough to be engraved on a ring. He wanted it to be endlessly enduring. The wise men thought and thought, and finally came to him with the magic words, "This too shall pass." The motto has survived century after century. I have sought refuge on occasion in these words of rare wisdom, "This too shall pass," and they have proven precious to me and to countless others.

I do not wish to become maudlin or cheaply sentimental but with the years have come considerable wisdom and sound sense. I have learned the value of persistence. Consider the postage stamp. It secures success through its ability to stick to one thing till it gets there. I have shunned the ways of the cynic—the one who knows the cost of everything, but the value of nothing.

I remember what Disraeli once said to a Jewish lad, "You and I belong to a race that can do anything but fail."

I have learned from sad experience that anger rarely pays since it warps the judgment and that one must ever be armed with the breastplate of a good temper and that life is short but there must ever be time for courtesy.

I grow a bit weary too, of those stiffnecked ones who prate of their superior or nobler blood. I say to them, "Take your superior blood to the marketplace and see what it will buy you." Years ago, I read Mark Twain, that truly indigenous author. He says in "Puddinhead Wilson": "Training is everything; the peach was once a bitter almond; cauliflower is nothing but cabbage with a college education." How true is the importance of training. There is little of importance without it.

I recall the words of the Talmud on gratitude—"Into the well which supplies thee with water cast no stones."

Life, too, is not merely having and getting, it is rather being and becoming. And good character is what you are when no one is looking.

And life would be barren and dreary without good, genuine friends. I do not mean synthetic friends, so-called friends that are like sundials, useless after the sun sets. I have been blessed with many real friends. They are all about me tonight.

Forgive my moralizing. I do not want to appear like David and Solomon, who were in their youth rather wild and unbridled but who, in old age, were given to much philosophizing. I remember the doggerel:

"King Solomon and King David led very merry lives
With their very merry concubines and very many wives;
Till old age came upon them with its very many qualms,
Then Solomon wrote the proverbs and David wrote the psalms."

Finally, my greatest joy has been my wife and family—my wife, Stella, daughters Jane and Judith, my son-in-law, Sydney, and my grandchildren, Sue and Jill. All have brought me a harvest of happiness.

Stella has been over the years my earnest love and inspiration—inseparable from me as the tree from its roots or tongue from mouth or ship from rudder. She has brought balm to wounds, smoothed off the rough edges of adversity, darned up the raveled sleeve with care, and brought into our home loving kindness. She has been my shield, my sword. "Her price is far above rubies—strength and honor are her clothing."

There is no need for me to say more here and now; it is rather for all of us—you and me—to continue to do battle against the forces of evil; against oppression in man's inhumanity to man in whatever way each of us best can do.

Thank you. God bless you. God keep you.

Of Men and Marble

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, our colleague the gentleman from Arizona [Mr. UDALL] reports regularly to his constituents on the activities of Congress as well as on other matters, and these thought-provoking reports are widely quoted.

His most recent report cited the tasteful and impressive memorials to Presidents Thomas Jefferson and Abraham Lincoln, and the new bell tower memorial to Senator Robert A. Taft as examples of what can be achieved in the way of honoring our statesmen and leaders.

He made the excellent point that the fashion in memorials is changing. It is, indeed, and perhaps we can look forward to memorials having utility as well as beauty. Let them speak to the living about persons and events which are a living part of our Nation's heritage.

I include this challenging report for the information of my colleagues:

OF MEN AND MARBLE

(By Representative STEWART L. UDALL)

Spring is here, and for a change thoughts turn to other than legislative things.

As with most national capitals, Washington is a city of statues and memorials. They look down on the passerby from the parks and public places, and even Washington's famous L'Enfant traffic circles are dominated by generals astride horses, or half-forgotten statesmen.

According to the Library of Congress the last official inventory (in 1937) disclosed that 192 statues, monuments and memorials dot the Washington landscape. It is a safe guess then that there are now well over two hundred, as patriotic societies and zealous friends are constantly hatching new plans which keep the sculptors busy.

In fact, next week will mark the dedication of a Memorial to the late Senator Robert A. Taft of Ohio who died in 1953. This newest tribute in marble is not a statute but a bell tower, and is located a stone's throw from the Senate.

If the Taft bell tower is testimony that statues have gone out of fashion, one can be thankful. There are few Washington statues I have seen which do credit to art. Daniel Chester French's noble figure which dominates the Lincoln Memorial is one of the exceptions, but most Washington statuary is poorly conceived both as a work of art and a personal tribute to its subject.

I suppose the practice of erecting monuments to distinguished citizens came to its full flower during the Roman Empire. Earlier of course, the Greeks executed great works of public art but for the most part these were devoted to abstract conceptions of beauty or truth and were uncorrupted

by personal taints. But the desire of men for personal glory burst forth under the Romans when every Emperor and his lieutenants sought immortality in marble, and their practices continue to dominate us today.

Thus, America is following ancient tradition by cluttering its capital with statues of the great, near-great, and forgotten who have helped make its history. Nevertheless, I have wondered lately whether we shouldn't pause to reconsider the means we choose of perpetuating our esteem for distinguished citizens.

I may be wrong, but it seems to me that if we would adopt a simple rule of thumb the whole problem would solve itself. This week I introduced a resolution which provides that no statue or memorial shall be erected in the system of Capital Parks to commemorate an individual or event until at least 50 years have elapsed.

A man's contemporaries are notoriously bad judges of his place in history. Proportion comes only with the passage of time, and it is an act of foolish presumption for any generation to pass judgment on its leaders.

It is highly significant, I think, that the Lincoln Memorial was finally dedicated nearly 60 years after his death. We have all gained by the fact that his contemporaries did not have the impulse to rush out and erect a lesser tribute. Nor was it an accident that the other superb Washington memorial—Jefferson's, nestled beside the Tidal Basin amid an arc of Japanese cherry trees—assumed form nearly 125 years after his death.

My point is that those memorials which have the most meaning—and artistic integrity—were conceived and carried out by posterity, and not personal friends. I mean no dishonor to the generals and political figures whose busts dominate the landscape here, when I suggest that their memories would be better served if a later generation selected the means and place of honor.

After all, we cannot escape history and no marble edifice will add 1 cubit to the stature of the good and great of our country.

Perhaps the wisest words ever spoken on this subject were uttered by the Roman Senator Cato (apparently in protest against the fad of his day) when he said: "I had rather men should ask why my statue is not set up, than why it is."

Should There Be a World Plan for Rice?

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Should There Be a World Plan for Rice?" by Claude R. Miller, president, Comet Rice Mills, 710 Gulf States Building, Dallas, Tex.

Without prejudice for or against world planning of rice, I am glad to submit this study for the information of my colleagues and those who read the CONGRESSIONAL RECORD.

Naturally anyone recognizing the faults and failures of the planned agricultural economy of the United States may understandably take a dim view of the expanded planning throughout the world. Also strong constitutionalists shy away from one-world activities. Yet these doubts do not preclude our thinking about problems confronting us. It is for this reason that I submit for the RECORD this study by a gentleman whose ability and sincerity is unquestioned. Not the least interesting is what might be a surprise to some that rice is the world's most important food, providing food for one-half of the world's population:

SHOULD THERE BE A WORLD PLAN FOR RICE?
(By Claude R. Miller)

Rice is the most important food in the world; rice supplies the major food requirements for more than one-half of the world's population.[1]

In 1840, rice production in the United States was only 842,530 hundredweight. The production had grown to 47,038,000 hundredweight by 1958, yet there was no more overall planning in 1958's production than there had been back in 1840.

Is better planning necessary, desirable and practical? Before attempting to answer that question, suppose we look at the chaos that has resulted from inadequate planning.

SCARCITIES AND SURPLUSES

Since its inception, American rice has, in most years, had adequate markets only during emergencies. Generally in times of peace and prosperity, rice production has glutted the market; prices have fallen; mills have been bankrupted; and rice people have suffered. Usually only during the travail of wars and famines have rice producers and processors been paid adequately for their efforts.

During World War II, American rice farmers and millers courageously met their country's call for increased rice production, but when the foreign countries that were saved by the war returned to productive capacity afterwards, they quickly cut rice prices and preempted world markets. This left U.S. rice producers and processors with millions of dollars of investment that lay idle and rusting because of cutthroat competition from abroad.

Legislation was hastily enacted to ease the loss for producers, but it did little for the millers who had millions invested in idle mills.

On July 1, 1959, total U.S. Government funds in farm commodities will total $9,100 million. This is more than the cost of operating the U.S. Government from its inception through 1875, and during that time three major wars were fought. During the present fiscal year, the net outlay for farm stabilization programs will be nearly $5½ billion, and that staggering sum is for 1 year only.

WHILE LIVING COSTS ROSE, RICE PRICES FELL

The Rice Journal, volume 61, No. 4, carried a report we prepared, entitled "The Price of Rice Is Too Low." The facts are reviewed showing that while living costs rose 19 percent, rice prices fell 15 percent in the decade from 1947 to 1957. Table I from that article is shown here:

TABLE I.—*Percentage of change*

	Percent
Rice	−15
Potatoes	11
Sugar	12
Cornmeal	14
Round steak	21
Milk	24
Pork chops	26
Bread	39

[1] Efferson, "The Production and Marketing of Rice," the Rice Journal, 1952.

(NOTE.—Other factual statements will not be footnoted. Statements of fact are predicated upon authorities deemed adequate.)

While rice prices fell 15 percent in decade 1947–57, other food prices rose 11 to 39 percent.

It is interesting to note that while rice has had the benefit of Federal legislation to support prices, actually the price of rice fell while the cost of living rose. Without the benefits of such protective legislation, beef has risen in price faster than has the cost of living index. Cattle growers have traditionally rejected protective legislation. One of the benefits of the protective legislation for U.S. rice has been the loss of foreign markets; another benefit has been millions of dollars loss to America taxpayers.

GOVERNMENTAL PROTECTION

Since 1934, American rice has been controlled in various ways by Federal legislation. For 25 years, rice has at various times been allotted, conserved, had quotas, enjoyed parity adjustment, been deposited in soil banks, and had price supports, but—except for wartime and world famines—U.S. surpluses have grown and rice prices have usually remained below the cost of living index.

Here is what President Eisenhower said, in part, with reference to rice problems in his message to the Congress on January 9, 1956:

"Rice production in this country is the most efficient in the world. However, our rice is rapidly being priced out of world markets and is being diverted into Government warehouses and even into the feed markets."

Three years later, in the 1959 farm message delivered on January 29, 1959, the President stated, in part:

"The price-support and production-control program has not worked * * *

"The control program doesn't control * * *

"The program is excessively expensive."

ARE PLANS WORTHWHILE?

Planning has been vocally done by so many self seekers, totalitarians and communists that the word plan is sometimes mistrusted. Because people whom we do not trust make 10-year plans, we are tempted to distrust long range plans. Such a reaction is unjustified.

Plans are needed to build buildings, to operate businesses, and to make progress in any endeavor in an organized way. The Constitution of the United States is, in the broad sense, a plan for governing a nation for the protection of each individual and the benefit of the whole population.

ARE THERE PLANS FOR RICE?

Every Agricultural Act is a plan for protecting farm products, but these plans are usually intended to ease immediate crises.

The rice industry, composed of American rice farmers, millers, and others interested in rice, is making great strides forward in planning consumer research, and in advertising and publicizing rice. This organization is concentrating on its efforts to sell more rice.

The U.S. Congress, U.S. Department of Agriculture, State experiment stations, State associations, the Rice Millers Association, the International Rice Commission, American food merchants, American farmers, and various rice groups, through wise planning, have made valuable contributions to rice research, promotion, and progress. These efforts, organizations and individuals all deserve applause and appreciation.

Despite the fine work done by numerous individuals and organizations, so far as we know, there has never been an effort made to formulate worldwide long-range plans for rice production, processing, distribution, marketing, and use.

If such a worldwide plan could be made for rice, it might be a guide for other commodities.

A WORLD RICE CONGRESS

We are not attempting to suggest the details of the plan; rather, we ask: Would such a plan be beneficial, and how could it be created?

The U.S. Constitution is a plan that has proved itself to be one of the world's most successful endeavors. We see that provision was made there for action through the Congress by representatives of all the people, with safeguards to protect individuals, areas, and political subdivisions.

One way that a world rice plan could be made would be by having a world rice congress. To spell out the methods of organization and procedure, perhaps a world rice constitution would be an essential instrument.

The world rice congress could be composed of representatives of producers, millers, suppliers, brokers, distributors, financiers, exporters, importers, wholesalers, food retailers, consumers, legislators, governmental agricultural administrators and research workers, governmental statesmen, and all others who are interested. Every rice producing and consuming nation, and various areas within nations, could be represented. The world rice congress could operate through committees who devote attention to specified activities. In one body, all those who are interested in rice would have representation, and would give all of mankind the benefit of their combined wisdom.

From the interchange of knowledge, experience, and expectations, those who attend the world rice congress could disseminate their findings to every country on earth. All of the world's people would enjoy the fruits from this effort.

As improvements were proposed, discussed, considered, and eventually adopted, the world rice congress could make long-range plans for rice that would benefit everyone who is concerned with the most important of all foods.

Other methods for creating a world rice plan may prove more appropriate. No doubt many improvements upon the basic idea will evolve. Our aim is to propose a positive approach in the hope that interest will be stimulated and appropriate action will ensue.

WHAT IS OUR INTEREST?

Comet Rice Mills was organized in 1902. Comet was the first packaged rice offered for sale in American grocery stores. Through the years, Comet Rice Mills has helped improve the growing and milling of rice in Texas, Louisiana, Arkansas, and Mississippi. In addition to the milling of rice, Comet's activities include the manufacture of rice bran, rice polish, rice oil, rice flour, and other rice products. Comet's products are distributed throughout the United States. Comet is a leading rice exporter to all the world.

Comet Rice Mills has been active in all rice cooperative efforts. We are interested in every phase of the world's rice production, processing and distribution. We are anxious to work in the closest spirit of cooperation with our own and other governmental authorities, and with all rice farmers, millers, food merchants and users everywhere to improve the world rice situation.

Comet Rice Mills wants to make the most rice available to the most people on the most economical basis. We want to expand rice use, cut surpluses, reduce taxes, and bring nutritious food to hungry people all over the world at the lowest possible cost. We are convinced that since rice is the world's most important food, any contribution Comet Rice Mills can make will be universally beneficial.

Numerous rice producers and millers have indicated a desire to see some movement undertaken to bring about improvement in the general rice situation. We have been urged to initiate the activity. The interest shown proves that the need is widely recognized.

A WORD OF CAUTION

We do not hope for an early nor an easy solution for so great a problem as planning world rice production, distribution and usage.

Perhaps it will be necessary to initially have a U.S. rice congress that can act as a nucleus from which the world rice congress can grow. Even so, it would seem that all people who are interested in rice—regardless of their country or nationality—should be invited to participate in the initial meeting.

The present conditions in world rice are such that any progress that is made toward worldwide rice planning will be an improvement over the existing situation.

WHAT CAN YOU DO?

If you are interested in any phase of the world rice situation, or in reducing surpluses, or in reducing taxes, or in more orderly commodity distribution, or in helping to eliminate famine, we shall welcome your views.

If you disagree with the thoughts expressed here, please write and tell us wherein you believe they can be improved. If you agree that a worldwide plan on a long-range basis for rice would be beneficial, please tell us how such a plan can best be made. Are there needs for world standards for rice varieties, types, terminology, and designations? Are there needs for better methods of distributions? Are there needs for educational work as to the benefits of rice as a nutritious, wholesome food? Are there needs to use surpluses to feed hungry people? Are there other needs that you are convinced a world rice congress could fill?

Please send us your views now. All correspondence received will be studied, filed, and ultimately made available to the members of the first rice congress, unless the writer requests otherwise. We probably will be unable to answer communications, but we feel certain you will not expect a reply.

CONCLUSION

If you are interested in seeing progress made in world rice, please write to us, stating your views, your suggestions, and your advice as to how advancement toward the goal can be accelerated.

If a rice congress is called, all of those from whom we have had communications will be notified of the time and place. Please indicate your name and address in full, to facilitate your receipt of the notice.

Please address us: Claude R. Miller, president, Comet Rice Mills, 710 Gulf States Building, Dallas, Tex., U.S.A.

The Medical Education Situation

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. THOMPSON of Texas. Mr. Speaker, I am interested in the medical education situation in the United States, particularly because the University of Texas Medical School is in Galveston, my hometown. With no little concern I have noted in recent months that the medical profession has been under attack in several areas of the press. As a result, I conferred with Dr. John Truslow, director of the Texas University Medical School, and then prepared seven questions dealing with medical education throughout the country, with a view to ascertaining whether sufficient qualified doctors are being produced to meet the needs of our rapidly growing population. I submitted these questions to Dr. F. J. L. Blasingame, of Wharton, Tex., an old friend and constituent of mine who went to Chicago a year ago to assume the responsibilities as executive vice president of the American Medical Association. I have complete confidence in Dr. Blasingame and his answers to the questions I submitted are very gratifying to me.

I was pleased to learn that since World War II there has been an increase in approved medical schools; that there is a substantial increase in medical students; and that, contrary to certain reports, the American Medical Association exercises no control over the number of students admitted to medical schools. There is much other valuable information in Dr. Blasingame's reply and I believe it will do much to eliminate certain misconceptions about the medical profession. Under leave previously granted, I insert my letter to Dr. Blasingame and his reply:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 9, 1959.

F. J. L. BLASINGAME, M.D.,
Executive Vice President,
American Medical Association,
Chicago, Ill.

DEAR DR. BLASINGAME: My attention has been called to a number of bills introduced in the 86th Congress affecting directly, or indirectly, the medical profession.

As a result, I wish to obtain certain information on the present supply of doctors in the United States and to ascertain as far as possible the prospects for an adequate supply of physicians to meet the needs of our growing population.

So I am calling on you, not only as executive vice president of the American Medical Association, but as my old friend and my loyal constituent to supply me with the information. On a separate sheet, I am submitting questions that occur to me in this connection. I know you can provide the facts; facts that should be made known to Congress before action is taken to consider legislation affecting the medical profession.

I am writing this after a conference with our mutual friend, Dr. John Truslow, head of the University of Texas medical branch in Galveston, who called on me today.

I will appreciate your answering these questions and will further appreciate any other information you might give me that is relevant.

I want to say that I think you did a courageous thing in sacrificing your substantial private practice in Wharton to take over the direction of the AMA. I wish you great success.

Dr. Truslow joins me in sending you our best wishes,

Sincerely yours,

CLARK W. THOMPSON.

AMERICAN MEDICAL ASSOCIATION,
Chicago, Ill., April 16, 1959.

Hon. CLARK W. THOMPSON,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN THOMPSON: Thank you for your recent letter and your interest in medical education.

It is indeed a pleasure to bring you an up-to-date report on the status of medical education in the United States. As you know, I am proud of the accomplishments of our medical schools and have great faith in their ability to train enough physicians to meet the needs of our growing population.

You asked seven important questions about the medical education picture. Let me answer them one by one.

First, has the number of physicians graduated from approved medical schools kept pace with the growth of the Nation's population? Over the long haul, the increase in medical graduates is much greater proportionately than is the increase in the population. From 1920 to 1958, the percentage of increase in medical graduates from approved schools was 125 percent, compared with a 64-percent increase in population. In the past 20 years, the percentage figures are fairly comparable: 32.1-percent increase for medical graduates; 33.4-percent increase for population.

The future, I believe, looks bright. Each year, for the past 11 years, the number of students enrolled in approved medical schools has increased. This boost in enrollment amounts to 29.6 percent (from 22,739 to 29,473).

Your second question was whether medical schools seek to restrict the number of medical students. Two factors make it necessary for a school to establish an arbitrary top enrollment figure: facilities and budgetary funds available to operate the school. Each school faculty determines the number of students who can have a sound education with the faculty personnel and the facilities available to the school.

Medical education is a graduate educational experience following the completion of the regular college course, and because of the subject matter covered requires individual and small group instruction. To turn out well-trained, highly-qualified physicians the school requires a large faculty of skilled educators, plus sufficient teaching and research laboraties, hospital beds and clinical patients. The number of students that can be taught must be necessarily restricted to fit the facilities so that the emphasis can be en quality of the graduate rather than on the quantity of students.

Third, you asked: What is the ratio between applicants to medical schools and those accepted? The answer is 1.97 (15,791 applicants for first year medical school to 8,030 places available). This ratio has remained about the same for the past 5 years.

Incidentally, a common confusion that arises in discussing applicants to student ratio is mistaking applications for people (applicants). Each person applies, on the average, to four medical schools. Thus, for the 1957–58 academic year, the 15,791 applicants filed a total of 60,946 applications.

Next, you asked if it is true that only students with an A college academic record are accepted into medical school. That has never been true. About one-sixth of the entering medical students for the whole country have A college records; about two-thirds have B records and about one-sixth have C records.

Your fifth question was: Is the number of medical schools increasing in the United States? In 1944, there were 77 approved medical schools, including eight 2-year schools from which students had to complete their final 2 years of medical education in any of the 69 4-year schools. In 1958, there were 85 approved medical schools. Eighty-one are 4-year schools; only four 2-year schools.

Two other schools are under development. As a step toward still further expansion of medical school facilities, the American Medical Association last year urged "institutions of higher education where medical education has not been undertaken in the past to give serious consideration to the development of opportunities in the field."

Sixth. Has the American Medical Association anything to do with the number of enrollments in medical schools? Enrollments are strictly determined by each individual medical school. Neither the universities nor their medical schools would permit an intrusion into their academic freedom by a national professional association.

Your final question asked whether I think it is necessary for Federal funds to be provided for medical schools. The medical profession welcomes one-time Federal grants for medical school construction and renovation as well as Federal grants for basic research. The profession has been opposed to continuing Federal aid for operating expenses because of the potentialities therein for Federal control.

I should like to point out that the National Fund for Medical Education, which raises funds from industrial sources, and the American Medical Education Foundation, which raises funds from the medical profession, have made grants in excess of $10 million to medical education over the past 8 years.

I hope this information will aid you in analyzing bills introduced in the 86th Congress which pertain to the training of physicians. As further background, I am sending along a copy of the most recent annual report prepared by our council on medical education and hospitals, which was published in the Journal of the American Medical Association, November 15, 1958. It provides additional data that you might find useful.

I am happy that you wrote me after conferring with our mutual friend, Dr. John Truslow. If I can provide any additional information, please make your wishes known.

Sincerely yours,

F. J. L. BLASINGAME, M.D.

Ohio Is Proud of Mary Eddy

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. LEVERING. Mr. Speaker, the 17th District of Ohio, which I am honored to represent in these hallowed halls, has many fine, generous, and talented individuals, and I and the people for whom I speak are proud of them. We want to help them, in every good way, to receive the recognition they so richly deserve.

Just a few weeks ago, we in this Chamber had the thrill of hearing Carl Sandburg, who has been called America's poet laureate, and most of us, at one time or another, have read one of his books, or recited one of his poems.

It has come to my attention—through a news story in the Mansfield, Ohio, News-Journal, for Sunday, April 19, 1959, that Mary Eddy, of Perrysville, Ohio, has received tributes from Carl Sandburg because of her longtime work in collecting American ballads. In fact, according to this article, Carl Sandburg used a number of ballads from Miss Eddy's collection in his two volumes "American Song Bag" and "New American Song Bag."

Because of the interest in Carl Sandburg and Americana of all kinds among Members of Congress, and in order to allow more Americans to learn of the fine and meritorious work of Miss Eddy, under leave granted me, I am inserting in the CONGRESSIONAL RECORD the article by D. W. Garber entitled "Mary Eddy: Her Ballads Caught Sandburg." The article is as follows:

MARY EDDY: HER BALLADS CAUGHT SANDBURG

(By D. W. Garber)

"May the road to Hell grow green waitin' for you." This ancient Irish toast, offered by Author Carl Sandburg as a tribute to Mary O. Eddy, of Perrysville, illustrates the warm friendship that has existed between them for many years.

Carl Sandburg discovered Mary Eddy. Impressed with a collection of ballads he obtained from her, Sandburg forwarded some of the material to the late Henry Ford, another enthusiast. A check for $200 and the publication of an article which she had written in the Dearborn Independent was the first real recognition she received for her collection of folksongs and ballads gathered from the old people on the Forks of the Mohican.

Carl Carmer, H. L. Mencken, and others have used her ballad material, but it is Sandburg who often expressed his admiration for her persistent efforts in preserving these fragments from the past. Writing to thank her for the use of original material he once said that they "have been priceless possessions, particularly 'Quarker Wooing' which I have given * * * for several hundred audiences."

In both of his books, "American Song Bag" and "New American Song Bag," Sandburg used a number of the ballads from Miss Eddy's collection, including "the Drunkard's Doom," "The Lily of the West," and "The Nurse Pinched the Baby."

Born at Perrysville of pioneer ancestry, she recalled some of the songs from her own childhood. Her interest in collecting ballads was stimulated by special studies with Dr. Albert H. Tolman, professor of epic and ballad poetry, at the University of Chicago, in collaboration with Dr. Tolman some of her collection was published in American Folk Lore for 1922 and 1923.

Forty-eight years ago she began her search for the all but forgotten ballads. Traveling by horse and buggy through the byroads of the Mohican area she located descendants of English, Scotch, and Irish ancestry who remembered ballads that were sung by the cabin fireside. Mary considered it a pleasant diversion, but her collection is an important contribution to Ohio folklore.

Encouraged by Sandburg and by the friendly reception she received from lectures, and from published articles and poetry, her book "Songs and Ballads of Ohio," was published in 1937. The demand for the book surprised the author. The edition was quickly exhausted and is now eagerly sought by collectors.

At the Ashland College commencement in 1951, Miss Eddy received the honorary degree of doctor of letters. It was well merited recognition for her work on Ohio ballads. Standing at her side was the then Governor of Ohio, FRANK LAUSCHE, who received comparable honors. It was a notable event in the life of the retired schoolteacher from Perrysville. She recalls with amusement the negative reaction of the local people at the time the honor was conferred. The morning following the commencement she was walking from the postoffice when a neighbor passed her. Without turning his head he casually greeted her out of the side of the mouth, "Hi Doc!" She enjoyed this, the only congratulation she received.

This dearth of recognition must not be misunderstood; people in small towns do not express themselves freely. They greatly admire her, in fact, their pride in Dr. Eddy has often been manifest.

When Sandburg first became acquainted with Mary Eddy through correspondence he was intrigued with the material she had collected and made a special trip to Canton to meet her. Then a teacher in McKinley High School, both Mary and the student body were pleasantly surprised one day when Sandburg walked into the cafeteria searching for her. The balance of the day she spent entertaining her guest, singing folk songs and discussing the origin of Ohio ballads. She recalls with pleasure how they sat together at a drug store counter enjoying ice-cream sodas.

Frank in expression, and mildly ironical, Miss Eddy is still a student. Although past four score years any question which commands her interest is the subject of serious research. Her views are refreshing and original.

Imported Livestock and Products Continue March Through Our American Ports

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. BROCK. Mr. Speaker, on February 24, I stood on the floor of this House and warned the membership of the threat to our national economy by the continual increase in imports of livestock and livestock products.

Despite the false claims that our exports of these commodities balance the imports, the increase marches onward. Meanwhile, the very existence of those engaged in this enterprise throughout the Nation is being worn thin.

Proof of this continued increase in imports is contained in an article written by Mr. Earle G. Reed, recognized expert in this field, and published in the April 9 issue of the Omaha Daily Journal-Stockman.

Under leave to extend my remarks, I therefore offer the article for inclusion in the RECORD:

IMPORTED MEATS AND CROP SURPLUSES

(By Earle G. Reed)

During the week of March 10 there were received and inspected at the three large west coast ports, from New Zealand, 3,409,291 pounds of beef cuts and boneless beef, 64,442 pounds of veal and 143,386 pounds of lamb carcasses and mutton; from Australia came 2,135,296 pounds of beef cuts, boneless beef and veal, and 44,818 pounds of mutton and lamb carcasses.

Meat imports are increasing despite the claims of some persons that the actual percentage of total meats we consume that come in from foreign countries is so small as to make little count when all is added up, and our exports of other commodities more than offset the meat imports.

Every boatload of meat that comes into the West Coast or any other place in this country adds up to reduced use of our own products, whether it is just common mutton, bull beef, canning cow beef or canned pork. It cuts into the volume of our packing plants, reduces the amount of our labor employed in packing plants and, most of all, it reduces the amount of grains, hay and other feeds used up in feeding livestock by reducing prices of meat products and curtailing the number of head that can be sold of our own production. Just another, but roundabout way of increasing our surplus of feeds and other crops.

Excerpts From Remarks of Hon. Charles A. Halleck, of Indiana, House Republican Leader, Before the Indiana Republican Editorial Association Dinner, Saturday Evening, April 18, 1959, at Indianapolis, Ind.

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. ADAIR. Mr. Speaker, under leave granted to extend my remarks, I am submitting a statement of excerpts from an excellent and timely speech made by the Honorable CHARLES A. HALLECK, minority leader of the House of Representatives, before the Indiana Republican Editorial Association dinner meeting at Indianapolis, Saturday evening April 18.

In addition to Mr. HALLECK's speech, I also wish to include in the RECORD the formal resolutions adopted by the Indiana Republican Editorial Association at this meeting. I believe they will be of interest not only to my Republican colleagues but to those Members of the House on the other side of the aisle.

Mr. HALLECK delivered an important address to the editors of this association which is the oldest political editorial association in the United States. The occasion was the annual spring meeting of the association. In addition to the Hoosier editors present, the Governor of the State, the Honorable Harold Handley, and my Republican colleague in the House of Representatives, the Honorable WILLIAM BRAY, were among those outstanding dignitaries who attended the banquet.

The excerpts from our minority leader's address are as follows:

EXCERPTS FROM REMARKS OF HON. CHARLES A. HALLECK, OF INDIANA, HOUSE REPUBLICAN LEADER, BEFORE THE INDIANA REPUBLICAN EDITORIAL ASSOCIATION DINNER, SATURDAY EVENING, APRIL 18, 1959, AT INDIANAPOLIS, IND.

The Republican press of Indiana receives my heartfelt thanks for fighting the good flight, year after year, to build the progress of our State and Nation on a sound and sensible basis. You carry on our Hoosier tradition of effective personal journalism, bringing further honor to Indiana which is known nationwide as the State where good newsmen are born.

The Republican press has a vital role in the campaign for the Republican victory we will win in 1960, in presenting the facts on State and national affairs to the public, giving them the fullest possible coverage day after day, week after week in their news columns, and in properly interpreting these facts through pertinent editorial comment.

We Republicans deal in truth, while too many Democrats peddle distorted propaganda. We must redouble our efforts to combat fiction with fact.

As you battle for Republican principles in your home towns, Republican Congressmen and Senators are fighting the same battle, shoulder to shoulder, in the Nation's Capitol.

In spite of the unpleasantness last November, morale and party unity among Republicans in the Congress are at a high pitch and are constantly increasing. We are not hyphenated Republicans. We are Republicans, period.

We are fighting the efforts of the Democrat spenders to wreck the Nation by their extravagance.

We stand united behind President Eisenhower in his efforts to balance the budget, the provide a sound and well-balanced national defense, and to stand firm against the Communist menace.

Rollcall votes show how Republicans, representing different sections of the Nation, often with diverse interests, are standing together and voting together.

This display of unity should be an example to party leaders. A party which has just lost an election cannot afford faction and fratricide. All over the Nation, the hatchets should be buried deep underground, and party harmony must be the watchword. But in this process, every effort should be made to evaluate properly and correct any mistakes of the past, if any there have been. The views of all responsible people in our party should be solicited and considered as we prepare for the future.

As we Republicans move forward together, the Democrats and their party move farther and farther apart. The differences between the Democrat conservatives from the South, and the labor-boss-dominated radical wing of their party are now in the irreconcilable stage. They have nothing in common but their party label.

The Democrats are both the party of the repudiator and the budget buster.

Democrat leaders are repudiating each other right and left. Paul Butler has repudiated the southern Democrats, and they have washed their hands of him with a very strong detergent.

Senator LYNDON JOHNSON and Speaker SAM RAYBURN have just about repudiated the programs of the Democrat advisory council.

LYNDON JOHNSON has been repudiated by Senator PROXMIRE and other Democrat Senators. Mrs. Roosevelt has repudiated Senator KENNEDY, and so on indefinitely. Democrat Senators are playing politics as they jockey for position in the presidential race.

In contrast, Republicans are working together.

The Republican minority in Congress is building a record, a Republican record, to present to the voters in 1960—the year in which another Republican President will assume his duties at the White House, and after which Democrat ex-Congressmen will no longer be able to collect Government rent for their front porches.

The first part of the Republican record for 1960 is our valiant fight against reckless, wasteful spending—the Republican fight to keep the cost of living down for the low-income family, for the American farmer who has so long been the victim of Democrat inflation and Democrat farm policies.

Balancing the budget is a right thing in itself. Every Government unit, just like every family and every business, should live within its income.

You can get by with overspending for a short period, sometimes, but the time soon comes when it catches up with you. After more than two decades of Democrat extravagance, it has caught up with our Nation.

Democrats have controlled the Congress which controls the Nation's spending for the past 4 years plus, and for 22 years of the

past 26. Only the Republican Congresses have cut Government spending and reduced taxes.

A balanced budget now offers the only hope for tax reduction in the future. Unbalanced budgets will lead inevitably to a further crushing burden of taxation.

I have received thousands of letters, from those the Democrats would call "little people," but whom I prefer to designate as thinking, articulate American citizens. I have been heartened by the overwhelming support of these people for President Eisenhower's program of a balanced budget, to hold down the high cost of living. People are appalled by Democrat extravagance. They place the blame where it should rest and call the Democrats the spenders.

We stand firm for a strong foreign policy, the Republican policy of John Foster Dulles. We clearly recognize that the world's best hope for continued peace is a policy of strength toward Russia and Red China. We realize that weakness and appeasement will lead inevitably to war.

The Republican Party believes in a strong national defense and trusts the judgment of President Eisenhower, the Nation's greatest military expert, in regard to the kind and amount of defense that is needed, over that of such armchair strategists as Paul Butler, Jake Arvey, and Adlai Stevenson.

We recognize the need for effective labor-management reform legislation to protect the rank-and-file union worker, the small businessman and the general public from the abuses which have been so vividly uncovered at the McClellan Committee hearings. But we know that it is going to be an uphill fight to get such legislation this year when so many of the Democrat majority in Congress are so deeply indebted to COPE and other like organizations.

As Republicans, we are firm believers in the individual enterprise system.

We know that it is the system that has made our Nation great and has resulted in the highest standard of living ever known in the history of the world.

We have built a record of resistance to the wild-eyed schemes of leftwingers who would lead us further down the pink path toward socialism. We are sincere optimists with confidence in the future of America. We will never sell our Nation short. The United States is at peace. And it is a Republican peace with honor. We are enjoying good times, with a strong economy and a secure defense.

Democrat runaway inflation has been slowed to a turtle crawl.

The vast majority of American citizens is sharing the benefits of prosperity and security. Our Republican record is one to which we can point with pride. Let's brag about it.

With the cooperation of the Republican press we will put our message across to the people. The public will judge correctly, and the result will be a Republican victory in 1960 from the courthouse to the White House.

RESOLUTIONS ADOPTED BY THE INDIANA REPUBLICAN EDITORIAL ASSOCIATION

The Indiana Republican Editorial Association, in convention assembled in the city of Indianapolis, on Saturday, April 18, 1959—

Resolves, That unity and harmony in the party are essential to the success that its principles deserve and for which all loyal Republicans stand, above self and selfish interests; and that therefore we urge our members to support a unified party, and insist that all elements lay aside differences if any in support of the traditional unity and party principles.

We take pride in the resolute course throughout the recent session of the General Assembly of Indiana by Gov. Harold Handley, Lt. Gov. Crawford Parker, the Republican majority and leadership in the State senate, and the house minority, which working together preserved a degree of economy, a record of accomplishment, and solvency for Indiana's State government. To Republican leadership and organization our State owes today the fact that ours is one of the few States where no new taxes were created, and that we will continue to have an enviable record of low taxes per capita.

Republican State administration and assembly are congratulated on their successful effort to continue making Indiana attractive to industrial expansion and more employment, and in continuing the freedoms and rights of organized workers traditional to America. We submit that the guaranties to workers of unfettered organization and to employers of favorable tax rates and a minimum of dictatorial government create a favorable climate for industry and industrial employment, and therefore a growing population in direct contrast to other States which are being abandoned by industry.

The Republican leadership of State and assembly has been able to support and improve the educational system without damaging the State solvency, and to provide for the constructive improvement of flood control on a permanent and workable basis for the first time.

We note the bankruptcy that threatens at least one neighboring State under principles and controls of a type repugnant to Americans, and propose that no effort shall be spared to resist encroachment of vast political slush funds and alien idealogies across State lines to prostitute and enslave Hoosier voters, and our government.

We applaud the wise and experienced counsel of President Eisenhower and Secretary of State John Foster Dulles, that has charted our successful course through troubled international waters by a foreign policy that has avoided with dignity threatening conflicts throughout the world.

We declare our confidence in the Republican delegation in Congress, and congratulate its dean and able leader, the Honorable CHARLES A. HALLECK, on his well-merited election as Republican leader, the responsibility that he has shared with distinction for many years.

We approve the efforts to assist the individual farmer on the family-sized farm in working out his economic ills, and we particularly urge that the farmer's freedom and independence be protected. We recognize that the farmer is an important segment of Indiana economy and that the general prosperity is greatly affected by the farmer's receiving fair prices for his large investment and hard work. Sound, workable solutions to the changing farm problems should be sought and would be found feasible by a Republican Congress, to protect and encourage an agriculture that has provided the most abundant supply of food and clothing in the world's history. We cite and approve the search for new markets and new uses for farm products as proposed by our own U.S. Senator HOMER E. CAPEHART.

We resolve that our national strength must be preserved by balanced budgets and tax economy achieved by wise and careful reduction of irresponsible cash gifts at home and abroad that have continued for years, except under a Republican Congress, to place unbearable burdens on the shoulders of our unborn descendants; thus to free private earnings for reinvestment, to provide jobs and build production.

We urge that all Americans testify to their pride in American leadership in the world, and in our way of living that means a better life for everyone, rather than dictatorship that excels in a few token but often meaningless feats and easy life for a chosen few, but deceit and hunger for the people.

We recall that 100 years ago when the infant Republican Party sustained severe losses at the polls, and Abraham Lincoln lost election to the U.S. Senate, there followed the opening of a new era of usefulness for the principles for which they both stood. This year of Lincoln's sesquicentennial illuminates this example, and the events of neither year are accidental. Victory rode, and will ride on the affirmation of principles. The country needs the firm foundation of the Republican Party, which saved the Nation with Lincoln and still stands ready to serve an ideal immeasurably higher than the gratification of personal wants and personal ambitions. Elections are lost because of failures to stand for something. What a Republican Party offers and must stand for are constitutional responsibility, fiscal stability, exaltation of freedom as a way of life, all of which have been guaranteed through the Republican Party in history, and by its record of administration today: So finally we

Resolve, That this organization call upon Republicans of all shades of opinion to place party above self, to shun expediency, embrace principle and stand immovable against influences that would dislodge them from the unrepealable political truths that are the beacons of our party's service to the Nation. Likewise we would call upon all citizens of all shades of political beliefs to applaud with their support the party of the people's rights and of world peace, and American freedom from the tyranny of the petty as well as the strong, the party of achievement today, rather than of weak dependence on a better tomorrow.

Resolutions committee: William Murray, the Bicknell Daily News, the Lawrenceburg Press, the Aurora Journal-Bulletin; Howard Houghton, the Huntington Herald-Press; Howard Grossman, the Salem Republican Leader; R. Thomas Mayhill, the Knightstown Banner, the Eastern Indiana Farmer.

Inflation—Prize Letter

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following prize-winning letter about the danger of inflation:

INFLATION—PRIZE LETTER

(Is inflation a remote danger—something that can happen only in Europe or Asia? A Chicago woman answers with a bitter "No!" in this first in a series of $25 letters from Tribune readers on inflation experiences. Her name is withheld by request.)

I know how a family can suffer from inflation. We have suffered—not in Europe—but right here at home.

In 1940 we bought our own home. We planned to live in it all our lives, and bring up our children there. We paid $9,500 for it, making a downpayment of $5,000, which was our entire savings plus a small inheritance.

Three years later we had cut the mortgage to $2,500. We had added landscaping, blinds, carpeting, a new refrigerator, and other furnishings that contributed to our joy of ownership.

Then, in January 1943, my husband received an invitation from Uncle Sam to join the Navy and help defend our country. I was left with four small children and a difficult choice. Finally, after my husband was assigned to a base with prospects of re-

maining there at least 10 months, I made plans to join him.

We thought about renting the house, which we couldn't afford to let remain vacant, but feared it would depreciate rapidly if we were out of the city. We decided it would be best to sell and buy another home after the war.

We were happy to get $9,500—the same price we had paid 3 years before. We put $5,000 in postal savings, as we felt nothing could be safer than trusting our money to the Government. We paid off the mortgage and put the remainder in a bank.

In March, 1946, with my husband's ribbons and medals, we returned to Chicago, hoping to take up where we had left off.

But our dreams were shattered. The house we had sold for $9,500 now had a price tag of $23,500. A smaller house that some friends once had bought for $5,000 now was priced at $14,500.

The terrible fact was that the $5,000 we had entrusted to postal savings now had decreased in purchasing power till it was worth less than half of what it was 3 years before.

The result is that our children never have had the joy of living in their own home. Although our income is above average, we have never been able to save enough after paying expenses of a growing family to buy a home. Instead, we paid rents of $125 to $175 a month for apartments.

This is how inflation cheated us and our children.

Our Liberties Versus Responsibilities in a Free Society

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. LEVERING. Mr. Speaker, several days ago I listened with great interest and pride when you told a group of young people from my congressional district that you did not subscribe to the idea that high intelligence and strong moral character is the exclusive birthright of another generation. I certainly want to associate myself with your statement, Mr. Speaker, for everyday I see heartening evidence that our present generation of boys and girls are of the highest caliber and give reassuring promise of their ability to assume the serious responsibility of citizenship in the perilous days ahead.

One specific example, to which I proudly refer is a young man from Sunbury, Ohio, in my congressional district. He is Danny Compton, a freshman at Big Walnut High School. This boy is one of the winners of the Ohio American Legion's high school essay contest. I had the pleasure of meeting and talking with Danny on the occasion of the contest winners' visit to the Nation's Capital on April 21, and it is my opinion that this typical American youth is a real credit to his home and fine parents, his school and its teachers, as well as the American Legion and the American Legion Auxiliary that deserve our highest commendation for having sponsored this Americanism essay competition for the past 25 years.

The subject of Danny's winning essay is "Our Liberties Versus Responsibilities in a Free Society."

Mr. Speaker, under leave to extend my remarks, I wish to call attention of my colleagues to this thought provoking essay, which follows:

OUR LIBERTIES VERSUS RESPONSIBILITIES IN A FREE SOCIETY

More than a century and a half ago, 39 able men compiled a code of fundamental laws, a Constitution, by which this thriving country, the United States of America, was to be governed. Ten amendments were added to the Constitution to further safeguard the rights of the citizens, and to direct and control the actions of those that governed us. It is these 10 amendments that give all of us our liberties or freedoms by which we were able to live and grow in our free society.

There is little difference between the term liberty and freedom. In the framework of our Constitution they used the word "freedom" which I understand to mean my "liberties."

The Bill of Rights, as these first 10 amendments are called, give me the right or freedom to worship as I please, write what I choose, and speak what I like in an assembly or crowd. No one has the right to come into my home and take advantage of me or my family as is the case in many other countries of today. I have the right to counsel and a fair trial by jury when I am charged with a crime. I can keep and bear arms for protection of life, limb, or property. Where else but in America does any individual have liberties as I

But with these liberties comes great responsibilities to oneself and to the Nation. What are the responsibilities that I as an individual need to understand and promote in a free society. First, I think it means freedom of choosing. To choose between good and bad, and right from wrong. In a free society one can not do as he pleases but should consider others. There are times when one must give up freedom to gain freedom, for freedom is earned. Then I say choosing wisely is my responsibility for liberty in a free society.

Freedom also means restraint. By this I mean I can not trample the liberties of others or make untrue statements of my fellowmen. To safeguard freedom for others I safeguard freedom for myself and those I love. Restraint means not doing selfish things but thinking of the welfare of others. Then I say that restraint is my responsibility for liberty in a free society.

Freedom involves other people. All alone a man is not free. This is because it is a shared responsibility which involves our schools, churches, homes, and the community. If everyone understands the responsibilities of our society then we can work together to keep liberty strong. Then I say that working with others is my responsibility for liberty in a free society.

Freedom is also specific. There is no such thing as being free in general. While we have laws that restrict us they also give meaning to our lives. We understand what we can do from the Bill of Rights and our State laws. They are specific about what freedoms I can use. The reason for these rights is to give everyone equal opportunities. I enjoy these liberties because my forefathers assumed the responsibility of keeping them. They have handed down to us a heritage that we must guard well, if need be, with our lives. Then I say that these specific freedoms are my responsibility for liberty in a free society.

"My County 'Tis of Thee, Sweet Land of Liberty, Let Freedom Ring" I say for it is my responsibility to keep these liberties, for I am an American.

Career Day

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. SCHERER. Mr. Speaker, a few days ago we heard at the dedication of the Taft Memorial that excellent band from Indian Hill High School which is near the home of the late Senator Taft. During the same week that band was here in Washington, one of Cincinnati's outstanding citizens, Mr. M. C. Hemsworth, delivered a splendid address to Indian Hill High School on the occasion of its celebration of Career Day. Mr. Hemsworth's remarks follow:

I certainly appreciate this opportunity to be with you today. Not only because I'm pleased to have a part in this very important day in your lives, but because I feel that I am visiting with friends and neighbors since we live only a short distance from your school.

A week or so ago, when I started making some notes of the things I'd like to talk about today (and frankly wondering a little about the advice I could give you), I couldn't help thinking of Jim Hansen, who was a classmate of mine in high school algebra. Our teacher had tried for 10 minutes in vain to get Jim to understand a problem and finally in exasperation he said, "Jim, I just can't understand why you can't understand this simple problem; why, when George Washington was your age he was a licensed surveyor," to which Jim added, "and when he was your age he was President of the United States."

But seriously, this can be one of the most important days in your lives. Today many of you will take a major step in making a decision that will vitally affect the rest of your lives, the selection of your life work.

In this age when the work of the world is so highly specialized, it is particularly important that you set your occupational goal early and wisely. Certainly, one would not try to build a house without a blueprint. It is even more important that you have a blueprint, or plan, for your life work so that all of the elements that contribute to success will fit properly. This is far too important to leave to chance and it is too important to be decided at the last minute. Perhaps you are not ready to make a final decision in this regard yet, but it is certainly not too early to begin considering it. And today offers you an excellent opportunity to make a major step toward that direction.

On your decision will hinge a great deal—not only your future economic success but to a great degree your personal happiness during the rest of your lives. This is much more important than dollars.

There are with you today men who have faced the decision of a career as you do today and, judging by their success in their chosen fields, have made wise choices. They are here today to give you the benefit of their experience, to counsel you in your decision.

I emphasize that they can only counsel. Drawing on their experience, they can help you, but the choice itself must be yours and yours alone.

Let's look at some of the factors that you should take into consideration in making this important choice.

First of all, pursue a career in a field in which you have a deep and sincere interest. Do not decide to be a lawyer or an engineer just because your father is one or a doctor because your mother has always wanted a

doctor in the family. If you decide to be a lawyer, or an engineer, or a doctor, do so because you believe you will be a good lawyer, etc., and will enjoy the work. You will please your folks a lot more in the long run by being a success, than simply by following in their footsteps.

By the same token, do not be unduly influenced by glamor or what appears to be an easy road to riches. A person, who decides to be a doctor simply because many of the doctors he knows drive Cadillacs, may end up riding the bus.

The real key to success is being happy in your work. Only if you are happy and stimulated by your work can you apply the energy and effort of which success is made. You have little chance of success, or personal satisfaction, in a job in which you cannot be happy.

Another factor you should consider is your basic ability in the field in which you are interested. Don't decide to be an engineer if you get 6½ each time you add 4 and 4. Chances are you will never make it. Don't decide to be a nurse if you can't stand the sight of blood. That is part of the job.

Today, you have the opportunity to discuss careers in several fields with experts in those fields. They can tell you just what the elements are of their particular vocations. But you will want to go further. Seek out other experts—other men who are successful in their field—and talk to them. Visit the places they work and watch them at work.

You will find one thing that successful men in all fields have in common—they always welcome the opportunity to give guidance to young people interested in their work.

Most important, be sure that you do not overlook another excellent source of advice and counsel right at hand—your teachers. Teachers are in the field of education because they are vitally interested in helping you achieve the highest possible degree of success in your life. Young people like you are their business. They are never happier than when helping you.

In their day-to-day association with you here at school, they have learned far more about you than you might suspect. They have assessed you against their dreams for their students. You can be sure that they are shrewd and effective judges of your potentialities. Their knowledge of, and interest in, you coupled with their broad appreciation of many fields of life can be tremendously valuable to you in helping you select your life work.

Of course, there are many other sources of information that should not be overlooked either in considering a career. Magazine articles and books are available on all types of work. You should seek them out and gain the insight they will give you.

There are many ways in which you can supplement the advice you receive with a practical taste of the type work that interests you. Many of you can find summer or part-time jobs in these fields. And by all means do. For example, if you want to be a civil engineer, get a job on a construction project.

Of course, you should realize that you must start at the bottom and that it will be a long time before you really know very much about the work. Do not be like the young man who quit a job in an architect's office after 3 days and told the architect that he did not like the work, adding as an afterthought, "In fact, I am sorry I learned the business."

You girls, who are interested in a nursing career, and I hope that many of you are, should not overlook the fact that you can gain exciting first-hand experience in this field while being of real service to your fellow beings by doing volunteer work in a local hospital.

After you have determined the career that interests you, you should begin to equip yourself to make the most of it. Decide, in consultation with your parents and advisers, what education you need to attain your goals and direct your schooling to that end.

In some instances, you can get the necessary amount of training and education in high school to be a success in your chosen field. In others, you will want to go on to take further training in trade schools or college.

Whatever the educational requirements of the career you decide to follow, be sure to make the most of your opportunities. Now, this may sound like old stuff, but I'll say it anyway because I believe it is very important. Do your best at every step so that you will be satisfied with your accomplishment. If you do less, you will surely regret it in the years to come.

Select your courses to contribute to your long range objective. Here your teacher's advice can be of particular value. The frequency with which we in business hear our associates remark that they wish they had taken a particular course in school attests to the fact that adult counseling in the selection of courses can be of tremendous value.

If the career that interests you can best be served by a college education, begin now to study the college entrance requirements for the courses you wish to follow. Take courses that will qualify you and help you in college. Now is the time to build the basic foundation of knowledge on which you can later construct a tower of success.

In this regard, never lose sight of the fact that learning is hard work and that it is a never ending job.

I heard the story of a misguided young lady in high school who asked the man seated next to her at a dinner party the nature of his work. He, a famed astronomer, replied, "I study astronomy," to which she commented with disdain, "Oh, I finished that last semester."

Education must be regarded in its proper perspective, however. The role of education is not to teach you everything you need to know to do your job. Its role is to teach you to think and to give you a basic knowledge of fundamentals. Education does not take you by the hand all the way to attainment of your goal—it takes you only part way and points the way you must travel on your own.

It has been said that an educated man does not know all the answers, but he knows how to find them.

During your lives, the world has made tremendous strides in every field of human endeavor. We have propelled manmade planets into space. We have found cures for diseases that cursed the world a few years ago, and closer to home—we're testing jet engines today at General Electric in Evendale, which will propel aircraft from New York to Los Angeles in one and one-half hours. But the strides that will be made during the remainder of your lives will be even more exciting.

Charles Kettering, a man who had an amazing insight into the future, has said: "With willing hand and open mind, the future will be greater than the most fantastic story you can ever write—you will always underrate it."

You are going to be a part of that future, and only you can decide what role you will play in it.

One of the deciding factors in your role will be your choice of a career. That is the stone that will rest on top of the foundation of willing hands and open mind. The next stone you can place in building your pedestal for the future is the preparation you make to play your role. And, the final stone will be the enthusiasm and vigor with which you follow up.

The future is unlimited for each one of you. It will be what you make it. Remember that you gain in proportion to what you give to the world and your fellow man—set your goals wisely and work hard and you will attain the success and satisfaction for which we all strive.

That is my wish for you on your Career Day.

U.S. Racism and Communism

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following address was delivered in Ireland on March 3 by our Ambassador there, Mr. Scott McLeod.

In these days when we hear so much criticism about "ugly Americans," some of it quite justified, it is a relief to read these words of an Ambassador of the United States to an intellectual group in a friendly country, explaining our country to them in an intelligent and sympathetic manner.

We are fortunate to have men of Ambassador McLeod's caliber in our Foreign Service. Mr. Speaker, I am happy to say that we have many such men serving our country all over the world and interpreting the American way to our friends by both precept and example.

The address follows:

U.S. RACISM AND COMMUNISM—ADDRESS BY AMBASSADOR SCOTT MCLEOD BEFORE THE CATHOLIC ASSOCIATION FOR INTERNATIONAL RELATIONS

Mr. Chairman, the title of this paper was more or less assigned in the invitation to participate in this enlightening, at least enlightening to date, series of lectures. My assigned task is to discuss both communism and racism in the United States, but I hope you will forgive me if I fail to correlate these items as you might wish.

I have not been in my country for nearly 2 years. I leave in a few days to be in Washington when President Eisenhower greets President O'Kelly. Perhaps I would have been better prepared to deliver this paper had it been postponed until my return. With this reservation, I must tell you that a great deal of the information about the United States which I have read in recent months indicates that some of our most thoughtful citizens are taking turns discussing the question of whether or not the American people have what has been called the will to survive.

My thesis tonight is that the American people do have the will to survive, the will to defend freedom, and the knowledge that our responsibility does not end at our own territorial limits.

My thesis, I believe, needs some historical support, so let us review some historical facts. The United States is a rather young nation—yet it was born in a spirit of nationalism and we are, in my view, still nationalistic.

My country has never known the rule of men. It has always operated under a rule of law. This is ingrained in our people. It makes an understanding of totalitarian dictatorships most difficult.

We have a tradition of individual freedom which we cherish. I believe the way our social structure was built has contributed to what I might describe as a fierce resistance to being pushed around. Recall that the colo-

nies which won their freedom at the end of the 18th century were populated with less than half the number of people who then lived in this island. They were a cross section of national and racial backgrounds—the natives, the Red Indians, had been pushed back from the seaboard by a conglomeration of dissident Englishmen and adventurous Englishmen, by Dutch merchants, by Spaniards and French of an earlier wave of settlers, by Scots and Welsh and Irish, by Negroes originally brought to the continent as slaves—by polyglot men, some little better than pirates.

Along with the sectional prides, prejudices, and conflicts there appears to have emerged from our Revolutionary struggle a considerable amount of good will; for the Founding Fathers, not without great difficulty and not without invoking the assistance of the Almighty, managed to achieve a form of government which is a compromise between the twin dangers of a potential overpowering Central Government and a loose confederation of strong local governments.

Throughout the debates of our Constitution makers runs the thread of not how best to govern, but how best to maintain man's individual liberties. I do not contend that the system they devised is foolproof, nor that suceeding generations of Americans may not dissipate this birthright. I do contend, however, that our system has withstood the ravages of nearly 200 tumultuous years and that this generation, my generation of Americans, will not only defend, but perpetuate this system.

There are a number of generalities about this generation of Americans of which Europeans should be aware. We are often pictured by our friends as completely materialistic, uncultured, inept socially, immature politically, and prone to loudmouthed arrogance. Our enemies picture us as gangsters, hooligans, and greedy imperialists manipulated by a crowd of completely unprincipled capitalists lurking in lurid Manhattan offices, each of us so preoccupied with profits or personal ambition as to be unable and unwilling to take joint action for our own welfare or that of the rest of the world.

In my judgment such generalities concerning the average American indicate a good deal less of understanding of us than we are alleged to have of the rest of the world. I would not be candid if I did not confess that there are vestiges of each of the types I have enumerated among our people. Perhaps we are all doomed to be known by our excesses. I must admit that the stage Irishman is patented in the United States to the same degree the stage Yank is portrayed hereabouts.

It is most difficult to depict the truly average American because the composite in one section is so complicated by inroads from another section and because each is so unlike the other.

Having been somewhat critical of generalities, I now take the liberty of using one. The old blueblooded Yankee of our past—the New Englander—was, and where he still exists is, quite cultured, quite straight-laced, quite serious in both demeanor and purpose. But he has been changed in the last hundred years by succeeding generations of Irishmen, Italians, Portuguese, Greeks, and French-Canadians. In addition to the immigrants from overseas he has been twice invaded by Americans from other sections as manpower shifted to meet the necessities of World Wars I and II.

Take my own case. Both my wife and I were born and reared as midwesterners. During the Great War we were shifted to New England, a distance of 1,300 miles—about as far as from Dublin to Rome. I was often asked by the inhabitants if I were a native and found the best answer to be, "No, unfortunately, but all three of my children are."

I am trying to convey that my country is truly, if I may use the cliche, a melting pot for humanity. The pot continues to boil because between 300,000 and 400,000 immigrants come to our shores annually and because our own population continually shifts. These movements of people keep our social structure from becoming solidified and our practice of political freedoms keeps it from becoming stratified.

I find that a good many people judge the United States on the basis of New York City as portrayed by Hollywood, where accuracy sometimes is a secondary consideration. New York is a fine city, but not nearly as typical of the United States as Dublin is of Ireland. However, it is here that our melting pot really boils—Irishmen, Italians, Puerto Ricans, Chinese, Negroes—all races and all colors but all Americans.

I cite these examples of new Americans—our immigrants—to indicate that we do not have the opportunity to forget the blessings of liberty as older more solid societies have done in history because these newcomers, such as the 38,000 Hungarians admitted since the fall of 1956, will not let us forget.

A study of the intelligence reports furnished to home governments by our enemies in the last two great wars indicate a pitiful lack of understanding of the dedication of our people to liberty. In both cases the practice of our liberties of free thought and free expression led our opponents to conclude that we would be unable to get together to fight. The record demonstrates that instead of the predicted disunity the United States closed ranks to produce miracles of production leading to victory during both of these conflicts.

Casual observers upon visiting my country for the first time are confronted with the immense size, the mountain ranges, the broad plains. They are confounded by the changes in topical interest as they traverse the sections from heavy industry to vast fields of grain to barren lands to rich irrigated fruit lands to forests of oil derricks. They become aware of the changing mood of political and economic climates. They hear dissident voices protesting either government action or inaction with respect to either domestic or international problems. In one section the visitor finds the accent on domestic affairs and in another on the international scene. The immediate reaction often leads such a visitor to question the cohesiveness of the American people. The thoughtful visitor will not accept a conclusion based on casual observation. He will probe and penetrate until his reflections lead to the inevitable conclusion that the real strength of the American society springs from the very elements that at first glance seem divergent. The insistence upon freedom—the freedom, for example, to be critical of Government policy and Government officials—is a right for which my fellow countrymen have fought and died and if called upon would fight again. Many Europeans have told me that they have heard many critical expressions about the administration of Government or Government officials, but never about the system of our Government. The belief and faith in our way of government constitutes the common thread that binds our people and gives us our national unity. This determination of all Americans of every origin or religious persuasion to remain free is an underlying factor which unites us.

There are a few points which I shall make to contribute to an understanding of these matters. First, it is not accurate to picture the conflicts between our races as arising from hate prejudices. To the contrary, that section of the country which is alleged to be most bitter toward the Negro—the South—is actually the section where there is greater understanding and affection for Negroes than is found elsewhere. Like discrimination anywhere in the world, so much of the problem in the South stems from fear, among other things, of economic competition and a feeling that persons from other sections are interfering. The resentment, therefore, is directed not so much toward the Negro but toward the carpetbaggers—the term of derision coined after our Civil War to denote the exploiters who came along, living out of carpetbags and taking advantage of conditions in a war-ravaged economy. The carpetbaggers were white men.

A parallel here may be familiar, the condition of the Negro since our Civil War. The Negro who has in some areas and to some extent been deprived of the franchise and other civil rights is analogous to the position of the Roman Catholic here in past years. According to popular belief the race prejudice is concentrated in the South, but this is not true. New York has had its problems with apartment buildings; Chicago and Detroit have had riots. And the problem, as you know, is not confined to the United States.

Old prejudices die slowly. The giant strides made by the Negroes in the United States in terms of education, social, and economic gains in the last 100 years, particularly when compared with the strides of nonwhite races outside the United States during the same period, are often obscured by the news reports of the difficulties arising from the Court decision of 1954 directing that schools must be integrated.

From 1896 (the Court decision on *Plessy v. Ferguson*) until 1954, the American Federal Government adopted a hands-off policy toward the actions of the State governments in relation to their Negro citizens. Therefore, the 1954 Supreme Court decision was a departure from previous policy and Court decisions. This Court decision, as you might suspect, proved a considerable shock to that section of our society which had become accustomed since 1896 to a segregated school system based on a court approved scheme of separate but equal facilities.

That the shock was not greater, the reaction more pronounced, and the attending violence more widespread seems to me to be of far greater significance than the rather isolated events reported in the press in the last 3 years. The significance, to me, is that here we have evidence that freemen, at least the vast majority of our citizens, have learned to live in our society under a rule of law.

And now I shall speak about communism. There is no doubt as to where the United States stands in this struggle. We find ourselves through force of circumstances a leader among the peoples of the earth who are in opposition to the Communist thrust. While we have not sought this role, we undertake to play it willingly. Some of the critics of world drama do not subscribe to this willingness but I say it is there.

Let me discuss a few of these criticisms. I will deal with an era in our recent past which has been greatly criticized by Europeans. I refer to the discovery by the American public that Communist conspirators or their dupes had penetrated to the inner circles of our Government.

It is hard to discern the beginnings of a storm. Although American intelligence agencies had been greatly concerned about the inroads of Communist agents during World War II it was, as you can appreciate, most of us that the Soviet-American alliance even though it was perfectly evident to most of us that the Soviet American alliance of the World War II was primarily a marriage of convenience, primarily convenient to the Communists. Consider this background—Americans, traditionally, are almost notorious for their lack of security consciousness. It is hard for us to believe that some men are driven by genuinely evil ob-

jectives. Since the days of red Indian wars most Americans have not known what it is to experience an enemy in their midst.

Throughout the two Great Wars there were no enemy battalions on our soil. The efforts of saboteurs and espionage agents—at least those of the enemy with whom we were at war—were singularly unsuccessful. We had a feeling of being safe in our homes. Many of us never locked our houses. I suppose most of us left our automobiles unlocked. We enjoyed a complacency regarding enemies in our midst which may be unique in history.

I recall my reaction when I first visited outside the United States and observed high walls, two-story doors and shuttered shops. It then occurred to me that such construction was evidence of a security consciousness going back centuries. I have often reflected that our discovery of the need for security precautions was utterly incomprehensible to people who had always known such precautions.

After public disclosure of the Gouzenko defection to the Canadians and the Alger Hiss affair, American public opinion became more aroused and demanded some action. It was only natural that the American Congress would reflect this attitude. Scores of Congressmen and Senators demanded action and in so doing focused public attention on the overall peril of communism. Today the United States has a security program carried out under President Eisenhower which is just as effective as those of the other Western Nations.

But the evolution of a workable security program in a society newly security conscious involved growing pains. Some of these growing pains were misconstrued by our friends to be hysteria. There was no such hysteria in the United States. There was rapid and effective action, which brought about in 24 months the more effective program we have now. The necessity of public discussion of the security program has passed. But the concern of the American people—their consciousness of the continuing pressure of the Communist thrust—remains.

Evidence that this consciousness exists today is to be found in the widespread support for our foreign policy on the part of all segments and sections of the population of the United States. The evidence is that we are spending an average of $40 billion a year on defense and an average of $4 billion more for an aid program to enable the rest of the free world to stay free. I contend a democratic people would not submit to such a program of spending their tax dollars if they were not convinced that their survival is at stake.

Of course, the Communists themselves have continued to arouse public awareness of the menace which they constitute not only to peace, but also to freedom. Their technique of moving from one crisis to another as they continually test the will of freemen to resist them is a pattern which is all too familiar. Today they are issuing ultimatums about Berlin, or denouncing Iran or Sweden. A short time ago the pressure was on Quemoy and Matsu and before that on Lebanon.

The latest leader of the proletariat, Mr. Khrushchev, appears to have consolidated his dictatorship if one is to judge from the 21st Congress of the party, just concluded. To accept his implication that he is a popular leader among his fellow party workers is fantastic. If any leader receives over 98 percent of the popular vote, we may assume the election is rigged. I suspect no man since Adam has managed to achieve such a percentage, including our own George Washington. Methinks Mr. Khrushchev doth protest too much. How could any leader who harangues a captive audience for 6½ hours be very popular?

However, I find in Mr. Khrushchev's program some very hopeful signs. For example, he appears to have introduced that old capitalist trick of incentive. He is offering his people materialistic glories to equal that of my country—which is an incentive Mr. Stalin never thought of and quite a compliment to our industrial machine. I believe he expects to achieve this result in 7 years. Let us hope he does. The Russian people certainly deserve a better life, better food, and better housing. If his incentives are successful it may lead some of his people to question the value of other aspects of capitalism, perhaps even adopt them.

Communists indulge in fantastic figures without basis of fact. In their attempts to describe the growing strength of communism as a world movement, they speak of the wave of the future. In his opening speech, to which I alluded above, Mr. Khrushchev stated the total membership of Communist parties in the world is "over 33 million people." He claimed that "this is an enormous victory of Marxism-Leninism, and a great achievement of the working class." In a speech on November 6, 1957, Mr. Khrushchev stated that the world Communist Party membership totaled 33 million. Thus more than a year later he was unable to cite an exact figure which would indicate an increase in the intervening period and therefore comes up with the vague figure of over 33 million. The fact of the matter is that 88 percent of Communist Party members (over 29 million) are in countries ruled by a Communist Party. Elsewhere there has been a significant decline in party adherence in recent years. Just to cite a few figures: Communist Party membership has declined in the United Kingdom by 30 percent to a new low of 25,000; in France from around 800,000 in 1946 to some 430,000 in 1958. Italy, according to Communist figures, from 2 million in 1956, to 1,820,000 in 1958. Norway, from 40,000 in 1945, to 5,000 in 1958. Among the countries where the Communists have suffered losses in recent elections are: in Belgium, where Communist candidates received 184,000 votes (3.57 percent) in 1954, as compared with 100,000 (1.89 percent) in 1958. In France, Communist candidates received 5,492,000 votes (25.6 percent) in the national election of 1956, as compared with 3,882,000 votes (18.9 percent) in the election of November 23, 1958. In Australia, the Communist percentage of the vote in 1958 fell below 1 percent as compared with 3.6 percent for the Senate and 1.2 percent for the House in the 1956 elections. It would be difficult to envisage communism as "the wave of the future" in terms of these declines.

Of course, the real weakness of communism is its lack of a solid spiritual rock on which to build. We all know of the historic religious fervor of the Russian people, a fervor which has not been extinguished. Pasternak is the latest to make that point clear. I doubt that freedom can be extinguished since it is inherent in the human spirit that man seeks freedom, that finding freedom man seeks truth, and that seeking truth man finds God. As God-loving people, we are first interested in the welfare of man. The Russians are building a society similar to the ancient dynasties or the later monolithic states based on force, and it is probably just about as safe—that is, safe enough to terrorize the world for a while but ultimately quite fragile.

It has always struck me that the great fallacy of the Communist system is that it is based on a presumpton that all men, particularly party members, are men of good will. Yet it denies the existence of the Prince of Peace our only true example of a man of good will on earth. For this reason alone their system doesn't work the way Marx said it would. No Communist government has ever withered away. It is still necessary to coerce those who mistakenly or purposefully fail to follow the party line, thus they continue to justify a dictatorship and to deny their people even the most elementary freedoms, as the Hungarian people will testify.

The course we pursue has been clearly mapped by President Eisenhower and Secretary Dulles. We have tried to make clear to the Soviet leaders, in order that there will be no miscalculation of our intentions, that we seek peace with justice by any honorable means. Only a fortnight ago President Eisenhower restated our intentions when Mr. Khrushchev was rattling his Berlin saber and the President told him simply that if there is to be any trouble he will have to start it.

I'd like to say just a word about Mr. Dulles for whom I have the very highest admiration. His critics have often complained that he is inflexible. The will to survive as a freeman is an inflexible principle in the character of Mr. Dulles. Of course, he has always indicated a willingness to modify or change his methods when necessary to achieve this objective. His inflexible adherence to principle is well known. To me this is one of his finest attributes. I can hardly think of any single aspect of character in a foreign secretary which is more admirable. He is inflexibly attached to his principles which I believe the world can discern to be principles grounded in a high order or morality.

In summary, Mr. Chairman, I make the following points:

In the United States today we face many problems—both foreign and domestic. While there may be serious differences which divide us domestically, we are nonetheless facing up to our domestic problems, our racial problems, for example, and we are making progress toward solutions. I think I can say that we do have a racial problem and that we are doing a fairly good—not poor and not excellent—job with it. The progress is gradual, but the progress is there.

In our foreign problems I submit that we have exhibited a unity of purpose seldom achieved in a democratic system of government. We have persisted in maintaining a unity in the western alliance despite siren calls to go it alone, to sit down with Soviet Russia and divide up the world in the interest of peace irrespective of the interests of other freemen.

As we look around the world today there is only one threat to the peace of the world—the Communist thrust for world domination. Other problems in the world, even one as knotty as the matter of Cyprus, are, it is demonstrated, susceptible to solution by reasonable men of good will.

Perhaps, as has been alleged, the western alliance opposing the Communist front is merely a repetition of the old balance of power concept in world affairs. What other choice confronts us? Shall we surrender our free way of life to Communist dictatorship? Shall we permit Communist subversion and Communist force gradually to reduce the perimeters of freedom? And, remember this, not once in history, to this day, have a people freely chosen communism. In every case it has been imposed on them by a combination of subversion and force or force alone. The Communists know this as well as we do—the main reason they utterly refuse to permit free elections for self-determination.

Our course is clear—and we have the will to pursue it. We must continue to oppose threats of force. We must wait patiently for the inherent evil of communism to prove the undoing of communism. We must maintain our spiritual strength, our will to be strong.

We of the West have a heritage of freedom and an obligation that it will not die with us. We must devote ourselves with all our energies to the proposition that this freedom shall be our legacy. I tell you: We have the will to do just that.

West Side Bank of West Pittston, Pa., Observes 50th Anniversary

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story which was featured in the Pittston (Pa.) Gazette on the occasion of the 50th anniversary of the West Side Bank of West Pittston, which was celebrated early last month:

The Pittston Gazette joins with residents in the area to extend sincere congratulations to the West Side Bank on its 50th anniversary of excellent service to the community. During these years, the institution has been held in high esteem and considered one of the most valuable institutions in the borough. It has maintained a high quality of service which is recognized in all banking circles throughout the country. It has shown steady increase through these years, and its success can be attributed to the excellent, courteous and qualified services which are offered.

As the borough of West Pittston expanded and flourished, its people realized the need for banking facilities within its boundaries. The first meeting to consider the organization of the bank was held in West Pittston Town Hall, on October 21, 1908. T. B. Mitten was appointed temporary president; R. G. Bennett, temporary secretary; and W. C. Brenton, temporary treasurer. Temporary board members were: T. B. Mitten, B. W. Tennant, W. J. Lewis, W. C. Brenton, M. R. Keeler, R. G. Bennett, W. W. Hall, L. B. Hillard, and A. L. LeGrand. At this organization, the proposed name of West Side Savings Bank was approved, and was later changed to West Side Bank when the charter was granted on March 2, 1909.

The first banking quarters were at 36 Luzerne Avenue in the Carr Building, next to the present Obrzut's Drugstore. Business was transacted at this location until the bank moved to its present location in 1913.

The first directors meeting was held May 26, 1909, with the following directors: L. B. Hillard, president; T. B. Mitten, vice president; R. G. Bennett, secretary; M. R. Keeler, W. C. Brenton, W. J. Lewis, John G. MacHenry, and F. L. Coursen.

B. W. Tennant was the first cashier of the bank, assuming his duties March 24, 1909. Mr. Hillard served as president until 1924 when he resigned and was succeeded by Mr. Keeler, who served 1 year. Dr. R. S. Brenton was elected president in January 1925, serving until 1946 when Joseph T. Jennings assumed the presidency, a position which he still holds.

The tremendous industrial development in the Garden Village in the past few years has contributed greatly to the progress of the bank. Because of this industrial expansion, the directors saw the need to enlarge the institution's quarters, and on October 13, 1958, purchased the valuable Brandon Building, adjacent to the bank. A few years ago, the bank also purchased the former Mosier property at 17 Luzerne Avenue, corner of Race Street and Luzerne Avenue. Plans are to use this plot as a parking area for patrons.

The bank is most fortunate to have the services of top trained personnel as cashier and assistant cashier. Charles S. Remington, cashier of the bank, joined the institution's personnel on February 4, 1924, and was made cashier in January 1942. He has served under every president of the bank.

Ralph D. Norris, assistant cashier, began his career with the local bank in May 1929 and assumed his present office in 1942.

Joseph T. Jennings, president of the board of directors, became a director in 1925, was elected vice president in 1930, and elevated to the presidency in 1946.

Harold D. Kasper, vice president, became a director in 1938 to fill the vacancy caused by the death of his brother-in-law, Dr. J. R. Beaver. He assumed vice presidency in 1946

William G. Brenton, also vice president, was appointed a director in 1948 to fill the vacancy caused by the death of his father, Dr. Richard S. Brenton, a former president of the board.

Attorney Charles J. Bufalino, secretary of the board since 1957, became a director in 1940.

Other directors are: Allan W. Smiles, a director since 1931; Roy K. Stackhouse, since 1929; J. William Snowdon since 1937; Santo Volpe, Jr., who was appointed in 1958 to fill the vacancy caused by the death of his father, Santo Volpe, Sr., and Carlton H. Stauffer, who was appointed in 1957 to fill the vacancy caused by the death of O. E. Schobert.

The directors and officers of the bank invite the public to an open house tomorrow from 11 a.m. to 2 p.m. to acquaint them with the fine facilities which are offered.

REA in Puerto Rico

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. SANTANGELO. Mr. Speaker, I have just returned from a 1-week trip to Puerto Rico with my colleague, H. CARL ANDERSEN, of Minnesota, in connection with the operation of the rural electrification program. As members of the House Appropriations Subcommittee of Agriculture, we are deeply concerned about the operation of the rural electrification program and the efficacy of its administration. We are pleased to report that the rural electrification program in Puerto Rico is making tremendous strides, is being completely administered, and is opening up a new world to the hill people and farm residents. While the electrification work has reached 50,000 rural homes in Puerto Rico, the Puerto Rico Water Resources Authority expects to accomplish the electrification of approximately 100,000 farms and mountain homes within the next 4 years.

Having visited the island 5 years ago, I can compare the present-day conditions and construction with those of 5 years ago. My colleague and I visited the hills of Narranhito and mountains of Barranquitos, the farms of Corozal and agricultural stations of Lojas. We have examined generating plants of Guayanilla and many transmission lines throughout the islands. We have observed the startling effects of electrification, not only on the physical aspects of the countryside, but also on the attitudes of the people and the appearances of the children.

Puerto Rico is undergoing a peaceful revolution, an economic and social revolution. Just as Christopher Columbus opened up a new world when he discovered Puerto Rico in 1493 so has the Puerto Rico water resources authority, assisted and aided by our loans from our Rural Electrification Administration, opened up a new world for the people and children in the hills and on the farms. No longer does nightfall bring darkness and boredom to the inhabitants of the farms and denizens of the hills. Rural electrification has brought light, activity, and opportunity for study. With electricity has come the use of various electrical appliances and expanding interests and activities. Television antennas sprout from mountain shacks and farm homes, and radios and musical boxes interrupt the stillness of the night. Freezers and refrigerators abound in homes and stores, thereby, preserving meats and food supplies which formerly spoiled and perished, because of lack of refrigeration facilities. Clean-faced and sunburned schoolchildren, immaculately dressed despite sultry weather, display an alertness not formerly seen.

Several residents of New York, who formerly lived in my district, have returned to the mountains and resorts because electrification has brought a less burdensome way of life. Comforts and services which we take for granted on the mainland are slowly but surely coming to the Puerto Ricans in the hills and on the farms. The light which illuminates the home is also electrifying the spirits of the people, who do their chores willingly. When day is done, the farmer, the worker, and the schoolchild, with electricity in their homes, have an evening to look forward to. We observed purveyors of electric light bulbs and equipment demonstrating in the evenings the workings of simple electrical gadgets to an open-mouthed and interested gathering of weather-beaten men and inquisitive-looking youths. Even jukeboxes, with their raucous songs, put springs into the legs of a tired people after they have worked hard all day. Cares have disappeared with the banishment of darkness. These essential services are new to these people on the farms and in the hills. In the cities, and we drove through many, sprout many appliance stores, which sell these instruments and gadgets.

We also observed an expansion and improvement in the cattle industry, especially in the southwestern part of Puerto Rico. Herds of cattle, mostly Holsteins, lazily and leisurely scatter about the farmlands. The sugar production is still the most important industry in Puerto Rico, and we inspected various sugar plantations where young men and old in the blazing sun cut down with

their machetes the sugar stalks to extract the juicy and succulent sugar.

In addition to the foregoing, my colleague, Congressman ANDERSEN, and I participated in a seminar on rural electrification. Representatives from Costa Rica, Panama, Brazil, Puerto Rico, and the United States delivered talks on various phases of rural electrification. This seminar provided not only a valuable interchange of ideas and information, but provided an opportunity for promotion of better pan-American feeling. Each country was ably represented and made a fine contribution. This seminar took place at La Parguera on the southern coast of Puerto Rico, which is an enchanting island, 40 by 100 miles.

Among those present and delivering prepared talks were Mr. David A. Hamil, Administrator of the Rural Electrification Administration, who demonstrated that he is an informed and able administrator, dedicated to his work; Sol L. Descartes, executive director of the Puerto Rico Water Resources Authority, who showed vision, grasp, and administrative ability; Clyde T. Ellis, general manager, National Rural Electric Cooperative Association; Brig. Gen. Herbert Davis Vogel, Chairman of the Board of Directors, Tennessee Valley Authority; Rafael R. Ramirez, head of the power division of the Puerto Rico Water Resources Authority; Victor M. Cataldo, head of the power utilization division of the Puerto Rico Water Resources Authority; Jorge Manuel Dengo, general manager of the Institute of Electricity of Costa Rica; Ricardo Arosemena, from Panama, chief engineer of the Inter-American Cooperative Service of Economic Development; Luiz Claudio de Almaida Magalhães of Brazil; Milton A. Chase, Assistant Chief of the Electric Engineering Division of the Rural Electrification Administration; Herman D. Plavnick, Assistant to Assistant General Counsel, Agricultural Credit and Conservation, U.S. Department of Agriculture; Dr. Jose Mariano Rios, sociologist and William H. Eastman, Director, Southeast Area, Rural Electrification Administration.

On April 16, Congressman ANDERSEN and I traveled to Ponce and Guayanilla to participate in the inauguration of the second unit in the South Coast Steam Electric Station. We represented the Congress and spoke to the large gathering attending the opening of this unit, which has a capacity of 50,000 kilowatts. Already in the outlying areas can be seen the spires of industrial plants ready to use this power.

Because of prior commitments, Governor Muñoz-Marín could not attend and was represented ably by Robert Sanchez Velilla, secretary of public works; Mr. Sol. L. Descartes, executive director of the Puerto Rico Water Resources Authority; and Mr. David Hamil, Administrator of the Rural Electrification Administration. The chairman for this function was Harold Toro, head of the Water Service Division, a man with a capacity of attending to many details.

Shortly after, we returned by plane to San Juan and visited the school lunch warehouses. Inasmuch as the school lunch appropriation program is within the jurisdiction of our subcommittee, we examined into the types of food which are being served to the 240,000 schoolchildren of Puerto Rico. Our contribution of $3 million for school lunch is matched by the Commonwealth of Puerto Rico. Dried eggs are a great source of satisfaction to the schoolchildren and to those in charge. Wheat, flour, cornmeal, powdered skim milk, dried milk and egg solids are served in abundance. The fact that these dried eggs were being produced in Minnesota, the State of my colleague, H. CARL ANDERSEN, and were preferred to products from other States, was of great satisfaction to Congressman ANDERSEN. It was with regret that we observed that corned beef was being obtained from Paraguay and not from the United States.

In both the electrification program and school lunch program, we asked for and were shown evidence that the United States contribution was recognized and publicized.

Despite a busy schedule, Governor Luis Muñoz-Marín found time to spend 3½ hours with us at his summer cottage. We discussed the past, present, and future of Puerto Rico and its relations to the United States. Inasmuch as Puerto Rico is excited today about its present and future status, we shall not set forth the Governor's thoughts and predilections. We did observe that many Puerto Ricans, proud of their United States citizenship, are encouraged by the admission of Alaska and Hawaii to the United States Union. They feel that the economy of Puerto Rico is adequate for them to take their place with us as a sister State. There are some who believe that the status of Commonwealth is at present the only realistic attitude. Others, and these seem to be a small minority, clamor for independence. Public officials feel that a plebiscite should be held to determine the desires of the people. Others feel that a plebiscite raises false hopes and is unrealistic.

I, for one, feel that we do not seek colonies, but wish our territories and possessions to have common interests with us. However, what the people want should be our standard and their desires should be indicated through a plebiscite and then through their representative bodies.

This trip proved informative, interesting and helpful. We trust that lights shall continue to eliminate the darkness and that the light of understanding shall brighten the lives of Americans all, on the mainland and on the isle of Puerto Rico.

Boleslaw F. Karpinski Honored

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. KOWALSKI. Mr. Speaker, a few nights ago in the city of New Britain, Conn., several hundred friends and admirers from all parts of my State gathered at a testimonial dinner honoring Boleslaw F. Karpinski—a man whose story is one of real Americanism.

"Professor" Karpinski, as he is saluted with affectionate respect in Connecticut, was born in Poland in 1881. He came to America as a youth and has lived in New Britain for the past 60 years.

Imbued with a deep love for his adopted country, "Professor" Karpinski spent most of his free time, after long days as a factory worker, in studying the history of the United States. It was a proud moment for him when, in 1911, he was granted American citizenship.

Once he became a citizen himself, this great American began devoting himself to the cause of helping other immigrants secure their citizenship. For the past 48 years, he has been conducting Americanization classes in New Britain and in that time he has helped prepare more than 5,000 men and women for the duties and responsibilities of American citizenship. Since 1930, his citizenship classes have been conducted under the auspices of the Pulaski Democratic Club.

Of the thousands of men and women trained for citizenship by "Professor" Karpinski, many have gone on to distinguish themselves in the business world, in the arts and sciences and in the profession. All who studied citizenship under his guidance are the better for having known him.

It was only appropriate at this testimonial dinner that "Professor" Karpinski should receive a gift from his former students and a gold medal from the Polish National Alliance, an organization which he has served devotedly for many years.

Mr. Speaker, when any of us hears doubts expressed about the future of this great country, let him remember that we have men like "Professor" Karpinski—a man whose whole life has been dedicated to our country.

It gives me great personal pleasure to add my salute to "Professor" Karpinski for his accomplishments. He truly represents the stuff of which the best of America is made.

We, in Connecticut, are proud to have "Professor" Karpinski as one of us. His life has been an example of what love of country can really mean.

Discrimination Against the Indian People of South Dakota

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. BERRY. Mr. Speaker, on Tuesday, February 10, 1959, Robert Burnette, chairman of the tribal council of the Rosebud Indian Reservation in South Dakota, testified before the Indian Affairs Subcommittee of the House Interior Committee, making various statements

regarding discrimination against the Indian people in South Dakota.

On March 19, 1959, Mr. Burnette supplemented and amended his previous remarks before the subcommittee.

Recently the Todd County Taxpayers' League, Inc., prepared an answer to the charges of Mr. Burnette. Both excerpts from the modified statement of Mr. Burnette and the statement of the Taxpayers' League were published last week in the Winner Advocate, a weekly newspaper published at Winner, S. Dak., which is a portion of the open area of the Rosebud Reservation.

That Members of Congress may be fully informed as to the question of discrimination against the Indian people on the Rosebud Reservation, I have asked unanimous consent to insert both articles from the newspaper in the CONGRESSIONAL RECORD: First, the modified charges by Burnette, and, second, the modified charges by the Taxpayers' League:

DISCRIMINATION AGAINST INDIANS HAS BEEN CHARGED

Robert Burnette, president of the Rosebud Sioux tribal council, has brought charges of discrimination against Indians of the area. Charges were leveled during testimony which Mr. Burnette gave during a hearing before the House Subcommittee on Indian Affairs. Those charges have been denied by the Todd County Taxpayers League, Inc. That organization's side of the controversey appears in page one of the third section of this week's Advocate.

Part of Mr. Burnette's lengthy testimony includes the following:

"Exclusion of Indians from jury duty: In the South Dakota State courts, Indians systematically are excluded from jury duty.

"Sentences: I made the point that sentences were not issued with an even hand, that Indians received heavier sentences than whites for the same or lesser offenses.

"I was given a report that in the jail at Winner on the Rosebud reservation, police officers have gone into the cells with their clubs and beaten up Indian prisoners. One example is John Fire, a Rosebud Indian, whose face is still partially paralyzed from a beating administered by a Winner policeman in the prison cell.

"I am informed that in small towns on the various reservations, the practice in South Dakota is to arrest Indians on the pretense of intoxication or disorderly conduct, and separate them from their money by fines, although non-Indians in the same place are not bothered. This applies, among other towns, to Rapid City, Pierre, White River, Winner, Mission, Martin, Mobridge, Chamberlain, Sisseton, and Fort Pierre.

"I made the statement that in South Dakota there were statutes on the books which discriminated against Indians in the matter of voting and mixed marriages but I made clear these laws had not been enforced.

"Up to 1951, the law of South Dakota specified that so long as Indian residents within the State maintained tribal relations they cannot vote or hold office. In 1951 the law was repealed. Up to 1957 the law made void marriages between persons of the African, Korean, Malayan or Mongolian race and persons of the opposite sex belonging to the white or Caucasian race. Many Indians were under the impression that this statute forbid marriages between Indians and whites. In any event the statute was repealed in 1957.

"I stated no Indian was a member of the South Dakota State police but that I knew several Indian applicants for the position. Since then I have learned there is one State patrolman, who is an Indian. In these circumstances I am reluctant to name individual applicants who were rejected for positions and asked to be excused from this assignment.

"Indians will not appreciate the United States giving Federal money to States to enforce State law and order against Indians. This would only encourage States to assume jurisdiction since the major deterrent up to now has been the lack of funds. The idea back of Public Law 280 was not to transfer a Federal obligation to the State. Its purpose was not to have the State perform a Federal chore. If Indians are ready for State law and order, it should be administered with respect to Indians the same as it is administered with respect to non-Indians of the State. If Indians are not ready for State law and order, the Federal Government has not fulfilled its obligation.

"Indians are not ready.

"Finally, following my testimony before the subcommittee, Sheriff James Shoemaker of Todd and Tripp Counties, appeared on the reservation with his deputy and William Day, Jr., the State's attorney and ordered the radios on the tribal police cars to be cut off the police channel used by the sheriff's office. This leaves the tribal police cars without police radio communication. Significantly, the sheriff applied his order to the tribally owned police cars but not to the police cars operated by the Bureau of Indian Affairs. We regard this as an effort by the sheriff's office to discipiline the tribe for my exposure of the discrimination problem.

"We at Rosebud have no desire to have justice administerd to us on the reservation by State and local judges, sheriffs, police or jailers who have been raised in an environment of ill feeling toward Indians."

INDIAN DISCRIMINATION CHARGES DRAW DENIAL

EDITOR'S NOTE.—The following information was prepared by the Todd County Taxpayers League, Inc., in answer to recent statements by Robert Burnette, head of the Sioux Tribal Council at Rosebud.

Re true facts concerning the Indian affairs of the State of South Dakota.

To the Members of the Congress of the United States of America, Washington, D.C.

DEAR CONGRESSMAN: The members of this association have been shocked upon our attention being called to statements and accusations made by one Robert Burnette, head of the Sioux Tribal Council at Rosebud, S. Dak., concerning the treatment, discrimination, and prefabrications which this man made when testifying before the House Interior Subcommittee on Indian Affairs in Washington, D.C.

This association and many citizens of South Dakota, including Indian citizens, are desirous of setting the matter straight and to clear any wrong impression which Mr. Burnette may have left with the Members of Congress as well as the residents of every State in the Union.

First. Mr. Burnette testified under oath: South Dakota has laws making it illegal for Indians to marry non-Indians.

Let this association set the record straight. Since the time South Dakota was made a State in the year 1889, Indians have intermarried with non-Indians. There was a law in the State of South Dakota which stated in effect as follows: 14.0106: (4) The intermarriage or illicit cohabitation of any person belonging to the African, Korean, Malayan, or Mongolian race with any person of the opposite sex belonging to the Caucasian or white race were void.

There is nothing in the above section, as Mr. Burnette states, which prevented Indians from marrying non-Indians. In chapter 38 of the session laws of South Dakota, 1957, even the above mentioned section was repealed. Thus, Mr. Burnette was not well informed and did not quote correctly the law in this respect.

Second. Mr. Burnette testified under oath: Only one Indian in South Dakota ever served on a State jury and none has served on State grand juries.

To this, this association states that Mr. Burnette should examine his home county and more particularly the jury panel which was called for Tripp and the attached unorganized county of Todd (where incidentally Mr. Burnette is a resident). Among the members of the jury list for the February term of 1959 was the name of William King, who is an Indian man. Among the members of the jury list for the February term of 1959 was the name of Charlotte Greaves, who is an Indian lady.

These Indian people have not been the only ones ever called in a jury panel in Tripp County, and we say again that Mr. Burnette is not well informed and did not quote correctly the facts as they stand in this matter.

Third. Mr. Burnette testified under oath: Indians in South Dakota get heavier fines and stiffer jail penalties in State courts than non-Indians.

This association states again that Mr. Burnette should again look to his home county of Tripp and the unorganized county of Todd. After talking this matter over with law enforcement authorities, we are advised that this is not the case. As a matter of fact, the Indians get the benefit of the doubt and if anything, their fines and jail penalties are less severe than those of non-Indians.

Law enforcement authorities in the home county of Mr. Burnette state that they would welcome any investigation conducted by any commission into any such charges by Mr. Burnette stating that Indians are treated differently or worse than non-Indians.

It would seem again that Mr. Burnette is not well informed and has not quoted correctly the facts as they stand, not only in the State of South Dakota, but more particularly in his county.

Fourth. Mr. Burnette testified under oath: They (Indians) are not permitted to serve as State, county, or municipal policemen.

This association respectfully requests that again the House Interior Subcommittee on Indian Affairs need only look into Mr. Burnette's home county and more particularly the town of Mission, S. Dak. Up until a short time ago, the chief of police for the town of Mission was an Indian man. Rapid City, S. Dak., has in its employ an Indian who is serving on the police force.

This association must apologize for repeating itself; however, again Mr. Burnette is not well informed and has not quoted correctly the facts as they stand even when this information could be obtained in his own backyard.

Fifth. There are statements which Mr. Burnette made to the effect that the Rosebud Sioux have no desire to have "justice administered to us on the reservation by State and local judges, sheriffs, police or jailers who have been raised in an environment of ill feeling toward Indians."

This association states that this statement, in itself, is a good statement; however, Mr. Burnette again is wrong in stating that these officials have been raised in such an environment. We members believe that at such time an investigation is made that the Sioux Indian would prefer to be under the jurisdiction of State and local courts. We believe that the Commission will find that the tribal courts are not adequate and cannot handle such volume as they have at the present time, and that the Sioux Indians themselves are not satisfied with such a system.

The Todd County Independent School District, Todd County, being where Mr. Bur-

nette resides, has integrated the Indian children with the white children. The Indian children are in a majority, comprising 65 percent of the school population. The school enrollment is approximately 1,093 and there is a faculty of 64 teachers, several of whom have some degree of Indian blood. This school system feels that there is absolutely no partiality or discrimination shown in their school system.

This association respectfully submits that the Indian people have their problems. There has been a problem since the white man came into this country. The Federal Government has recognized this problem and has taken some measures to help correct it. The Government has instituted a relocation program, whereby Indians are encouraged to move to different parts of the United States and are provided jobs. According to some sources, this program is about 80 percent successful.

Although programs such as this are started, it appears to this organization that the Federal Government has started other programs which, if carried out, will work not to the furtherance of helpful programs such as relocation. We feel that an example of this is the idea of consolidating blocks of land on the reservation. In effect, this will force the red man on the reservation where it is conceded that there is not much chance of them getting ahead. Actually, this type of program is segregating the Indian instead of integrating him. This method breaks down the relocating system that is being instituted, thereby defeating the program.

One of the great needs of the Indian is proper education. In fact, many Indian people in this area have not had a grade school education. Therefore, they are forced to work at common labor. Due to the fact that there is a large number of Indians in South Dakota and more particularly in this area, jobs are few even in the areas of common labor. As it has been shown time and time again, the better educated a person is, a better citizen he is and a better degree of earning power he has. Therefore, due to the fact that Indians are not able to work because of lack of jobs, the spare time which they have on their hands may get them into trouble. Therefore, the people of this organization are fully behind these programs such as relocation and other programs which will further the education of the Indian.

We again submit to you ladies and gentlemen, that the Indian people have their problems. However, we are interested in helping them. We, therefore, desire that you know the truth. We know that no good can come to these people when one of their own. Mr. Robert Burnette, misquotes the facts, prefabricates, and uses these tactics for his own publicity and private purposes instead of the alleged purpose that he is champion of his people.

We of this association will welcome any investigation concerning the Indian people and more specifically the charges which Mr. Burnette has made to the House Interior Subcommittee on Indian Affairs and any other group to which he has made these statements. We know that you must be acquainted with the true facts in order to help this country, and its citizens—both the white man and Red man—thus the reason for this letter.

Attached hereto for your information is a series of affidavits given by Indian people of the State of South Dakota, which will be self-explanatory and which will further show our genuine interest in this matter.

Respectfully submitted.

R. L. LAPSLEY,
Chairman, Todd County Taxpayers, League, Inc.

KEITH SCHLUETTER,
Secretary, Todd County Taxpayers League, Inc.

"I, Thomas Whiting, Sr., residing at Hidden Timber, County of Todd and State of South Dakota after being first duly sworn on oath depose and state that I am a registered Rosebud Indian; my wife is a white woman; I was elected by the Todd County voters to serve on the Todd County Road Board for three terms, each consisting of 6 years, part of the last term which I am now serving; I have never been refused any of the constitutional State rights; that I have had the same opportunity as my neighbors and I have no knowledge of being treated differently from any of my fellow citizens."

"I, Henry Haukass, residing at O'Kreek, county of Todd and State of South Dakota, after being first duly sworn on oath deposes and states that I am a registered Rosebud Sious Indian; I was elected by the Todd County voters to serve on the Todd County Independent School Board for a term consisting of 6 years, part of the term which I am now serving; I have never been refused any of the constitutional State rights; that I have had the same opportunity as my neighbors, and that I have no knowledge of being treated differently from any of my fellow citizens."

"I James Didier, residing at Mission, county of Todd and State of South Dakota, after being first duly sworn on oath, deposes and state that I am a registered Rosebud Sioux Indian; my wife is a white woman; I was appointed by the State as brand inspector for Todd County about 1945 and am still acting; I was deputy sheriff for Todd County for 9 years, until I resigned in May 1957; I was on the police force in Mission from July 1947 until I resigned January 1, 1959; I have never been refused the right to vote; that the conditions of my employment are good, and that I have no knowledge of being treated differently from any of my fellow workers."

"I, Ben Lundeman, residing at Rapid City, S. Dak., county of Pennington and State of South Dakota, after being first duly sworn on oath, deposes and state that I am a registered Rosebud Sioux Indian; that I am now retired, employed by city police, and have been working there for 22 years; that the conditions of my employment are good, and that I have no knowledge of being treated differently from any of my fellow workers."

(EDITOR'S NOTE.—Mr. Lundeman is now retired.)

The Individual in America—Let's Keep America Successful

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. HULL. Mr. Speaker, an essay contest on "The Individual in America" was recently sponsored by the Quaker Oats Co., in St. Joseph, Mo., for high school students.

The winner was Miss Connie Jean Voss, a student at Central High School in St. Joseph. Her winning essay earned her a trip to Washington, D.C., with her teacher, Mrs. John Frazier.

Under leave to extend my remarks, I include the essay by Miss Voss:

LET'S KEEP AMERICA SUCCESSFUL

What has made America so successful? The answer to this question seems to hinge on individual freedom. Rugged individualism is the signature of our civilization. This term has been used by American leaders for over a half century in eulogy of those God-fearing men and women of honesty whose stamina and character and fearless assertion of rights led them to make their own way in life. It is they who have born their burdens and given leadership in their communities. Rugged individualism is indeed a distinguishing and enduring quality ever found among Americans. It gives lifeblood to such basic principles as freedom of speech, conscience, press, and equality before the law, regardless of race or religion. It contributes to the saving of our souls and character from the deadening pressure of conformity and false ideals.

Thus, it may be said that individualism has played a major part in making our Nation what it is today. In an attempt to better understand why it has led to the success of America, let's examine it in relation to socialism. After a clear explanation of each of these theories, we can more easily plunge into the effects of each upon the individual.

In general, individualism is the theory of government which favors the noninterference of the State in the affairs of individuals, while socialism is a theory of government which favors the interference of the State in the affairs of individuals. More specifically, the economic quintessence of the socialistic program is a method of production which would introduce a unified organization of national labor, on the basis of collective or common ownership of the means of production by all members of the society. This collective method of production would remove the present competitive system, by placing under official administration such departments of production as can be managed collectively, as well as the distribution among all of the common produce of all, according to the amount and social utility of the productive labor of each. Economic individualism would then be the system of production by means of private capital (held by single persons, firms, corporations, or cooperative associations): this method of production demands a free labor contract, open competition, and distribution to individuals. The utopia of the individualist is an approach to anarchy: the utopia of the Socialist melts into communism.

As I have just plainly shown, the main difference in these two theories is their effect on the role of the individual. Each existing government differs from every other in the degree to which it intervenes in the affairs of individuals.

This Socialist-Communist idea of from each according to his ability to each according to his need definitely discourages individual aggressiveness. The person with the ability would feel no necessity to work for something that would be taken away from him while the person in need would be relieved of any incentive to work if he would receive what he needed regardless of whether he earned it or not. This socialistic theory of equality of reward for services is denounced by the majority of Americans who believe in equality at birth, equality before the law, and equality of opportunity. It is known that any society to be successful must secure the effort and initiative of its citizens. Otherwise it will stagnate or degenerate. To meet its needs and to advance its civilization it must encourage the impulses which motivate the individual to action and achievement. Therefore, any workable philosophy of society or framework of government must take account of the raw materials of human nature, from which its motivations or human drives arise, if it would build for the betterment of the nation.

It is also important for us to keep in mind that socialism advocates government intervention in the affairs of individuals. Government interference always means either violent action or the threat of such action. Government is in the last resort the employment of armed men, of policemen, gendarmes, soldiers, prison guards, and

hangmen. The essential feature of government is the enforcement of its decrees by beating, killing, and imprisoning. Those who are asking for more government interference are asking ultimately for more compulsion and less freedom.

Freedom is the most valuable of all human possessions, next after life itself. It is more valuable, in a manner, than even health. No human agency can secure health; but good laws, justly administered, can and do secure freedom. Freedom, indeed, is almost the only thing that law can secure. Law cannot secure equality, nor can it secure prosperity. In the direction of equality, all that law can do is to secure fair play, which is equality of rights, but not equality of conditions. In the direction of prosperity, all that law can do is to keep the road open. That is the quintessence of individualism, and it may fairly challenge comparison with that quintessence of socialism. Socialism, disguise it how we may, is the negation of freedom. This may also be observed when we stop to think that a planned life is not free. Ludwig von Mises states it this way, "A man has freedom as far as he shapes his life according to his own plans. A man whose fate is determined by the plans of a superior authority * * * is not free." Socialism definitely employs authoritarians, or persons in command of the instruments of compulsion.

As a result of little or no freedom and lack of incentive under socialism, the individual suffers greatly. Living standards are much lower, prices are sky high, and life is miserable for the majority of them. This results because socialism aims at economic goals and ignores individual personality. They, however, must not be aware of that, "Only personality can create wealth, but wealth cannot create personalities."

America, on the other hand, has stressed freedom of the individual and considers him an important link in the chain of its great democracy. He is not just one of the masses but somebody important to the survival of the Nation.

Instincts, character, and the divine spark in the human soul are the property alone of the individual. There can be no human thought, no impulse to action, which does not arise from the individual. A free people maintain as many potential centers of enterprise, leadership, and intellectual and spiritual progress as there are individuals. We might as well talk of abolishing the sun's rays if we would secure our food, as to talk of abolishing individualism as a basis of successful society. It can well be said that it is what made America so successful.

Today, the problem that confronts us is keeping the spirit of individualism alive. To throw away what our forefathers fought and died for would be a catastrophe. They planned the Constitution so carefully to make sure it wouldn't interfere with individual freedom. To make doubly sure, they added the Bill of Rights which lists certain personal freedoms that the Government cannot infringe on. To give two examples, amendments 9 and 10 state respectively, "The enumeration in the Constitution of certain rights shall not be construed to deny or disparge others retained by the people" and "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." We cannot let the spirit that caused this great document to be written fade away. Most of us Americans believe this strongly but still our spirit of individualism is slowly dying. I don't believe we are fully aware of what is happening. On the whole, we claim to support individualism. Yet we clamor for Government price controls, Government housing, social security, agricultural control, and many other similar plans. All such plans are steps in the enslavement of individuals, even though they voluntarily vote to surrender their responsibilities and freedom to the State. Our heritage is being lost more through weakness than through deliberate design. The Bill of Rights still shines in all its splendor, but many of us are looking in another direction. Many of us are drifting back to that old concept of government that our forefathers feared and rejected. Many of us are now looking to government for security. Many of us are no longer willing to accept individual responsibility for our welfare. Yet personal freedom cannot exist without individual responsibility.

We, the American people, should constantly guard against letting our Nation swing toward socialism. The spirit of individualism caused America to be founded and has marked our success. We must preserve our precious individual freedom and to do so we must be responsible citizens fully aware of our country's condition and not ignorant of what's happening. Let's not be just one of the masses. Let's be individuals who are proud of our country and its glorious heritage. Let's keep America successful. The only way is to keep the flame of individualism forever burning.

Our Liberties Versus Our Responsibilities in a Free Society

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. BROWN of Ohio. Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD and include therein an essay written by Carolyn Tipton, 2541 Casey Drive, Springfield, Ohio, a junior in the Springfield High School, on the subject of "Our Liberties Versus Our Responsibilities in a Free Society." This essay was a winner in the statewide American Legion essay contest in Ohio; and, as a result, Miss Tipton was 1 of 12 such essay contest winners honored by the Ohio delegation in the Congress at a luncheon held here in Washington on April 21. I am sure the House of Representatives will join with me in congratulating Miss Tipton on her excellent essay, which is as follows:

OUR LIBERTIES VERSUS OUR RESPONSIBILITIES IN A FREE SOCIETY

(By Carolyn Tipton)

Hello. My name is Liberty and I would like to tell you a story about me. This is my life. I have always been present and I always shall be, from the time the first man drew in his first breath even until the last man forces out his last. You see, I am a vital part of man, as vital as his heart. Man could not exist without me; yet, as you will later see, I can be his destruction. I can flourish in any climate, in any country, and among any race for I cannot feel differences in weather conditions, I am not impressed by names of nations, and I do not prefer one color to another. Although I am an unprejudiced soul, I am strong in few places. I am most prevalent in one place, my shrine, the United States.

It has commonly been said that there are two sides to everything, and I am no exception to that statement. My second side is unfairly thought of by many people as my dark side, this dark side being my shadow. Responsibility. In many ways Responsibility is my shadow; still, in other ways I am its. It is true that without me Responsibility could not be; however, it must never be forgotten that without responsibility I could not long endure. People praise me but curse my shadow. Can they not see that we are one; each dependent on the other for an assurance of existence?

Many citizens of the United States boast of their great freedom of voting, a chance to elect the candidate who they think will fill the qualifications of a certain office best. Yet, how many of these boastful citizens ignore my shadow when election time approaches? The number is startling when one stops to consider what might happen. Most of these people who fail to perform their voting responsibilities feel that just one vote will not change the outcome of the election. However, what they do not conceive is that if everyone felt as they did, soon there would be no chance to exercise such a wonderful freedom, for it could not exist. Negligence on the part of the public allows the wrong men to obtain recognition in the Government. Could not these men take the long ago fought for freedoms away from them?

The United States is known for her many public schools, libraries, parks, and roads. The citizens are proud of these public facilities and institutions; yet, they are reluctant to assume the responsibility of supporting them by paying taxes. My shadow, accompanied by a rare assortment of vulgar words, is thrown into a corner while these same proud citizens are driving on tax-supported roads, sending their children to public schools, and taking advantage of other comparatively free privileges. Don't they understand that without tax money the rich would be the only ones to enjoy such luxuries?

I have told you only a fragment of the possibilities to be obtained through me and my shadow. Now I hope all can see that I alone could destroy myself and mankind along with me. My shadow serves as a weight to tie me down to earth. No matter how high I jump to escape, responsibility is still on the earth pulling me back like a magnet. Any generation may decide to disregard my shadow; however, they may well be the last to have the chance to make any decision.

Atlantic Unity

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. MACHROWICZ. Mr. Speaker, Joseph Alsop's column in the Washington Post, April 17, has a striking statement of a disturbing fact:

Ideas, at bottom, are what make an era; and the dearth of seminal and fresh ideas in these last years has become downright frightening.

Senator THEODORE F. GREEN—Senate Calendar No. 1499, Report No. 1470, 85th Congress, 2d session, p. 3—when he was chairman of the Senate Committee on Foreign Relations, pointed out a possible source of new ideas:

All wisdom does not lie in government, and it is worthwhile to stimulate efforts to bring private talents to bear on the complex problems which confront NATO.

I am quoting these two statements, one exclaiming about the great need for

new ideas and the other pointing to a possible source of them, in order to call attention to a resolution already before Congress that has for its purpose an exhaustive exploration for new ideas to achieve Atlantic unity; and to do this on the unexplored level of private talent. This is Senate Concurrent Resolution 17, House Concurrent Resolution 107–108. I commend it earnestly.

Instead of bemoaning the lack of new ideas, we should put through this resolution without delay, in order to get together at the earliest possible moment a group of NATO's outstanding private citizens, so that when the brief Atlantic Congress which meets next month has adjourned, some exhaustive examination of the problems can be made, in the hope that they will come up with something not only new but practical to increase western unity and invigorate western policy.

The Alsop article follows:

THE OLD MEN GO

(By Joseph Alsop)

Within a short fortnight, Konrad Adenauer has accepted transfer from the chancellorship to the persidency of West Germany; and John Foster Dulles' illness has at length driven him to lay down the office of Secretary of State of the United States.

The Dulles resignation, climaxing an amazing display of stoic fortitude, coming at a desperately critical moment in our affairs, is a deeply poignant episode. The most ordinary human sympathy compels one to wish that this astonishing old man might have achieved his grimly pursued aim.

It was a modest aim, after all. It was no more than to hang on, still in harness, still pulling the coach, until the West had turned the Berlin corner. Man's fate is often cruel, but it seemed extra cruel, somehow, that the few months of extra time that Dulles wanted so badly—that he bore such suffering to gain—were not in the end granted to him. By the same token, it is a great misfortune for the western allies.

For the short run, in truth, the loss of Dulles means the loss of the greatest single element of strength in the Eisenhower administration and the departure from the stage of the one western leader whose knowledge and authority could not be challenged, even by his most bitter enemies. Viewed in a longer perspective, however, the departure of Dulles has another meaning, directly linked to the meaning of Adenauer's intended half-retirement.

These two great changes in the West's leadership mean the beginning of the end of a whole era. Dulles and Adenauer, like Eisenhower and Macmillan and De Gaulle, were old enough to experience the first World War, not as mere boys, but as grown men. Dulles, who rose in the world more rapidly than the others, was even a fairly significant junior member of the cast in the drama at Versailles. The present ear's tone has been set, its outlook has been determined, its leadership has been provided by these and other men who saw the first war, made their careers in the interwar years, and reached command positions as a result of the second war.

That is the era which is now ending. It will come to its real close, for all practical purposes, when Dwight D. Eisenhower steps down from the Presidency. In many respects, it has been a great and fruitful era, particularly marked by a total revolution in the relations between the United States and the rest of the world. But a new era has been long overdue, nonetheless.

Ideas, at bottom, are what make an era; and the dearth of seminal and fresh ideas in these last years has become downright frightening. In our domestic politics, the conservatives will sound like parodies of Herbert Hoover, while the leftwingers are still pale and timorous imitations of Franklin Roosevelt. In foreign affairs, the great innovations were made after the war ended; but the first Truman administration was the cutoff point. NATO, for which the keel was laid in 1948, was the last big ship to go down the long abandoned ways.

The second Truman administration was wholly barren of fruitful new departures (for the brave response to the challenge in Korea, though admirable in itself was only a decision to cope with a disaster which had been invited by the preceding Truman-Louis Johnson disarmament program). Under Eisenhower, despite the talk of a dynamic new foreign policy, the barrenness continued. With all his stature and energy and angry determination to hold the line for freedom, John Foster Dulles offered no fruitful new inventions—for there was nothing novel in such devices as SEATO, which mimicked NATO, but lacked NATO's substance.

Time did not stand still after 1948, however. On the contrary, the last decade has witnessed a gigantic upset of the world balance of power, owing to the Soviet Union's military and economy growth. It has witnessed, too, a long series of upheavals in the ex-colonial areas like the Middle East, on which the Western Allies are still heavily dependent. Yet no reasonably safe and sure and reliable way of coping with either of these huge and ominous processes has even been suggeted by any of the existing Western leaders.

In short, Secretary Dulles carried on a holding operation, not always successfully but with great courage and self-sacrfice. It is downright tragic that he should be removed from the scene at the very moment when the need is greatest for his special talent and his unusual strength of character. But the need is also great for fresh ideas that are always born when a new era starts, under the auspices of new men with fresh outlooks.

Panama Canal: Part of Communist Drive for Latin America

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. FLOOD. Mr. Speaker, in previous addresses to the House, I have covered at considerable length the vital question of control and jurisdiction of the Panama Canal, which since 1956 has gradually mounted in gravity. It was early apparent that the situation in Panama was not isolated but hemispheric in scope. The subsequent unfolding of events affecting the canal has more than justified my fears, and the end is not yet.

Already the forces of international communism have become intrenched in Cuba and Venezuela—both flank on the Atlantic approaches to the Panama Canal. These forces are now converging on the isthmus in furtherance of their long-range plan, with repeated evidences of revolutionary activity in Panama.

Thus, it was with great interest that I read in the Chicago Sunday Tribune of April 12, 1959, a most informative news story on the Communist drive for Latin America, by Jules Dubois, whose wide travels in Latin America, long residence in Panama, and service in the Panama Canal Department of the U.S. Army in World War II enable him to write from extensive observation.

The indicated news story, which follows, is commended for reading by all concerned with the problem of U.S. security:

REDS STEP UP DRIVE FOR LATIN AMERICA—GOAL OF KREMLIN NOT CHANGED, SAYS DUBOIS

(By Jules Dubois)

HAVANA, CUBA, April 11.—The advances which the Communists are now trying to make in Cuba bring into focus once again the fact that the plans of the Kremlin to dominate Latin America never have changed.

The objectives of the Soviet Union with regard to Latin America are clear cut. When the leaders of the Kremlin consolidated their hold after the Russian revolution, they included, in the early twenties, the subversion of Latin America as an integral part of the global master plan of the Communist conspiracy.

The spitting and stone-throwing incidents against Vice President NIXON in Peru and Venezuela last year were inspired, organized, and directed by the Communists.

WORSE THAN NAZI PERIL

The Soviet shadow over the Americas is a much more serious menace than the threat offered by the Nazis before and during World War II in the same area. The Nazi ideology was the fruit of the German agents and their satellite nationals in the Latin American nations. Not too many of the native Latin Americans fell for it.

The Kremlin, on the other hand, counts on a far more potent and dangerous fifth column. The Communists and fellow travelers in Latin America are nationals of those republics and, as such, enjoy considerably more freedom of action as they perform their roles of traitors to their countries and reserve their first and only loyalty for the Soviet Union.

WOULD UNDERMINE UNITED STATES

The immediate goal of the Communists, acting under directives from Moscow, is to undermine and destroy the prestige and leadership of the United States in Latin America. The ultimate goal is to convert the republics south of the Rio Grande and of the Florida keys into Red dictatorships.

To achieve the immediate objective, the Communists successfully directed campaigns to deny to the United States bases required for the defense of the Panama Canal. This has been done through the stimulation of nationalistic movements to defend the "sovereignty and territorial integrity" of the country.

SEEK TREATY REJECTION

The Communists whip up patriotic, nationalistic sentiment against commitments to cooperate with the United States in continental defense in accordance with existing treaties.

They infiltrate, control, and agitate in labor movements, student movements, the universities, the high schools, the arts and letters, and in all mass media of communications.

They strive to gain influence in government through so-called "national democratic" or "national unity" fronts and through the election of candidates acceptable to, and willing to support the party strategy.

Thus, without any of their party members obviously appearing on the surface, the Communists gain a most influential voice, not only in the dictation of foreign and domestic policy, but especially in negotiations with

the United States over delicate matters of continental defense.

ALWAYS CENTRAL CONTROL

To achieve the ultimate objective, the Communists work hand in glove with the executors of the immediate goal. There is central direction at all times.

A chain of operating bases contiguous to the United States and to American interests has been established by the Communists. These are located in Cuba, Mexico, Guatemala, Honduras, Costa Rica, Panama, Venezuela, and in Martinique in the French West Indies.

Important centers of Communist operations and agitation are located in Argentina, Uruguay, and Chile, and other gains have been made in Bolivia and Peru.

Numbers mean nothing in the strategy of Communist master plans. Results are what count, and vociferous, militant minority usually provides enough Red fire to produce a telling impact.

THRIVE UNDER DICTATORS

Communism has thrived under dictatorships in Latin America. The drama of desperation under dictatorship in some of the countries, notably Venezuela, drove the non-Communist, harassed, and oppressed opposition into an unholy alliance with the Reds in order to depose the tyrant, Gen. Marcos Perez Jimenez.

The Communists were most vocal and active in the Venezuelan presidential election campaign that ended last December. The candidate they endorsed, Rear Adm. Wolfgang Larrazabal, was defeated by Romulo Betancourt, who divorced himself from communism more than 20 years ago.

The Kremlin today is giving a higher priority to the cultivation of communism in Latin America than ever before. There is a noticeable increase in total Communist activity such as propaganda, political and labor agitation, economic infiltration, foreign language broadcasts, cultural operations, and labor, student, and cultural exchange.

THREE PRIMARY TARGETS

Three areas are listed at this moment as primary targets by Moscow. These are Cuba, the Panama Canal, and Venezuela.

Cuba, because it lies only 90 miles from the United States and depends on our country for most of its income through purchase of its sugar crop, has long been ticketed as the fulcrum for operations in the Caribbean.

Our large naval base at Guantanamo Bay, near the southeastern tip of Oriente Province, is a communist target. A campaign may be expected to be waged to urge Premier Fidel Castro to denounce the basic treaty which grants us the rights to that base in perpetuity.

RED LEADER IN MOSCOW

Juan Marinello, president of the Cuban Communist Party—which uses the name Partido Socialista Popular— is in Moscow receiving the latest orders from the Kremlin. It is reported that the entire Cuban Red command will be shaken up and younger men will take over.

Castro has said he is not going to persecute the Communists. Some of his underlings have been persecuting anti-Communists. The Cuban people would like to hear assurances from him that that practice will stop.

A rising star in the Cuban Communist fold, Alfredo Guevara, has been appointed director of the newly organized government-sponsored motion picture institute. As such he will have sole supervision over the production of motion pictures in the island and it is not yet known whether this will include television films.

CANAL DEFENSE HURT

The Panama Canal, despite the space age, nuclear submarines, and giant cargo aircraft, continues to be a vital link in our national defense. It is almost totally defenseless, thanks to agitation germinated by the Communists in 1946 and 1947. This helped to mobilize public opinion in Panama and prompted the rejection of a postwar defense pact with the United States by a unanimous vote of the national assembly.

When Panama was not invited to the Suez Users Association conference in London in 1956, both Nationalists and Communist sectors stirred up anti-American sentiment anew on the banks of the canal. The cry arose for the internationalization, or inter-Americanization, of the Panama Canal.

NO STUDENT PRANK

It was no mere student prank when 75 Panama flags were planted last May 2 by university students inside the U.S. Canal Zone in a maneuver that caught both the American Embassy in Panama City and the officials in the zone by surprise. The university students called their maneuver Operation Sovereignty.

Venezuela is a prime target because of the more than $3 billion in American investments there, most of it in the prolific oilfields and mountains of iron ore.

Mexico, whose thriving economy under the capitalist system cannot be tolerated by the Communists, is a principal secondary target. The Communists have been trying to cripple the economy of that country through paralyzing railroad and other strikes.

PARTY LEGAL IN MEXICO

Mexico is one of the few countries in Latin America in which the Communist Party is legal. The others are Cuba, Venezuela, Argentina, Bolivia, and Ecuador.

The Communists retain their alliance with the Peronists in Argentina, a situation that obtained throughout the rule of the exdictator, Juan Peron. They are making a bid to overthrow President Arturo Frondizi, whom they backed in the presidential campaign last year.

Because of the Communist-Peronist alliance, Frondizi has been forced to govern under a state of siege since last November. Recently, organized mobs of Reds and Peronists turned downtown Buenos Aires into a battlefield as they burned transportation, destroyed stores and fought the police.

CONGRESS BARES ADVANCES

The advances made by communism in Latin America were reflected by the attendance of 158 delegates at the third Latin American Communist Congress held in Moscow in October 1957. There were only two countries which had no delegates there. These were El Salvador and the Dominican Republic.

This does not mean that there are no Communists in either country. Apparently Moscow was not interested in their attendance, else ways and means would have been found to get them there.

The delegates from the other 18 countries were as follows: Argentina, 16; Cuba, 11; Brazil, 39; Chile, 21; Bolivia, 9; Peru, 6; Uruguay, 6; Colombia, 5; Costa Rica, 5; Guatemala, 5; Mexico, 22; Ecuador, 4; Venezuela, 2; Honduras, 2; Panama, 2; Haiti, 1 Nicaragua, 1; Paraguay, 1.

TO CONTINUE POLICY

That congress decided to continue the policy of autonomous action by the Communist Parties in Latin America but ordered them to remain subservient to the Communist Party of the U.S.S.R.

The delegates were instructed to accentuate the nationalist problems within their countries to foster the impression they are sincere patriots.

They were also instructed to make a concerted drive to enlist the youth into the party and to adopt the following strategy and tactics:

Communists should work covertly, infiltrating into all the democratic organizations, advocating national unity fronts without Communist colors or Soviet names; sabotage the national economy by affecting the commercial and industrial lives of the people; step up the campaigns against the policy of the United States and prepare the mentality of the people for the world revolution; all Communist parties shall be completely subservient to the U.S.S.R., and take orders only from the Kremlin.

ONE MODERATION ORDER

The delegates were ordered to moderate their battle against capitalism in general, but to attack the North American trusts and to build increasing resistance against the United States, its policy, its economic, cultural, and social intervention.

"National fronts will have to be formed with the purpose of supporting the sectors most hostile to the United States," the directive to the delegates emphasized.

It is that hostility against the United States which the Communists are trying to keep alive in Cuba as an aftermath of the anti-American resentment that was built up because of our military aid to the ex-dictator, Fulgencio Batista, during the civil war.

Our Economy and the Unemployed Need Help

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. MACHROWICZ. Mr. Speaker, the Wall Street Journal of Monday, April 20, 1959, reported that in March 1959 American industry produced at the record rate of 147 percent of the 1947–49 production—slightly higher than production 2 years ago, March 1957. This sounds like a record of economic recovery until you read further: This March—with higher production—we had 1,460,000 more people unemployed than we did 2 years ago.

In manufacturing, alone, we produce more goods with 1 million fewer workers. Inside these figures is the fact that periods of unemployment for individual workers are longer and exhaustions of unemployment compensation are running at record rates. And because our Federal-State unemployment system is out of date, only about one-fourth of the wage loss from unemployment is restored to the unemployed and to the communities they live in.

Mr. Speaker, much of the work of this Congress must be addressed to the solution of the basic problem of expanding our rate of economic growth and to put America's manpower and factories back to work and to keep them at work.

One important piece of work we can do toward this end is to set Federal standards of duration, benefit level, and coverage in our unemployment compensation system to reduce the economic deterioration which results from unemployment.

I submit for the RECORD this enlightening appraisal of current trends in business and finance from the Wall Street Journal, which gives stark economic facts and analysis which again remind

us of our grave responsibilities to the economic future of the Nation:

[From the Wall Street Journal, Apr. 20, 1959]

APPRAISAL OF CURRENT TRENDS IN BUSINESS AND FINANCE

(By George Shea)

Publication of the figures for March on industrial production and total employment in the United States points up a lagging trend in employment. But a study of population trends suggests that, while the lag may continue this year and possibly next, there are forces which over a period of years will tend to offset it.

The two figures that look worst in relation to the state of general business are nationwide unemployment and the total of jobs in manufacturing. Industrial production in March, as announced just a few days ago, was at a new record high of 147 percent of 1947–49, the previous top having been 146 in February 2 years ago. Since we're talking about employment, which varies with the season as well as with production rates, let's compare the latest March figures with those for March 1957, when output was almost as high, at 145.

Today unemployment is 4,360,000, compared with 2,900,000, 2 years ago, even though production is now higher. In manufacturing, which accounts for by far the greater part of industrial production, jobs are down to 15.9 million from 16.9 million 2 years ago.

Nationwide job figures are more encouraging. The total is at 63.8 million or practically as large as the 63.9 million of just 2 years ago. The reason why it shows up so well in the face of the decline of 1 million in manufacturing jobs is that service occupations, including Government jobs, have become more numerous and have taken up the slack. And the reason unemployment shows up so badly even though jobs are nearly as high as 2 years ago, is that there are more people in the Nation, especially more people of working age. The civilian labor force is up to 68.2 million from 66.7 million 2 years ago.

As for the decline in manufacturing jobs, it is simply a result of increased efficiency. Manufacturing production, a component of total industrial output, is actually up a bit more from 2 years ago that the total, at 150 percent of 1947–49 against 147 in March 1957. More is being produce with 1 million fewer workers.

Within these figures, furthermore, lies a hint that more of the same may be expected if production rises further. The sector of industry which seems to hold greater possibility of increased output than any other is plant and equipment spending. Its 1959 rate seems so far to be between $31 billion and $32 billion, a very small gain over the 1958 recession rate of $30.5 billion, and well below 1957's record total of $37 billion. This particular lag is reflected also in the component of the production index that covers manufacture of durable goods; at 160 percent of 1947–49 in March it was 3 points lower than 2 years ago.

Obviously, if plant and equipment spending, and the durable manufacturing sector generally, forges ahead later this year and next year, employment will increase. However, if this group of industries repeats the experience of the rest of the industry and also produces more per worker, the increase in employment will continue to be slower than gains in output.

The question that these facts raise is whether similar trends may be expected in the longer future, with a growing unemployment problem facing the Nation for many years to come even if business and production continue to rise to new highs. Somewhat the same thing took place immediately after the 1953–54 recession.

The 1953 high in industrial production was 137 percent of 1947–49, reached in May. After the recession, the index recovered to higher than that level as early as 2 years later, with a May 1955 figure of 138. But employment in manufacturing industries never recovered the September 1953 high of 17.5 million. The largest figure it reached following the 1954 recession was 17.2 million late in 1956.

Unemployment, similarly, has never recovered the lowest figure of 1953, which was 1.2 million in August. Best since then: 1.9 million in October 1956.

However, trends in population promise to work towards a slow improvement in this situation. While the birth rate has slipped a little from the levels reached in the middle 1950's, it is still high by comparison with the rates of the last 30 years. At the same time, the long-time trend for people to live longer is continuing, as a result of improving health conditions. The result is that the proportion of the very young and the old in the population is growing; and by the same token the proportion of workers is falling even though the number of workers rises.

In 1950 the proportion of youngsters under 20 and oldsters over 65 was 42 percent of the population. In 1955 the proportion was up to almost 45 percent and in 1960 it promises to be around 47 percent with further increases towards almost 50 percent indicated in the subsequent years to 1965. Thus the number of consumers who don't produce increases in relation to the number of producers, which means an increasing call on the efforts of the producers.

It is true that unemployment has tended to grow since 1950 in spite of this population shift. And it is impossible to calculate which of the two forces—increasing efficiency and a rising proportion of nonproducers—will overcome the other in the years to come.

But it is clear that the solution to the problem of unemployment is an expanding economy. And it is also inevitably true that an expanding economy requires growing efficiency. So, while unemployment may well continue to exist and demand solution for political as well as humanitarian reasons, as long as it takes the form it has in the majority of recent years—a lag in jobs behind production gains—it will not be an economic threat but rather a reflection of basic economic health.

Cloistered Scholarship Has Limited Value

EXTENSION OF REMARKS

OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. BENNETT of Florida. Mr. Speaker, a recent editorial in the Florida Times-Union entitled "Cloistered Scholarship Has Limited Value," does a dual job of admirably praising the outstanding president of Jacksonville University, Dr. Franklyn A. Johnson, while at the same time pointing up the subject of the general need for emphasis upon utility in scholarship. It is true that there are some values in academic studies unrelated to observable, practical considerations, but in the long pull the studies which generally have the most value to the individual and society are those which assist human beings along the slow but sure progress to higher levels of attainment. I am very happy indeed that Jacksonville University has at its head a man who is not only a scholar, but also a very practical and human individual. I include here the editorial referred to:

CLOISTERED SCHOLARSHIP HAS LIMITED VALUE

An academic administrator who is a scholar is getting to be a rare person, and a scholar with practical experience in his area of concern may be rarer still.

But Dr. Franklyn A. Johnson, president of Jacksonville University, seems to refute the trend in both instances. He has found time to author two books, the second of which, "Defense by Committee," is slated for publication this spring by the Oxford University Press of England, a recommendation in itself.

The book deals with the role of British foreign and military policymaking of the Committee of Imperial Defense. Since our National Security Council, Department of Defense and Joint Chiefs of Staff are patterned after the British system, it can help our understanding of our own military setup by having some acquaintance with its model.

Dr. Johnson's own military experience adds weight to his findings and arguments. It's more than an academic matter with him, for he has had to wrestle with military problems personally. He came out of World War II with a distinguished combat record, including being wounded three times.

Too often scholarship is not backed up with frontline experience, be it in the arts of war, politics, economics, or what-have-you. Scholarship divorced from reality has limited value.

Ideas can look so good on paper, be cogently advanced in well-turned phrases and still not be feasible, when they have not been tempered by some practical experience by their author.

We certainly need an endless stream of scholarship and research on the problems that beset us today, particularly to this one that Dr. Johnson adresses himself to in his book, the challenge of huge military establishments to popular democracy.

We must examine the extent that the military is shaping our thinking and our lives today. We must think about what unnecessary restraints a bickering democracy places on the agency entrusted with defending us against those who would destroy our way of life.

Are we less free than our forefathers because of the rise of militarism? How much freedom must we sacrifice in order to survive?

It seems that these vital issues in all their complexity will be more fully and fairly presented by a person of versatile experience and scholarship, as is represented by the author of this book.

Dulles: A Great American

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. FORD. Mr. Speaker, under leave to extend my remarks I would like to include an editorial from the Grand Haven (Mich.) Daily Tribune of April

17, 1959, entitled, "Dulles: A Great American." Mr. Almon W. McCall is the editor of this Ottawa County newspaper, and I am sure that his comments express the sentiments of all Americans at the loss of Secretary Dulles' services.

The editorial follows:

DULLES: A GREAT AMERICAN

Sincerity is one of the highest human virtues. Devotion to a good cause is another. John Foster Dulles possessed both of these qualities to a generous degree.

The disease that forced Secretary of State Dulles to resign may also prove fatal to him in a matter of weeks or months. Thus in a sense his retirement as Secretary of State has produced his "obituary" while he is still living.

History marches into the future with seeming indifference to the suffering of the individuals who make it. Secretary Dulles may find little comfort in the fact that while he is being praised by free people everywhere, he is fighting a painful battle against cancer. Words of sympathy help. But they do not compensate for the grim toll exacted by a leading killer.

Perhaps no man in history has covered the mileage which John Dulles has to his credit in troubleshooting by all kinds of transportation all over the globe.

A few months ago there was some dissatisfaction with the Dulles brand of diplomacy. He seemed to be fighting a losing battle against a ruthless enemy that kicked up little rows and stole additional acres of territory.

All that has changed now. Dulles may have been inconsistent but he more than made up for this failing by a willingness to meet any friend, and even the Communists, halfway.

More than anything, he sold the idea that Americans want peace. At the same time he convinced a doubting world that Americans would also fight if sufficiently provoked—and if endangered would use all the weapons at their command to turn back the enemy. This was his version of the soft voice and the big stick.

There probably has never been a diplomat like Dulles. Some are more suave, others are more gifted in diplomatic doubletalk. Others may be more consistent and sure of themselves. But none ever worked so hard. And few could have done a better job in keeping the world from blowing up in its present state of tensions.

John Foster Dulles is not indispensable. But he is being forced to the sidelines when the ticklish Berlin crisis could still erupt into something serious. While it is wise that he retires at this time, it places a heavy responsibility on President Eisenhower in picking his successor.

Millions of us may owe our very lives to the man who felt that he owed more to his country than his personal health. God spare him undue suffering in his ordeal.

What "Unemployed" Really Means

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. HIESTAND. Mr. Speaker, the following article appears in the current issue of U.S. News & World Report and does much to explain why Walter Reuther's much-heralded "unemployment march" was such a dismal flop. Under leave to extend my remarks in the RECORD, I include this article for the benefit of my colleagues:

WHAT "UNEMPLOYED" REALLY MEANS

Take a closer look at "the 4.4 million unemployed."

You'll find surprises. Only about 1 million represent families whose sole breadwinner is out of work.

Others listed as jobless include workers shifting to new jobs, the temporarily laid off, the sick.

These are just a few of the facts that figures alone don't tell about unemployment now.

When you read that nearly 4.4 million workers in this country are unemployed, the question raised is this: What does "unemployed" really mean?

Are 4.4 million people walking the streets, destitute, looking for work? Are these millions as badly off as the unemployed of the early 1930's, living in families where there is no breadwinner and no income?

Start digging for answers and you find many things. You discover, first of all, that even in the best of times 3 million persons or so are classed as unemployed. These include people who are shifting from one job to another and are temporarily without income. They include young persons looking for work for the first time. They include workers laid off, but expecting to be rehired within 30 days. They include the temporarily sick and a considerable number of people who could be called "unemployables"—alcoholics, handicapped persons, those untrained for any kind of work.

So there are about 1.4 million people out of work now, over and above the number that would normally be classified as unemployed.

LOTS OF JOBS

You also find that, in March 63.8 million people had jobs. That was an increase of 1.1 million workers over February and a gain of 1.5 million over March 1958. Actually, employment now is almost as high as it ever was.

Does this mean that unemployment is not serious?

Being out of work is always serious for those who are unemployed. But the figures suggest that unemployment is not now a major national problem calling for a crash program to create jobs.

Actually, just what is an unemployed person?

By official definition, anyone over the age of 14 who is looking for a job and cannot find one is counted as unemployed. That includes a wife who would like to earn a little money, even though her husband is employed. It includes students and young people looking for temporary jobs. It counts retired people with pensions who would like to add to their incomes. It even includes a farmer who may be looking for an off-farm job to add to his earnings.

How are the unemployed counted?

The unemployed are estimated through samples taken each month by the Census Bureau. The sampling covers 330 areas embracing each State and the District of Columbia. Approximately 35,000 households are checked each month. Statisticians believe that estimates of unemployment are accurate to within 100,000.

Are most of the unemployed destitute?

By no means. For example, among the total number of unemployed, 1.7 million are married men who are heads of families. In these families are 500,000 working wives and 200,000 sons or daughters who have jobs. That leaves about 1 million families without a breadwinner—less than 25 percent of the total unemployed.

Then some people counted as unemployed still have incomes?

Probably most of them have incomes. An unemployed father, for example, may be drawing $30 a week in unemployment benefits, and his wife may be earning $60 a week. That's an income of $90.

Does a jobless person have to take another job when it is offered or lose his unemployment benefits?

Not always. Most State laws say that a jobless person need take only a job that offers work and pay comparable to the job he lost. A skilled machinist, for example, can refuse a job as a common workman.

How about the million families without a breadwinner? Are they destitute?

Probably not many of them are. A large proportion of the unemployed are entitled to benefits that provide some income up to 26 weeks. Others may be getting some direct relief. Still others are getting emergency benefits. Not many have been without jobs long.

How long have the jobless been out of work?

The average is 4 months for all of the unemployed. Chances are that most married men with families have been unemployed for less than the average period.

Then, for most people, unemployment is not permanent?

That is correct. Unemployment usually has been temporary for most workers. The Government estimates that, of the 1.5 million men aged 25 and over who lost their jobs during the recession, 1 million had been rehired by this spring.

How many people have been out of work for a long time?

The official figures show that 1.5 million persons have been unemployed for 15 weeks or more. About half of these—around 800,000—have been jobless for 6 months or more. That's a small percentage of the total labor force.

Why don't these long-term unemployed take jobs elsewhere?

A good many of them probably don't want to move because they have their homes and are settled in their communities. There probably are others who hope to be rehired, and don't want to lose seniority rights.

Then there is some rigidity in the working force in this country?

Yes, probably quite a bit. Many workers have built up seniority and pension rights and don't want to lose them by switching jobs. Also, some employers hesitate to hire a person who may quit as soon as his former job opens up again.

Is that why casual labor, such as household servants and yardmen, is hard to find even when unemployment is reported as large?

The explanation for the scarcity of casual labor probably stems from a number of causes. In the first place, unemployment, for most people, does not last long. Then, as the figures show, all but a few families usually have some member employed.

The unemployed, then, are a shifting rather than a steady group?

That is quite true. This country's labor force grows year after year by about 700,000 people. That means that each year a lot of young persons are looking for jobs for the first time. They are counted as unemployed until they find work. The latest figures for example, show that the percentage of unemployment is highest among people who are 24 years of age or younger.

Does a growing labor force mean that unemployment will be a permanent problem?

Not necessarily. In times of recession it's hard for newcomers to the labor market to find jobs. But, over the years, the country has managed to provide jobs for people able and willing to work.

Is unemployment worse for men or women?

More men than women are without jobs, both in actual numbers and as a percent

of the working force. In fact, the Census Bureau notes that total employment of women changed very little during the recession.

How serious is unemployment among Negroes?

On a percentage basis, unemployment is about twice as high for Negroes as for white workers. That is the usual situation in periods of business recession. Also, the percentage of unskilled workers is higher among Negroes than among others, and it's usually the unskilled who are laid off in larger numbers.

What happened to skilled workers in the recession?

The official report on the labor force indicates that, even during the recession, the number of professional and technical workers increased about as usual. There also was an increase in the number of clerical workers, people in service industries and salespeople. This does not mean that there was no unemployment in these groups, but it does indicate that demand for such workers stayed high, as it did for managers and business proprietors.

How many people are being forced to work only part time?

The number working less than 35 hours a week because of reductions in schedules is smaller now than a year ago, smaller than before the recession began.

However, the number of people who normally work part time has increased over the last 2 years. The trend apparently is for an increase in part-time workers. This group consists largely of housewives, students, and older persons who do not want full-time jobs.

The increase in part-time workers is another indication that the recession was accompanied by a rather small amount of actual distress among workers.

Is unemployment general throughout industry?

No. Unemployment is and has been spotty all through the recent recession. Unemployment in March was heaviest in manufacturing. About 1.2 million factory workers were without jobs in that month. And most of the unemployed factory workers usually are employed in industries that make "hard" goods—autos and machinery.

Is this situation improving?

Decidedly. In autos, for example, 1 worker in 10 is now unemployed, compared with 1 in 4 a year ago. For the hard-goods industries as a whole, unemployment has dropped from 11.6 percent of the labor force to 7.4 percent.

In what part of the country is unemployment most serious?

Latest official surveys show that unemployment probably is most serious in the coal-mining regions of West Virginia and Pennsylvania. Then there are persistent unemployment problems in some textile centers in New England.

Unemployment is still heavy in Detroit and other automotive centers, and in some steel centers.

JOBS TOTAL STAYED HIGH

Actually, the country weathered a sharp recession with very little severe distress among workers. And total employment never dropped below 62 million.

FAMILY BREADWINNERS OUT OF WORK

Here are the latest figures:

Out of nearly 4.4 million unemployed people, about 1.7 million are heads of families.

But, of these, in round figures, 500,000 have wives who are working; 200,000 have sons, daughters, or other family members who work.

Leaving, out of all the families counted in the labor force about 1 million in which nobody has a job.

Dr. Adams, of Moses Lake—It's Surprising the Amount of Setbacks a Good American Can Endure and Still Love His Country

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. JENSEN. Mr. Speaker, I here recite an interesting life story of a great American, Dr. Lytle S. Adams, of Moses Lake, Wash., as he told it to me, documented. I have had the rare privilege and great pleasure of knowing Dr. Adams for many, many years, and can vouch for his patriotism, honesty, and integrity.

His life is an outstanding example of the kind of mettle in man which has made America great. To date, his contributions to American progress have brought him small recognition and little compensation, except the personal satisfaction in knowing he has fought a good fight. Regardless of his many setbacks at the hands of individuals, as well as by his Uncle Sam, he still carries on at the age of 77 years young.

Mr. Speaker, I sincerely hope and pray the day will soon come when Dr. Lytle S. Adams will receive just recognition and compensation for all his good works. Surely he is rightfully and justly entitled to no less, even at this late date, for there has scarcely been a time in Dr. Lytle S. Adams' 77 years when he was not thinking of ways to serve others. Though an ambitious young man, he was thinking of the service he could render when he left his home in Kentucky to work his way through dental school at the St. Louis University.

Trained for service and filled with idealistic ambition he took his first bride to Parsons, Kans., and opened his first dental practice in 1906. On a visit to Los Angeles in 1911 he envisioned a thriving metropolis as it is today, instead of the orange groves and wheat fields before him. He stayed on to enter real estate. He saw on the rolling Palo Verde Hills, beautiful home sites as they now exist, when as an agent he sold that great estate.

It was the commission of that sale that enabled him to purchased the beautiful Pauma Valley Ranch of 13,500 acres in San Diego County; and he set about immediately to clear, subdivide, and develop it. During a dry season on the ranch he observed how small cactus plants sprang up in areas where they were not native from seeds contained in rabbit droppings. A germ of an idea thus conceived was to keep coming back to his inventive mind for nourishment and growth for years to come. Good fortune smiled but briefly. A flash flood in 1915 swept all evidence of his efforts away to sea, and his investment as well.

Dr. Adams was undaunted. He had designed a plow for bringing the rich subsoil to the surface for plant use. It was a good plow and adaptable to many uses. Dr. Adams went back to St. Louis, organized a company on limited capital to manufacture plows but was never able to produce and market them in sufficient quantities to make a go of it.

About 1922 Dr. Long, of the Long Bell Lumber Co., said to Dr. Adams in St. Louis, "I'm going out West to the State of Washington and start a new town. How about coming along to help?"

The call of the wild was too much for Dr. Adams. He moved his family bag and baggage to the new lumber town site of Longview, Wash., on the Columbia River. There was no means of transportation except by boat from the neighboring coast town of Long Beach. Dr. Adams thought they should have a road. He went to his friend, Mr. Long, who supplied dynamite, tractors, and other equipment, and with all volunteer labor, they built 65 miles of road through the wilderness from Longview to the sea, along the north bank of the Columbia River. This road though greatly improved is known today as the Ocean Beach Highway.

Watching the hook and grapple mechanism of a tractor during logging operations in the building of this road, another idea was born. Dr. Adams brushed it aside for a time as he sought to replenish a completely dwindled bank account. He took the examination before the State dental board to practice oral surgery and dentistry in the State of Washington and opened an office in Seattle.

That ball and grapple continued to haunt him. He was sure it could be used to pick up and deliver packages from an airplane without landing the plane. For several years he spent all his spare time and spare cash perfecting this device. Air Transport magazine records the first successful pickup tests in 1928:

PICKUP DEVICE PASSES SEATTLE TESTS SUCCESSFULLY—WILL ELIMINATE NECESSITY OF LANDING TO TAKE ON AND DISCHARGE MAIL

SEATTLE, WASH.—Successful tests of an air-mail and general cargo pickup device for planes have been completed at Gorst Field here by Dr. Lytle S. Adams, the inventor, under the observation of William P. McCracken, of the U.S. Department of Commerce Division of Aeronautics, and C. M. Perkins, Seattle postmaster.

Trailing a steel cable catchline into the pickup chute, a Travel Air OX5 biplane piloted by Clayton Scott, of Seattle Flying Service, snagged a 35-pound pouch of airmail without lowering the speed of the plane or causing it to settle. Tests with heavier loads will be conducted later.

With a little more than a handful of letters of introductions, Dr. Adams took the crude-looking device to New York and Washington, D.C. He had many setbacks, but if God ever gave the man anything more than a good supply of ideas, it was ample determination to carry out those ideas.

The Newark Star-Eagle in its Friday edition, December 14, 1928, carried a picture of three pilots, Don Brown, Capt. John O. Donaldson, and L. V. Rawlings, with the plane called the *Postmaster*, which they proposed to fly in an en-

durance test at Roosevelt Field, N.Y., refueling in the air and using the Adams pickup device which has been installed there to refuel their Travelair cabin monoplane while it is in flight. These trials are believed to be the very first refueling to be done while in flight.

Mrs. Harry S. New, wife of the Postmaster General, christened the Travelair cabin monoplane the *Postmaster*. At the christening ceremony Postmaster General New paid tribute in these words:

This is the last word in the land of invention for the benefit of the airmail. The realm of prophecy is always a dangerous one upon which to enter. No man can foretell the exact result of an experiment, and yet all progress is the result of invention and experiments. This plane, which has been adapted through the genius of Dr. L. S. Adams, of Seattle, to pick up fuel and useful loads from the ground while the plane is in motion, is an entirely new note. If successful, as we all hope it may be, and as it bids fair to be, Dr. Adams will have made a most substantial contribution to the transportation of useful loads through the air. We wish him all success.

Interested observers of these tests took Dr. Adams to the United States Lines. The pickup device was installed on the deck of the U.S.S. *Leviathan* and on June 7, 1929, the New York Journal issued a special aviation edition inaugurating the first ship-to-shore and shore-to-ship service by air. This special edition quoted men of prominence as saying on the occasion:

Ship-to-shore and shore-to-ship services by air offer many possibilities for expediting commerce and travel. The inauguration of this service in conjunction with the arrival of the *Leviathan* is an event worth commemorating. (Wm. P. MacCracken, Jr., Assistant Secretary of Commerce for Aeronautics.)

Inauguration of shore-to-ship mail service is but another example on the long step forward in fast mail service made possible by the utilization of the airplane as an agency of rapid transportation and American initiative in taking advantage of its possibilities. I wish this undertaking every possible success. (F. Trubee Davison, Assistant Secretary of War.)

The Wall Street financial crash of 1929 wiped out all the plans for the new Adams Air Express Co. that had just gotten under way and Dr. Adams had to start over again.

Many people believed in the pickup and helped Dr. Adams. Before an airmail contract could be obtained a company had to prove its ability to perform. Clifford Ball Airlines was interested and put in an installation on the Cleveland-Pittsburgh route No. 11 at Youngstown, Ohio, in 1929. Other installations were put into use at New Castle and Beaver Falls, Pa., along the same route in 1930.

At the World Fair in Chicago, Ill., 1932 to 1933, the airmail pickup made daily flights carrying souvenir mail cachets from the fair. This was done to raise funds to augment the necessary finances to carry on the demonstrations. Dr. Adams carried on his demonstration work for the Postal Service trying to obtain an airmail contract for more than 10 years. Dr. Adams' records show that on May 5, 1937, two companies were formed—Tri-State Aviation, an operating company, and All American Aviation, a patent holding company. Arthur P. Davis, Lytle S. Adams, and W. Edgar Leedy, Jr., were the incorporators. They also show that at the first meeting of the board of directors, May 1, 1937, "Dr. Adams was elected president and Mr. Davis, vice president and chairman of the board."

The service was taken to the remote areas in West Virginia, Pennsylvania, Kentucky, and Ohio, and an impressive experience record had been built up by 1938. During the 75th Congress a bill, H.R. 7448, was introduced; and in the hearings on this bill, March 1938, Dr. Adams' statement is of public record and show his untiring efforts to obtain an airmail contract.

Dr. Adams was forever in debt as was the operating company Tri-State Aviation. He was put in touch with Richard C. du Pont and after Mr. du Pont flew the route with Dr. Adams, he was most enthusiastic about the pickup and immediately put up the necessary money to keep Tri-State Aviation operating. Dr. Adams offered a 40 percent interest in both the companies. Although, Mr. du Pont had made a substantial loan—$45,000—to keep Tri-State operating, when it came to making a deal, Dr. Adams says Mr. du Pont was interested only in buying into the debt free patent holding company All American. This was a source of grave concern to Dr. Adams, for All American had no experience record with which to legally qualify as an airmail contractor.

At the time the contracts were finally awarded by the Post Office Department, the Du Pont company, according to Dr. Adams, used their influence to have the contract awarded to the patent holding company of All American Aviation. Over Dr. Adams' strenuous objections, the contract was awarded to the more financially stable company—but a company without the necessary performance record to qualify under the law.

Dr. Adams tried to keep alive the debt ridden Tri-State Aviation but it could not compete. All American had the airmail contract, which Dr. Adams felt had been earned by Tri-State and was financially secured by the Du Pont wealth.

Many differences arose from these two companies trying to operate over the same route—differences, legal and otherwise with which Dr. Adams' inventive mind had not been trained to cope. He claims he was finally forced to sell his complete interest in the All American Aviation, Inc. to Mr. du Pont, September 26, 1940. The terms of the contract were not simple, and by the time Dr. Adams gathered all the stock in the company to satisfy their requirements, considerable expense was involved and his receipts show that what he actually received from his interest was exaggerated by Mr. du Pont's following statement to the press:

The company in obtaining additional financing sold its treasury stock at $3 a share. Dr. Adams has obtained the same price for stock he has disposed of. On this basis he was paid $360,000 for his contribution to All American Aviation, Inc., which I believe is fair and adequate.

Dr. Adams says his net from the transaction amounted to only $37,000.

Dr. Adams again showed his ability to turn his back on disappointment by starting to work on a new service to mankind and another use for the airplane. That little germ of an idea of the little rabbit carrying cactus seeds around and distributing them on the land in pellet form could be made to serve mankind. He devised a machine for making the pellets of seed, soil, and fertilizer and a machine for distributing them from an airplane. He again approached the Government with the idea of revegetating the western rangeland.

World War II interrupted these plans, but Dr. Adams was sure he could help out in the war effort. He came up with the idea of using live bats as carriers for incendiary bombs. He communicated the the idea to President Roosevelt, who gave the "go ahead." Dr. Adams went right to work, ever confident that he was serving his country and that he would be paid for his services. All the money he could borrow from every source available he put into this project. He even mortgaged his home in Irwin, Pa. He recalls that he was assigned military men, equipment, and top priorities to carry out the project. He was certain his Government meant to pay him. He was sworn to secrecy and assured over and over that something was "being worked out for him financially." The war ended. He presented a claim for payment but the claim was turned down. Dr. Adams has not received payment of salary and expenses for work on this project.

The Internal Revenue Service had been busy while Dr. Adams was on his secret war project. He had not explained to the Bureau's satisfaction the money Mr. Du Pont had told the press Dr. Adams had received from the sale of the All-American Aviation, Inc., stock. When he was available to answer their questions, they arrived at their own figure of $165,113.02 as an assessment. This figure seemed so fantastic, Dr. Adams was sure there would be no problem in explaining his situation. Explain? Yes. But proof was another thing. His wife was a good bookkeeper and kept all the records, but shortly thereafter she died. He hired a lawyer and an accountant and after going over the records they wrote Dr. Adams that they were "sure that you do not owe the Government anything." I will return to this later.

The pellet seeding was no longer an idea. The Interior Department was interested. Congress believed in it and appropriated $100,000 for an experimental contract in 1945. Seeds in such large quantities as required for the job were not available, a draught made seeding impractical, abrasives wore out the pellet wheels at a rapid pace, but a simple and flexible contract allowed for these setbacks and by 1947 over 50,000 acres had been seeded. The project received wide acclaim and publicity. Although, still in the experimental stage, the International Seed Pellet Co., formed to do the work, looked forward to a bright future.

The 1947 appropriation was for $200,000 to carry on this important work. Some 80,000 acres were seeded under this appropriation with a total expenditure of $112,844 of the $200,000 appropriated.

Congress further indicated their confidence in the aerial reseeding program by appropriating another $200,000 for 1948. Competition developed and two other companies with coated seed entered the field and private fliers wanted to bid. Dr. Adams says that restrictive specifications written to make possible these other companies to enter the field, ran up the International Seed Pellet Co.'s operating costs until it was impossible to carry out their contracts with any sign of profit. A letter from the bank financing Dr. Adams and the International Seed Pellet Co. protests this situation:

Because of certain restrictions imposed by the Interior Department under these contracts as to time limit, delay in selection of areas, and final award of the contracts, the great distance of the seeding areas, the almost impossible weather conditions, and the necessity for unforeseen expenses in building roads, airstrips, etc., the contractor has operated at a loss.

We are writing this letter in the hopes and because of your interest in the outcome of this enterprise, you will use your influence to have these contracts so drawn that it will enable the contractor to carry them through with a minimum of expense and with a sufficient time to do the work, taking into consideration all the factors as above stated.

Over 70,000 acres were seeded with earthen pellets and an expenditure of $98,225.25 was made. Due to the competitive bidding, contracts were let to coated seed companies and private flying organizations for aerial seeding. There was $65,000 left as a carryover of the appropriation. Near the completion of the final contract the equipment was snowed in and had to be left on the job until spring through the 1949 blizzard. The stranded men were dropped food supplies from the air. This contract was canceled and with it was dealt the crippling blow to the International Seed Pellet Co.

However, the Congress still had faith in this practical means to make the desert bloom and appropriated another $200,000 plus the balance of the 1948 carryover of $65,000 for the specific purpose of earthen pellets. The bids for this appropriation were never let. Dr. Adams carried on for nearly 2 years trying to salvage something from the operation. Finally, the bank foreclosed on the International Seed Pellet Co.'s equipment and all was lost. In addition, a deficiency judgment was obtained against Dr. Adams by the bank in the amount of $72,000.

Of the $700,000 appropriated for earthen pellets, only $297,366.25 was actually received by Dr. Adams, according to him hardly enough to pay for the equipment loss.

In August 1951 Dr. Adams again entered the practice of dentistry in the city of Seattle, after being away from it for nearly 25 years. He worked with other dentists, took refresher courses at night and opened his own office in Moses Lake, Wash., in the fall of 1953.

The tax account had not been resolved, liens were placed on the doctor's deceased wife's estate and it was sold at forced sale. Although the attorney and accountant were "sure the tax department does not have a case," they had to have payment to process the case.

Without funds to execute properly the tax case, he finally had to throw himself upon the mercy of the court. The case was sent to Seattle but the judge in Washington, D.C., refused to have his papers returned from the accountant. Dr. Adams did not have the $10,000 fee that the accountant was demanding. So without papers of proof the court in a stipulation reduced the claim from $165,113.02 to $17,240. In signing the stipulation, Dr. Adams states he was led to believe that in so doing the tax department would undoubtedly be persuaded to accept the money, held in the court in Pennsylvania from the sale of his deceased wife's estate, in the amount of $12,911.94 as a compromise settlement for the whole thing. Dr. Adams wrote the Internal Revenue Service to this effect. They have not answered his letter.

They did write Dr. Adams' creditor and dental supply houses indicating they had first priority on all of Dr. Adams' earnings. This though perfectly legal, falsely represents the facts, according to Dr. Adams. Dr. Adams had remarried in 1949 and the new community, under the laws of a community property state, is not subject to this old debt.

Ill health befell Dr. Adams in Moses Lake. He had two surgical operations within a 3-year period. Other taxes accumulated. Since his illness, however, he has paid off more than half of the new accumulation, leaving a balance of about $3,200. A heart attack in November last year has made it impossible for him to carry on his dental practice. It appeared that he would not be able to work again and a compromise offer was made to settle the old tax account which has now grown with interest from $17,240 to $42,000. He felt that if he could remove the stigma and worry of this old account that he would in some way find it easier to pay off the balance against this community. The following from a letter received from the internal revenue department last week indicates the strain he is now laboring under as he tries to regain his health:

Failure to reply promptly to this Office regarding the above-mentioned matters may result in our placing a lien and levy against your social security benefits. You are, therefore, respectfully advised to give this matter your immediate attention.

Dr. Adams has three small children, ages 5, 7, and 9, and he feels his social security is something he has earned for them. This could be a final blow from the Government, but, no, there is more.

Dr. Adams' one consolation has been that he has accomplished much and that these accomplishments would be recorded by history and live after him.

This hope was shaken last week by a visit Dr. Adams made to the Smithsonian Institution, to take a picture of a plane given in 1949 by his former pilot, Norman Rintoul. The plane was used in the airmail pickup system and was given as a memorial to Dr. Lytle S. Adams, inventor. The plane is still in storage, awaiting the construction of the new Aviation Building he was told, "but, a model of it is on display in the Aviation Building." The model, given by "All American Airways, in memory of Halsey R. Bazley, former president" has a plaque with data depicting the airmail pickup as dating 1939 to 1949.

The question was brought up in the office of the Smithsonian Institution, as to information they might have on the airmail pickup prior to its purchase by Mr. du Pont. He was told, "Oh, there wasn't any airmail pickup before All American, as far as we know."

Now Dr. Adams has no desire to detract anything from anyone who has contributed to the success of the air mail pickup service and there were many who gave unselfishly of their time and money to help develop the pickup system. He concedes that Godfrey Cabot, Richard C. duPont and Halsey R. Bazley have earned a place of honor for their many, many contributions to society.

Still it is a matter of public record that the patents on which the All American Pickup System was originally based were those of Dr. Lytle S. Adams and he spent more than 12 years perfecting and proving them—1927–40. These 12 years surely have their rightful place in the air mail history, not only as a necessary supplement but as a complement as well to the 10 years of All American.

As shown by his fully documented papers, Dr. Adams organized the first All American Aviation Co., and was the first acting president of it, long before Mr. duPont was approached for financing.

If we cannot count on history being more accurately recorded, what can our future generations hope for?

Though greatly incapacitated by physical illness, Dr. Adams' mind is still keen and he still has much to offer the world through the field of invention. He has again brought to Washington from the Northwest an ingenious plan to make the new State of Alaska accessible to year around surface transportation. The plan invisions: a double-deck all-weather highway, with a monorail freight and passenger service inclosed with the lower deck, and an automatic water hauling train for resupplying our rapidly falling water table. Transportation and conservation of our national resources are of vital interest to him and with little hope of remuneration, he has brought his new ideas to Congress in the hope that they may be used in the future development of our country.

Dr. Adams has retained his sweetness of soul, his loyalty to God and country through the seemingly impossible odds. In terms of service—he has given 77 years and is willing to continue to give—but for what?

"The Communist Resolutions: What the House of Delegates Really Did," by Ross L. Malone, President of the American Bar Association, Delivered at the American Bar Association Convention

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me heretofore so to do, I am pleased to present the text of an important and timely article by Ross L. Malone, president of the American Bar Association. This text appeared in the American Bar Association Journal for April 1959 and was a speech given by Mr. Malone at the recent Bar Association Convention:

THE COMMUNIST RESOLUTIONS: WHAT THE HOUSE OF DELEGATES REALLY DID

(By Ross L. Malone, president of the American Bar Association)

(Few actions of the association have stirred up as much interest as the House of Delegates' approval in February of five resolutions offered by the association's Committee on Communist Tactics, Strategy and Objectives. The resolutions aroused considerable discussion, not only among lawyers, but also among the general public. In an address before the upper Ohio Valley regional meeting, delivered March 11 in Pittsburgh, President Malone seized the opportunity to give a straightforward, factual explanation of what the resolutions actually say and what their approval by the house of delegates means. The address is a timely account of an important policy decision by the house and should help to "set the record straight" in an area in which there seems to be a large degree of misunderstanding.)

The American Bar Association is privileged to convene its upper Ohio Valley regional meeting, the second and final regional meeting of this association year, in the city of Pittsburgh. The significance of the occasion is increased tremendously by the opportunity to participate in the celebration of the 200th anniversary of the founding of this city of dramatic achievement.

I can imagine no more inspiring atmosphere in which to conduct a regional meeting than in the Pittsburgh of today. The history of this great city and its triumph over seemingly impossible obstacles have captured the imagination of the entire country.

The Golden Triangle is known from the Atlantic to the Pacific. It stands as a symbol of the strength and vitality of free enterprise and as a tribute to the determination of its citizens. We join with the rest of the country in congratulating you upon a distinguished history and a future bright with promise.

When compared to the 200 years of the life of this great city, the octogenarian American Bar Association seems only a youngster. Yet the American Bar Association, like Pittsburgh, can view the past 25 years as a period of special growth and achievement.

Perhaps the greatest single event in the history of the association was the reorganization which occurred in 1936. At that time the representative body which is known as the house of delegates was created to replace the members who happened to be in attendance at an annual meeting, as the policy-making body of the association.

Today, in addition to representatives of the American Bar Association members throughout the country, it includes representatives of all the State bar associations of the United States and all local bar associations having a membership of 1,000 or more, 30 percent of whom are members of the American Bar Association. It counts in its numbers representatives of specialized national legal organizations such as the Association of Women Lawyers, the Association of Attorneys General, the American Judicature Society, the American Law Institute, and the other national organizations of the profession. In theory and in fact, when the house of delegates of the American Bar Association speaks today, it represents the organized legal profession of the United States.

Its ability to do so on a representative basis results from the fact that it is indeed a cross-section of the legal profession of the United States. A recent analysis of the membership of the house of delegates disclosed that its 249 members range in age from 3 members who are under 36 years of age to 3 who are octogenarians. The largest percentage of its membership in any age bracket, 23 percent to be exact, falls in the age bracket from 51 to 55 years of age. Approximately 50 percent of its membership is composed of lawyers 55 years of age or younger.

Seventy-six of the 125 approved law schools have alumni in the House of Delegates.

Approximately 10 percent of its members are individual practitioners. An analysis of the members of the house of delegates who practice laws as members of law firms discloses that the house is in no sense dominated by large law firms. Thirty-nine percent of the members of the house are in firms with five lawyers or less, and an additional 30 percent are in offices from 6 to 10 lawyers. It also includes law teachers, corporation counsel, bar officials and Government officials.

Populationwise, also, the house of delegates is representative. Whereas 38 percent of the lawyers in the United States practice in cities of over one-half million population, 34 percent of the house of delegates come from such cities. Turning to the other extreme, with 30 percent of the lawyers of the United States from cities under 50,000 we find 22 percent of the house of delegates coming from such cities. There was a time when the charge was made that the American Bar Association was dominated by big city lawyers from large firms. My analysis shows, however, that this group is actually under represented in the house of delegates, constituting only 6 percent of the membership of the house.

I have had this analysis of the composition of the house made because of the importance, both to the association and to the country, that it be understood in evaluating action of the house of delegates of the American Bar Association. The two meetings of the house of delegates which are held each year attract the attention of the press of the entire country. Action taken by the house of delegates upon issues of public importance receives widespread attention throughout the United States.

THE HOUSE OF DELEGATES—VOICE OF THE LEGAL PROFESSION

Persons who disagree with such action sometimes seek to discredit it with the statement that the views expressed by the house of delegates are not representative of the views of the legal profession of the United States. I suggest that there is no evidence to support such a statement. On the contrary, composed as it is, of delegates selected by the organizations of the legal profession of the United States, and typical as it also is, in terms of age, law schools, size of community and branches of the profession, it, in fact, expresses a representative opinion of the legal profession of the United States.

You and I, as members of the association and as members of the legal profession of the United States, are entitled to take pride in the attention given to action of the house of delegates by the people of this country and in the weight given to its action in the National Congress.

There is one further aspect of the house of delegates' action to which I should like to refer. The board of governors of the association, which is composed of one member from each judicial circuit of the United States, plus the officers of the association and the editor in chief of the Journal, is the executive committee of the house of delegates. Between sessions of the house, it exercises the and authority of the house. Only the house of delegates, and between its sessions, the board of governors, is authorized to speak for the association. The policy of the association on any issue is fixed either by the board or the house.

Action of the house of delegates is taken upon resolutions submitted to it by the reports of committees and sections of the association. The rules of the house require that any such report set out at the outset of the report the resolutions which it is proposed that the house of delegates shall adopt. There then follows the report of the committee which expresses the views of the committee, which are the bases on which the recommendations are made to the house.

The committee report expresses the views of the members of the committee who sign it, and only their views. When the house of delegates acts, it acts only upon the resolutions which are submitted—not on the body of the report. Following debate upon each resolution, it is either adopted, amended, and then adopted, or rejected by the house. Thus it is the resolutions voted on and adopted by the house that reflect the official position of the association.

The house of delegates takes no action upon a committee report which accompanies the resolution. Language in the committee report is in no sense the language of the American Bar Association or the house of delegates. It in no sense represents the policy of the association, which is limited to the language of resolutions adopted. The reason for this rule is obvious. A committee report which frequently may extend to 25, 50, or even sometimes 100 pages, obviously cannot be considered, rewritten, or adopted in a deliberative body of 249 members. The debate of the house and its action, for obvious reasons, is limited to the resolutions presented for action.

The distinction which I have mentioned between the resolutions adopted by the house of delegates and the text of a committee report which is submitted to the house with those resolutions is of importance. Of equal importance is the fact that committee reports filed with the house of delegates but which have no resolution accompanying them occasion no action by the house of delegates and hence do not represent the official position of the American Bar Association. They merely constitute an ex parte statement by the 5, 7, or 10 individual lawyers who sign the committee report which is filed. Reports filed by sections of the association are subject to exactly the same rules.

In an effort to avoid misunderstanding, the rules of the house of delegates require that the following statement appear on the face of all section and committee reports to the house of delegates:

"Reports of sections or committees of the American Bar Association, prepared for submission to the house of delegates, are not to be construed to represent the official pol-

icy of the association. Reports containing policy recommendations reflect association policy only as and when these recommendations are acted upon by the house of delegates. Reports containing no recommendations for specific action by the house of delegates are merely informative; they represent only the views of the section or committee recommending them."

I have mentioned in detail the internal functioning of the American Bar Association because it seems to me to be important that members of the legal profession, the public generally, and our representatives in Congress understand and be able to give appropriate weight to action of the American Bar Association and its subordinate bodies.

Unfortunately, statements and news reports resulting from the recent meeting of the house of delegates at Chicago have indicated considerable misunderstanding in this regard.

THE COMMUNIST RESOLUTIONS—WHAT DO THEY MEAN?

In the light of theforegoing background I should like to discuss the action of the house of delegates upon the report of the special committee on Communist tactics, strategy, and objectives, taken recently at Chicago. This committee was created in 1950 by action which originated in the assembly at the annual meeting in 1950 and was concurred in by the house of delegates.

Shortly before the February meeting the committee submitted a comprehensive report to the house of delegates. The board of governors of the association, acting as the executive committee of the house, reviews all reports before they reach the house of delegates and recommends to the House the action to be taken upon the resolutions submitted with each report. In this instance the board of governors transmitted the resolutions submitted by the committee with the following statement:

"The board recommends approval by the House of the several recommendations in the report and their transmittal to the Congress of the United States in order to correct legislative defects in the field of internal security revealed by particular decisions cited in the report.

"In making its recommendations for approval, the Board does not in any way intend to indicate censure of the Supreme Court nor an attack upon the independence of the judiciary. Indeed, the obligation of the Bar to defend the Supreme Court as an institution is emphasized in the first resolution proposed by the Committee's report.

"The recommendation for approval, in the case of this report as in the case of all other reports of association sections and committees, does not constitute endorsement of statements in the report itself, such statements being those of the individual members of the committee."

The house of delegates took up consideration of the report of the special committee on Communist tactics, strategy and objectives as a special order of business at 2 p.m. on Monday—the first day of its session. Upon motion made at that time, it was put over to 10 a.m. on Tuesday in order to afford the delegates an opportunity for further examination of the lengthy report of the committee. Final action was taken the following morning. Almost 2 hours were consumed in the debate on the resolutions.

The action of the house of delegates on these internal security resolutions has occasioned as widespread publicity and developed as much public interest as any action taken by the association in many years. As you would expect, the president's mail has increased tremendously since the Chicago action.

Reaction within the profession and from laymen has ranged from enthusiastic approval to extreme disapproval, with all intermediate shades of opinion well represented. There has been one letter of resignation in protest against the action. Other members who did not approve of the action of the house have expressed their disapproval and their resolve to remain in the association and seek to have their views reflected in future action. They are to be commended for so doing.

The American Bar Association includes in its membership lawyers of every school of thought—and there is a place in it for all of them. Its house of delegates must be, and I believe that it is representative of the legal profession of the United States.

Inevitably, when the house of delegates acts upon a question in an area of controversy, there is going to be strong disagreement on the part of those who opposed the action in the house of delegates and those who would have opposed it had they been in the house of delegates.

INTERNAL SECURITY—THREE CONTROVERSIAL AREAS

The internal security resolutions were certain to evoke disagreement on the part of some members of the organization whatever action was taken upon them. They involved not one but three areas of controversy. I believe that the existence of a Communist threat to our internal security is now generally recognized by lawyers of all schools of thought, but the magnitude of the threat, and hence the nature and extent of the action which should be taken to combat it, constitutes an area of controversy of long standing. It is one which relates closely to the emotions stirred by appeals to patriotism and hence it produces emotional and sometimes violent opinions.

The second area of controversy with which the resolutions dealt is that of civil rights. The rights guaranteed by the Bill of Rights are the distinguishing characteristic of our concept of government and our entire governmental structure was designed to insure their protection. Nonetheless, it must be recognized that the need for protection of our civil liberties occurs in areas of controversy, usually in cases of minorities or unpopular individuals. Accordingly, proposed legislation in this area frequently produces more heat than light.

Finally, it must be recognized that the Supreme Court of the United States today has become a center of controversy and sometimes even the subject of controversy. That this is so is to be regretted, but it is not without precedent. In fact, it is inevitable that the decision of the Court as the ultimate guardian of the rights of the individual and as the final arbiter of the validity of legislation will be the subject of controversy. This has been the Courts' entire history with only intervening periods of relative quiet.

It is not surprising then that the resolutions considered by the house of delegates were the subject of widespread interest or that the impact of association action was reflected in strong reactions of both approval and disapproval depending upon the interests and predilections of the individuals involved.

What is surprising is the fact that reaction in so many cases has been based upon misapprehension or misconstruction of the action actually taken by the association. This has been reflected in statements by men in public life in Washington, by newspaper editorials and in the voluminous mail that I have been receiving.

Any fair construction of the action of the association must be made on the basis of the resolutions which the house actually adopted. I submit that those resolutions, when read objectively are:

"1. An expression of concern as to the threat of communism to our internal security;

"2. A request for legislation in five specific areas which will strengthen our internal security by remedying defects in legislation which were pointed out in Supreme Court decisions;

"3. A recognition of the position of the Supreme Court of the United States as the final guardian of our individual liberties, and of the obligation of the Bar to defend the courts;

"4. Reaffirmance of the position of the American Bar Association in opposing the Jenner and Jenner-Butler bills of the last Congress and other legislation which would curtail the appellate jurisdiction of the Court;

"5. A request for improvements in the creation and procedure of congressional committees which would meet the standards set out by the Court in the Watkins decision, and, at the same time afford better protection to witnesses appearing before such committees;

"6. A request for continuation of the work of the committees of the Congress dealing with internal security matters."

I might add that resolutions similar to this have been adopted by the house heretofore.

Press reports, editorials and public statements which labeled the action of the house of delegates as an attack by the bar upon the Supreme Court of the United States were, in my opinion, and I believe in the opinion of the great majority of the members of the house of delegates, wholly unjustified and contrary to fact. Not only did they ignore all portions of the resolutions except those calling for legislation, the necessity for which has been diselosed by decisions of the Supreme Court, but, in addition, they attributed to the house of delegates approval of statements within the 50-page committee report which the house not only did not approve, but which, under the procedures of the house, it could not act upon in any respect.

In all fairness, I must confess that to an outsider the distinction between resolutions adopted by the house, which represent the position of the association, and the report of a committee which accompanies proposed resolutions to the house and which reflects only the views of the committee members who sign it, is quite finely drawn and likely to result in confusion. Nonetheless, to the members of the house in passing upon recommendations of literally dozens of committees and sections, it constitutes a very real distinction.

The board of governors made that fact quite plain in the statement by which it transmitted the resolutions proposed by the committee to the house. After recommending approval, in order to correct legislative defects in the field of internal security revealed by particular decisions, the board of governors said:

"The recommendation for approval, in the case of this report as in the case of all other reports of association sections and committees, does not constitute endorsement of statements in the report itself, such statements being those of the individual members of the committee."

The press of the United States has provided convincing evidence that construction of the house action as an attack upon the Supreme Court is unjustified. In spite of the fact that headlines such as "Bar Attacks Court" had resulted from some press reports, almost all editorial comment, written in the light of the actual resolutions adopted by the house, has found the action to be, as I believe that it was, a considered, constructive request for needed legislation. Certain editorial writers have recognized that the need for the legislation was disclosed by court decisions which revealed defects in existing laws. Equally they have recognized that the bar was evidencing its conviction that the legislation had desirable

objectives and that the requirements pointed out by the Court's opinions should be met through curative legislation. Only a small minority, however, have seen in the action anything even approaching an attack upon the Court or even disagreement with the correctness of the decisions themselves.

This has been true of newspapers of all shades of opinion. Thus, the Chicago Tribune did not find the resolutions to be an attack on the Court, but rather that they were "respectful of the Court."

The Boston Herald, after commenting on the known conservative mindedness of the association (which I think is equally applicable to the profession as a whole) said:

"Yet its report and recommendations with respect to recent Supreme Court decisions in the security field are surprisingly moderate.

"We cannot agree with all the ABA's proposals for remedial legislation. But the general approach the lawyers recommend is unexceptionable, and so is their language.

"The bar is performing a useful and appropriate function when it offers Congress recommendations in this area. Its main position is clearly in defense of the institution of the judiciary.

"This is a conservatism of which we can use more."

The San Francisco Chronicle observed:

"The action this week of the association's house of delegates at Chicago has been widely headlined as a slap at the Court. As a matter of fact, the house of delegates declined to go along with some of the Court's more intemperate critics and it usefully and wisely disapproved proposals to limit the Court's appellate jurisdiction."

After referring to the specific recommendations for legislative action, the Chronicle commented that "These recommendations are hard to quarrel with" and concluded "A careful reading of the actual ABA recommendations leads to the conclusion that the hotheads in the anti-Court faction of the ABA were repudiated."

These editorial writers, and others I could quote, clearly reached a conclusion as to the action of the house of delegates which was directly contrary to the impression gained in many parts of the country that the association had attacked the Court. I believe that their conclusions are sound. I believe that those conclusions represent the state of mind and intentions of the vast majority of the house of delegates when they voted upon these resolutions.

A SOUND DECISION—SUPPORTED BY A VAST MAJORITY

Because I believe that, and that an erroneous impression was created in many parts of the country as to the implications of the action of the house of delegates, I have been attempting to do what I can to get all interested persons to read and judge for themselves as to the action of the house and the position of the association. In so doing I want to make it clear that I am in no sense making apologies for the action of the house; neither am I seeking to pour oil on troubled waters. I have the utmost confidence in the lawyers of the United States and in their representatives who constitute the house of delegates. I think that their action was sound, and I believe that the vast majority of the United States will agree, if the action is judged on the resolutions which were adopted and not on erroneous conclusions drawn from them.

I recognize, however, that there is room for legitimate disagreement with the position actually taken by the association. To one who feels that the legislation recommended would constitute a peril to individual liberties in the United States, not justified by the threat of communism to our internal security, the action of the house is unsound—and he is certainly entitled to so view the situation. I cannot, however, find in the resolutions adopted by the house support for any statement that the American Bar Association has attacked the Supreme Court, has "maligned" the Court or in any sense has been unfaithful to the primary duty of the profession to "maintain the respect due to courts of justice and judicial officers" and to "maintain toward the courts a respectful attitude, not for the sake of the temporary incumbent of the judicial office, but for the maintenance of its supreme importance."

The vast majority of the lawyers of the United States, and the American Bar Association as the national voice of the profession, have demonstrated time and again their appreciation of their responsibility toward the courts and particularly toward the Supreme Court of the United States.

In 1937 the bar rallied to the defense of the Court against attacks from the Executive and from the left. In 1958, it rallied to the defense of the Court from attacks from the legislative branch and from the right. In both instances the decisions which had brought on the controversies were in highly controversial areas. There was no unanimity of opinion within the profession as to the correctness of these decisions. Be it said to the credit of the bar that it was not on that basis that the position of the bar was determined. Rather, it was on the basis of our knowledge of the delicate balance which must be maintained in the separation of powers of the three branches of our Government and upon our realization that only through the existence of an independent judiciary can individual freedom in this country be preserved and liberty under law be a reality. I have no hesitation in predicting that whenever that issue is presented the bar will be found as it is found today, in the foremost ranks of the supporters of the Supreme Court of the United States as a vital institution of our Government.

Mr. Speaker, also I call to your attention, and to the attention of my other colleagues, an editorial appearing in the same issue of the American Bar Association Journal on the same subject:

THE INTERNAL SECURITY RESOLUTIONS

The action of the house of delegates on the recommendations of the special committee on Communist tactics has drawn widespread national attention and a great deal of publicity, not all of it accurate, and some of it distorted, doubtless because issued without having the resolutions themselves available. Some of the distortion and confusion is doubtless due to lack of understanding that the action of the house did not include either adoption or approval of the report of the committee. This report represented only the views of the committee and not the views of the association; and it was so stated. The action of the house was specifically confined to the amendment and adoption of certain resolutions submitted by the committee. Therefore, a brief summary of the salient features of the resolutions approved by the house seems pertinent. The key features of these resolutions are:

1. It was resolved to "disapprove proposals to limit any jurisdiction vested in the U.S. Supreme Court."

2. It was resolved that the Congress should enact into law "a specific pronouncement of congressional intention that State statutes proscribing sedition against the United States shall have concurrent enforceability."

3. It was resolved to recommend that "the House of Representatives rewrite and adopt its basic resolution of authority for the Committee on Un-American Activities, under the same name or such name as such legislative body shall designate, setting forth that the purpose in creating said committee is to study the operation of existing laws and the requirements of further legislation, in addition to defining clearly and adequately the powers of such committee." Citing *Watkins v. U.S.*

4. It was resolved to recommend to the Congress "that whenever any of its committees subpenas a witness to appear and testify or to give evidence, such committee should furnish the witness at the time he is subpenaed with a copy in writing of the precise terms of the basic authority of the committee."

5. It was resolved that where "problems of safeguarding National and State security have been exposed or created" by Supreme Court decisions, Congress should undertake "the prompt and careful consideration and study of recent decisions of the U.S. Supreme Court, and the preparation and passage of separate amendments to the laws involved so as to remove any doubt as to the intent of the Congress, and to remedy any defect in the existing law revealed by the decisions."

6. It was resolved "that legislation be promptly enacted to eliminate obstacles to the preservation of our internal security in the following areas":

(a) "Amend the Smith Act to define the word 'organize'."

(b) "Amend the Smith Act to make it a crime intentionally to advocate the violent overthrow of the Government of the United States, or to teach the necessity, desirability or duty of seeking to bring about such overthrow (see *Yates v. U.S.*)."

(c) "Establish the right of each branch of Government to require as a condition of employment that each employee thereof shall not refuse to answer a query before a duly constituted committee of Congress or before duly authorized officers of either the executive or judicial branches of the Government with respect to Communist, Communist front or other subversive activities or any matter bearing upon his loyalty to the United States, as the Government has the right to know his record."

(d) "Invest the executive branch of the Government with the right to protect our internal security against the activities of aliens who were Communists at the time of their entry into the United States or became Communists at any time subsequent to their entry into the United States by providing for their deportation without any deprivation of due process."

(e) "Insure the effectiveness of the Foreign Agents Registration Act of 1948 by a requirement that political propaganda by agents of foreign principals be labeled for what it is where such agents are situated outside the limits of the United States, but nevertheless directly or indirectly disseminate such propaganda within the United States."

7. It was resolved that "the House of Representatives continue to maintain a committee to investigate matters relating to national security with particular emphasis on Communist activities, invested with adequate jurisdiction to accomplish its purpose, and that the Senate continue to maintain and support its Subcommittee on Internal Security."

8. It was further resolved that such congressional committees "maintain close liaison with the Intelligence and Security Agencies, as well as with the Attorney General of the United States, to the end that they may be kept advised as to legislative needs of the executive branch of the Government required to carry out its responsibilities for internal security."

In the best tradition of the bar, the house of delegates, just as in the Court-packing days of 1937, defended the Court as an indispensible arm of government to decide cases and controversies, reserving, however, to the members of the bench, the bar and the public, equally and at all times the right to criticize the Court's decisions and to suggest corrective legislation to solve problems "exposed or created thereby."

Except to refresh memories, it hardly needs recording that some of the most vigorous criticisms of certain of these decisions come from dissenting members of the Court itself, whose right to criticize the actions of the judicial department are no less and no greater than that of the humblest American citizen.

As said by Mr. Justice Black in 1941, in The Los Angeles Times case: "The assumption that respect for the judiciary can be won by shielding judges from public criticism wrongly appraises the character of American public opinion."

Mr. Justice Frankfurter, dissenting in the same case, nevertheless concurred on this phase, as follows: "Therefore, judges must be kept mindful of their limitations and of their ultimate public responsibility by a vigorous stream of criticism expressed with candor however blunt."

Taking cognizance of criticism of some of the Court's opinions, the house of delegates has asked Congress to evaluate the criticisms and the recommendations and to act accordingly.

Repeal the Wartime Tax on Communications

EXTENSION OF REMARKS
OF
HON. JOHN M. SLACK, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. SLACK. Mr. Speaker, during wartime, when special pressures dictate the actions of the Congress, measures are often enacted which are intended to serve a limited purpose and to be repealed with the end of hostilities. The present tax on communications is an excellent case in point. It was levied to raise funds for the war effort, but had the additional objective of discouraging the use of communication facilities for other than necessary purposes. This tax is a relic of the days of gasoline rationing and the little red and green commodity stamps, and should have passed away when they did.

In today's expanding economy, with all goods and services in amply supply, this tax is extremely discouraging to business incentive, because it keeps the public conception of the actual price of the product distorted and thereby undermines orderly future planning in a regulated industry. It is regressive in its application because it strikes hardest at those communication companies which have shared least in postwar prosperity by virtue of their location in areas clouded by depressed economic conditions.

I have joined the ranks of those who have introduced bills to repeal this tax, and as evidence of the strong desire for such repeal among our people I would like to call your attention to the following resolution passed at the recently concluded session of the West Virginia legislature:

HOUSE CONCURRENT RESOLUTION No. 43

Resolution urging repeal of excise taxes on communication services and transportation of persons

Whereas the Federal excise taxes on public utility and transportation services were initially levied or greatly increased during World War II to help defray war costs and to discourage unnecessary use of such services; and

Whereas Congress has acted to remove a substantial portion of this discriminatory tax burden on public utility and transportation services by elimination of excise taxes on the use of electrical energy and the shipment of goods and property; and

Whereas today, more than 13 years after cessation of hostilities, the excise taxes on communication services and the for-hire transportation of persons are still in effect and are continuing to discourage the public use of these services which are now the only services, regulated or unregulated, against which any Federal excise taxes are levied; and

Whereas a committee of the 85th Congress rejected a proposal for the enactment of legislation which would have repealed or reduced the Federal excise taxes on communication services and the transportation of persons even though the repeal of the discriminatory excise taxes would immediately release upwards of $86½ million annually to the West Virginia economy: Therefore be it

Resolved by the house of delegates (the senate concurring therein), That the Legislature of the State of West Virginia is of the opinion that the discriminatory excise taxes on communications and transportation services are not in the public interest, that such taxes should not continue to be levied by the Federal Government; and be it further

Resolved, That the Congress is hereby petitioned to terminate the discriminatory excise taxes on all communications and transportation services at the earliest possible date; and be it further

Resolved, That the clerk of the house of delegates forward a copy of this resolution to Congressman WILBUR MILLS, chairman of the House Ways and Means Committee of the 86th Congress, and to the U.S. Senators and Members of the House of Representatives from West Virginia.

Foreign Trade Requires Fairer Standards of Competition

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. STRATTON. Mr. Speaker, it has been a favorite charge of many of those favoring completely free trade abroad that those who seek regulation of imports by tariffs or quotas are motivated by fear and dislike of competition as such. This, of course, is not true. Americans more than the people of any other country have lived with competition, believe in competition, and are not afraid of it.

At the same time, since 1890, when Congress passed the Sherman Antitrust Act, we have made extensive efforts to see that domestic competition be fair. Subsequent legislation has included the Sherman Act, the Federal Trade Commission, and the Robinson-Patman Act. Fairness of competition was also a prime objective of the minimum wage and maximum hour law and the Walsh-Healy Public Contracts Act. Here the idea was that wages should not be used as a means of gaining a competitive advantage.

Clearly, American industry is not afraid of competition so long as it is fair. I ask unanimous consent to insert into the RECORD a letter written by Mr. O. R. Strackbein in reply to one from a member of the British Parliament. The letter has to do with a charge from a member of the House of Commons much the same as that of our freer-trade advocates that we are afraid of competition. The letter, which appeared in the Washington Post and Times Herald on March 30, 1959, follows:

UNWANTED COMPETITION

Your issue of March 23 carried a letter from the Honorable John Hall, British Conservative Member of Parliament, remonstrating against what he chooses to call our fear of competition from abroad, as distinguished from domestic competition. He shows himself particularly concerned about certain Government contracts that have been awarded to American firms, one of them relating to electrical turbines for the Greers Ferry Dam.

His exceptions are, by and large, temperate and well taken. He goes so far as to say that "we do not question your right to have buy American laws if you feel that you need them." No doubt Mr. Hall is aware that Britain itself has laws corresponding to our Buy American Act, such as the Safeguarding of Industries Act, and therefore has some appreciation of our position. Their law is quite restrictive on a number of items.

Mr. Hall says there is mounting irritation over our treatment of wool, lead and zinc. He refers to our tariff quota on woolen goods and our outright quota on lead and zinc.

The tariff quota on woolens resulted from a reservation made in our negotiation of a tariff reduction in Geneva under the auspices of the General Agreement on Tariffs and Trade in 1947. We cut our duty roughly in half but reserve the right to hold this reduction in bounds if imports should exceed 5 percent of our own production of similar woolen fabrics. All imports in excess of the 5 percent would then pay the old rate. Imports up to 5 percent of our production, however, would continue to pay the lower rate.

We invoked this reservation effective October 1, 1956, as we had every right to do under the agreement. Since then British exports of woolens to this country have declined materially even though our total imports have held up. Britain's trouble has been not with our tariff quota but with Japanese and Italian encroachment on her market in this country. Realistic as they are, the British would now like to see allocations so that Britain could not be driven out of our market.

Why are the British afraid of Japanese and Italian competition? Are her reasons about the same as our fear of competition from abroad? Somewhat; but there is a difference in degree. The differential in wages between England and the two other countries is not nearly as great as between our wages and those prevailing in other countries (Canada excepted).

Why then do we not fear domestic competition? The answer should now be obvious to Mr. Hall. We do not fear essentially fair competition, just as England does not. We do fear, as do the British, low-wage competition against which there is no defense, since we do not control such competition. Our cost-raising legislation, such as the wage and hour law, does not extend beyond our borders. With the rapid mechanization of the industry of other countries our own industries are as rapidly losing such competitive advantage as they may have had, and costwise they are falling behind.

Surely the British can understand this if they will look in the mirror.

O. R. STRACKBEIN,
Chairman, Nationwide Committee on Import-Export Policy.
WASHINGTON.

The Universal Message of Mohammed Iqbal, Poet-Philosopher of Pakistan

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given at the Islamic Center in Washington on the 21st anniversary of the death of Mohammed Iqbal, who combined in an inspiring way the mysticism of the East and the realism of the West. His roots were in the Muslim faith and culture but his message was to all mankind:

THE UNIVERSAL MESSAGE OF MOHAMMED IQBAL
POET-PHILOSOPHER OF PAKISTAN

(Address of WALTER H. JUDD, Member of Congress, at the Islamic Center, Washington, D.C., April 21, 1959)

Your Excellencies, ladies and gentlemen, we are living today in a world of unprecedented ferment and change. A large part of mankind has just begun to breathe the intoxicating air of human freedom. At the same moment another large section of human beings is being forced to don prison garb, regimented and driven like beasts of burden. Important segments of the world's population are being forced by events to decide whether they can best attain their hoped-for political and economic development by democratic or by authoritarian means.

In such times as these, it is a good thing for us to pause to contrast the eternal truths preached by the great spiritual leaders of mankind with the crass ideologies of those who would crush the human spirit and make man an instrument for the creation of a soulless state.

After all, what is man? That is the question asked by man himself, universally.

Some years ago I heard the eminent Lebanese philosopher, Dr. Charles Malik, now President of the United Nations General Assembly, say that when the Conference on Human Rights convened in Paris after World War II, the delegates spent several months trying, in vain, to agree on an answer to that ultimate question. For how could they declare what the rights are to which a human being is entitled until they decided what a human being is?

One of the great spirits of modern times to whom free men can go for renewal of their faith in God and in man, was the Muslim poet whose memory we revere tonight. Mohammed Iqbal, the man who dreamed a dream for the Muslims of the south Asian subcontinent and whose dream became reality in the creation of the nation of Pakistan, held no brief for those who would attain even the precious goals of political and economic independence by destroying the identity of the human being. Rather did he sing of the sanctity of human life, of the grandeur of the human self, and of the inviolability of the human personality.

Like all who profess the Jewish, the Christian, or the Muslim faith, Mohammed Iqbal conceived of man as being created in the image of God. In the core of his philosophy he held that the human personality, being created in the image of God, should be developed in a way to prove itself worthy of being in that image. Those things which fortified the human personality, said Iqbal, were good; those which weakened it were bad. Is there a better test?

His concept of the nature of man reminds those who have American heritage of the words of those who founded our Nation. "We hold these truths to be self-evident," they said, "that all men are created * * *." They based their whole venture on that great act of faith: that there is a Creator, that man is His child and therefore partakes of His nature. Man has from his Creator the capacity to make moral judgments and decisions. Man can become more and more like his Creator, if he will. To do so is the deepest joy and the richest fulfillment of life. And the more man becomes one with God, the more he becomes one with all mankind.

The faith regarding the nature of man, and of God, and of the universe that filled Iqbal in Asia and inspired the founders of the United States in the Western Hemisphere, is being everywhere coldly and cruelly challenged today. The conflict tearing the world apart is not an old-fashioned struggle for control of land; it is for control of man—the mind of man, the soul of man, the whole of man.

Another great son of Pakistan, Gen. Ayub Khan, now its president, said to a group of us in Lahore one night in 1953, "The time has come in this world struggle when all those who believe in one God, the God of justice and of righteousness—whether Muslims, Christians, or Jews—must stand together against those who believe in no God."

We need to sit at the feet of men like Iqbal whose profound insights and inspiring words help us see afresh not the minor things that separate us—whether race, nationality, language, or culture—but the deep things that unite us—our common faith in God and our common humanity.

Mohammed Iqbal was an extraordinary man in the breadth of his interests and the scope of his accomplishments. He was at once a great poet, a great philosopher, a great lawyer, and a great political thinker. But most of all, he was a great human being, a man who saw as the most significant of human rights the opportunity to serve humanity.

Born in Sialkot, West Pakistan, in 1873, Iqbal received his intermediate education in a Scottish mission school. Here he came under the influence of the prominent Muslim scholar, Mir Hasan—an inspiring personality who perceived the genius of the poet and moulded it.

Finishing his distinguished career at school he joined the Government College, Lahore, where he came in contact with another magnetic personality, Professor Sir Thomas Arnold, who was said to be an embodiment of all that was "the noblest and the best" in Western civilization.

Iqbal's love and appreciation of Eastern values and of Western disciplines, his desire to break down the barriers between East and West, his desire to see his country play its full part in the establishment of world peace, may be related largely to these early influences of his two great teachers.

Equipped with the idea of one humanity and one God as the basis of Muslim culture, which he learned at the feet of Mir Hasan, and the scientific approach of the West to the problems of life, which he gained from Professor Arnold, Iqbal went to Cambridge in 1905. For his further researches he went to Munich where he submitted his thesis, "The Development of Metaphysics in Persia," and obtained his doctorate in philosophy. That same year he was called to the bar, and the mind that had shown its grasp of philosophical ideas and its sensitivity to the things that are not seen, now revealed its ability to master practical legal issues.

Dr. Iqbal returned to India and started his practice at Lahore. He also was professor of oriental learning at the University of the Punjab. He entered political life in 1927 when he was elected to the Punjab Legislative Council, and remained a member for three years. He was elected president of the annual session of the Muslim League held at Allahabad in the year 1930. In his presidential address, he demanded "the formation of a consolidated Muslim State in the best interest of India."

Unfortunately, Iqbal did not live long enough to see the results of his efforts. From 1934 onwards his health deteriorated; he could not accept an invitation to Oxford as Rhodes lecturer in 1935. On the morning of April 21, 1938, his body breathed its last. But his words, like his spirit, will be immortal.

Iqbal's philosophy of life accepted the principles of freedom, equality, and love as the basis of world brotherhood. His concept for the new country of Pakistan, whose formation he did so much to inspire, was the establishment of a society deeply interested in the service of humanity, in the promotion of peace and in providing equal opportunities for all, irrespective of color, caste or creed. There was no conflict in him, as there need be none in you or me, between love of country and love of mankind. To work for the proper interests of one was to promote the well-being of the other.

Iqbal devoted the greater part of his life to giving people a faith in such an ideology of love and peace. His poems continue to speak that message to all men of all continents and cultures today.

Iqmal's faith in humanity was not misplaced. Along with the great cleavages that exist in the world today and occupy most of our attention, there is, nevertheless, a vast movement among the free peoples of the world to understand each other, to respect each other, and to inspire in each other mutual confidence and trust. It goes beyond mere tolerance of other cultures than one's own; there is increasing appreciation of other cultures—and the values in them. Understanding, appreciation, confidence, and trust are the spiritual foundations for any world order that is to withstand the ideological onslaughts of those who worship the material state and are determined to impose it on all mankind.

We Americans, as we take part in this tribute to the great poet-philosopher of Pakistan, are grateful that our own national leadership is alive to the need for the peoples of the world to know each other better. The President of the United States has advocated that people of all nations seek each other out and learn more of each other not by just one method, but by thousands of methods. This people-to-people diplomacy, which is certainly in the spirit of Iqbal's concept of the universality of mankind, can become a powerful force in determining the course of world events. Even tyrannies eventually have to pay some attention to changing attitudes and wishes among the peoples under them.

Our gathering tonight exemplifies the sort of relationship between persons of all sorts of backgrounds, races, and cultures which creates a genuine feeling of brotherhood. Americans and Europeans as well as Middle Easterners and South Asians; Muslims, Jews, and Christians we are gathered here to pay homage to a great Muslin spirit in a Muslin House of God. The memorial service in which we are taking part is sponsored by an American organization, the Council on Islamic Affairs, which is composed of Christians, Jews, and Muslims. We are gathered together because our desire to pay tribute to a great man is a bond which transcends differences of cultures, creeds and nationalities.

More and more people-to-people partnerships are being created as the human race gropes its way toward the spiritual perfection which Iqbal called "being worthy of having been created in the image of God."

Who can measure the constructive influence of an institution like the American University at Beirut, not only on the peoples of the Middle East from whom most of its students have come, but on the whole world, including the impact its many graduates have had at the United Nations and other international gatherings to which, because of their superior training and broadened outlook, they have been sent as delegates?

It was a desire to help relieve the suffering of people in need that sent me to China long ago, there to work for 10 years as a physician to men, women, and children of all walks of life as they came into my clinic. But I received more than I gave, and I learned more than I taught. That is what generally happens when men join hands to try to meet human needs.

Wherever some human beings have escaped the control of tyrants to become refugees on the face of the earth—from China, from Hungary, now from Tibet—other human beings from many countries have promptly volunteered to bring them relief, food, medical care, and, if possible, a new home somewhere and a new life of dignity and usefulness. Mohammed Iqbal would have been in the heart of all such efforts.

For he knew that some men are cruel and evil; but he believed that most men want to be kindly and good. In the universally understood language and symbolism of beautiful poetry, he called on all to stand together in common service to humanity—in realism opposing the evil of today in order that men may have opportunity freely to pursue, in idealism, their aspirations for tomorrow.

We gratefully honor here tonight the memory of this gifted man and noble spirit. He spoke to his own people, and he speaks also to us. May we refresh our spirits and renew our dedication by joining in his prayer.

"That my life, O God, should be like that of a candle
So that through my efforts
I may try to dispel the darkness of evil
And illumine the whole world."

Excise Taxes on Public Utility Services

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. McINTIRE. Mr. Speaker, I submit to the RECORD a resolution of the Public Utilities Commission of the State of Maine, as related to excise taxes on public utility services.

Whereas during World War II the Congress of the United States levied or greatly increased the Federal excise taxes on communication services as a temporary, wartime emergency measure and several years ago the emergency ended and communication services are no longer considered a luxury; and

Whereas Congress has afforded substantial relief from discriminatory tax burdens on public utility services, and of the four essential utilities—heat, power, water, and communications—only communication services are subject to Federal excise taxation; and

Whereas the Federal excise taxes on communication services are discriminatory, have outlived their justification, and should be repealed; and

Whereas there is now pending in the Congress of the United States certain bills which would effect the repeal of these taxes, which should no longer be continued in effect: Now, therefore, be it

Resolved, That the Maine Public Utilities Commission does respectfully urge and request the Congress of the United States to provide a measure of needed tax relief to the communication consumers of this country by repealing these "wartime" excise taxes; and be it further

Resolved, That a copy of this resolution expressing the views of this commission, be sent to each U.S. Senator and Representative from the State of Maine and to the chairman of the Ways and Means Committee of the U.S. House of Representatives and to the chairman of the Finance Committee of the U.S. Senate.

Dated at Augusta, Maine, this 14th day of April, A.D. 1959.

Cal-Sag Water Transportation Reaches Maturity

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an address delivered by Maj. Gen. Louis J. Rumaggi, division engineer, U.S. Army Engineer Division, before the East Side Chamber of Commerce in Chicago, Ill., on March 30, 1959.

The address follows:

CAL-SAG WATER TRANSPORTATION REACHES MATURITY

(Remarks by Maj. Gen. Louis J. Rumaggi, Division Engineer, U.S. Army Engineer Division, North Central, before East Side Chamber of Commerce, Chicago, Ill., Mar. 30, 1959)

Gentlemen, thank you for having me here tonight. I appreciate the nice introduction and am indeed delighted to be with you. It is a great pleasure, since assembled here are many friends and associates with whom I've worked so intimately in the past 2 years. To them I wish to address my remarks. To those whose hearts and aspirations dwell on this fabulous region, it is a privilege to retell the story of this waterway's improvement, its present status, its future and the effects of these improvements on the welfare of the region.

Here is Judge Butler, the father of the port district, John Killian, Jim Haines and Donald O'Toole of the Calumet region congress, and of course you many, many others of the east side chamber, all strong boosters for this area of industry, who join with me as we are about to realize the culmination of long-sought goals. You have guided this endeavor for a long time and it is now proper that we look up ahead at the prospects of the immediate future.

Also here with me tonight are many who have been my coworkers in the corps. There is Col. John B. W. Corey, your district engineer at Chicago under whose immediate supervision your local projects are being constructed and who so ably pursued his responsibilities in connection with this program.

This is a significant year for the Great Lakes in general, and for this area in particular. With the opening of the St. Lawrence Seaway, with the almost feverish activities of business, industry and Government in behalf of Great Lakes navigation, we are witnessing an unprecedented interest in the waterways serving the American heartland.

In developing this basic natural resource we depend on the initiative and leadership of organizations such as yours. Certainly this need for local leadership in providing for our country's progress is appropriate in a democracy. However, this reliance on farsightedness at the local community level carries with it great responsibilities. It requires an enlightened citizenry and an enlightened leadership with a long-range outlook on the future of their people, their lands, their cities and their industries.

It requires, at the local level, vision and devotion to a frequently thankless task of looking after interests of future generations and, incidentally, the future welfare of our Nation.

The local leadership and congressional support in furthering the growth of this region are certainly reflected in the great works which make this area a center of transportation, industry and business, second to none.

With large-scale St. Lawrence Seaway-Great Lakes navigation projects underway, let us first consider the Calumet-Sag region, South Chicago's vital industrial complex.

Accessible to the Great Lakes system via Lake Michigan and the Mississippi-Ohio Rivers systems via the Calumet-Sag Canal, this is an area situated on the crossroads of our Nation's finest transportation facilities.

Here converge waterways, railroads, highways, and air routes to make this truly a foremost transportation and industrial complex.

These great advantages have resulted in the almost fabulous growth of this area.

Now the area is reaching maturity.

The combined impact of the new St. Lawrence Seaway-Great Lakes navigation system and the widening of the Calumet-Sag Canal to accommodate modern inland barge transportation make it self-evident that you have outgrown the early years of pioneering and are now preparing for your most productive accomplishments.

The need for an improved Cal-Sag navigation project was long recognized by local leaders and Congress, and in July 1946 a congressional act finally authorized this important undertaking.

International crisis delayed initiation of construction until late in 1955, but since that time considerable progress has been made.

The first westerly 6 miles of channel widening are virtually complete to its authorized width of 225 feet and 9-foot depth in comparison with the old width of 60 feet provided when the channel was built in 1922. Another section about 4 miles long is approximately 80 percent complete at this time. An additional portion of the work will be placed under contract this year.

That will bring the project to the edge of the heavily congested metropolitan area of Blue Island—a situation which poses many additional problems.

Major among the problems, of course, is the complex of rail and highway bridges crossing the channel in the vicinity of Blue Island. These crossings must be altered to conform to the increased vertical and horizontal clearance requirements of the new improved channel.

I refer particularly in this connection to the Western Avenue Bridge, the Rock Island, Grand Trunk & Western, and the Baltimore & Ohio Railroad bridges, as well as the 139th Street overpass and the Vermont Street and Francisco Avenue underpass, all of which

present major engineering problems. The reconstruction of these inevitably will impose considerable inconvenience to residents and business firms of the area while the work is in progress. However, with the continued cooperation of local interests, the authorities of Cook County and the State of Illinois, I am hopeful that these problems will be worked out to the satisfaction of all concerned. Certainly, transportation into, and through, this area will be greatly facilitated, particularly at 139th Street, Vermont Street, and Francisco Avenue, once grade crossings are eliminated.

While we are on the subject of bridges, it can be reported that the Gulf, Mobile & Ohio Railroad bridge near Lemont is complete with the exception of approaches, work on which will start this spring. Also completed is the new Torrence Avenue overpass. The Michigan Central and Wabash Railroad bridges have been under construction for some time. The Michigan Central bridge is scheduled for completion during 1959, and the Wabash is scheduled to be completed in 1961.

I can also report that the Corps of Engineers is arranging with the bridge owners to start design work on 17 highway bridges which must be either replaced or altered between Sag Junction and 130th Street. If we can adhere to our present construction schedule, all of these bridges will be completed and in use within about 3 years.

Last June 13 we started an additional phase of the Calumet-Sag navigation project with the award of a contract for construction of the Thomas J. O'Brien lock and dam in the Calumet River. This work has been proceeding ahead of schedule and is well advanced at this date.

This structure is aptly named in honor of Congressman O'Brien, dean of the Illinois congressional delegation, who has so effectively supported the needs of this region.

The new lock, upon its completion in 1960, will replace the existing and inadequate Blue Island lock. Measuring 110 feet in width and 1,000 feet in length, it will be fully in keeping with the improved Cal-Sag Channel. Like the channel itself, it will permit the ready movement of modern-sized barge tows and towboat without the necessity of rearranging the barges before entering the lock chamber as at present.

It was also last June that the corps awarded a contract for the widening of Acme Bend, a horseshoe bend in the Little Calumet River. Unfortunately, it was impossible to eliminate the horseshoe entirely because of the heavy industrialization of the area. It was possible, however, to increase the channel width sufficiently to permit the ready movement of barge traffic.

This job will be accomplished before the year is over—a fact which will undoubtedly bring sighs of relief to harried towboat captains who have had the responsibility of negotiating Acme Bend's twists and turns in the past. Accomplishment of this objective alone will mean the excavation and removal of some 1,200,000 cubic yards of material from the channel.

In connection with this reach of the river there is also now in the planning stage the relocation of the Illinois Central Railroad bridge.

With the Cal-Sag Channel assuming the role as a major artery linking traffic of the Illinois Waterway with lake- and ocean-borne traffic at Chicago, it is interesting to recall that initially the channel was never intended for navigation at all. Rather, its original purpose was that of a sanitary canal designed to prevent pollution of Lake Michigan by reversing the flow of the Calumet River.

However, despite the limitation imposed by its narrow width and the maze of restrictive bridges overhead, its increasing use for commercial barge navigation has been little short of amazing. This traffic, during 1958 alone, amounted to approximately 6 million tons in receipts, shipments, and through traffic—a figure which is dwarfed by a predicted 12 million tons or more yearly after completion of the present project.

A large volume of the commerce through the Cal-Sag Channel will terminate, as it does now, along the channel and at the many terminals serving the huge industrial complex in the South Chicago, Indiana Harbor, and Gary regions. In addition, the channel will carry a large volume of traffic to and from the Great Lakes. Upon completion of the St. Lawrence Seaway this spring, the through traffic to and from the Great Lakes will be further extended through the St. Lawrence River and to foreign ports via the Atlantic Ocean.

Of prime importance in this regard has been the development of Lake Calumet Harbor by the Chicago Regional Port District. This facility already has assumed a significant role as a transshipment center serving not only waterway navigation and lake carriers but rail and truck transportation as well.

We are engaged at present only on part 1 of the Cal-Sag navigation project. From Sag Junction to Lake Calumet. There remains, as funds are made available, the widening and deepening of the Grand Calumet River, the replacement or alteration of numerous rail and highway bridges, and the widening to 225 feet of the Chicago Sanitary and Ship Canal from Sag Junction to Lockport. Still another important milepost in the project will be achieved with the construction of a lock and controlling works in the Grand Calumet River just west of its junction with the Indiana Harbor Canal.

On the basis of 1958 price and wage levels, it is estimated that the Cal-Sag navigation project, in its entirety, will represent a total investment of $202 million. Of this amount, the Federal Government will assume an expenditure of $147 million.

The question as to whether or not this investment is worthwhile has been answered in the form of conservative estimates. These estimates indicate that, for every dollar expended on construction, operation and maintenance cost, the Cal-Sag navigation project will yield approximately $2.20 in savings and benefits.

Any discussion of the Cal-Sag navigation project must take into consideration the Illinois Waterway, of which it is a vital and integral part.

Stretching 327 miles from its junction with the Mississippi River at Grafton to Lake Michigan at Chicago, it provides a series of seven locks and dams which progressively elevate upbound traffic to the level of the lake or lower downbound navigation to that of the Mississippi. The seven locks are La Grange, Peoria, Starved Rock, Marseilles, Dresden Island, Brandon Road, and Lockport.

Together with necessary channel dredging, the seven locks and dams have been the instrument of canalizing the waterway and of creating a series of pools. The resultant benefits to commercial navigation have been significant. Since the improved Illinois Waterway was opened for use by the Corps of Engineers in 1935, commercial navigation carried over it has increased steadily and rapidly. It has increased from 1,700,000 tons in 1935—its first year of operation—to 23 million tons in 1958.

What commodities comprise this teeming water commerce? Where is its origin and destination? It includes many thousands of tons of coal, loaded on barges at Havana, Ill., and headed for Chicago, where much of it is transformed into electric power. It includes petroleum products from Mississippi River ports destined for Peoria, Chicago, and intermediate terminals. Grain and sand and gravel, iron and steel products and an increasingly wide range of manufactured products make up much of the balance. Increasingly in recent years, varied products from points as remote as South America, Puerto Rico, Florida, and Texas have moved along the waterway in transit to northern destinations.

I must emphasize here that all of the credit for the development of the Illinois Waterway as a major artery of commerce does not belong to the Corps of Engineers. Initially the State of Illinois had appropriated $20 million for the project and had accomplished much of the construction of locks at Starved Rock, Marseilles, Dresden Island, Brandon Road, and Lockport. The State met a further requirement in the construction or alteration of five railroad bridges spanning the waterway. In accordance with the Rivers and Harbors Act of 1930, the State later transferred to the Federal Government its partially completed project on the Illinois and Des Plaines Rivers between Utica and Lockport.

Lasting credit belongs to local leaders who had the foresight and provided lands, rights-of-way and other local cooperation required under the various river and harbor acts authorizing the project. Indeed, it took more than wishful thinking to get the job done.

As for future growth of the waterway, I need only cite from House document 677 of the 79th Congress. This report placed at 27 million tons the ultimate annual potential of traffic on the waterway between Brandon road and Sag junction within a period of 25 or 30 years following completion of the Cal-Sag navigation project. Likewise, prospective commerce on the waterway below Lockport is conservatively estimated at 32,700,000 tons by the year 1970 and—beyond that—at 55 million tons by the year 2000.

The facilities of the Illinois Waterway, the capacity of its seven locks and dams, are of course not commensurate with even a fraction of such an increase in commercial navigation.

The size of the present locks, 110 feet in width and 600 feet in length, is the principal factor which limits the size of tows on the waterway, particularly below Lockport. These restrictive dimensions result in congestion at the various locks as barge tows await their turn for passage. In order to get through at all, many tows must be rearranged and "jack-knifed" prior to entering the lock chambers, entailing time consuming delays.

To investigate this problem, Congress directed a study to be made by the corps of engineers, and as a result, a system of duplicate locks was recommended. Each additional lock would be 1,200 feet long and 110 feet wide. The system of duplicate locks would be constructed at each of the 7 locks, not immediately, but at such time as the traffic at each existing lock reaches its practical capacity.

This study is now subject to congressional action.

I now wish to describe briefly the present activities of the corps of engineers in the interest of deep-draft navigation on the Great Lakes.

There are 3 major items of work which must be accomplished to provide needed 27-foot controlling depth in the Great Lakes-St. Lawrence navigation system to accommodate modern shipping. There is the St. Lawrence Seaway which will provide 27-foot depth from Montreal to Lake Erie; the Great Lakes connecting channels which will provide 27-foot controlling depth from Lake Erie to the upper 3 lakes—Huron, Michigan, and Superior; and the deepening of Great Lakes Harbors required to accommodate the deep-draft vessel traffic anticipated to use the improved connecting channels and the St. Lawrence Seaway.

The St. Lawrence Seaway, the first of the three major items of work, will be open for deep-draft traffic by the beginning of the navigation season. In this historic undertaking, the Corps of Engineers served as design and construction agents for the St. Lawrence Seaway Development Corporation. The seaway will provide a 27-foot channel from the ocean through the St. Lawrence River, Lake Ontario, and the Welland Canal into Lake Erie, replacing the old channel with a limiting depth of 14 feet in the St. Lawrence River above Montreal and of 25 feet in the Welland Canal between Lakes Erie and Ontario.

From Lake Erie to the upper three lakes, the controlling depths in the connecting channels are now 21 feet in upbound and 25 feet in downbound channels. These are being deepened to provide controlling depths of 27 feet for both upbound and downbound traffic. The present estimated cost of the connecting channels deepening is about $146 million, of which $45 million have been appropriated to date.

There are two upbound channels with controlling depths of 21 feet—one is the Amherstburg Channel in the Detroit River and the other is the Middle Neebish Channel in the St. Marys River. The first step in the construction program is to improve the westerly 300-foot width of these 21-foot upbound channels to provide a controlling depth of 27 feet. These channels will be used for deep-draft downbound traffic when the parallel downbound channels are being deepened since they must be closed to traffic while the work is underway. Deepening of the two upbound channels commenced in 1957 and is planned for completion in 1960.

Contracts have also been let for deepening the approach channel to the head of the St. Clair River at the foot of Lake Huron, for deepening the channel through Lake Nicolet and the Lake Nicolet anchorage area in the St. Marys River. Present schedules contemplate that 27-foot depths will be available in all of the connecting channels above Lake Erie by the middle of the summer of 1963. This will provide the second major item of work for the 27-foot Great Lakes system.

The third major item in providing a 27-foot depth navigation system on the Great Lakes is the deepening of harbors and probably some other improvements required to accommodate the increasing number of large deep-draft vessels.

In response to congressional directives, we are now engaged in a comprehensive study to determine the advisability of further improvements at harbors on the Great Lakes in the interest of present and prospective deep-draft commerce with due regard to the scheduled time of completion of the St. Lawrence Seaway and the deepening of the Great Lakes connecting channels. In these studies the improvements proposed at any individual locality must be justified on their respective merits. Our studies to determine improvements which can be justified at Great Lakes harbors involve three major elements—namely, traffic analysis, engineering studies, and an economic analysis.

The first step is to do the necessary research to form a basis for estimating the reasonably prospective waterborne commerce to and from a harbor. Next, an estimate must be made of the character of the vessel fleet which will carry this commerce. After preparation of these estimates of prospective commerce, engineering studies are undertaken to determine whether the considered improvements can be justified on the basis of savings in transportation costs resulting from such improvements. Each harbor situation is an individual problem and must be given special study to assure that the estimated savings will actually be realized because of the reduced cost of transportation as compared to the cost by any known present or prospective alternative means. Improvements are not recommended for authorization unless there is a clear showing that the annual benefits exceed the annual costs of the proposed improvements.

These Great Lakes harbors studies are being processed so as to accomplish the most productive work in the shortest possible time. In many cases interim survey reports are being submitted to consider improvements required to serve navigation involved in the transportation of bulk commodities of major importance, such as iron ore, stone, coal, and grain. This is being done since economic analysis for improvements serving the transportation of such bulk commodities can be completed in a much shorter time than traffic analysis for general cargo.

Interim reports have already been submitted on 15 harbors as part of our Great Lakes harbors study.

The importance of prospective general cargo or miscellaneous bulk cargo traffic through the St. Lawrence Seaway is also fully recognized. However, the comprehensive studies now underway to develop estimates of such commerce are complex and require more time to complete than those for the bulk commodities. These traffic studies have now advanced to the point that we will soon be able to consider general cargo overseas traffic in our reports. We hope, if sufficient funds are made available, to complete all of our Great Lakes harbors studies in the near future.

Gentlemen, as we review past accomplishments and current efforts in the interest of Cal-Sag and Great Lakes navigation, we must agree that waterborne transportation is not a thing of the past, indeed it is only now reaching maturity.

As we progress in the further development of our lakes and rivers in the service of man and his economy, we witness a new era for mid-America. In these accomplishments, the Federal Congress and the local interests have joined with the Army and the Corps of Engineers in the closest cooperation and mutual support.

As we pass the halfway mark of the 20th century, we face a future of unequaled opportunities limited only by our own imaginations and initiative. And as I complete my service, I wish you well in your efforts to build a greater Cal-Sag region and a greater Chicago.

The horizon of opportunity is broad, clear, and unclouded. There is room for grand endeavor here in Chicago. If I were a young man once again, I would equip myself to take a role in Chicago's bright future. I urge you to continue in your drive to keep Chicago in the forefront of American progress.

Golden Jubilee of the Greater Philadelphia Magazine

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. BARRETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted in honor of the golden jubilee of the Greater Philadelphia magazine, 1831 Chestnut Street, Philadelphia, Pa.:

Whereas the stimulation of industry and commerce has and always shall be a privileged function in these United States; and

Whereas local efforts to stimulate industry and commerce have and always shall be an important part of the national effort; and

Whereas the contributions in the Philadelphia area toward prosperity and employment are, in fact, contributions toward prosperity and employment in all parts of the United States; and

Whereas over the past half century, the Greater Philadelphia magazine has made significant contribution to the growth and vigor of industry and commerce in Philadelphia and, indirectly, throughout the Nation as a whole: Now, therefore, on the occasion of the golden jubilee of the Greater Philadelphia magazine, it is

Resolved, That the Congress of the United States of America extend greetings and wishes for continued long and useful life to the Greater Philadelphia magazine.

Address of the Honorable Carmine G. De Sapio at the Annual Dinner of the New York County Democratic Committee on April 16, 1959

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mrs. KELLY. Mr. Speaker, as the national committeewoman of the State of New York, I would like to bring to your attention the remarks of the Honorable Carmine G. De Sapio, the national committeeman of the Democratic Party of the State of New York. He made his address at the annual dinner of the New York County Democratic Committee, Thursday evening, April 16 ,1959, at the Hotel Commodore in New York. In this address he took issue with those who were critical of his leadership. In reading his address, I hope all will bear in mind that it was under the leadership of Mr. De Sapio that the Honorable W. Averell Harriman was elected Governor of the State of New York, and that the Honorable Robert F. Wagner was elected mayor of the city of New York.

The address follows:

My good friends, since the last time we met together, the people of our communities—as well as our Democratic Party here in New York—have undergone a series of very instructive, if not altogether fortunate, experiences.

To the younger people among us, some of these experiences have been rather bewildering. To those of us who are in our middle years, they have represented some striking parallels with the past.

These same experiences have demonstrated to many of the oldtimers to whom I have talked, that although history may not actually repeat itself, it does provide numerous examples of the people's ability to recognize that politics offers an astonishingly accurate means of predicting certain patterns of behavior.

To others, who are not here with us this evening, but who nevertheless have sought to leave certain impressions upon us, these experiences have proved to be too challenging. And the members of this latter group, to the regret of all of us who have had cause to admire and to respect them in the past, have taken refuge in bitterness, in acrimony, and in political secession.

And it is for us, for all of us who are present here tonight, not really to judge them, but to try to understand them, to examine the facts of their defection from our ranks, to evaluate their reasons for seeking to discrupt the Democratic Party, and to decide if it is possible—if it is desirable—for us to move forward without them or whether we must now seek refuge in conciliation, in compromise, or in capitulation.

This is the choice that they have insisted we must make. And, certainly, in deference to their past service and to their past achievements, we cannot—nor should we wish to—try to avoid making an honest, straightforward reply to their demands.

The issue upon which this controversy turns is liberalism. And in order to resolve it, we must first define liberalism. We must clarify in our minds and within the context of our philosophy whether liberalism is a useful and proper political phenomenon. And we must arrive at a thorough understanding of what is entailed by the espousal and practice of liberalism.

For only when we have arrived at a valid concept of what constitutes a liberal—only then, my friends, can we bring the wrangling and harshness to an end. Only then can we move ahead in unity and in strength. Only then can we give our full attention to the problems and tasks which face our Democratic Party in New York and throughout the Nation.

The time to resolve all of these questions is now.

The dictionaries define "liberal" as follows: "Free to give or bestow; munificent; bountiful; generous; not selfish, narrow, or bigoted; embracing interests other than one's own."

And a liberal individual is further characterized as someone who advocates "greater freedom of thought or action."

It should be obvious from all of this that to be a liberal—or, more accurately, to give the impression of being a liberal—is a very desirable and fashionable political goal.

And, indeed, in recent years, politicians and office seekers of all partisan denominations have made determined efforts to characterize themselves—accurately or otherwise—as liberals.

One of the few nonliberals who was sufficiently honest to admit that he was not a liberal—former Senator William Knowland, of California—learned very dramatically last year that his political theories are not very much in demand in the Unite States these days.

To his credit, if not to the advancement of his political career, Senator Knowland refused—unlike many of his colleagues in the Republican Party and unlike some who persist in identifying themselves as Democrats—he refused to compromise his principles by claiming to be what he knew he was not.

Now, of course, it is possible for anyone who possesses a certain amount of wit and intelligence to rationalize a claim to liberalism.

This was done, in 1952, and again in 1956, for President Eisenhower—by those who conducted his campaigns.

It was done again last year—in a strikingly evocative fashion—by Governor Rockefeller and his supporters.

It is being done today—now—by a splinter group within our own party.

In the case of Mr. Eisenhower, the presidential candidate was characterized by his friends, by his political mentors, and by himself, as a generous and outgoing individual.

Certainly, they declared, this was the hallmark of a liberal.

And it has taken the American people more than 6 long years—years of administrative inaction, retraction, and petrifaction—to reach the conclusion that Eisenhower practices a very special kind of liberalim—phony liberalism—and that his brand of liberalism is indeed based upon generosity, upon a lavish grant of power and privilege to vested industrial interests.

The people, in their observation of this new and callous concept of the Presidency, have learned a lesson that they will not soon forget. This lesson reduces itself to the inevitable logic that the Republican Party—with its false liberalism—has been and is consistently barren of ideas, void of ideals, and bereft of leadership.

In the case of Mr. Rockefeller, the gubernatorial candidate was characterized by his friends, by his political mentors, and by himself, as one who was munificent and bountiful, as one who would maintain at all costs his freedom to give and to bestow.

Certainly, they chanted, this was the hallmark of a liberal.

But the people of New York learned in 6 weeks—to their pain and deep chagrin—that Rockefeller practices precisely the same kind of liberalism as does Eisenhower—a phony liberalism—that his brand of liberalism is indeed based upon bounty and munificence, upon an extravagant subservience to the forces of industrial and financial bigness whose tenacity, voracity, and rapacity have proven to be his principal sources of political inspiration.

The people of our own city, certainly, have found that Rockefeller's freedom to give and bestow is entirely dependent upon the sufferance of upstate Republican legislators who abhor—who simultaneously fear and despise—the very thought of equal citizenship for the 8 million residents of our town.

And the capacity of the Republican legislators for bounty and munificence—much less for political morality—never has been more conspicuously nonexistent than during the first 4 months of 1959.

In the case of the vociferous handful of dissidents within our own party, its members are characterized by their friends, by their supporters, and by themselves as people who advocate greater freedom of thought and action—as people who are neither narrow, nor bigoted, nor selfish.

Surely, they proclaim, these are the hallmarks of liberalism.

But, my friends, it seems to have taken the vast majority of loyal Democrats no time at all to realize that these people, too, share with other self-ordained crusaders a peculiar kind of liberalism, that they, too, practice a phony liberalism, that when they speak of greater freedom of thought and action, they mean freedom to proclaim themselves leaders and candidates—as the case may be—without the mandate of voter support and freedom to act, not merely with a healthy degree of independence, but entirely apart from the great body of our Democratic Party.

Theirs is a concept of liberalism which is based principally upon friction, constriction, and dereliction.

My good friends, by all of these standards, political liberalism as you and I understand it, as our fellow partisans practice it, and as our Democratic Party is pledged to uphold its meaning and traditions, true liberalism has indeed fallen upon hard times.

For those who shout the loudest—those who clamor—about their own liberalism have abandoned the simple definition which provides the real key to the kind of liberalism to which we have dedicated our political creed and which the vast majority of our fellow citizens mean when they speak of liberalism.

The ability—coupled with the passionate determination—to embrace interests other than one's own.

My friends, let us ask the pseudo-liberals, the semi-liberals, the quasi-liberals—let us ask all of the part-time liberals—a few pertinent questions. And let the people judge their answers.

Let us ask Dwight Eisenhower, for example, if it is in keeping with a liberal political philosophy to pursue a national economic policy which enriches your friends in industry and impoverishes countless millions of working people through spiralling living costs, widespread unemployment and the repression of Federal aid in such vital areas of Government service as public health, housing and education.

Ladies and gentlemen—you who fill this room tonight—perhaps you would like to answer the question.

Is that your idea of liberalism?

Let us ask Nelson Rockefeller if it is in keeping with a liberal political philosophy to turn your back on the people who believed your promises, who applauded your pledge of interest in their welfare and who elected you on the basis of your apparent concern for their welfare.

Is it in keeping with political liberalism to break faith with 8 million of your fellow New Yorkers who trusted your declaration of political independence, to levy higher State taxes, to cripple our city's tax program and, at the same time, ruthlessly to slash State aid grants which you promised with such solemn and pious pronouncements only a few months ago?

Ladies and gentlemen—you who sustain and honor a great tradition of political realism—is that your idea of liberalism?

My friends, let us not attempt to hide the fact that there are some people within our own party whose concept of liberalism has suffered serious attrition in recent months.

Let us ask them if it is in keeping with a liberal political philosophy recklessly to condemn the will of the overwhelming majority for the sake of satisfying a sense of prejudice, pique, pride or power. Doesn't their personal ambition threaten the very structure of our party and aren't their actions really designed to tear down our political house?

Is it indicative of their self-ordained liberalism that they have failed to utter a single word in support of Mayor Wagner's and our party's fight for fiscal justice? Or is their silence on the most critical economic issue to face the people of our city in many decades * * * is this silence indicative of their personal approval of the Rockefeller tax and budget programs?

Ladies and gentlemen of the New York County Democratic Committee, perhaps you, again, would like to answer these questions. Is this the kind of behavior that you would interpret as liberalism?

My friends, many great liberal Democrats are present here with us this evening.

Our courageous mayor, Robert F. Wagner, who has carried the fight for public welfare to the people of New York and who has shown them just how shameful and deceitful is the fraud which the Republican-controlled State legislature and its captive Governor are trying to perpetrate in the name of liberalism.

Our brilliant State comptroller, Arthur Levitt, who proudly and vigorously bears the responsibility for preserving some semblance of sanity against the creeping financial crapulence of the Rockefeller administration.

And our very great Governor, Averell Harriman, who lost an election because he refused to betray the proud tradition of true liberalism which is his political heritage, because he refused to match the demagogy, the fakery, and the cynicism of his opponent.

In the past, I have talked often and earnestly—sometimes when it was politically unfashionable to do so—about the need for eliminating hypocrisy from politics and government.

And I submit to you now that never has that need been greater than it is today when anyone with ample lung power and

abundant campaign funds can proclaim himself to be a liberal and stand a fair chance of parlaying that claim into an election victory.

Let us pledge—here and now, tonight—in preparation for the momentous, rapidly approaching national elections, that we will work to restore this much-abused word "liberalism" to a place of honor in the lexicon of politics.

Let us place our concept of liberalism before the people. Let us—diligently and with all of the eloquence that we can summon—expose political fraud and hypocrisy wherever we may find it.

Let us not be afraid to repudiate—decisively and with determination—anyone in our own ranks who may be guilty of false liberalism. Let us use our own innovation of the direct election of district leaders by the people—an innovation which we have pioneered—let us use this technique of Democratic liberalism to accomplish our objectives.

For only by an honest and searching examination of our own political consciences can we achieve maximum unity and strength.

And only through our dedication to a political philosophy which accurately reflects the genuine liberalism of the people whom we represent can we claim, can we earn—and can we win—the exciting and challenging political battles which loom before us.

Thank you very much.

Where Protection Isn't

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. McCULLOCH. Mr. Speaker, the Washington Daily News of April 22, 1959, has performed a notable public service in presenting an editorial entitled "Where Protection Isn't."

In view of the decision in question, it clearly appears that if the public is to be protected against organized abuse the Congress must act.

It seems to be increasingly necessary to pass another law to enjoy simple justice.

The editorial follows:

WHERE PROTECTION ISN'T

In a San Diego case just decided, the Supreme Court has widened the gap in the law which leaves the public unprotected against organized abuse.

Several unions pressured an employer to sign a union-shop contract. The employer declined on the ground that his employees were not interested and there had been no election to delegate one of the unions as bargaining agent. The unions then threw a picket line around the employer's place and put the heat on his customers and suppliers to boycott him.

The California courts ordered the picketing stopped, until the employees had selected a bargaining agent, and awarded $1,000 in damages.

This action the Supreme Court has reversed. The Court held the State had no power to act because the abuses of which the unions were accused are forbidden by the Taft-Hartley law. Only the Federal Government can enforce that law.

But the Government, through the National Labor Relations Board, had refused to take jurisdiction. This, said the Court, didn't make any difference.

Now, we'll just leave it to the Supreme Court to say what the law is. But, as a moral proposition, doesn't this leave a lot of people in a devil of a fix? Regardless of the fine words in oodles of laws, Taft-Hartley included, a man can be harassed, pushed around, badgered, and menaced out of his business. And nobody to come to his rescue.

The victim will be the small businessman. Because the Labor Board measures its jurisdiction by the size of the business and the degree it is involved in interstate commerce. The little fellow the politicians always are bleating about is left out in the cold—he's too little to command the august attention of the Labor Board and the Court says his own State government must keep hands off.

Sometimes we think there is too much law and too little justice.

National Coal Policy Conference

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mrs. KEE. Mr. Speaker, on this coming Monday evening, April 27, the newly formed and extremely important National Coal Policy Conference will have a dinner at the Statler-Hilton Hotel and all Members of the House of Representatives have been invited to attend. The theme of the meeting will be "Coal Powers America's Future" and one of its aims will be the adoption by the Federal Government of a national fuels policy based on a realistic approach to the use of basic fuels in America.

The National Coal Policy Conference represents coal operators, coal miners, coal carrying railroads, coal burning electric utilities and manufacturers of coal mining equipment. Thus, it is clear that the conference is well qualified to speak for a united coal industry.

Mr. Speaker, the reason I have requested permission to insert this plea in the CONGRESSIONAL RECORD has been to respectively urge every Member of the House to make a special effort to attend this informative dinner. The speeches will be short and directly to the point. The Members who do not represent coal mining congressional districts and their constituents have a stake in the coal industry. It has been truly said, "The coal industry contributes—in an important way—to the daily living of every American ever day."

Coal is a basic American industry. It provides employment for hundreds of thousands of people. Coal is our basic fuel. Without coal, our Nation could not long remain free.

There exists a need for the Federal Government to take a look at the various basic fuels and establish a policy that will relate them to each other and to the national security. Our Nation has a gas policy, an oil policy and an atomic policy. Only coal of the basic fuels operates without a national policy as a guide.

It is my heartfelt hope that every Member of the House who can possibly do so will avail themselves of this opportunity to meet the men who head this great and vital industry. I can assure you with full confidence that you will enjoy an informative and rewarding experience.

New All-Time Record for Pacific Northwest Plywood Shipments Forecast

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. PORTER. Mr. Speaker, last year the walls of this House echoed with debate as to whether or not the importation of Japanese hardwood plywood was ruining the Northwest's softwood plywood market. My position now, as then, is that this contention is incorrect.

To further substantiate the facts I should like at this time to place in the RECORD an article which appeared in the Portland (Oreg.) Journal, for March 14, 1959. It concerns the prediction by the Pacific Northwest advisory board that a new all-time record for Pacific Northwest plywood shipments will be reached in the months of April, May, and June.

The article follows:

RECORD PLYWOOD CARLOADINGS, BIG INCREASE FOR ALL FOREST PRODUCTS, FORECAST BY SHIPPERS

A new alltime record for Pacific Northwest plywood shipments in the next 3 months, along with a major increase of 10,580 carloads for all types of forest products, was forecast for this region here today by the Pacific Northwest (carloadings) Advisory Board.

The expected 18.3 percent boost over 1958 in plywood shipments would jump the second quarter of 1959 to 30,000 carloads, the first time plywood has reached that peak.

For all commodities, the board forecast 235,729 cars, up 4.2 percent from the second quarter a year ago with a gain of 9,560 carloads.

Only pessimistic factor generally is an expected freight car shortage that could cut into shipments of basic Northwest industries.

In analyzing the forecast, M. A. Kasen, of Portland, executive secretary of the advisory board, pointed out it is the fourth consecutive quarter of expected increases.

Forecasting by board members, who represent all basic industries, has been accurate within a fraction of 1 percent in the past.

With the pace of heavy construction continuing, gravel, sand, and stone shipments are expected to climb 11.2 percent and brick and clay products 12.7 percent.

Other major increases include sheep, hogs, and goats up 13 percent and scrap iron up 14.2 percent.

Some declines also are expected. Chief among them will be fresh fruits other than citrus and apples, off 14, potatoes off 11.4, coal and coke off 48.1, logs off 12, and cement off 19.5 percent.

The freight car shortage, current big worry of major Northwest industries, will be confined mainly to special types such as wide door cars needed by plywood and lumber.

"and they are short everywhere," admitted Ralph E. Clark, chairman of the Association of American Railroad's car service division, Washington, D.C.

However, bad order cars (in need of repair) have climbed from 6.5 percent of the total of all cars last year to a current 8.9 percent, he admitted.

Most of the increase in unrepaired cars has been on Eastern roads which had a larger drop in business volume last year, he explained, while bad order cars on Western roads are about normal.

Repair programs have been stepped up substantially to meet the situation, he told the group.

A big "if" in the car supply situation is the amount of transit lumber shipping this summer, he pointed out, declaring that warehousing in freight cars through such delayed shipments automatically cuts the number of available cars.

J. G. Manning, of West Coast Lumbermen's Association, Portland, was elected 1959 president, with M. A. Kasen, Centennial Mills, Portland, as new vice president, and Steve Kipper, Can-Go Shippers Association, Seattle, replacing Kasen as executive secretary.

Those elected from this area on the executive committee are:

Portland: K. C. Batchelder, WCLA; Ralph Benson, Georgia-Pacific (retired); W. C. Cole, Georgia-Pacific; Richard Crabtree, Kerr Grain; C. A. Nelson, Herbert Templeton Lumber; C. R. Tulley, NW Canners; J. G. Wilson, Simpson Logging, and R. M. Wirt, North Pacific Lumber.

Longview: A. M. Cloninger, Longiew Fiber, and B. H. Wills, International Paper.

Salem: N. H. Hickok, Western Paper Converting.

Vancouver: L. D. Jones, Washington Canners.

Eugene: N. E. Ottosen, Associated Ply, and R. B. Taylor, Timberland Lumber.

Hood River: R. G. Scearce, Apple Growers.

Must We Go Backward in Education

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. LEVERING. Mr. Speaker, one of the early Governors of a neighboring State said in 1671:

I thank God there are no free schools or printing presses * * * for learning has brought disobedience and heresy.

We, today, might say: "We thank God that his biased and prejudiced views did not prevail, for without the blessings of education, it is doubtful if our civilization would have progressed much beyond the stage of savagery."

Unfortunately, Mr. Speaker, the tendency of many individuals who have been fortunate enough to learn to read and write, although a lot of them never learn to think, is to say that because they have been this lucky, they owe nothing toward helping others to get an education. They are penny wise and pound foolish, for we know that if people are not educated, they cannot contribute as much to the society as they might otherwise contribute, and the whole country suffers.

It is hard to believe, but right today there are individuals—many of them—who are against the spread of new knowledge. They will not come right out and say it, but they vote against every practical method to cause new knowledge to spread. Therefore, at heart, they really are agaisnt having other people learn new facts and facets of what man has developed, although they might deny this in conversation.

I am heartened, Mr. Speaker, that editors in my own congressional district of Ohio are thinking on these things. Under leave granted me, I am inserting in the CONGRESSIONAL RECORD an editorial by Don Beattie from the April 18, 1959, issue of the Ashland (Ohio) Times-Gazette, in my congressional district. This editorial is entitled "Well, We've Taken First Step Backward in Educating Our Children." This editorial also points up the growing needs of additional schoolroom facilities which characterize many areas of our expanding Nation. I commend it to my colleagues.

The editorial is as follows:

WELL, WE'VE TAKEN FIRST STEP BACKWARD IN EDUCATING OUR CHILDREN

Ashland moved a step or two backward this week.

Yes; that's exactly what it amounts to.

Since 1950 Ashland has been offering kindergarten education to its youngsters. Most communities in our State do and have done so for years and years.

Next year Ashland will no longer endeavor to train its youngest children.

The process of our educational progress will be slowed that much.

Next year, too, the program offered to Ashland's seventh and eighth grade pupils will be curtailed. Training in industrial arts, home economics, and crafts will be either eliminated or curtailed.

And three classes of eighth grade students, usually housed at the Osborn school, will be transported to and from Montgomery school—some 3½ miles away—throughout the school year so that ample classroom space can be found for them. That is expensive and time consuming.

The following year, when even more crowded conditions are certain, Ashland will take another—even more drastic—step backward in its educational processes.

In 1960–61 the high school and probably grades seven and eight may have to go on a half-day schedule.

This is a horrible situation, yet it is true here.

The city board of education took the first official steps in this direction Thursday evening.

It is a sad state of affairs in our community.

Yet it is with us and the situation promises to become far more severe before we can have it corrected.

We failed to approve a bond issue to get the correction underway last November. There probably are people who are proud of that achievement.

Yet those people still face the problem they refused to solve before. Now they are forced to suffer along with expensive temporary programs and still spend more to do the same they were offered for a cheaper price before.

This, antitaxers tell us, is wise.

It's another victory for the antispenders.

Yet they will argue with you that it's wise to spend more later to do the same thing that could be done when needed for less.

The kids are with us.

The space is needed.

This newspaper has been telling the public over and over since as far back as 1953 that this crisis was coming.

People simply don't seem to believe it until the youngsters are sticking out the windows, or roaming the streets during ordinary school hours.

They can express their belief on May 5. Sixty percent of those voting must say "Yes", or our situation will become more acute and more expensive.

The answer is as simple as that.

Lincoln's Attitude on Race

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

LINCOLN'S ATTITUDE ON RACE

Much has been printed about what Abraham Lincoln said on race relations.

His words have been twisted by the propagandists to produce a synthetic attitude the President of the United States held when the social conflict led to a war.

Lincoln had definite opinions about the amalgamation of the races and its dangers. He spoke out publicly and with force and conviction on these vital issues.

A reader has requested information on quotations from Lincoln on the subject. Research yields a few examples.

In an adress at Springfield, Ill., on June 26, 1857, Lincoln stated:

"A separation of the races is the only perfect preventive of amalgamation; but an immediate separation is impossible. The next best thing is to keep them apart where they are not already together.

"A few free colored persons may get into the free States in any event; but their number is too insignificant to amount to much in the way of mixing blood * * * Such separation, if it is ever to be effected at all, must be effected by colonization * * *. The enterprise is a difficult one, but 'where there is a will there is a way' and what colonization needs most is a hearty will."

In his famous debates with Judge Stephen Douglas, Lincoln at Ottawa, Ill., on August 21, 1859, said:

"I have no purpose to introduce political and social equality between the white and black races. There is a physical difference between the two, which in my judgment, will forever forbid their living together upon the footing of perfect equality; and inasmuch as it becomes a necessity that there must be a difference, I am in favor of the race to which I belong having the superior position."

On September 16, 1859, at Columbus, Ohio, Abraham Lincoln again spoke out on this subject when he said:

"There is no reason in the world why the Negro is not entitled to all the natural rights, enumerated in the Declaration of Independence, the right of life, liberty and the pursuit of happiness. * * *

"I agree with Judge Douglas, he (the Negro) is not my equal in many respects—certainly not in color, perhaps not in moral or intellectual endowments. But in the right to eat bread, without leave of anybody else, which his own hand earns, he is my equal, and the equal of Judge Douglas, and the equal of every living man.

"I am not, nor have I ever been in favor of bringing about in any way the social and political equality of the white and black races—I am not, nor ever have been, in

favor of making voters or jurors of the Negroes, nor of qualifying them to hold office, nor to intermarry with white people.

"I will add to this, that I have never seen to my knowledge a man, woman, or child who was in favor of producing a perfect equality, social and political, between Negroes and white men. * * *

"I give him (Judge Douglas) my most solemn pledge that I will, to the very last, stand by the law of the State which forbids the marrying of white people with Negroes."

After he became President, Abraham Lincoln, on August 14, 1862, recommended colonization to a "Deputation of Free Negroes," who called on him at the White House.

"You and we are different races. We have between us a broader difference than exists between almost any other two races. Whether it be right or wrong I need not discuss; but this physical difference is a great disadvantage to us both, as I think.

"Your race suffers very greatly, many of them by living among us, while ours suffers from your presence. In a word, we suffer on each side. If this is admitted, it affords us a reason, at least, why we should be separated. * * *

"Even when you cease to be slaves, you are yet far removed from being placed on an equality with white people. * * * On this broad continent not a single man of your race is made the equal of a single man of ours. Go where you are treated the best, and the ban is still upon you. * * * I cannot alter it if I would.

"I need not recount to you the effects upon white men, growing out of the institution of slavery * * * and its evil effects upon the white race.

"See our present condition—the country engaged in war—our white men cutting one another's throats * * * and then consider what we know to be the truth.

"But for your race among us there would be no war, although many men engaged on either side do not care for you one way or the other. * * * It is better for us both, therefore, to be separated."

When Lincoln signed the Emancipation Proclamation, he said:

"I have urged the colonization of the Negroes, and I shall continue.

"My Emancipation Proclamation was linked with this plan. There is no room for two distinct races of white men in America, much less for two distinct races of whites and blacks.

"I can conceive of no greater calamity than the assimilation of the Negro into our social and political life as our equal. * * *

"Within 20 years we can peacefully colonize the Negro and give him our language, literature, religion, and system of government under conditions in which he can rise to the full measure of manhood.

"This he can never do here. We can never attain the ideal union our fathers dreamed, with millions of an alien, inferior race among us, whose assimilation is neither possible nor desirable."

Thus spoke the founder of the Republican Party.

Oil-Import Restrictions Should Be Removed

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the text of a letter which I am this day addressing to the President concerning the restrictions recently imposed on the importation of oil products, its possible effects on our business community, and a request that the restrictions be withdrawn.

In the same connection, I am also inserting the text of a resolution adopted by the Chamber of Commerce of Greenpoint, which is a part of my congressional district in Brooklyn. The letter and the resolution read as follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 23, 1969.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: I am writing you in connection with the recent mandatory quota placed by the U.S. Government on the importation of oil and oil products into this country.

The district which I have the honor to represent in the U.S. Congress is located in Brooklyn, N.Y., and is largely an industrial and commercial area. Many of the industries in the district are dependent on reasonable prices of oil products, which makes it possible for them to compete in the commercial markets and to stay in business.

The action taken in setting a quota on imports of oil products from foreign countries, while it is aimed to aid our domestic oil suppliers, actually means higher prices for oil and oil products for our refineries, for our industrial and commercial firms, and ultimately for the great masses of American consumers.

That is not all, however. It further means that many of the smaller firms, such as those located in my district, will no longer be able to compete in the open markets and will be forced to shut down operations. Needless to say that such a situation would be most calamitous, since it would throw out of work thousands of people and seriously impair our economy, at a time when we can least afford it.

Business people in my district are very much disturbed over the matter. Their employees are uneasy regarding their future economic security. This type of fear and uneasiness may result in irreparable damage to our economy if steps are not taken in time to improve it or to remove the causes of it.

In the light of the situation and the ensuing difficulties, Mr. President, I urge you to reconsider the acton taken by the Government and to withdraw the mandatory restrictions on oil imports in the interests of the Nation's economy and security.

Respectfully yours,

VICTOR L. ANFUSO,
Member of Congress.

RESOLUTION BY THE GREENPOINT CHAMBER OF COMMERCE

Whereas the Government of the United States has placed a mandatory quota on the importation of crude and various oil products into the United States, we would submit the following for consideration:

Greenpoint is part of a large industrial and commercial area and contains many industries dependent on favorable fuel costs, one of the largest being a refinery operated by the Mobil Oil Co. which employs more than 500 individuals, and which is dependent on imported crude if it is to compete with other refineries which enjoy the advantage of lower processing fuel costs.

Many of these industrial enterprises are engaged in trade with many friendly nations of the world.

The difficulty and the cost of discovering and developing the oil resources of this country have been steadily increasing.

Trade with friendly nations and the industrial development which it stimulates abroad stands as our main bulwark against the Soviet trade offenses and must be regarded as one of the main pillars of this country's long term national security.

Many retail petroleum products consumers in Eastern States will be subjected to a spiral of increasing costs as eastern U.S. refineries are forced to seek crude supplies from domestic areas.

It is ridiculous to consider that oil from Canada is less essential to the national security than oil from U.S. fields across the border.

Federal regulation of a free enterprise industry destroys the main strength of the United States by adopting measures of compulsion paralleling those used by the very countries which are threatening our national security.

The provision in the mandatory imports control requiring surveillance of prices by Office of Civil and Defense Mobilization will lead to substitution of compulsion for the free market choice at competitive prices by consumers.

Be it resolved, That the Greenpoint Chamber of Commerce is opposed to the principle of mandatory quotas reducing to low levels the importation of oil and oil products, and requests immediate reconsideration and withdrawal of the mandatory provisions so that refiners may conform to the ideals of optimum economics and of the true national security in their use of domestic and foreign crudes.

Testimony Relating to the Community Facilities Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. BROOMFIELD. Mr. Speaker, in the House Banking and Currency Committee on Tuesday, April 21, a distinguished leader and resident of my home district of Oakland County, Mich., gave some interesting and enlightening testimony in relation to H.R. 5944, the community facilities bill.

The comments which this gentleman, Mr. Harold K. Schone, director of the Oakland County Department of Public Works, made are of such importance to our Nation, its communities and its people that I would like to call them to the attention of all my colleagues.

In my opinion, he has pointed out some basic flaws in our present programs of Federal help to communities in providing the essentials in service. He has outlined a problem of the inability of a great number of growing communities to pay for the water and sewage treatment facilities which they must have to maintain acceptable standards of public health.

As you will note from his statement, Mr. Schone is not seeking a Federal giveaway program for a number of reasons. One of these reasons is that there simply is not enough money in our Federal coffers to do the job which is needed in providing adequate water supply and

pollution control facilities. Another reason is that in the vast majority of cases adequate funds would be available at local levels to provide these strictly local facilities if future growth is taken into account.

In addition to his present duties as county public works director in an urban area adjacent to Detroit, Mr. Schone has a distinguished record of public service. He has been manager of a number of cities, including Oak Park, Mich., which has won national acclaim for its orderly development during a period of tremendous population growth. He is an expert on community administration at both the city and county levels, and he has done a great deal of good in our own municipalities in Oakland County by working out cooperative programs which have permitted these local governmental units to provide essential services to their citizens at a minimum of cost and maximum efficiency.

Mr. Schone's testimony follows:

In presenting the views of Oakland County, Mich., which I represent, we do not presume to infer that our views are necessarily the views of every county throughout the country since certainly there must be situations where varied points of view will occur. However, we must assume that our views, while perhaps not identical, are representative of the combined thinking and would most certainly reflect the situation in all counties with a similar metropolitan complex.

We further feel that we represent the views of many cities, villages, and townships, since it has been proven to us that the best, and in most cases, the only solution to the problems relating to the major portion of community facilities must be approached either on an area or county basis since community facility needs generally transcend such jurisdictional boundaries.

While House bill 5944 is primarily a health and welfare measure and not an antirecession measure, it does refer to unemployment and stimulation of business activities and, therefore, we would like to comment on this aspect.

We are firmly convinced that the construction industry is a major portion of our Nation's economy and employment. Past history would tend to support this statement since it would appear that when construction industry declines, the result is a gradual decline in the Nation's economy with its resultant effect on unemployment following in a period of 12 to 18 months after the start of a decline and continuing in more pronounced degrees of severity until the construction industry starts on the upswing, at which time the effect is more immediate, insofar as its bearing on the national economy and employment, than the decline produced. In view of the high rate of unemployment existing in the Detroit metropolitan area, we have, therefore, a major interest in the effects of this legislation on unemployment in our area.

Of the various phases of the construction industry, we feel the housing industry is by far the most important because of the many fields involved in housing. The construction of housing calls upon almost every type of labor and production to satisfy its needs since even after the completion of the actual construction there is a resultant effect on industries and retail business to meet the needs for textiles, furniture, refrigerators, stoves, washing machines, nursery stock, etc. In addition, its effect on the moral fiber of our citizens is of vital importance, since the fulfillment of a person's needs and desires for adequate housing tends to create a new perspective of his citizenship.

The Nation's needs for housing have continuously outpaced the construction of homes and we must face up to the basic needs of our people before we attempt to supply the frills and luxuries.

It is apparent that the housing needs of our citizens are well recognized by Congress and the administration, since much has been done in the past to strengthen the housing program and from all appearances Congress is at this time giving serious consideration to methods of further strengthening the industry. However, in the past, not enough has been accomplished to provide community facilities which, in the main, are the foundation of the structure. This is somewhat like providing a farmer with tractors, plows and harvesters when he has no soil to till.

In February of 1958, we made several observations and recommendations to the Congress, regarding a program for Federal loan support in connection with public works which, in part, are as follows:

"A serious problem exists throughout the country, particularly in metropolitan areas, in abating pollution in our streams, rivers and lakes to protect the public health. In addition, a serious problem exists again, particularly in metropolitan areas, in providing safe, adequate and potable supplies of water.

"Those involved in the protection of public health and providing necessary facilities to the citizens of their areas recognize that the problems of sewage disposal and water supply cannot be divorced, one depends upon and complements the other.

"The problems are magnified by our rapidly expanding population into fringe areas that have heretofore depended entirely upon septic tanks, filter beds and inadequate subdivision treatment plants for sewage disposal and independent or community groundwater supplies, which are rapidly becoming inadequate for present populations with no provisions for the rapidly expanding populations. In addition, such ground-water supplies are, in many areas, endangered by the inadequate sewage disposal facilities existing today.

"While we do not presume to imply that we have full and complete knowledge of existing conditions regarding the inadequacies of sewage disposal facilities and water supply on a national level, all publications on these subjects, which have been reviewed, strongly support the theory that the conditions existing in the Detroit Metropolitan region and other metropolitan areas of Michigan are not unique but follow a well established pattern of "too little-too late" in regard to facility planning and construction.

"The practice is to build facilities according to financing ability rather than on needs with the result that as soon as such projects are completed, their capacities are already taxed close to their limits. This results in the waste of large sums of the taxpayers money since as soon as there is ability to finance further, the facilities have to be relieved and, in some cases, completely replaced.

"Oakland County, Mich., which is a part of the Detroit metropolitan region and the second largest county in Michigan, has and will continue to have tremendous increases in population, in relative proportion to national population growth.

"The 1950 census gave Oakland County a population of 396,001 and the best estimates of the regional plan commission indicates a present population of 700,000 with an expected population in 1980 of 1,158,400.

"In spite of the rapid increase in population, the county and local units of government have been extremely successful in providing for the needs of this increasing population with the exception of sewage disposal and water supply.

"Since these exceptions are those most necessary to protect the public health and welfare, serious problems are and will, in greater proportion, inthe future face the area. A solution to these problems must be found immediately.

"The Congress has on numerous occassions evidenced its awareness of the problems by enacting into law the provisions in the housing and home finance agency legislation which provides for public works planning advances. Special attention by Congress has been given to sewage treatment works needs under the Water Pollution Act grants as provided in section 6 of Public Law 660.

"The availability of public works planning advances through the housing and home finance agency has proven to be of much assistance in areas where the population is concentrated, the problem acute, and where assurance can be given that projects for which funds are advanced will be promptly carried out.

"This program, however, falls short of the needs in areas where population has not approached the ultimate and where financing of large adequate facilities to meet the known long-range—10 to 20 years—needs of a given area is impossible due to present population and tax base. Since under such conditions it is impossible to certify to the agency that the work planned for will be constructed in a reasonable period and without such assurance the planning advances will not be approved.

"A review of the accomplishments of section 6, the construction grant provision of Public Law 660, would appear to reveal that there has been a substantial increase in construction of sewage treatments works in 1956 and 1957 over 1955 which could be attributed to the provisions of the act. However, it can be assumed that a large portion of such work was probably anticipated and ready to go in 1955 or prior. Also, it seems reasonable to assume that of these obtaining grants-in-aid, a large percentage wolud have proceeded with their projects without the grant due to increased concentration of population and ability to finance.

"The degree of success of the program is a highly debatable one and strong arguments could be made on either side as to the degree but there is no question in our minds that in spite of any degree of success, it does not offer a total solution to the problems.

"In a report submitted to the Federation of Sewerage & Industrial Wastes Association's Annual Convention in Boston on October 8, 1957, prepared by D. A. Poole, Curtiss M. Evarts, and David B. Lee, State sanitary engineers of Indiana, Oregon, and Florida respectively, it was demonstrated that the distribtuion of the grants-in-aids to the States, in some cases, exceed the amount that could be used by four times, while in other States the amounts distributed amounted to only one-quarter of the amount that could be used, all based on present formula of 30 percent of construction or not to exceed $250,000 per project.

"The conclusions of the report bear out the reported needs and paragraph 'a' of conclusion 3 is a supporting conclusion to the requests made herein.

"We would urge Congress to take the following steps which we are firmly convinced will establish the background for a proper solution to facility construction and if they are adopted will start a strong public works program on a local level which will go far to solve the present problems of unemployment:

"1. Abandon the theory of Federal grants for sewage treatment works as established under Public Law 660.

"2. Increase the ability of the Housing and Home Finance Agency to make public

works planning advances for sewage treatment works and water supply systems.

"3. Establish an adequate Federal loan support program for sewage treatment works and water supply systems.

"GRANTS-IN-AID

"We do not feel that the grants necessarily are a strong encouragement to construction. It must be admitted that in some cases where the amount of the grant was the difference in the ability of the unit to sell bonds for the project that it does encourage construction. However, on the other hand, some units who could properly finance their own program might have a tendency to hold up the project in the hopes of obtaining a grant and if they did not receive one initially they might put the project off until the next year or a year thereafter in the hopes they eventually might obtain some free money.

"In some cases grants have been given after projects are already under construction. The philosophy of the Government giving people something they have the ability to pay for themselves does not seem to be compatible with our beliefs.

"PUBLIC WORKS PLANNING ADVANCES

"The Housing and Home Finance Agency should be provided with funds so that expansion of their advances for sewage treatment works and water supply systems could occur.

"The Agency should be encouraged to place the applications for advances to be used for these two purposes at the top of the priority lists and advances should be sufficient to provide complete construction plans. This might be placed on a formula of the advance being limited to 85 percent of the actual cost of the planning work with 15 percent being provided by the local unit so that only projects in which the unit has a sincere enough interest in the need for the work to raise funds of its own, in the amount necessary to meet the suggested 15 percent would be eligible for the advance."

The balance of the report dealt with the third phase of establishing a Federal loan support program and we would like to take this opportunity to draw to the attention of the House Banking and Currency Committee, House bill 2733 which was introduced by the Honorable WILLIAM S. BROOMFIELD, of Oakland County, on January 19, 1959, for your serious consideration as a part of your deliberations on the bill now under study.

On March 26, 1958, we had the honor and the pleasure to appear before the Senate Banking and Currency Committee to testify in behalf of Senator FULBRIGHT's bill No. 3497, which was a community facility bill which failed to pass Congress.

We raised some objections to this community facility bill, as proposed by Senator FULBRIGHT, since it provided for loans for construction, repair and improvements of streets, sidewalks, highways, parkways, bridges, parking lots, airports, and other transportation facilities, public parks and other public recreation facilities public hospitals rehabilitation and health centers, public refuse and garbage disposal facilities, water, sewerage and other sanitation and public utility facilities, public police and fire protection facilities, public schools, libraries, offices and other public buildings and public land, water, and timber conservation facilities.

The bill proposed a $2 billion community facilities fund which, on the surface, appeared to be a tremendous figure, even to those of us who are involved in multi-million-dollar projects, yet in balancing this amount against the public works and public facilities which would be eligible under the act, we felt certain that either the amount must be considerably increased or some of the proposed eligible projects eliminated. Otherwise, the basic community facilities would be relegated to a minor position as they so often have in the past.

Certainly House bill No. 5944, as introduced by Congressman SPENCE, has taken care of this problem and lends credence to our belief that community facilities, as defined in the bill, are the basic needs of any community.

If the proposed legislation is enacted into law, it would go a long way in solving our present critical problems and could serve to properly solve problems which will be critical in a short time. As to known unsolved problems of financing where the proposed legislation would be the salvation we would like to point to a specific problem in our county.

The Clinton River Basin in Oakland County is an area encompassing approximately 250 square miles lying directly in the path of the approaching army of increased population and its resultant demands on the water supply system and sewage disposal facilities.

The units of government in the area are aware of the need for facilities and have petitioned the board of supervisors of the county to develop a master plan of sewers and sewage-treatment facilities for the Clinton River Basin. The board of supervisors recognize that the only economical and sound solution for the individual units is on an area basis and as a result of this have, by resolution, established the Clinton River Sewage Disposal System under the county department of public works.

The department is now preparing construction plans for this project with the aid of a planning advance through the Housing and Home Finance Agency. From a planning and engineering viewpoint, the answer to the problem is the construction of interceptor sewers to transport all of the sewage to a central treatment plant located on the lower portion of the Clinton River to abate pollution. The southerly or downriver portion of the area is now at the danger point and needs immediate relief and the interceptors need to be of such a size as to accommodate the present and ultimate populations of the upriver areas. The sewage-treatment plant site must be acquired in such a size as to adequately permit expansion at later periods to accommodate future populations. The initial treatment plant must be constructed with some built-in features for the ultimate population and others constructed in such a manner so as to be expanded.

While there is a strong desire to do the project right and to have the burden of the costs assumed by the area, it is apparent that a bond issue could not be sold at a rate of interest which would make the project financially sound.

There has been a known need in the area to supplement or replace the ground water supply with a potable and adequate water supply from Lake Huron for many years, and each year sees a serious lowering of the water table for ground water sources and inadequate supplies from other sources, and yet we are unable to guarantee that there will be the required supply before it is too late. Oakland and Macomb Counties have joined together and have spent $116,000 for an engineering report on the proposed project and it could be constructed in short order if financing problems were overcome.

The ultimate ability for the system to meet its obligations under a bond issue with realistic water rates is not a question. The only problem is in the first 5 years if a realistic interest rate is not obtained; and here is where the proposed community facilities bill, as introduced by Congressman SPENCE, and/or the loan support bill, as introduced by Congressman BROOMFIELD, would make it possible to provide for an adequate, safe, and potable supply of water for present and future population.

These examples could be repeated over and over again for specific projects in the region and we are sure throughout the Nation. Such a program, we feel, while not bringing us to a state of Utopia, will solve our major problems in relation to sewage disposal and water supply and in addition will spark an immediate construction program which will go far in relieving the present unemployment problem in metropolitan areas.

We suggest the adoption of such a program as being basic to the principles upon which our forefathers founded our form of government in which the Federal Government assists to perform those functions which the State and local governments are unable to perform by themselves.

It is further suggested that if such a program is adopted that adequate safeguards be provided so that only projects which clearly evidence eventual ability to pay any advancements under the program are certified. This does not mean that vision should not be used since this will be necessary. If such a program is handled through the Housing and Home Finance Agency, it will probably mean that their planning and financial division may have to be strengthened to properly review applications from areas where reliable regional planning commissions are not in existence and where units have not employed recognized financial consultants in connection with their applications.

We woud further suggest that consideration be given for providing that sewage, sewage treatment and sewer facilities be certified as eligible, under the act, by the Department of Health, Education, and Welfare after review by the State agency charged with water pollution control.

In the proposed act under "Declaration of policy, section 201," it is stated that it has been the policy of Congress to assist lower levels of government in providing facilities essential to the health and welfare of its people where they are financially unable to provide same.

We believe sanitary sewers, drains, and water facilities are essential to the health and welfare of all our people, and certainly an immediate public works program would serve to provide these much needed facilities and at the same time relieve unemployment, not to mention the stimulus it would create in the many allied businesses, including the housing industry, which we have previously atempted to outline.

The opportunity to appear before this committee to present the views of the National Association of County Officials and Oakland County, Mich., is greatly appreciated. If the members of the committee have any questions I would be most happy to attempt to answer same. Thank you.

Pesach, 5719

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

Thursday, April 23, 1959

IN THE HOUSE OF REPRESENTATIVES

Mr. MULTER. Mr. Speaker, why is this night different from all other nights? Why is this time of Pesach, or Passover, different from all other seasons of the year?

We of the Jewish religion, inheritors of the rich and glorious tradition of Judaism, know well the story of the exodus from the land of Egypt, and our

children learn of the sufferings, the courage, and the deliverance, of their ancestors of thousands of years ago. It is as important today as it ever was, and it will be important as long as the world lasts, that we pass on to our children, unimpaired, the virtues inculcated by that story—the fortitude, the stubborn determination to resist oppression, the resolve to live by the spirtual truths and moral laws that are our precious inheritance, the humility to submit to the divine will in any misfortune, and the hope and energy to rise bravely to new life and new circumstances.

As we commemorate in our Seder, not only the sufferings and the deliverance of our Hebrew ancestors, but the sufferings endured by the Egyptian people before the Pharaoh would release the Hebrews from bondage, let our thoughts turn to the oppressed and enslaved peoples, the world over, in this day of peril and tyranny. A darkness of the spirit, black as the Egyptian night, lies over the Communist-dominated lands today. In other lands, differences of race or of religion give rise to mob violence or repression under the forms of law.

Let us keep ever before the eyes of the spirit, for our own guidance and the guidance of the world, as a pillar of fire by night and a pillar of cloud by day, the ideals of freedom, of justice, of equality, of goodwill toward all men.

Thus we may be able, in the fullness of time, to fulfill our high destiny, and lead all mankind, freed from violence and from wrong, and united in an eternal confidence of brotherhood, to celebrate the universal Passover in the name of our God of freedom.

Secretary of State Dulles

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial, somewhat abbreviated, from the Los Angeles Times of April 16, 1959. For a man who has loved his country so much and so intelligently, putting its well-being and safety above every cruel attack on himself, it is, I hope, some small compensation to Secretary Dulles to have universal recognition now of the righteousness of his principles and policies, and grateful praise for his unswerving steadfastness and courage.

What an unpayable debt we all owe to John Foster Dulles.

The editorial is as follows:

SECRETARY OF STATE DULLES

The resignation of Secretary of State John Foster Dulles was announced by the wet-eyed President of the United States. The President is a military officer, conditioned from his youth to the loss of friends and heroes in war, and his weeping would more likely be for his country than for the dying man who has spent more time than he in serving the United States.

GREATEST MOMENT

Any stern republican American, republican in the sense of Cato, should understand the President's tears. The United States has lost John Foster Dulles at his greatest moment, at a crisis when three-quarters of the world confidently expected him to solve its key problem. And lost him without any possibility of recovery.

In writing this kind of an appreciation—almost a funeral oration—one is always tempted to seek a parallel, and there is one in another field of striving for the Republic. Robert A. Taft and Dulles were somewhat alike in this: that the people who had discussed them controversially for years became exquisitely aware of their positive virtues only when they were dying.

UNIQUELY QUALIFIED

Even Walter Lippmann, one of the most despondent of Mr. Dulles' critics, was candid enough to admit that he was appalled when it seemed certain that the Secretary would not be able to command the negotiations with Russia about the Germanys. Who else, after all the years-long racking and raging against Dulles, could handle this negotiation?

We have been guilty of criticizing Mr. Dulles, but, thank God, we have never denied him. This places us—a rare occasion—on the side of former President Truman: Mr. Dulles campaigned against him and all his works in 1948, but the reelected President, in one of his unusual insights, appointed him 14 months later to go to Japan as the Ambassador to make a Japanese peace treaty. Mr. Dulles went and produced the most magnanimous treaty of history. He gave Americans something to live by: Whenever Europeans or Asiatics, or some of the newly inflated Africans, declaim to a U.S. citizen that his country is dollar mad, obsessed with opulence, vindictive, prejudiced or race conscious, he has only to point to our accommodation with the Japanese. There is nothing quite so wonderful in history, and John Foster Dulles is its architect.

COMMUNISM CONTAINED

But there is a more recent and controversial association of notions with the memory of Mr. Dulles as Secretary of State. His enemies have complained that he would make no deal with the Communists. They have been right, and his intransigence has been our salvation. He has felt very strongly that there is no point in making agreements with the Communists unless the agreements are self-enforcing. He has been the symbol of Communist containment on every continent. His means have sometimes been called into question with reason (we think), but his ends cannot be challenged. We mentioned Cato. A civilized 20th century Presbyterian cannot insist that Russia be destroyed and its people enslaved or massacred, but he can, looking all moralists in the eye, say that the Russian thing shall not infect new ground so long as the United States can prevent it. He has conceived prevention to be his prime duty as Secretary of State, and he has carried it out.

His successor cannot possibly measure up to him.

You Should Be a Politician

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the April 22, 1959 issue of Human Events:

YOU SHOULD BE A POLITICIAN—THE PRECINCT KEY TO POLITICAL SUCCESS

(By Joseph J. Eley and F. Clifton White)

"Politics is the practical exercise of self-government, and somebody must attend to it if we are to have self-government. The principal ground of reproach against any American citizen should be that he is not a politician."—ELIHU ROOT.

Less than 25 percent of the electorate determine—through the processes of conventions, caucuses and primary elections—the alternatives which the electorate shall have. An even smaller percentage makes a majority of the fundamental decisions through work in the political party process.

In reality the American political process is dominated by an aristocracy of self-appointed people. The aristocracy is composed of those who work at politics, day in day out, year in year out. The public officeholders are an important and substantial bloc of the aristocracy, but the majority of the "self-appointed" are not officeholders in government but are instead the precinct, ward, district and county workers of the political parties.

Converging circumstances today demand that Americans begin to express themselves in political affairs if any semblance of the independent spirit remains. There can be no serious doubt in the student's mind that in the coming days we will be asked to choose between the capitalist economic system and socialism. The choice will be made within the structure of our political party system.

Some people avoid political participation because they think that political parties are closed organizations. The truth is that political parties are public bodies; their existence and general mode of operation are prescribed in State law. Most States publish or cause to be published those statutes which determine the legal base of the political parties, the manner in which party officers are selected and the methods of conducting elections.

In States in which the electoral statutes are codified and published separately from the general code, a copy may usually be obtained from the State attorney general or secretary of state. The individual who proposes to be an effective citizen should be conversant with the legalities of politics in his State by familiarizing himself with the code.

He should also be familiar with the bylaws of his party. Most State codes first stipulate the legal base for the political parties and then vest in the parties the right to formulate rules for their own operations. County committee bylaws are not always easy to obtain, but somewhere in the party structure there is an individual who has possession of the rules. In most cases, the rules are filed with the county clerk, giving them quasi-official status. There are some cases—Georgia, for example—in which the bylaws of the political party appear to be of more significance than the code, in that the bylaws are much more detailed.

Once the individual has familiarized himself with the code and bylaws, he should determine the structure and operations of his party at the county and subcounty levels. He should find out how party leadership in the precinct or election district (or whatever it is called in the particular State) is selected, how ward or town leaders are chosen.

The basic unit of the political parties' operations is the precinct or election district. The terms are synonymous. In either case, precinct or district, the focal point is a polling place surrounded by a geographical area containing a specific number of voters prescribed by State law and ranging from 300 to 1,200. The national average size pre-

cinct is 600 voters. The size of the precinct has been largely determined by practical circumstances; how many voters can conveniently vote in the prescribed time in the polling place.

Each political party attempts to have an individual in the precinct to act as the party leader in that neighborhood. The principal job of the precinct leader, who is known sometimes as a precinct captain, district captain, or committeeman, is to register the voters of his party and get his party's vote to the polls on election day.

He is, in almost all cases, the representative of his party's voters in his precinct on the county committee. In addition, in major cities, he is a member of the town committee. If he has organized his precinct properly and maintains communications with his constituency, he has a surprising degree of power. He can have considerable impact on the party councils, especially if he consistently carries his precinct for the party.

Precinct leaders are selected by different processes, determined by the election code or party bylaws. In New Jersey and many other States, the precinct leader is elected in a primary election for a prescribed term of office. In Texas, among other States, the precinct leader is elected in a precinct caucus. Still a third method, used in Virginia, for example, has the precinct leader appointed by the city or county chairman, who is elected in a mass meeting.

After the precinct—on the table of organization of the political party—each level upward is related to a unit of government, that is, officers of government are elected from each. The formalized party structure runs from the precinct through the ward, town or city to the county level, thence to the State and finally to the National level. At each of these levels, there is usually an individual or group of individuals working at the job of politics. To those levels of party organization noted above must be added others depending on the governmental structure of the particular State. There are usually congressional district organizations; sometimes State senatorial, legislative or judicial district organizations.

The organization of the parties is determined by practical circumstances; where there is someone to be elected to public office, there must be people to support the various candidates in circulating nominating petitions, transmitting to the voters the reasons for electing a ticket or a candidate, registering and getting the voters to the polls.

The county committee is the backbone of American politics. At the risk of generalizing, the county chairman, as an aggregate, represent the most potent political force in politics. The chairman has a voice in the selection of county judges, sheriffs, supervisors or commissioners, legislators, State senators and Congressmen. He is influential in the selection of delegates to conventions. He will be sought out by candidates for Governor, Senator and even President.

His primary function, though not completely official, is to find candidates for the various offices and coordinate the organization's efforts behind those candidates and his party generally.

The county chairman obtains his job in a variety of ways. He may be elected by the county committee, which represents the various precincts or districts of the county. He may be elected in a county convention or, as in a few cases, he may be elected in a primary election. State election codes generally spell out the procedure through which the county chairman and other officers of the party at the county level are selected. The method for the formulation of the State committee or committees and the selection of State chairman can be determined also by consulting the election code and the bylaws of the particular party in which the individual is interested.

With this basic structure in mind, you may be interested in some do's and don'ts that might prove of use to those going into politics:

Determine which party is most acceptable to you. Don't expect either party to reflect your philosophy perfectly, but choose the one in your locality which stands most for the things you feel are right.

Register and identify yourself as a member of the party.

Study the election code of your State, particularly those sections which apply to the formation and operations of the party.

Vote in primary elections, attend precinct caucuses and town, city, and county meetings of the party.

Speak up—when you know what you are talking about. When you speak, be guided by the facts and not by anger.

Don't talk too much. Remember, many people think the wisest man is the man who listens to their ideas.

If the leadership of your political party generally reflects your thinking and is honest and efficient, support it to keep it that way.

Don't buck the "organization" unless you have enough votes to defeat it. If the party leadership isn't what you think it should be, build up your faction's strength before you engage in a contest for leadership.

Don't be arbitrary or rigid in your thinking; this doesn't mean that you should compromise principles. There are many ways to climb a mountain. Find a way acceptable to the majority to achieve your objectives and implement your principles.

Don't forget the stake you have in politics. From such prosaic matters as garbage collection to weighty problems of foreign affairs the influence of politics is extremely important. Taxes, schools, zoning, traffic control, highways, the economic system, all are within the purview of the politician.

Decisions on these and many other matters are subject to your influence, first as a voter, second as an individual with the ability to influence others. You will either contribute to making these decisions or someone will do it for you. History indicates that free societies inevitably collapse when the people permit "others" to make their decisions, for the decisionmaking quickly realizes that his responsibility to make decisions gives him control.

Interposition: the Neglected Weapon

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks, I include an article distributed by the Federation for Constitutional Government, 801 American Bank Building, New Orleans, La.

The chairman of the Federation for Constitutional Government is a distinguished American, Mr. John U. Barr. The author of the article is Mr. Drew L. Smith, member of the Louisiana Bar. It follows:

INTERPOSITION: THE NEGLECTED WEAPON

(By Drew L. Smith, member of the Louisiana Bar, New Orleans)

As a result of the U.S. Supreme Court decision of May 17, 1954, invalidating segregation in the public schools of the Nation, the Southern States, with approximately three-fourths of the Negroes in this country, have been thrown into such turmoil as they have not known since the dark days of reconstruction.

Once again the power of the Federal Government is being employed to coerce the South into accepting racial integration in all public institutions.

Since the enunciation of the above decision the South has determinedly sought to find a legal solution to contain the race problem within the bounds of segregation, so arduously developed over the generations.

This is being done in order that the white and Negro people of this region may continue to live together on a peaceful basis, and in order that the racial integrity of the two races may be perpetuated for the general welfare of all concerned.

Indeed, it is also being done not just for these purposes alone, but to preserve the principles of States rights and constitutional government for all people everywhere in this Nation.

INTERPOSITION

In her search for a means to accomplish this there suddenly appeared on the horizon the word "interposition." Editors and publishers throughout the South, and some in the North, thoroughly explained in many editorials how individual States, among them some northern States, in many instances, had successfully interposed the State's power to protect the people of the State from an unconstitutional act of any branch of the Federal Government.

One of the best examples of interposition came from the North, and we may refer with profit to what happened in the State of Wisconsin concerning fugitive slaves.

Under the Federal Fugitive Slave Act of September 18, 1850, U.S. marshals were empowered to arrest fugitive slaves in any of the States of the Union and return them to their former masters. Sherman Booth, a Wisconsin editor, was charged under this act with unlawfully aiding a fugitive slave from Missouri to escape from the lawful custody of a U.S. marshal. Booth applied for a writ of habeas corpus to the Supreme Court of Wisconsin,[1] alleging in his application that the Fugitive Slave Act under which he was arrested and imprisoned was unconstitutional and void.

The language of the Court in declaring the act unconstitutional, and the freeing of Booth from custody, is such a forceful presentation of States rights and so appropriate and timely to the segregation problem in the South today, that it is quoted from extensively, as follows:

"Justice SMITH. I would gladly escape from deciding upon a question so grave as to whether the act of Congress is unconstitutional and void, but I believe the last hope of free, representative and responsible government rests upon the State sovereignties, and fidelity of State officers to their double allegiance to the State and Federal Government. To yield acquiescence in, and support to, every power constitutionally exercised by the Federal Government, is the sworn duty of every State officer, but it is equally his duty to interpose a resistance to the extent of his power, to every assumption of power on the part of the Federal Government, which is not expressly granted or necessarily implied in the Federal Constitution.

"Nor can I yield to the doctrine early broached, but as early repudiated, that any one department of the Government is constituted the final and exclusive judge of its own delegated powers. No such tribunal has been created by the fundamental law.

"The judicial department of the Federal Government is the creature by compact of the States, as sovereignties, and their respective

[1] In re Booth, 3 Wis. 1.

people. That department can exercise no power not delegated to it. All power not delegated, and not prohibited to the States, the States have expressly reserved to themselves and to the people. To admit that the Federal judiciary is the sole and exclusive judge of its own powers and the extent of the authority delegated, is virtually to admit that the same unlimited power may be exercised by every other department of the General Government, both legislative and executive, because each is independent of, and coordinate with the other. Neither has any power but such as the States and their respective people have delegated and all power not delegated remains with the States and the people thereof. The power of the Federal Government depends solely upon what the States have granted.

"I solemnly believe that the last hope of free representative and Federal Government rests with the States. Increase of influence and patronage on the part of the Federal Government, naturally leads to consolidation, consolidation to despotism and ultimate anarchy, dissolution and all its attendant evils. Without the States there can be no Union, the abrogation of State sovereignty is not a dissolution of the Union but an abrogation of its elements.

"The Constitution not only confers powers upon the Federal Government but it guarantees rights to the States and to the citizens. The States derive not one single attribute of power or sovereignty from the Constitution of the United States. They were preexisting sovereignties. The Federal Government is one of the delegated powers, the State government is one of inherent or reserved powers; the former competent to act only within the sphere prescribed by the Constitution, the latter exercising all the functions of sovereignty not delegated or relinquished by that instrument. A judicial determination without the constitutional sphere would be no judgment or decree."

Following the above decision Booth was again charged and convicted in the U.S. District Court in 1855, and once again was freed by the Wisconsin Supreme Court. Later in the year the U.S. Supreme Court issued a writ of error which the Wisconsin Supreme Court ignored, even refusing to send up a copy of its record. This record was finally obtained by the Supreme Court in 1857. In 1858 the Supreme Court[2] reversed the judgment of the Wisconsin Supreme Court. When the State courts refused to enforce the judgment of the U.S. Supreme Court, Booth was rearrested in 1860 by a U.S. marshal, only to obtain a pardon in that same year from President Buchanan.

As a result of the decision in *Ableman* v. *Booth*, the Wisconsin Legislature[3] enacted a resolution of interposition in 1859 which is briefly quoted from as follows:

"*Resolved*, That the Government formed by the Constitution of the United States was not made the exclusive or final judge of the extent of the powers delegated to itself; but as in all other cases of compact among parties having no common judge, each party has an equal right to judge for itself as well of infractions as of the mode and measure of redress * * * that the several States which formed that instrument, being sovereign and independent, have the unquestionable right to judge its infraction, and that a positive defiance by these sovereignties of all unauthorized acts done or attempted to be done under color of that instrument is the right remedy."

Most of the other Northern States enthusiastically supported the action taken by Wisconsin in interposing the power of the State, to check unconstitutional and unlawful acts of the Federal Government.

SOUTHERN STATES PROVIDING FOR INTERPOSITION

Observing what had been so effectively done by the Northern States on the issue of slavery convinced the South that this was the answer to her segregation problem, and one after another the Southern States passed resolutions and acts of interposition.

By Act No. 42, special session, 1956, the Alabama Legislature, enacted a resolution of interposition declaring therein.

"That until the issue between the State of Alabama and the General Government is decided * * * by a suitable constitutional amendment that the Legislature of Alabama declares the decisions and orders of the Supreme Court of the United States relating to separation of races in the public schools are, as a matter of right, null, void, and of no effect; and the Legislature of Alabama declares to all men as a matter of right, this State is not bound to abide thereby."

Georgia, in House Resolution 185 of the 1956 session of the general assembly, the senate concurring, provided for interposition in the following language:

"That the decisions and orders of the Supreme Court of the United States relating to the separation of the races in the public institutions of a State are null, void, and of no force or effect."

Mississippi, in Resolution 125 of the 1956 regular session of the legislature, set forth her position on interposition in the following words:

"We do hereby declare the decisions and order of the Supreme Court of the United States of May 17, 1954, and May 31, 1955, to be a usurpation of power reserved to the several States and do declare as a matter of right, that said decisions are in violation of the Constitution of the United States and the State of Mississippi, and therefore, are considered unconstitutional, invalid, and of no lawful effect within the confines of the State of Mississippi."

South Carolina enacted a resolution of interposition by act of the general assembly dated February 14, 1956, stating that:

"The State of South Carolina as a loyal and soverign State of the Union will exercise the powers reserved to it under the Constitution to judge for itself of the infractions and to take such other legal measures as it may deem appropriate to protect its sovereignty and the rights of its people."

Virginia provided for interposition in Senate Joint Resolution 3 of the general assembly on February 1, 1956. The resolution states:

"That by its decision of May 17, 1954, in the school cases, the Supreme Court of the United States placed upon the Constitution an interpretation, having the effect of an amendment thereto, which interpretation Virginia emphatically disapproves; that until the question here asserted by the State of Virginia be settled by clear constitutional amendment, we pledge our firm intention to take all appropriate measures honorably, legally, and constitutionally available to us to resist this illegal encroachment upon our sovereign powers."

Louisiana, by House Concurrent Resolution 10 of the 1956 session of the legislature, provided for interposition in these terms:

"The Legislature of Louisiana does hereby solemnly declare the decision of the Supreme Court of the United States of May 17, 1954, to be in violation of the Constitution of the United States, and of the State of Louisiana, and we declare, further, our firm intention to take all appropriate measures honorably and constitutionally available to us to void this illegal encroachment upon the rights of the several States."

In House Concurrent Resolution 174 adopted by the Legislature of Florida on May 2, 1957, interposition was provided for in the following terms:

"That the Legislature of Florida denies that the Supreme Court of the United States had the right which it asserted in the school cases decided by it on May 17, 1954, to enlarge the language and meaning of the compact by the States in an effort to withdraw from the States powers reserved to them and as daily exercised by them for almost a century. It is the duty of the State in flagrant cases such as this to interpose its powers between its people and the effort of said Court to assert an unlawful dominion over them: Therefore, be it

"*Resolved*, That said decisions and orders of the Supreme Court of the United States denying the individual sovereign States the power to enact laws relating to the separation of the races in the public institutions of a State are null, void, and of no force or effect."

Tennessee in House Resolution 1 enacted January 17, 1957, by the general assembly denounces the decisions of the U.S. Supreme Court in the school segregation cases and resolves therein,

"That the House of Representatives, in cooperation with the Senate, pledges its firm intention to take all appropriate measures, honorably and legally available, to resist any and all illegal encroachments upon the powers reserved to the State of Tennessee in order to control its own domestic institutions according to its own exclusive judgment."

The State of Arkansas provided for interposition by means of initiative petitions which were approved by the people at a general election providing for constitutional amendment No. 47 which reads in part as follows:

"The General Assembly of the State of Arkansas shall take appropriate action and pass laws opposing in every constitutional manner the unconstitutional desegregation decisions of May 17, 1954, and May 31, 1955, of the U.S. Supreme Court including interposing the sovereignty of the State of Arkansas to the end of nullification of these and all deliberate, palpable and dangerous invasions of or encroachments upon rights and powers not delegated to the United States nor prohibited to the States by the Constitution of the United States and amendments thereto."

Texas, by House Concurrent Resolution 33 at the 1957 regular session of her legislature, provided for interposition thusly:

"The Legislature of the State of Texas is the appropriate body under mandate from the people of Texas to intervene between Federal encroachment and State sovereignty:

"*Resolved*, That the sovereign State of Texas intervenes and registers officially its objection on behalf of its people to the effort of the Federal Government to assert an unlawful dominion over her citizens and * * * Texas declares her firm intention to take all appropriate measures honorably, legally and constitutionally available to the State to resist illegal encroachment upon her sovereign power."

The Legislature of North Carolina did not provide for interposition, being the only State in the South failing to do so.

HAS THE SOUTH USED INTERPOSITION?

Now, what have the Southern States done to utilize the resolutions and acts of interposition so hopefully adopted by their legislatures?

A search of the records shows that it has been employed only three times, but in each instance was successfully used.

(1) In the first instance, interposition was used by Gov. Allan Shivers, of Texas.

The action of Governor Shivers grew out of the decision in the case of *Jackson* v. *Raw-*

[2] *Ableman* v. *Booth*, 62 U.S. 506.

[3] General Laws of Wisconsin, 1859.

don (235 F. 2d 93), pursuant to which the U.S. district court, northern district of Texas entered a decree on August 27, 1956, ordering the admission of Negro children to the Mansfield High School at Mansfield, Tex., and forever restraining the Mansfield school district officials, and all other persons acting in concert with them, from refusing admission of the Negro plaintiffs to the Mansfield High School.

As a result of this decree, disorders developed at the school and then Governor Shivers issued the following statement on August 31, 1956, which effectively interposed the sovereignty of the State of Texas to prevent the admission of the Negro students to the Mansfield High School:

"Under the general powers of the Governor to enforce the laws and see that order is kept in Texas, I have instructed Colonel Garrison to send Texas Rangers to Mansfield to cooperate with local authorities in preserving the peace. I talked by telephone with B. L. Huffman, superintendent of the Mansfield schools, and have wired O. C. Rawdon, president of the Mansfield school board, urging that the board go ahead and transfer out of the district any scholastics, white or colored, whose attendance or attempts to attend Mansfield High School would reasonably be calculated to incite violence. Should the resulting actions on part of the Mansfield school authorities be construed as contempt of the Federal courts, I respectfully suggest that the charge should be laid against the Governor and not the local people."

To this date, as a result of the Governor's act of interposition, no Negro children have entered the Mansfield High School.

(2) In the second instance, interposition was asserted by the Virginia Supreme Court in the case of *Naim* v. *Naim* (87 S.E. 2d 749).

That court held a marriage void that was in violation of a Virginia miscegenation statute. The U.S. Supreme Court held on appeal that the constitutionality of the Virginia statute was not squarely before it, and remanded the case to the Virginia court for clarification of the issues. Whereupon the Virginia Supreme Court held there was no provision in Virginia practice whereby the case could be reopened in the trial court and thus must adhere to its original opinion (90 S.E. 2d 849). In a per curiam opinion[4] the U.S. Supreme Court denied a motion to set the case down for oral argument, holding that the case was devoid of a properly presented Federal question.

The decision of the Virginia Supreme Court remains unchanged up to the present time.

(3) In the third instance, interposition was invoked by the Florida Supreme Court in the case of the *State of Florida, ex rel. Virgil D. Hawkins* v. *The Board of Control, et al.*[5]

This action was commenced by a Negro who sought admission to the Law School of the University of Florida in 1949. On appeal to the U.S. Supreme Court, that court held after the decisions in the school segregation cases that the Negro must be admitted. The Florida Supreme Court held that he could not be admitted to the school because it would lead to violence in the university communities, and that it would bring about a serious disruption of the university system. Following this action the U.S. Supreme Court denied a writ of certiorari to the plaintiff bringing about the withdrawal of his application for admission to the school.

From its early history to this date, interposition has always succeeded in the hands of a Governor or a State court that has had the desire and the courage to use it with determination.

Stripped to its simple definition, interposition is the right of a State to interpose its sovereign authority against a violation of the Constitution by the Federal Government.

Interposition has never failed. Interposition will succeed now, if our southern Governors and State courts will stand firmly upon the rights of the State.

Address by Dr. Samuel D. Proctor

EXTENSION OF REMARKS
OF

HON. JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. BARR. Mr. Speaker, on Sunday, April 12, the national convocation of the United Negro College Fund met in Indianapolis, Ind., in my congressional district. This organization has always been very close to my heart because I ran its campaign in the State of Indiana for 2 years.

Dr. Samuel D. Proctor, president of Virginia Union University, made the opening remarks of this convocation. It seems to me that in these remarks he stated explicitly the problems of these Negro colleges and the contribution they can make to the United States of America. It is my opinion that this statement is of such importance to our educational and cultural development that it should be a part of the record of this Congress:

ADDRESS DELIVERED BY SAMUEL D. PROCTOR BEFORE UNITED NEGRO COLLEGE CONVOCATION, INDIANAPOLIS, IND., APRIL 12, 1959

Mr. Chairman, members of the Indianapolis host committee, the Honorable Mr. KENNEDY, Senator from Massachusetts, my distinguished colleagues, ladies, and gentlemen, in these days of contention for full integration in educational opportunity, it may seem paradoxical that we should be here in the interest of Negro colleges. It may appear to some that we should be seeking to abandon all institutions that imply racial distinction, close the doors of Fisk and Tuskegee forever and send our students to Emory, Vanderbilt, Duke, and Tulane.

Well-meaning persons, in the north especially, who are unfamiliar with the tedious process of social change and who are poorly informed on the extent of the impediments that lie between what is and what ought to be, have refused to support the United Negro College Fund on the grounds that this effort resuscitates the dying anatomy of segregation when rigor mortis should be setting in.

Others have suggested that every effort should be spent on compelling full implementation of the 14th amendment, as recently interpreted by the Supreme Court, and waste no further time and effort on predominantly Negro institutions.

There is a rather naive optimism abroad that the lion of race hate and the lamb of brotherhood may lie down together much sooner than the facts tend to indicate.

But the facts with which we must reckon courageously, imaginatively and immediately promise a long and arduous struggle against deeply entrenched prejudices, hallowed by time-honored practice. We are struggling against emotional sanction and accommodation to habitual practices which enjoy community and political approval and encouragement.

We operate in a climate of stagnant racial attitudes and a resistance to change fortified by community housing patterns, complete separateness in recreational and social life and legislative circumvention of lawful and duly constituted authorities. We are frustrated by intimidation, threats, economic reprisals, editorial castigation and the timidity of our friends who know the dangers of being overtly committed to our cause.

Every sound strategy for lifting the Negro people out of the morass of second-class citizenship, and establishing them as a fully productive, fully responsible, fully integrated and fully accepted segment of the American populace should receive our prayers and our generous support. And there are many such strategies. I am aware of the tremendous change in attitudes which may result from church agencies operating with an inclusive policy. The enlargement of the franchise of the Negro and the increase of political articulation throughout the country will certainly prove efficacious in changing the status of this crucial and growing minority.

It has already been demonstrated, however, that all other things being equal, the more education a people possesses the more the people can help themselves to approach the whole gamut of their problems with creativity and effectiveness.

The last thing that we would want to see would be the diminution of the influence of these 33 colleges, located in the South where more than 12 million Negroes must work out their destiny. We must not let these faculties become second rate, these buildings dilapidate, the laboratories become empty, these libraries become dust-laden curiosity items, the tradition of excellence evaporate and the history of sacrificial devotion to the upgrading of our people be forgotten.

Because of the record that these schools have already made in producing leadership of highest caliber, we must see them retained and strengthened, not as a matter of charity, but out of a moral, civic and patriotic compulsion. This compulsion is generated on the one hand by our loyalty to basic American ideals. We are passionately dedicated to the principle that every person shall have the right to realize his maximum capacity in a society which provides the same opportunity for everyone else. It is therefore cause for national shame that so many Negroes have been dwarfed by the impositions of racism throughout our country.

These colleges offer one of the best instruments by which the lags may be corrected and the evil consequences of racial inequality may be checked.

Ten of these colleges are located in the hard-core States of South Carolina, Georgia, Alabama, and Mississippi—States where no modicum of integration in public schools and in tax-supported colleges and universities has yet taken place and where the reaction is so intense that no one dares to predict what forced compliance will bring forth.

But these 10 colleges, with integrated boards of trustees, integrated faculties, on whose campuses may be held meetings and conferences that bring all people together—these colleges are bound to be the key to the future in these States. Their alumni are serving constructively in every corner of these States, winning the admiration and respect of the people.

When democracy becomes a fact throughout the country we will owe much to the leaders prepared in United Negro College fund schools.

Not only are we compelled by virtue of our concern for democratic practices and processes but we are under a compulsion to see education—just education—available to everyone who desires it.

Thirty-two of the thirty-three are located in the area where two-thirds of the Negroes live. There are 25,000 boys and girls enrolled now in these colleges. This says nothing

of the prediction that the American college population will be doubled within 10 years.

Where will they go? The families from which they come earn one-half what the white families earn. They have to attend colleges whose fees are tailored to meet low-income family needs. How can Negroes pay $1,500 to $2,000 a year for college when this strains white families earning twice what Negroes earn? This is not just a southern problem. Our large numbers of northern students suggest that the relatively lower income of Negroes the Nation over require college education to be made available at $900 a year more or less.

This is of vital importance to the northern industrial centers. The Negro population has increased one to every four during the last 5 years in New York, Chicago, Los Angeles, and other points in between. You cannot escape the flood tide of untrained, frightened, apprehensive migrants looking for a better break in life. But if the condition is changed at the source, if wider opportunities are extended in the South, instead of the next 10 years bringing problems to the large urban centers, we will see an increasing number of technicians, accountants, nurses, teachers, and managers available for American business industry and humanitarian agencies.

A democracy is not a static thing. We do not look at problems with hand-wringing, teeth-grinding disgust. We approach our problems dynamically and positively. We see changes taking place all over. Negroes have sloughed off paternalism for equality. This is an ideal. In order for this to become a fact educational opportunities must be maintained and enhanced, especially in the South.

In order for us to destroy the correlation between color and delinquency, the new order now emerging must be nurtured to its full flower by wise and productive Negro leadership, eliciting respect and mutual friendship from those who will find it difficult to change their pattern of relationships.

When we succeed—for we will succeed—it will be as natural for a firm to engage a Negro—as natural for a real estate broker to sell a Negro a home in the nicest neighborhood—as natural for a club to receive a Negro member—it will be as natural as the seasons trailing each other and the planets coursing the sky in their orbits, for color will be neutralized.

And, then, there is the moral and spiritual compulsion which moves us to see this cause, thus far so nobly advanced, continue with vigor and strength.

One of the most moving chapters of American history is perhaps the least known. Ninety-four years ago, when 4 million slaves were set free in the midst of their former masters, in a climate of resentment and hostility, with no heritage of blood, gold, or self-determination, freed from the bondage of slavery, but shackled and fettered by the bondage of ignorance and fear, before the dust had settled at Appomattox and while the shells still smoldered on the ground at Gettysburg and Chancellorsville, and while the echoes of the gunfire from the Merrimac and the Monitor could still be heard on Virginia's fair and fertile peninsula, New England trained teachers, fair skinned and blue eyed, were leaving their ivy clad campuses, moving to South Carolina, Texas, and Tennessee, and Georgia to establish Shaw University, Atlanta University, Spelman College, and Hampton Institute. They used church basements, rented halls, abandoned buildings, boxcars, and parsonages.

In Richmond, they purchased Lumpkin's jail where incorrigible slaves had been held and beaten to submission. The jailkeeper's house became a chapel for the preaching of the gospel, the cellblocks became a dormitory, the whipping post became a lectern. The devil's half-acre became holy ground.

The rich tradition of the Judaeo-Christian faith had encountered another staggering human need and these angels of mercy came not to be ministered unto, but to minister.

My own grandmother, a contemporary of Booker Washington during his student days at Hampton, brought into my youth the discipline and the love of learning and the self-respect that she received at the hands of these dedicated servants of God.

Practically every one of these 33 colleges had such a beginning; they were the creation of sensitive spirits who braved ostracism and abuse to bring enlightenment to a benighted people.

Great progress has been made in these 90-odd years, but the Negroes of America are still wrestling with the consequences of slavery and segregation. An unfortunate image of our people has been etched indelibly on the minds of our neighbors, the delinquencies, social, and economic, caused and permitted by ghetto living and racial restrictions have perpetuated a stereotype among us for far too long a time.

The vicious cycle goes on and on. Denial on account of inferiority. More inferiority because of denials.

Any person whose soul is tuned to the moral imperatives of the God of our fathers can see the evils inherrent in this cycle.

A court edict will go far to correct it. Good will and fellowship will help to change the atmosphere and encourage amelioration.

But nothing—nothing will cause the tide of prejudice and hate to recede like the steady flow of well-educated, courageous, mature, and God-fearing young Negroes, standing in their full height as strong, young Americans, ready to become answers—not further problems—to the critical needs of our time.

When Henry L. Morehouse, the man for whom Morehouse College is named, was raising funds for the Baptist colleges of the South 50 years ago, he was asked why he felt that Negroes should be trained in the arts and sciences. His reply is a classic:

"I believe in the thorough humanity of the black man capable of culture, capable of high attainment under proper circumstances and with sufficient time—not a being foreordained to be a hewer of wood and drawer of water for the white race—predestined to irrevocable inferiority, but a being whose mind and soul can expand indefinitely, to comprehend the great things of God, and to take a place of usefulness and honor in the world's activities."

These colleges are the fulcrum, your support is the lever by which America may break the inertia in solving one of her most difficult problems and move forward without spot and blemish in her rightful role as the leader among the nations of the earth.

More Propaganda From the U.S. Department of Agriculture

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. METCALF. Mr. Speaker, on March 18 I introduced H.R. 5813 to provide for the expansion of presently authorized research into the effects of pesticides on fish and wildlife.

In a statement, on page A2375 of the CONGRESSIONAL RECORD of that date, I documented the need for such an expanded program and the ways in which the increased authorization could be well spent.

In this connection, my attention has been called to an article by Jerry Hornsby in the March 20, 1959, issue of the Alabama Journal on the premiere of a new film on the fire ant control program. The article follows:

MORE PROPAGANDA FROM USDA

(By Jerry Hornsby)

Yesterday's Montgomery premiere of a new film entitled "Fire Ants on Trial" has left its first audience puzzled.

Is the film an attempt at dramatic preeminence, or is it supposed to be the comedy hit of the year?

Produced by the U.S. Department of Agriculture, the film supposedly depicts the life of the imported fire ant which the USDA would have us believe constitutes the biggest single insect menace now facing the American public.

Among the film's featured stars are an anonymous little fire ant who starts out narrating the film, then suddenly disappears; a couple of local television personalities, and various Autauga County farmers and their families.

The film opens with a frightening closeup of a rather formidable-looking fire ant thrashing about to the accompaniment of pulsating music, and closes with this choice bit of dramatic monologue: "It is written that man inherits the earth—but for how long?"

SAFER WITH ANTS THAN POISONS

How long indeed? We're a lot safer with the fire ant than with the insecticides being used to poison them, and we'd be a little better off financially if we didn't have to kick in the tax money to support the USDA's "eradication" program in Alabama and other Southeastern States.

Eradication? Hardly, if the USDA's own figures and calculations are correct.

According to them, 11 million acres in Alabama are infested by the fire ant. Also according to the USDA, not more than 200,000 acres will be treated in Alabama during any one year.

As was pointed out recently at the 23d annual convention of the National Wildlife Federation, this means it will take 55 years to treat all infested areas in Alabama.

Figuring the residual effects of these insecticides to be 5 years, the areas now being treated will be vulnerable to reinfestation for 50 years before all areas are covered.

Meanwhile, what type of animal life besides fire ants is being killed? The USDA film neglects to touch upon this minor aspect of its program.

The poisons' disastrous effects upon wildlife (which is why a fire ant discussion creeps into this column) are generally known to sportsmen and conservation workers throughout the South. Appalling kills have been verified in Alabama and other Southern States.

The effect upon domestic animals was confirmed by the journal's own investigation into the Monroeville program. There, 36 affidavits showed the poison deaths of almost 700 chickens and other domestic animals.

POSSIBLE EFFECTS ON HUMAN BEINGS

Professional men are warning of the possible long-range effects upon human beings. A prominent medical doctor says the increasing use of pesticides is connected directly with the "alarming rise in the incidence of deaths from heart attacks and other forms of vascular disease." They also are thought to be contributing to an increasing number of mental and leukemia victims, among others.

Does the fire ant itself pose a menace to our very survival, as the USDA film intimates?

The USDA says the ant is a threat to human life; the National Audubon Society says one death has been attributed to the fire ant since its invasion of American soil 30 years ago.

The USDA says the fire ant is a menace to animal life; Auburn researchers, who are probably better informed about the fire ant than any other group or individual in the South, have observed no animal kills.

The USDA says the ant is a menace to crops; Auburn found it impossible to encourage ants to eat plants growing on their own mounds.

The USDA says the ant poses a threat to wildlife; Auburn researchers and the conservation department find nothing to substantiate this claim, and even say that wildlife is more plentiful in certain areas heavily infested by fire ants.

DEPARTMENT SEEKS ANOTHER $250,000

The battle rages, the public takes sides, and in the Alabama Legislature the agriculture department requests another $250,000 for its treatment program this year.

If only Noah had stepped on one of the little tikes as it boarded the Ark.

Mr. Speaker, the Department of Agriculture has committed $4.8 million for eradication of the fire ant in the last 2 years, and the budget request for fiscal 1960 includes another $2.4 million for this purpose—despite disastrous kills of fish, small game, and other animal life, including livestock and poultry in the sprayed areas.

It seems to me that at least part of this amount could better be spent on research to find out what these deadly poisons are doing not only to fish and wildlife, but also to man.

In Remembrance of Him

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. OSMERS. Mr. Speaker, one of the most solemn observances of the Ancient and Accepted Scottish Rite of Freemasonry is the commemoration of the Last Supper that Jesus shared with His disciples; and the tragic events that followed that repast are foreshadowed in the ancient ceremony of extinguishing the lights.

On March 26 of this year, at the beginning of this annual commemoration, the Imperial Potentate of North America, A.A.O.N.M.S., George E. Stringfellow, of New Jersey, delivered the following address which was given at the Scottish Rite Maundy Thursday dinner, held at the Scottish Rite Temple, Balboa, C.Z. Mr. Stringfellow applies ancient religious teachings to the problems of today in a most constructive approach. Under unanimous consent, I include this address in full in the Appendix of the RECORD where his thoughts will be available to all of the Members:

IN REMEMBRANCE OF HIM

(An address by George E. Stringfellow)

Maundy Thursday is a day of deep significance to Christians and Jews alike.

It was on this Thursday of Holy Week that Jesus gathered his disciples for the observance of the ancient Feast of the Passover.

It was on this night before he was crucified that our Lord instituted the holy supper and mandated his disciples to do this in remembrance of him.

From these two historical events, which we traditionally commemorate on Maundy Thursday, have come an enduring emphasis upon the essentiality for mankind of such qualities as sacrifice, humility, service, and love.

With the passing of the centuries some of the external forms of the observance of Maundy Thursday have been modified.

The ceremony of washing the feet of the poor by noblemen, prelates, and kings is obsolete. The tradition of giving special alms and "Maundy money" is now seldom observed. Other special ceremonies and rituals have long since passed into the limbo of things forgotten.

The spiritual, moral, and ethical significance, however, of Maundy Thursday has not been diminished by the passing of time.

Certainly the opportunities to apply these values in a practical way have increased with each succeeding generation and, in our time, have multiplied almost unbelievably as our daily lives have become more complicated and our society has become more complex.

How easy it is for all of us to become involved and burdened with trivia of daily living. How easily we forget the really important things in life.

Our thoughts and our energy are too often devoted to the ephemeral rather than the eternal. We give ourselves unthinkingly to passing fancies rather than to enduring values.

We forget to commune with our God except when we are in trouble. We fail to think very much about the problems of other people. Seldom do we share another's burdens, his sorrows, or his cross.

But Jesus said at the Last Supper, "This do in remembrance of Me."

His command is neither selfish nor personal. Our Lord wanted us to remember all that is good in life, to cherish truth and beauty and goodness. He wanted us to conduct our daily lives in remembrance of Him.

We must ever remember that ours is a country founded upon the ideals of the Old anw New Testaments, by people who took their Bible seriously. We must remember that the men and women who came to our shores in search of religious and economic freedom were bound together by a spiritual thread that no hardship could sever. That thread has been the warp on which the whole pattern of our Nation was built. It is no accident that on our Liberty Bell the words "proclaim liberty throughout the land to all the inhabitants thereof" are to be found in the Old Testament Book of Leviticus.

It was that faith in God, as emphasized in our Bible, that gave our forefathers the courage to fight for independence and to win in spite of overwhelming odds.

From that faith came the almost divine wisdom that gave us our Constitution which for 170 years has assured us the right of life, liberty, and the pursuit of happiness.

That faith was the light which guided our leaders during the dark days of the Civil War. That same faith today will help us overcome the danger of communism, which is threatening the world. The Communists fear the power of belief in God and assert that it must be exterminated before communism can be safe. By their own admissions we have in our possession a spiritual weapon which can be used against this ideology which denies God, enslaves man, creates hate, and devastates the human soul.

As Christians and Jews and as Masons we believe in the fatherhood of God and the brotherhood of man. This is a phrase we hear often in the rituals of our order. Its simplest interpretation can be made in the words of Jesus when he said "A new commandment I give unto you, that you love one another."

This is what gives significance to Maundy Thursday. This is why we are here tonight—to remember and to heed with renewed spirit the commandment to "love one another."

If we should practice that admonition, it might well be the solution to the ills and problems of the modern world. That may sound visionary, but it isn't impossible if we follow Jesus' teachings and his example.

His love inspired love in those around Him. There was little reason for a strict orthodox Jew like James to associate with a despised tax collector like Matthew. Yet, when they became friends of Jesus, they inevitably became friends of each other. A rough fisherman like Peter had little in common with a refined scholar like Nathaniel but they were drawn together by their mutual friendship with Jesus. And so it was that the love one showed for another, touched someone else, and like the ripples on the water reached unseen shores as a result of one point of contact.

To love one another is the motivating spirit of our brotherhood. Our example could be the pebble that could start the ripple of friendship spreading among ourselves, our neighbors, our business associates, our Government officials, and finally, through the leaders of other nations, touch foreign shores.

If the spirit of brotherhood were practiced in the affairs of individuals and of nations, the unrest which now disturbs the world would disappear.

It would create a better understanding. It would protect the weak from the strong. It would eliminate selfishness and greed. We would have peace and good will in national and international affairs. The world would thus be a better place in which to live.

And so in the name of Jesus Christ, our Savior, I say unto you, "Love one another."

Hunger Breeds Discontent and Communism

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 23, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, when Fidel Castro was in Washington, he made the statement that Cuba will not turn to communism as long as the Cubans have enough to eat. Of course, this is an oversimplification of the situation, but it contains a basic truth. So long as people are hungry, uneducated and unemployed, they are easy prey for the first ism that comes along.

On April 20, I introduced in the House a companion bill to the food for peace bill introduced in the Senate by Senator HUBERT HUMPHREY. Under the provisions of this bill, our abundant food production would be used to implement our foreign policy by helping underdeveloped countries help themselves.

The importance of economic foreign aid is pointed out in an editorial which appeared in the current issue of my State's farm magazine, Wisconsin Agriculturist and Farmer. Under leave to extend my remarks, I would like to include that editorial in the RECORD:

FOREIGN AID: HOW MUCH?

Both Houses of Congress seem bound and determined to slash $1 billion off the Government's request of $3.9 billion for foreign aid.

Almost any proposed slash in Government spending brings out a brigade of lobbyists to stop the cut. But foreign aid does not have a lobby.

Members of the House would like to take the full cut from economic aid, leaving the military intact. Leading Senators vow to fight for full economic aid, would cut military aid to underdeveloped lands.

The present Government request leans heavily to the military. Two-thirds of the request was earmarked for military assistance.

Economic foreign aid seems to lack all glamour. And yet it is one way to build stability in many troubled countries.

We can pour millions in tanks and guns into a country. One revolution can topple the government, turning all the equipment over to a totalitarian leader. Unless we are willing to risk an all-out war, we can only watch helplessly from the sidelines.

Only when people have productive jobs, schools to educate the people and some measure of security in life, will they have stable governments. So long as they are uneducated, unemployed—have seemly nothing to lose—that long will they follow whatever rabble rouser promises the most.

Economic aid, used wisely, brings jobs, education and stability to the peoples of underdeveloped lands. The amount of money needed may look great. But it is small compared to even a Korean war.

If we fail to help meet the economic needs of our friends overseas, the Russians are only too happy to rush to their rescue.

If we fail we can expect to continue to spend far more than economic aid would cost us. We'll spend it—as we have been doing for sometime—rushing from trouble spot to trouble spot trying to put out the fires. And we'll often be too late. We can expect to see more and more countries drop from the roster of the free world.

The truth is, that in these troubled times we need to spend more money on economic development overseas, not less.

The Farm Scandal

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. BOLAND. Mr. Speaker, the current issue of Life magazine contains a timely editorial concerning the farm subsidies and surpluses in this country and how they are costing the American people nearly 20 cents out of every tax dollar spent for nondefense Government needs this year.

SUBSIDIES RAISE THE PRICE OF FOOD AND CLOTHING

I agree with the editorial that these unrealistic subsidies and surpluses are just raising the prices of food and clothing that must be purchased by my constituents in the Second Congressional District of Massachusetts, and by all Americans throughout the country.

SUPPORTS WILL COST $5.4 BILLION THIS YEAR

This Government is going to spend another $5.4 billion on supports this fiscal year. Storage alone is costing $1 billion a year for the surpluses. The overall farm program has grown to ridiculous proportions.

Mr. Speaker, I commend this editorial to my colleagues to read, and, under unanimous consent, insert it in the RECORD:

A TAX CUT YOU CAN AID

Fellow taxpayer, on this annual occasion of wailing and gnashing of teeth, we have a question to ask you: "If a man came up to you and asked you for a lot of money so he could raise the price of your food and of the shirt on your back, would you hand it over—or sock him?"

The answer is, you are handing it over, billions upon billions, and it is being used to raise the price of your food and clothing. We're talking about the subsidies being paid to farmers for crops that aren't needed, to raise new surpluses to pile on top of staggering existent surpluses.

This economic madness has now reached its ultimate absurdity with the multimillion dollar soil-bank program which is enabling quite a few farmers to retire: by agreeing to take their entire farm out of production for many years, they can get enough Government money to sit back and do nothing at all. Does that make you feel good at income tax time? Well, listen to this:

Out of every tax dollar you pay this year for nondefense Government needs, nearly 20 cents of it will be spent on these needless handouts to farmers.

At this very moment you have nine billions of your money tied up in these surpluses. They are now so huge that it will cost you more than $1 billion this year just to pay storage and other charges.

You've got as much money sunk in this unwanted surplus as you will spend this year on the whole U.S. Army.

You're going to spend another $5.4 billion on supports this fiscal year. And it isn't all going, as originally intended, to help the struggling small farmer stay on his feet. The great bulk of it is going to corporations or other farm outfits with operations so huge that two of them got more than $1 million each in loans, while 15 others got more than $250,000. Such loans frequently wind up as subsidies.

The Government has now so much wheat stacked up that if not another bushel were grown this year we would still have enough for all our domestic and foreign needs. In spite of this you, the American taxpayer, paid $330,267.51 in the form of a loan to the corporation of Tom Campbell, the millionaire wheat king of Montana (Life, March 23), who is perfectly capable of looking after himself.

Do you know how much of your tax money is going to support this wasteful and self-defeating program? Every single penny you pay above the basic 20% rate goes into the farm supports. The $5.4 billion now going into this is $2.2 billion more than the entire Federal budget in 1929.

Farmers, once free and independent, can now be arrested and prosecuted for growing "too much" grain even if they do nothing with it but feed it to hogs on their farms.

The Government has so much surplus cotton that it has been dumped overseas at less than the price paid. But U.S. shirtmakers have to pay an artificially high price for cotton, thus making your clothes cost more than they should. Make you happy? Well, reflect on the further fact that you paid $781,274 for a loan to Mississippi's Delta and Pine Land Co., a big corporation. The loan, unrepaid, became an actual subsidy.

Corn growers, who recently voted to accept a lower support price ($1.12 a bushel) in return for freedom to plant as many acres as they please, are getting ready to plant what is expected to be the biggest crop in U.S. history. The prospect of even trying to cope with this surplus has struck Eisenhower's economizers with fear and trembling. To buy it up would send the already fantastic cost of subsidies right through the ceiling.

In short, the whole farm support program, which has cost you $18 billion in a quarter-century, is a colossal failure.

The only sensible thing to do about it is to get rid of it, stop it. Why go on pouring good money after bad?

The subsidies were enacted in the depression, when farmers were in desperate need. Today, farming is a big business, highly mechanized, performed mainly by large operators, and enormously efficient. Thanks to chemical fertilizers and automation, each year it gets more out of every acre. There is no more reason why you should give a subsidy to this successful big business than to General Motors or any private operation. It can stand on its own feet. When it is left to find its own way in a free market you'll get cheaper meat, bread, and clothing. And the farm business will shake down to those efficient enough to survive.

Of course, that kind of a jolt will create distress for some of the smaller, marginal farmers who are on land that should not be in cultivation. But the taxpayers should be perfectly willing to spend whatever is necessary to relocate them. Such aid would only be a drop in the bucket compared to the billions now going to the big fellows who don't need relief.

Cynics in Washington say that no farm bill of any kind—for better or for worse—can be got through Congress in this political year when every other Senator is a would-be President. The cynics assume that you taxpayers will go on as before, meekly shelling out this money for what is, in reality, a double tax on you—the cost of the subsidy plus higher prices for your food.

Well, you can prove the cynics wrong. In this country, the voter is king. When he squawks loud enough, Congress listens—even more so in a political year. So start squawking loud and long enough to put an end, for good and all, to this incredible farm scandal that is getting worse every year.

The New York Naval Shipyard

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. ANFUSO. Mr. Speaker, the New York Naval Shipyard, which to us of Brooklyn will always be affectionately known as Brooklyn Navy Yard, recently celebrated its 158th year of continued service to the Nation. It was originally established in February 1801 on a 42-acre tract of land and was subsequently expanded over the years, until it now occupies some 288 acres of factories, shops, drydocks, streets, ways, and buildings. It is a tremendous center of production and skill serving the needs of our country's defenses.

I am particularly proud of this shipyard because it is located in my district. I am proud of its wonderful record of achievements throughout its long history; the skilled and loyal personnel employed there; and the very able men

who are at the helm of this shipyard. It is no wonder that the New York Naval Shipyard has become popularly known as the Can Do shipyard, because of the great ships that have been built there and the men who built them. No job is too difficult for them and none is impossible.

The present commander of the New York Naval Shipyard is Rear Adm. S. N. Pyne, whom I have had the pleasure of meeting on a number of occasions. In the 2 years since he has been in charge of the shipyard he has done a magnificent job under difficult circumstances. Under his splendid leadership two special jobs were completed of which all the employees at the shipyard, in fact all of Brooklyn, were especially proud. I refer to the repair work done on the U.S.S. *Saratoga* and the construction of the U.S.S. *Independence*. For these jobs well done, I wish to extend my congratulations to Admiral Pyne and his very able crew at the New York Naval Shipyard.

While I extol the virtues of both the people and the facilities available at the New York Naval Shipyard, which I regard as the greatest in the world, I desire to call the attention of my colleagues in Congress and our leaders of the Defense Department, especially in the Department of the Navy, to the fact that this shipyard could and should get more work. I should like to suggest that the next aircraft carrier be assigned for construction there, as well as some of the new fleet of atomic-powered submarines, and other naval vessels being contemplated in the near future.

In connection with the job done on the U.S.S. *Saratoga* and the U.S.S. *Independence*, Admiral Pyne has received many congratulatory messages. Just a few of these have been selected and I am now inserting them into the RECORD. These messages are a well-deserved tribute to Admiral Pyne and the entire personnel at the New York Naval Shipyard. The messages are as follows:

"SARATOGA"

(a) From the Chief of Naval Operations: "Successful sea trials of *Saratoga* noted with pleasure. Congratulations and a special well done to all hands for expeditious completion of *Saratoga's* main reduction gear repairs.

"ARLEIGH BURKE."

(b) From commander in chief, Atlantic Fleet: "Early completion date on *Saratoga* most impressive. Consider this excellent example of the continued cooperation and effort which helps keep us in business."

(c) From the Chief of the Bureau of Ships: "Successful completion *Saratoga* considered outstanding accomplishment in view very great magnitude of task and very brief time elapsed start to finish. Convey my sincere appreciation to all responsible personnel.

"A. G. MUMMA."

(d) From the commander, Naval Air Force, Atlantic: "*Saratoga* sea trials successful. In accomplishing the replacement No. 3 main reduction gear in 2 weeks to the hour, you surpassed our most optimistic estimates. Magnificient job.

"Thank you."

(e) From commander, Carrier Division Six: "I hope that you may have a suitable opportunity to convey to all involved in the repairs to *Saratoga* my deep admiration of the superb job that was done. The professional competence shown together with the enthusiasm and interest around the clock for 2 weeks by all hands is an inspiration to all of us aboard.

"Many thanks and good luck.

"RADM ANDERSON."

(f) From the commanding officer, *Saratoga:* "Sea trial on No. 3 main engine reduction gear completely successful at all speeds including suitable period at full torque. Am proceeding Norfolk.

"Consider shipyard completing gear change in only 2 weeks in round the clock accident free effort is an impressive achievement and a tribute to all those who took part."

"INDEPENDENCE"

(a) From the Chief of the Bureau of Ships: "congratulations to you and all New York Naval Shipyard personnel on the fine shipbuilding job represented by U.S.S. *Independence*. This ship is a worthy addition to our fleet and another important contribution by your yard to national defense. An excellent performance.

"A. G. MUMMA."

(b) From the Commanding Officer, U.S.S. *Independence* (CVA62):

"For Rear Admiral Pyne:

"We leave New York with great appreciation for the fine ship built us by the great shipyard you command.

"MCELROY."

Increased Minimum Wage Would Benefit Pennsylvania

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following letter from Mr. Joseph L. Hueter, manager of the Philadelphia Textile Workers joint board, Textile Workers Union of America, AFL–CIO.

He points out that the increase in the minimum wage to $1.25 an hour and the extension of coverage to workers now excluded would increase by an estimated $95 million a year the purchasing power of low-income workers in Pennsylvania, without imposing an undue hardship on Pennsylvania employers. The House should act promptly on the Kennedy-Clark-Morse-Roosevelt bill.

The letter follows:

PHILADELPHIA TEXTILE
WORKERS JOINT BOARD,
TEXTILE WORKERS UNION
OF AMERICA, AFL–CIO,
Philadelphia, Pa., April 3, 1959.

Hon. GEORGE M. RHODES,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN RHODES: Under date of March 10, 1959, Mr. Sol Stetin, the regional director of the Textile Workers Union of America for the States of Pennsylvania, New Jersey, and Delaware, sent you a letter pointing out that within the State of Pennsylvania there are outstanding instances of low-wage employers competing unfairly with manufacturers who pay prevailing rates. Mr. Stetin pointed out that the enactment of a more realistic minimum wage could do much toward correcting the type of situation he described.

To supplement this relevant information sent you by Mr. Stetin and to follow up my earlier communication on this same issue, I wish to call your attention to an estimate just made by the research department of the AFL–CIO on the overall impact on the entire economy of Pennsylvania of the passage of legislation such as H.R. 4488 and S. 1046 which, as you know, organized labor is supporting. The data just released by the AFL–CIO are as follows:

In Pennsylvania, an increase in the minimum wage to $1.25 and extention of coverage to unprotected workers, as provided by the Kennedy-Clark-Morse-Roosevelt bill, would require raises for an estimated 349,000 low-paid workers.

The required increase in total wage and salary payrolls in Pennsylvania would be six-tenths of 1 percent.

Although small as a proportion of total payroll, the increase would be a considerable addition to the purchasing power of the State's lower-income families. In dollar terms, the increase in purchasing power for Pennsylvania's low-income workers would be an estimated $95 million a year.

We believe that these figures demonstrate beyond any question that passage of the broadened coverage and the $1.25 minimum wage would (a) stimulate purchasing power appreciably in our State; (b) offer no particular difficulties for employers in Pennsylvania; (c) aid in the most direct and desirable manner a large group of families who are now suffering severe economic depression.

Although we feel that the purely economic arguments for this legislation are clear and quite substantial, we wish to make it very plain that in the final analysis we support this measure on humane and moral grounds. To us it is quite indefensible and distressing to find that there are practically 350,000 wage earners in a State as productive as Pennsylvania who are today resceiving hourly earnings of less than $1.25 per hour. This figure, of course, does not take into account the larger number of persons who are employed in Pennsylvania at jobs that are classified as intrastate. Certainly we must act promptly to reach as quickly as possible those individuals who can be covered by the Fair Labor Standards Act and whose wages are now so glaringly substantard.

You will understand, I am sure, Mr. Congressman, that we are completely satisfied with your position on this legislation. Our purpose in writing to you once more is to transmit these recent figures relating to the impact of an improved Federal wage and hour bill on Pennsylvania. Also, to ask you to do whatever is possible to see to it that the hearings on the Roosevelt bill before the House Labor Committee are not postponed until passage at this session would be endangered.

Sincerely yours,

JOSEPH L. HUETER,
Manager.

Under What Circumstances Should a Passport Be Denied to an American Citizen?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Arthur Krock from the New York Times. It will do much to clear up the misun-

derstandings that have developed on the question of compelling the Secretary of State to issue passports to persons who are reliably known to be enemies of our form of government and whose travel can be very injurious to the United States:

A LIBERAL FORMULA FOR THE ISSUING OF PASSPORTS

(By Arthur Krock)

WASHINGTON, March 30.—The series of decisions by which the Federal courts strongly asserted the constitutional right to travel, and banned as illegal some of the discretionary practices of the Secretary of State in denying and revoking passports, has since been closely studied by Congress and the department for guidance toward a formula the courts will uphold as both constitutional and authorized by Federal statute. The results of the department's study were made public in detail for the first time by its security administrator, Assistant Secretary John W. Hanes, Jr., in a recent speech at Chicago.

The effect of the decision that invoked the new formula was stated by Hanes as follows:

"Since the Supreme Court's 5-to-4 ruling of June 1958 [that the Secretary cannot deny a passport to a known Communist Party member simply for that reason, or to a citizen he has specifically found is going abroad to 'willfully and knowingly engage in activities to advance the international Communist conspiracy'] there has been a flood of applications from such persons * * * some previously denied * * * some made for the first time. Many we know a great deal about. Others we would like to know more about.

But the Department is no longer in a position to inquire, much less to investigate, whether such applicant is a * * * party member or how dangerous he may be * * *. Passports have been and are being issued to all."

The Supreme Court based its ruling in part on the finding that Congress had not specified the right of the Secretary of State to deny passports to Communists just because they are that, and made clear that any new legislation by Congress must not infringe the constitutional right to travel. The consequent bill, approved by the House in the last Congress, died in the Senate. And thus far no action has been taken by the current Congress.

The Hanes speech was made in behalf of such legislation. As the administration's spokesman, he proposed this liberal formula for it:

1. Specific authority for the Secretary of State to deny passports to "hard-core supporters of the international Communist movement." This denial to occur under due process of law, including judicial review. The authority should not apply to citizens who merely hold Communist beliefs or have Communist associations, but should apply to them if they engage here in furtherance of international communism, or if the purpose of their errand abroad is to do this.

2. Due process means to the State Department that the Secretary must have sound, not arbitrary or capricious, reasons for passport denial; that he must give these reasons in detail to the individual concerned, and also give a full opportunity for refutation—in the Department's appellate structure as well as in the courts.

3. But new passport legislation would be meaningless and would not achieve any purpose if it prohibited the Government from utilizing confidential information. Almost without exception dangerous cases * * * involve confidential information and * * * investigative sources. But the Government should be required to provide the applicant a fair summary of the content of any such information.

4. Statutory authority is not wanted by the Department to stifle critics of the Government or the administration; or to restrict the travel of those who hold unorthodox political, social or economic opinions; or to end travel or activity abroad only because it might embarrass the American people or their Government.

5. And it is not wanted to penalize those who, before the nature of the Communist conspiracy became * * * crystal clear, may have had Communist sympathies, or even belonged to Communist organizations in this country.

Hanes probably surprised his Chicago audience with some statistics of passport denials that may also surprise readers of this report, particularly those who have seen in some denials infringements of the constitutional right to travel. He said that from 1952 until the Supreme Court's 1958 ruling the Secretary of State denied passports to only 15 after full hearings. He said also that in the calendar years 1956 and 1957 the Secretary (he must act personally in this matter) issued 1,145,000 passports and only 51 of the applicants were subjected to the process of inquiry.

A Salute to the New Federation in the Sun

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. MULTER. Mr. Speaker, the brazen sun beat down through the sweltering humidity of Port-of-Spain. It was an historic day, April 22, 1958. The multiracial people of Trinidad—Africans, East Indians, whites, Chinese, and every possible combination—were packed tight around the Red House, seat of the Government. Finally the moment all had been waiting for arrived. Princess Margaret, cool and dainty, unruffled by the heat, entered the hall, greeted the officials, then read in her small, girlish voice, "I now declare the Federal Legislature of the West Indies to be inaugurated." With these eventful words, an important step was taken in the development of democratic institutions in the Western Hemisphere—the Federation of the West Indies was created.

This new nation is a crescent-shaped constellation of islands stretching over the Caribbean Sea from Jamaica in the northwest to Trinidad in the southeast. Though divided by Caribbean waters, these antilles share a common beauty—a kaleidoscopic purple and green and blue brilliance of sea around them, mountains climbing steeply from the water, and lush green valleys lying between stony peaks.

The total land area of these islands is only some 8,000 square miles, about the size of New Jersey, but they are scattered over 550,000 miles of water. The people of the West Indies are mostly descendants of slaves brought over from Africa hundreds of years ago to work on sugar plantations. After the abolition of slavery, contract workers were imported from the East Indies, and today the East Indians compose a substantial portion of the population, together with a number of Chinese merchants, some British plantation-owning families, and some descendents of early French planters.

The West Indies are as poor as they are beautiful, with too many people, too few jobs, and a very high birth rate. The islanders, outside of Trinidad and Jamaica, subsist chiefly from farming, particularly sugar and fruit. Some employment is provided in the oilfields and at the asphalt lake in Trinidad and in the bauxite mines in Jamaica. But poverty grinds the ever-increasing population, manifesting itself in wretched living conditions, malnutrition, and tuberculosis.

It was these conditions that engendered the movement for federation. The individual islands by themselves were too small and weak to maintain viable economies. The old form of government, with each island or small group of islands forming a separate colony ruled directly from Great Britain, was a barrier to economic progress.

Farsighted thinkers proposed to unite all of these colonies into one federation, with the unified group of islands to enjoy greater powers of self-government. After 10 years of patient study, negotiation, conference, debate, and action, a federal constitution was adopted.

Under it, the federation is headed by a governor-general appointed by the British Crown, who is vested with exclusive powers over defense and foreign affairs. The governor-general can veto the acts of the Federal Parliament, although he is normally expected to act on the advice of the Prime Minister and his Cabinet. Each colony is represented by two members of the Senate, which has the power to delay the passage of laws for as much as a year but not to defeat legislation. The power to legislate for the federation resides in the house of representatives, which is popularly elected. Its jurisdiction on most matters of policy is shared with the legislatures of the individual states.

Since the governor-general has the power to veto acts of the federal parliament, as well as to conduct foreign affairs, the new constitution does not grant full self-government to the West Indies. Rather, it establishes a more moderate form of colonial government under which the islands can progress toward autonomy. If political developments are satisfactory, in 5 years the West Indies will become completely self-governing and gain dominion status within the British Commonwealth.

From its very beginning, the United States has maintained trade relations with the West Indies. In recent times, many Americans have visited these islands, both as tourists and as traders. Since the early stages of World War II, there have been a number of important defense arrangements with the United States which reflect the interdependent nature of security among the countries of the Western Hemisphere.

The United States, which also emerged from a federation of separate British colonies, congratulates the Federation of the West Indies on the first

anniversary of its federal union and its initial step toward self-government and dominion status within the British Commonwealth of Nations. The economic and political problems confronting the new federation are strongly challenging.

The United States looks forward to being a good neighbor to the Federation of the West Indies.

Our Liberties Versus Responsibilities in a Free Society

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. BOW. Mr. Speaker, I am proud to include with my remarks an essay by John Kropf, a 10th grade student of Orrville, Ohio, which was the winner in the Ohio American Legion Essay Contest:

OUR LIBERTIES VERSUS RESPONSIBILITIES IN A FREE SOCIETY

(By John Kropf)

What do we mean by liberties? There are many different kinds—civil, political, individual, and personal. All these liberties denote a freedom from restraints by others. Civil liberties are those which we enjoy as citizens. Political are those that permit us to share in the formation and conduct of our Government. In individual liberty we find freedom of the person, while in personal liberty we enjoy equal rights in our courts and freedom of conscience and a security of our person and property.

Where do these liberties come from? We find them in our Constitution and in particular the Bill of Rights which were secured by our forefathers whose fundamental aim was to set up a government which would provide liberty for individual development and progress. Over the years it has been necessary for succeeding generations to put our free society to a test. Perhaps the greatest test was the great Civil War which, in the words of Lincoln, was a testing "whether that Nation, or any other nation so conceived and so dedicated, can long endure." In the exercise and enjoyment of our liberties and our freedoms we give the individual the permission to voice opinions and ideas which are often conflicting with those of others. Thus the "Anvil Chorus" might well be our theme as we hammer out on the anvil of public sentiment the differing voices which when brought together spell progress.

What do we mean by responsibilities? And how are they related, if at all, to our liberties? Someone has said that responsibility is the ability to pay, and I am wondering if it could mean that this relationship is one that requires us to pay for the liberties we enjoy. Since it takes money to run our Government, we have responsibilities toward the payment of taxes which support the Government. But in a larger sense our responsibilities require us to do what is right which will keep alive the liberties we cherish—liberties which were born out of conflict and continued in existence by the watchful eyes of our ancestors.

They also reocgnized their responsibilities as they took pride in their right to vote and to hold public office. They took an active interest in government and were free to say what they wished. This is the only way in which a democratic society can stay in existence.

We must realize that as members of a free society we face our greatest danger when the people fail to take an active interest in their government; fail to make their wishes known; when they feel they are helpless in making great decisions; fail to become informed about affairs of government; and when they become separated from their highest ideals. Each one of these failures represents a failure in the responsibility which we owe to our Government and society. To safeguard our liberties we must see to it that we are not guilty of these failures. We must see to it instead that we concern ourselves with affairs of government; that together we make our wishes known; that we get the necessary information to take part in the big decisions to be made; and that we constantly keep high our ideals. This provides the greatest security in keeping the liberties of our democratic society alive.

Integrity—Address by George Stringfellow

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. ADDONIZIO. Mr. Speaker, I know that the membership will wish to read the inspiring address on integrity delivered by Imperial Sir George E. Stringfellow, of East Orange, N.J., imperial potentate, A.A.O.N.M.S., at a luncheon given by Phi Theta Kappa Fraternity, Tivoli Guest House, Balboa, Canal Zone, March 28, 1959.

The countless friends won by George E. Stringfellow in his manifold professional, fraternal, civic, and humanitarian activities associate him with the great traits of integrity and industry about which he spoke so eloquently to Phi Theta Kappa Fraternity. His fine qualities of mind and heart, coupled with his unusually broad experience, admirably qualify George E. Stringfellow for the challenging responsibilities of the office of imperial potentate, A.A.O.N.M.S.

The address reads as follows:

"INTEGRITY"—ADDRESS BY IMPERIAL SIR GEORGE E. STRINGFELLOW, OF EAST ORANGE, N.J., IMPERIAL POTENTATE, A.A.O.N.M.S., AT A LUNCHEON GIVEN BY PHI BETA KAPPA FRATERNITY, TIVOLI GUEST HOUSE, BALBOA, C.Z., MARCH 28, 1959

Thank you for having elected me to honorary membership in your fraternity. I appreciate the honor and I am complimented by your invitation to address you.

I have selected "Integrity" as my subject.

Let us at the outset define "integrity." "Integrity" is soundness of character. It is that quality of mind and spirit which we associate with honesty and good faith. It is the foundation upon which virtue and morality rest. It is the cornerstone of right relationships between individuals and groups. It is an indispesable ingredient of good business and the professions. Everything we are, everything we have, everything we hope for, rest upon the integrity of man.

A nation's greatest wealth is not found in the coffers of its financial institutions, nor is it found in the assets of its industries or its natural resources. A nation's greatest asset is the integrity of its citizens and the responsibility of its government.

There is a false notion abroad today that men of sterling worth, men of complete honesty and noble character, are not successful in a monetary sense. However, the history of human progress is a record of men of integrity, men who could be trusted and men who put righteousness, truth, justice, and freedom above personal gains, above power, yes, at times, above life itself.

Successful men in all walks of life have been men of integrity. The crooked businessman, the unscrupulous lawyer, the quack doctor, and the insincere clergyman are rare enough to make news.

In politics or statesmanship, Abraham Lincoln has been looked upon as a model of integrity. They called him "Honest Abe." The story of his walking 3 miles to return 6 cents to a woman he had overcharged is probably true.

Paralleling "Honest Abe" was the "Prince of Merchants," John Wanamaker, who was affectionately known as "Honest John." The story of his personal life, how he built his business on integrity and maintained it through giving honest value, has been a challenge and an inspiration to merchants everywhere.

In the realm of science and invention, Thomas Alva Edison, with whom I was privleged to be a daily business associate for a number of years, was a man of integrity. There is a story about Edison which I think is worth repeating since it represents a philospohy which he followed throughout his life.

Edison conducted more than 50,000 experiments on a certain product before placing it on the market. While he had taken great care to make sure that the product was right before he began to market it, defects showed up in the field which had not been revealed in laboratory tests. On learning of these defects, Edison closed his factory, requested his customers to return their purchases and to get their money back. Many of his customers were amazed at his request to "return the product and get your money back." Some protested that the product which Edison found defective was better than its competition and refused to respond to the inventor's request. In discussing this incident, I asked Mr. Edison why he had not charged the customers for the service they received and for which many of them were willing to pay. Mr. Edison replied by saying, "My integrity was involved and that is not for sale." Edison knew that integrity is a priceless ingredient and he measured his every decision by integrity. "Is it right?" he would doubtless say to himself. Edison was never interested in who is right. Edison was interested in what is right. And so were all great men of history. That is why their memory commands a devotion rooted deeply in human gratitude.

What is the future for those who are graduating from schools and college today and entering what is considered by some as a hard, cold world is a question many are asking. My answer to that question is that the future was never brighter for those who posses the priceless attributes of integrity and willingness to work. Such young people face the future with confidence and a feeling of security. Their contribution to civilization will be vasty enhanced and their rewards multiplied many times if they go forward with that matchless combination.

In closing, may I quote the last message of Thomas Alva Edison to the American people, and to the world, so far as that is concerned: "Be courageous. * * * History repeats itself again and again. Be as brave as your forefathers before you. Have faith. Go forward."

Integrity and the will to work produce great things. They produce a forward movement which cannot be stopped. Do you have them? If you do not have them, cultivate them.

Mr. Herter, Our New Secretary of State

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including two very fine editorials from my hometown newspapers, the Nashville Tennessean and the Nashville Banner, with regard to the appointment of the Honorable Christian A. Herter as Secretary of State.

These two great newspapers are united on the selection of Mr. Herter. Such approval and support of our national leaders in these crucial times make our country great. Yes; Mr. Herter will be able to take over his new responsibilities with the full approval and support of a united people.

The editorials follow:

[From the Nashville Tennessean, Apr. 19, 1959]

CHOICE OF MR. HERTER WILL BOLSTER U.S. WORLD POSITION

Acting Secretary of State Christian A. Herter's choice to be the head man on foreign affairs after the resignation of Mr. Dulles is a deserved promotion which has the Nation's approval.

As a matter of fact it would have been difficult to overlook his fitness, by background and training, for the post he is now to assume. Senate confirmation can be taken for granted.

President Eisenhower seemed to lay particular emphasis on a clean bill of health for Mr. Herter before making up his mind. But he need not have done so in view of the 2 years of superior service that had marked the Bay Stater's record in the State Department.

Though dependent on hand crutches at times because of arthitis Mr. Herter has nevertheless been energetic and productive. In his 2 years as Under Secretary of State, he necessarily worked more behind the scenes as the operating head while Mr. Dulles was the front man and spokesman.

On those frequent occasions, however, when Dr. Dulles was traveling abroad or troubled by illness, he made the day-to-day decisions, held staff conferences, welcomed visiting diplomats, and directed the operations control board which carried out policy decisions.

Psychologically, it may have been preferable to see a younger and more mobile man as a conductor of foreign policy. But the physical troubles of Mr. Herter are not progressive or in any sense incapacitating, and more important than that, he does not have to be indoctrinated or briefed as to the intricacies relating to the many and complicating policies of the Government.

Though his diplomatic experience is not as great as that of the older Mr. Dulles, the new Secretary nevertheless has had much experience dating from the time he was a staff assistant to President Wilson at the Paris conference of 1919.

And with his background as Governor of Massachusetts and as a Member of Congress from that State, he may be rated as a better politician. He should be able to deal with the Congress more effectively than his predecessor.

In the main, his voting record on the Hill was fairly liberal, and his principal achievement was in seizing upon the Marshall plan idea and lining up support which put it through the Republican 80th Congress.

Of course it is too early for him to discuss any possible changes in policies as they apply to the Berlin or any other situation. But he will have his chance to demonstrate boldness and imagination that has been so often discussed when attending the foreign ministers' conferences and the summit meeting. That will be the climactic effort unless unexpected barriers arise.

In the course of time, Mr. Herter may become a controversial figure, as so many of his predecessors have. But as of now, in assuming tremendous responsibilities, he should be strengthened by the confidence of a sober citizenship, to say nothing of the national administration of which he is a part.

His mere presence as active head of the State Department will tend to increase his country's prestige and build for better morale and unity among the bickering allies.

[From the Nashville Banner, Apr. 20, 1959]

MR. HERTER EMBARKS ON TASK WITH FULL SUPPORT OF UNITED STATES

In just 9 days America's new Secretary of State, Christian A. Herter, will be in Paris meeting with other Western leaders to prepare proposals for negotiating with Russia over the Berlin crisis.

Next month Mr. Herter will be in Geneva for a Big Four foreign ministers conference with Russia to set the stage for a summit meeting.

Then in mid-June, unless all expectations fail, Mr. Herter and President Eisenhower will meet at the summit with Soviet Premier Nikita Khrushchev, British Foreign Minister Harold Macmillan and French President Charles de Gaulle.

These are the herculean tasks facing the man who has succeeded cancer-stricken John Foster Dulles.

It is generally conceded that as Under Secretary and Acting Secretary, Mr. Herter is the man who can replace Dulles with the least disturbance to State Department operations.

And probably no previous Eisenhower Cabinet appointment has drawn more support at home and abroad than the elevation of Mr. Herter to State Department's top post.

Senator LYNDON JOHNSON's outspoken endorsement of the Herter appointment is indicative of Democratic reaction.

The Senator observed: "Since he has been working closely with Secretary Dulles, his appointment assures continuity of policy." This statement, in itself, must be interpreted as tacit bipartisan endorsement of Dulles' program.

Associates who have worked closely with both Dulles and Herter emphasize that they foresee no change whatever in the basic policy line laid down by Dulles with Eisenhower's approval, and although the two men may differ in their methods of work, the goal will remain the same—and that is, continuing the policy of no appeasement, no surrender to Russian bluff and bluster.

And this is the primary task facing the new Secretary of State, growing from British pressure for a softer approach in dealing with the Russians—a softer approach than West Germany, France, and the United States are willing to take.

It will be Mr. Herter's immediate job to weld the Western Powers into a solid front before facing the Soviets on any vital issue.

To assure the "continuity of policy" Senator JOHNSON referred to, both Mr. Eisenhower and Mr. Herter will be able, during these crucial days ahead, to draw on the vast experience and wisdom of Mr. Dulles who is to be retained—and wisely so—as a consultant to the President.

As Mr. Herter embarks on the history-making job ahead, he does so with the comforting knowledge of the full support of American people.

Letter Opposing Proposed Amendments to Regulation T and Regulation U

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter sent by Mr. George J. Scully of the firm of Eisele & King, Libaire, Stout & Co., of New York City, to the Federal Reserve Bank of New York, concerning regulation T and regulation U. I believe it deserves the attention of all of my colleagues:

EISELE & KING, LIBAIRE, STOUT & CO.,
New York, April 1, 1959.

FEDERAL RESERVE BANK OF NEW YORK,
New York, N.Y.

DEAR SIRS: With reference to your request for views on the proposed amendments to regulation T and regulation U, we are opposed to their adoption for the following reasons:

1. There appears to be no evidence of excessive use of credit for the purchase of securities. There is, however, considerable evidence of excessive use of credit in connection with installment buying and real estate.

2. If no excessive use of credit exists in the securities markets it can only be assumed that the proposed changes are aimed at controlling the price of securities, the volume of transactions, or both, neither of which functions appear to be authorized or provided for by the Securities and Exchange Act or the Federal Reserve System.

3. The continued rise in stock prices is considered by most economists as resulting from the fear of inflation by the people. Stock prices merely reflect the effect of the inflationary trends and are not the cause. The public's fear of inflation and their flight from fixed income obligations and cash to equities would be soon dispelled if the Government stopped deficit spending, maintained a balanced budget, and reduced the national debt.

4. The present privilege of switching from one stock to another does not in any way increase the amount of credit currently in use. If the proposed change is made effective it will probably result in creating a greater scarcity of stocks as holders will be unwilling to sell and lose their position or create greater activity in lower priced shares by switching the proceeds of higher priced stocks into an equivalent number of shares of lower priced ones.

5. The long-term result will probably be a lesser liquidity of the market which in turn could produce a drastic decline, and hamper new financing.

6. Any substantial reduction in volume will adversely affect the gross income and profits of member firms, cause a reduction of employment in the financial district, and in all probability make necessary the imposition of increased commission charges to compensate for lower volume.

7. Other lending institutions such as factors or finance companies that are not subject to the same requirements as broker-dealers and banks will be able to continue the extension of credit for the purchase of securities on more liberal terms.

8. Broker-dealers will be discriminated against by being prohibited from arranging loans with banks for their clients. Clients will not discontinue making such loans, they will merely be forced to arrange them directly with the bank or use the services of a money broker not subject to the regula-

tions. Both banks and brokers should be subject to the same regulations with respect to identical transactions, and if banks are to continue to be in a preferred position broker-dealers should be able to handle all of the details of a client's securities transactions.

Yours very truly,

GEORGE J. SCULLY,
Partner.

Drive for Higher Prices in the Name of Fair Trade

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an editorial appearing in the Kansas City Star on January 21, 1959.

That newspaper chronicles some of the evils of the fair trade bills, so-called, the danger to the consumers and to the free competitive American economy which we in America proclaim is the best in the world:

DRIVE FOR HIGHER PRICES IN THE NAME OF FAIR TRADE

You may be forced to pay much higher retail prices by action of this Congress. There is a serious drive for the so-called fair trade bill which is a price-fixing measure. By this device the manufacturers would be permitted to set the retail sale value of their merchandise and force compliance. According to fairly uniform estimates the price increases of controlled merchandise would be close to 30 percent.

It strikes us that the time has come for consumers to talk cold turkey with their Congressmen. Is your Representative in Congress prepared to slap a big price increase on you? Anyone is entitled to know.

The current movement is an effort to set up a substitute for the former State fair trade laws. Encouraged by an act of Congress, nearly all the States adopted official price fixing. Missouri was one of the few that refused to go along. Strong political support for such laws was assembled by associations of small merchants who were fearful of competition by chains and larger stores.

Now the State laws have collapsed before a series of adverse court decisions and competition by uncontrolled brands. State action was supported by a Federal law. But the price fixing principle encountered sharp criticism in the Justice Department. Normally the Federal Government is critical of agreements in restraint of trade.

This time the price-fixing groups propose much more drastic procedure that would enforce prices by Federal law. Missourians who were saved by their legislature from State price fixing would have to pay under the new proposal.

Such restraints of trade are directly opposed to American business principles. Free competition is the life stream of free enterprise. Obviously it is difficult for a small drugstore to compete on a price basis with a big chain. But many small independent merchants are succeeding. Generally the successes are good businessmen who know how to give personal service and make friends for their businesses.

Small business people represent the kind of initiative and courage that built America. Certainly we hope they will continue to be an impotrant part of the American economy. In many fields there are limits on the advantages of bigness.

But it would be ridiculous to ignore an inevitable trend toward big units in the American and world economy. Where it improves efficiency and cuts costs the trend is improving the American standard of living. But like it or not, it is here.

Fair trade laws don't stop the progress toward bigger business. They simply deny the public the benefits from large operations in the form of lower prices. If aroused, the American consumers can protect themselves in Congress.

Hints on Handling Witnesses

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. HOSMER. Mr. Speaker, I pass along the following editorial by Larry Collins, Sr., of the Long Beach Independent of April 20, 1959, without comment other than to say reading it brought none of my colleagues to mind:

FEELING IMPORTANT

It is unfortunate that same people must express their feeling of importance by trying to make others feel unimportant. It is a weakness found in many executives in dealing with those they supervise. It is shown by some public officials who seek notoriety by browbeating division heads. It is sometimes shown by the way shoppers treat the clerks who wait on them.

Someone has said, "It's nice to be important—but it's more important to be nice." That slogan most of us could profit in our daily dealings with others. It is of particular importance in dealing with those over whom you exert authority. The person who feels secure in his position does not need to browbeat others. Those who feel unsure are more apt to show discourtesy to subordinates because it gives them a sense of power.

This is shown by city councilmen who arrogantly berate city officials or people who appear before them. Often it is shown by Congressmen or State legislators in hearings on budget or other public issues. It is apparent the politicians seeking publicity care nothing for their dignity or that of those whom they berate.

These elected officials are in effect boards of directors of the political units they represent. They make policy and pass laws. The career people who must administer these laws are the employees of the governing body. They may make mistakes and some may deserve to be removed from office. But there is no justification for the vitriolic condemnation they publicly take from politicians who never held an important administrative office.

Some of the public is responsible for the actions of such politicians. They seem to like to read of a tirade by some elected official. It gives the impression that here is a two-fisted individual who does not care what people think. But what they are really praising is an exhibitionist who is insensitive to the decency of dealing with other people. It encourages arrogance and a disregard for human dignity.

This situation is found among some employers in private industry. But very few such enterprises are ever successful. They do not have alert and loyal workers because they destroy these qualities. There are many foremen or supervisors over their fellow workers whose arrogance is destructive to morale. But such people soon find they are despised by workers and removed from such power.

The bigger the man, the more considerate he is of those over whom he has power. There is a humbleness about the successful individual that stands out. It is something he has learned during his climb to his position of authority. He realizes that more is to be gained by a courteous firmness than by an arrogant ranting.

Loud talking, table thumping, and belittling of others may make some people feel important. But actually they show themselves to be irresponsible and lacking in confidence in their own ability. When they deliberately embarrass those over whom they exert power they show an arrogant and cruel streak that labels them as persons who would harm others for their own personal gain. To such people we again quote: "It's nice to be important—but more important to be nice."

Opening the Doors of Soviet Russia for the Emigration of Jews to Israel

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. BARRY. Mr. Speaker, on April 5, Dr. Joseph Schechtman, noted author and Zionist leader, delivered an address in Forest Hills, N.Y., on the problem of opening the doors of Soviet Russia for the emigration of Jews to Israel.

Dr. Schechtman forcefully and dramatically pointed out the paradoxes and pitfalls in Russian policy toward the Jews who tragically are forced to eke out an existence in the barren soil of Communist society with little hope of being permitted by the authorities to escape.

Forced to submit to unrelenting inequality of treatment, Jews in Russia are forbidden the teaching of their religion except by parents; the study of their culture is banned, and Hebrew theaters, cultural institutions, and printing houses have long been closed.

Despite exposure for 40 years to the unrelenting psychological and political pressure of the Russian colossus and despite being denied the opportunity for cultural self-expression, the Jews in the Soviet have not denied their lineage with the West. In the eyes of the Communist dictators this is unforgivable. They refuse to grant to the Jews rights of other minorities and they are obviously not prepared to grant them an extraterritorial national status.

The only alternative to this grim picture is to allow emigration to those who wish to leave.

Dr. Schechtman has explained the problem with clarity and compassion. I am happy to have his address brought to the attention of the Nation so that more of us will be made aware of the plight of these unhappy millions in that wretched land; and, that we remain alerted to their needs—conscious that we will not forget them as long as tyranny and fear darken the face of Communist Russia.

The address follows:

ADDRESS DR. JOSEPH SCHECHTMAN, NOTED AUTHOR AND ZIONIST LEADER, AT A MEETING OF THE UNITED ZIONIST-REVISIONIST ORGANIZATION OF AMERICA TO DEAL WITH THE PROBLEM OF JEWS IN SOVIET RUSSIA, HELD IN FOREST HILLS, N.Y., ON SUNDAY, APRIL 5, 1959

Organizations dealing with the welfare of Jewish communities in all parts of the world have been for years concerned over the status of the Jews of Soviet Russia who are being deprived of the opportunity of cultural self-expression. Every nationality in the U.S.S.R., big and small, possesses a school network of its own, its language is officially recognized, and its national culture fostered. Newspapers and books in dozens of languages are being published in millions of copies. Orthodox and Moslem religious institutions are free to expand. But no such facilities are granted to the Jews, although, technically, the Soviet constitution recognizes them as a national entity, at par with all other ethnic groups.

Study of Hebrew and Hebrew culture is forbidden. So is the teaching of Jewish religion up to the age of 18, except by parents. There are no schools with Hebrew or Yiddish as the language of tuition, nor bilingual schools such as are common in the Western World. With the exception of an occasional sheet in Biro-Bidjan, there is no Jewish periodical in the whole of the Soviet Union. Yiddish theaters and other cultural institutions have been closed and no books in Yiddish or Hebrew are being published.

Citing all these deviations from the general Soviet nationalities policy, Jewish organizations have been persistently appealing for equality of treatment for the Jews in Soviet Russia.

This appeal has remained unheeded. And it has no chance of ever being concurred with by the Soviet regime. It must be realized that, however just and well-founded by Western democratic standards, this plea stands in organic, irremediable contradiction to the very essence of the Communist concept of relationship between the state and its nationalities, to the entire pattern of the Soviet state structure.

This structure is based on ethno-territorial entities. All the nationalities of the Soviet Union live in compact territorial agglomerations. It was therefore possible to form them into territorial units with different degrees of self-government (constituent republics, autonomous republics, autonomous provinces, and autonomous districts), with all the attributes of cultural self-determination: national schools, cultural institutions, press, etc.

The Jews are different. They are scattered throughout the union and represent an extraterritorial entity. The overall Soviet pattern of settling the nationalities problem is not applicable to the Jewish minority. To claim for this minority "equality of treatment" is practically tantamount to demanding an exceptional status, which has no counterpart in the Soviet system.

It is futile to expect a Communist regime, based on uniformity, to grant such a unique status to the Jews, and thus to secure the further existence and development of a single extraterritorial minority endowed with all the cultural attributes of ethno-territorial entities.

The Jews simply don't fit into the general Soviet design. The classic Communist prescription for eliminating this anomaly was, and still is: Integral assimilation. As late as a few months ago the pamphlet, "The State of Israel, Its Position and Policies," issued in Moscow by State Publishers of Political Literature, reiterated and emphasized Lenin's, by far, not rhetorical question:

"Is it pure chance that precisely the reactionary forces of all Europe are uniting against the assimilation of Jewry and are trying to emphasize its isolation? * * * Hostility to heterogeneous sections of the population can be ended only then when they cease to be foreign and merge with the general mass of the population. This is the only possible solution of the Jewish problem and we must support all that serves to reject Jewish isolationism."

Any demand for Jewish national rights is viewed by Moscow as an attempt by "reactionary forces" at perpetuating exterritorial "Jewish isolationism" within the framework of the Soviet state—something wholly unimaginable, wholly unacceptable, and deeply suspect. The Soviet regime has always been very sensitive and apprehensive about the specific position of its Jewish minority. The Ukrainians, the Tartars, the Georgians, the White Russians, the Uzbeks, and other national groups in the Soviet Union live on the Soviet soil only. They have no co-national states, or sizable organized co-national communities abroad, and cannot be suspected of spiritual allegiance toward, let alone of nationalist "collusion" with, any foreign body. Their respective emigré associations in the Western world have as much—or as litle—influence and affiliation inside the Soviet Union as purely Russian emigré societies. All Soviet minorities can therefore be relatively easily controlled and therefore relied upon.

The case of the Jewish minority is divergent. Jews living in the Soviet Union and in the satellite countries constitute only a fraction of the Jewish people. The overwhelming majority of world Jewry are dispersed over many countries, for the greater part in the Western democracies and in Israel. The Soviet Government, of course, is fully aware of the bonds of sympathy and spiritual solidarity that bind the Jews the world over. It has for years been striving to sever these ties by hermetically sealing off "its" Jews from any contact with other Jewries. For a time the Kremlin was confident that decades of forcible isolation and indoctrination had irreparably destroyed the national consciousness of the Soviet Jews; that they were securely immunized against the call of Jewish solidarity and the magnetism of Jewish statehood.

This confidence has been rudely shattered. The Soviet rulers have reluctantly come to the conclusion that 40 years of brainwashing had somehow failed to permeate Soviet Jewry with fear of and hatred toward the entire non-Soviet world. Large sections of the Jewish population still have relatives and friends in the United States and a deep emotional attachment to Israel. This makes them suspect in the eyes of the regime. A Russian, an Ukrainian, a Georgian, a Tartar is implicitly supposed to have deep, ineradicable roots in his native Soviet soil. One or another of them may be convicted individually of treachery, "deviationism," reactionism, but not of "rootlessness." Yet the Jew is per se suspect of this greatest of all crimes and as such is being looked upon as a bad security risk.

There is little sense in arguing whether this appraisal is justified. What really matters is the fact that this seems to be the position of the Soviet rulers. It is therefore sheer wishful thinking to believe that they would ever consent to bestow on this section of their population any collective national rights which are being enjoyed by regular national entities centered in territorially defined areas.

It is, of course, possible to continue indefinitely repeating over and over again demands to this effect. But no useful purpose can be served by indulging in self-righteous protestations of this kind. There is little, if any, sense in reiterating the traditional, worn out roster of grievances and demands: some of them major and essential, others less so. It is permissible, for instance, to inquire whether it is that worthwhile to clamor for the resurrection of the Yiddish press in the Soivet Union. Is somebody really longing for the reappearance of the infamous Emes of Moscow or Shtern of Kharkov, organs of the notorious Yevsektzia, which had been for so long a time pouring venom and scorn on everything that is dear to the Jewish heart and mind? And where is the national Jewish value of one more replica of a Communist sheet? Two correspondents of a leading Warsaw weekly Swiat (The World), who have recently visited Birobidjan, candidly reported that the solitary Yiddish weekly, the Birobidjan Shtern, is "a mere Yiddish copy of the local Russian Communist paper, the Birobidjan Star."

Instead of a long litany of complaints and desiderata, which are in their majority either obsolete or manifestly impossible of achieving, Jewish national bodies must concentrate on a single powerful idea: that the Soviet Union allow those among its Jewish citizens who wish to leave the country, to do so freely.

The Jewish minority proved to be utterly unmanageable. It cannot be dealt with in the same manner as territorially centered national groups, and the Soviet Government is obviously not prepared to grant it an exterritorial national status.

The alternative to the status quo is twofold—and twofold only. The Soviet Government can either solve the problem of the Jewish minority by mass deportation to Siberia, or it can allow emigration to those who wish to leave. The first method was widely and ruthlessly applied during the Second World War to the 400,000 Volga Germans, to the 600,000 Chechen, Ingushes, Balkans, and Karachais of the Caucasus, as well as some 200,000 of Crimean Tartars. If they could see no other way out, the Soviets would hardly hesitate to apply this device to the Jews.

An alternative solution appears, however, more probable. Should the Soviet Government decide that a Jewish exodus offers a convenient way fo getting rid of a troublesome minority, it will not hesitate to have recourse to such a move. Those who shape Soviet policy are no doctrinaires. They have manifested time and again amazing capability for abrupt and radical turnabouts on many matters of both major and minor importance. Nobody could have foreseen either the Soviet vote in favor of partition of Palestine in November 1947, or the severing of diplomatic relations with Israel in February 1953, or for that matter the resumption of these relations in July 1953. Likewise, unexpectedly came the recent resumption of emigration from Rumania, which, of course, could not take place against the Kremlin's wishes. Totalitarian regimes are prone to such spectacular reversals. The Soviet Premier Nikita Khrushchev himself told, in the summer of 1957, a group of American visitors: "I am sure the time will come when all Jews, or Russians, for that matter, who want to go to Israel will be able to do so." One may doubt the sincerity of such a statement, but it offers evidence that such contingency is not completely ruled out in the mind of the Kremlin.

It is true that a few weeks ago the official Soviet Izvestiya blasted as provocative fabrications and badly smelling concoctions all Western reports that Moscow might permit some of its Jews to leave for Israel. It is, however, significant that the only reason for this attitude invoked by the paper was the Kremlin's determination not to shake Arab confidence in the friendship of the Soviet Union by increasing the military and manpower potential of Israel. No mention was made of the traditional argument that immigration to Israel was contrary to the general principles of the Communist regime. The motivation is distinctly tactical, not funda-

mental, and Soviet tactics and friendships are known to be elastic and reversible.

Should Moscow, for compelling domestic reasons, decide that Jewish emigration suits its interests, it could easily counter any Arab recriminations by reminding them of the Arab States' own record in this field. Did not Yemen, violently anti-Israel, in 1949 officially authorize wholesale Jewish exodus and thus contribute 48,000 Jews to Israel's military and manpower potential? Did not the Iraq Parliament on March 5–7, 1950, pass a law on the strength of which 123,000 Jews were flown to Israel? Did not Egypt in 1948–52 tolerate the emigration of 17,759 Jews to Israel, and did not Nasser himself, already after the Sinai operation, permit (from November 1956 up to the end of 1957) the departure of 24,000 Jews, of whom 13,000 went to Israel? Arab protests sound hollow in the face of these telling facts and figures. They can be smashingly refuted should Moscow deem it necessary.

What is needed now and is long overdue is not an intricate set of piled-up grievances and claims, but one single, clear and simple, even primitive, all-embracing postulate, which would offer a radical and uniform solution to the Jewish problem in the Soviet Union, "Let my people go."

It Really Is Price Fixing

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Christian Science Monitor on Thursday, April 2, 1959.

Among the more dangerous legislation introduced in this Congress during this Session has been the so-called fair trade bill, H.R. 1253.

The idea behind fair trade is supposedly to permit small business to compete.

Unfortunately, the effect of the bill will be to repeal pro tanto the existing anti-trust laws, and, in that way and in many others, make it less possible for the small retailer to get a fair share of the market.

The bill is nothing more or less than price fixing and will gouge the consumer for the big manufacturer and the big retailer. It will deny the small merchant an opportunity to conduct his own business in his own way, will not outlaw dumping of distress goods and will cost consumers billions of dollars a year.

The editor of the Christian Science Monitor has hit the nail right on the head in describing the so-called fair trade bill as "price fixing." The article is as follows:

IT REALLY IS PRICE FIXING

The United States has grown strong on the axiom that competition is the life of trade. Americans want to keep the freedom of a competitive economy. Yet they are not always awake to the ways in which that freedom is eroded through controls set up to restrain competition. So-called fair trade laws are among the most respectable-looking enemies of competition. And now, after suffering severe setbacks in State legislatures and in the courts, the advocates of this kind of price fixing are driving for Federal legislation.

In essence this legislation (notably the Harris bill) would put the National Government behind an arrangement denying retailers freedom to sell a product below a price fixed by the manufacturer. We can understand the feelings of the small retailer who finds a competitor resorting to loss leaders and even temporary price wars. In some cases this kind of competition can put an honest merchant out of business. But we do not understand why resort should be had to anything so drastic as Federal fair trade legislation.

Most unfair competition could be halted by Federal Trade Commission regulations or State laws barring sales below cost. Instead fair trade legislation would allow prices to be fixed to guarantee a profit to both manufacturer and retailer. No wonder powerful lobbyers are plugging for it. No wonder consumers must view it as a device for lifting or holding up prices.

But the threat in this proposed legislation is not merely to citizens as consumers. It threatens the basic American concept of free competition in one vast area of business. On this, let's note what the Federal Trade Commission has to say:

"The fixing of resale prices is inconsistent with the American system of free competitive enterprise and contrary to the public policy expressed by Congress in the antitrust laws since 1890."

It is one thing to protect honest retailers. It is quite another to erect barriers against the enterprising merchant trying to build a business, attracting customers by lower prices—made possible by his own efforts in lowering his operating costs. The retailer is already under enough pressures which would make him merely the agent of the manufacturer or supplier. Why add the force of Federal law to restrictions on his freedom and initiative? Slice fair trade any way you like, it still amounts to price fixing.

Are Congressmen prepared to put the special interests of certain groups ahead of the general interest of the public? Are they ready to override the wishes of 20 States which either have refused to adopt fair trade laws or have thrown them out after experience? Do they wish to substitute price fixing for free competition in one great section of the American economy? Do they favor higher prices and guaranteed profits at the expense of consumers?

These are questions Americans should be asking their Congressmen.

The New Elite in Public Housing

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the folowing provocative account of public housing tenants in Boston as recounted in an editorial of the Boston Herald of Monday, April 13, 1959:

THE NEW ELITE

Last fall, in a referendum subverting Mayor Hynes' right to determine appropriate municipal pay scales, Boston firemen won pay raises ranging from $790 to $1,050. Identical increases were subsequently extended to the police in order to reestablish the traditional equality of pay scales as between the two protective departments.

Now, the Boston Housing Authority is seeking to raise the income ceilings for continued occupancy in State-aided housing projects so that 353 families of Boston police and firemen will not be evicted because of the increased income gained through the referendum.

A better instance of having one's cake and eating it, too, could hardly be imagined.

Public housing, designed for persons of law income, must be converted to middle-income, or near-middle-income status, because the firemen and policemen have advanced to that status.

The Boston Housing Authority says rents will be increased for these 353 families, although it hasn't said how much. But even if these increases are commensurate with the fire and police pay raise, the continued occupancy of public housing by these families automatically bars as many low-income families from entry into the projects.

Will the Boston Housing Authority state how many low-income families must stay in shabby tenements so that the fire and police families may remain in public housing?

May we not legitimately ask whether we are on the way, here in Boston, to the establishment of a new elite—a special class of drones for whom those without influence labor unremittingly?

World War I Veterans Pension—Resolution

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, the Senate of the State of California adopted, on April 7, 1959, its Senate Resolution 39, by Senator Teale, relative to World War I veterans' pension.

The Senate of the State of California shows an awareness of the desperate plight in which, unfortunately, many World War I veterans find themselves.

I hope that this legislation will encourage the Congress to take positive and favorable action in this important matter:

SENATE RESOLUTION 39

Whereas many thousands of veterans of World War I are in dire circumstances and subjected to the indignity of public charity: Now, therefore, be it

Resolved by the Senate of the State of California, That the Congress of the United States is respectfully memorialized to provide for a World War I pension, and that the senate recommends to the Congress the program approved by the legislative committee of the Veterans of World War I of the United States of America; namely, that such a pension be in the amount of $100 a month to those veterans of World War I who have attained the age of 62 years and whose annual income is not greater than $2,400 without dependents, or $3,800 with dependents, excluding social security or other pensions to which the veteran has contributed; and be it further

Resolved, That the secretary of the senate is hereby directed to prepare and transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States.

I hereby certify that the above resolution was unanimously adopted by the Senate of the State of California on April 7, 1959.

J. A. BEEK,
Secretary of the Senate.

Anatomy of an Aid Program

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. GROSS. Mr. Speaker, a recent issue of the Wall Street Journal published the following discerning article on foreign aid in Thailand:

A LOOK AT THAILAND SHOWS THE U.S. PROBLEM ALL OVER THE WORLD

(By Vermont Royster)

BANGKOK.—An inquiring American who wants a clear look at what the U.S. foreign aid program is trying to do all over the world can hardly do better than to come here to serene and peaceful Thailand.

The aid program here is small, as those things go; its $20 million a year sinks almost unnoticed in a total foreign aid budget of $4 billion. It seems to be handled with reasonable care; at least it has not been plagued by public scandals.

Moreover, it is an aid program that does not have to wrestle with the special problems that, in so many countries, are used either to justify or excuse the results. The Thai government is solvent. It has been spared extreme political chaos. The Siamese people lack neither rice nor roofs. They are easy going and happily unconscious of any great problems.

Perhaps all this robs the American aid program here of a certain amount of color. But it does permit the ICA to plan its program under almost ideal circumstances and its more than one hundred officials to apply them with a minimum of hindrance. And so if the present U.S. program can look good anywhere, it should look good here.

It certainly looks ambitious. The American foreign aid help for the Siamese reaches into the financial structure of the country, the homes, the schools, down Bangkok streets, across rice paddies and into the almost impenetrable jungle.

ADMINISTRATIVE MACHINERY

To see how, perhaps the best way to begin is with a glance at the size of the administrative machinery the International Cooperation Administration has found necessary to erect to spend this $20 million a year.

At the top of the U.S. Operations Mission ("Usom" is an ubiquitous word in Southeast Asia) is the office of the director, together with an office of the deputy director. Spread out below them is a rather intricate array of division offices, reporting not only to the director but in some cases to each other.

These are, separately, an Office of Technical Services, a Division of Agriculture, a Division of Education, a Division of Public Health, the Public Administration Division (this is to help the Siamese run the thousand-year-old city of Bangkok), a Division of Public Safety (to make the Siamese better policemen), an Audiovisual Division (teaching with pictures), a Training Division (to teach the Thai Government how to govern Thailand), a Division of Public Works and a Division of Industrial Development.

These, of course, are only the divisions dealing directly with aid to Thailand. To do the housekeeping and general management of these divisions there must be other administrative divisions. There is, for example, an Office of Management to keep track of the other divisions, an Office of Finance to keep track of the money, and an Office of Programing to coordinate the programing of the programs of the separate parts.

Even so, categorizing these on an organization chart does not give the full sweep of the U.S. aid program to this small country, because under nearly every division there are branches or sections for specific projects.

A sampling of these shows that even in an underdeveloped country atomic energy is not neglected; there's a program for training a cadre of nuclear scientists. There's a skilled labor training program, a regional telecommunications program, an English language teaching program (few Usom personnel speak Siamese), and a project for stimulating villagers to take more active interest in community affairs.

Nor are these merely paper programs. For example, a visitor finds that though the Siamese, being blessed with rich land and adequate rainfall, are a people who have never known famine and who are heavy rice exporters, they are nonetheless getting the benefit of a very active and extensive agricultural program.

The U.S. is bringing to Thailand the American system of farm extension services, and even the 4-H clubs. More than 100,000 farmers have been instructed to date, more than 250 extension agents have been trained in American methods, and something like 4,000 farm boys have been signed up for 4-H. Not content with this, the agriculture program envisions for the future creating a "unified extension service with clear line of administration, staffed with best available personnel; trained extension workers at national and regional levels and establishment of plans for continuous trainig of future extension workers."

But this is only a part of what we plan for Siamese farmers. Some time this year the Usom agency plans to demonstrate contour cultivation on some 200 farms and to organize some 30,000 village seed associations. About 50 breeding bulls are being brought in and will be distributed to selected villages. The American cooperative marketing system is being encouraged, and this year a cooperative management program will be organized for more than a thousand families.

Meanwhile, industrial development is not being neglected. Technical surveys are underway of the country's mining and water resources, including an airborne geophysical survey. The highway program involves not only actual roadbuilding but the reorganization of the Thai highway maintenance and equipment division and the replanning of the streets of Bangkok.

There's also an airport construction program, an air communications program, a meteorological program, and, in fact, a comprehensive program for the reorganization of the whole Thai transportation system.

Nor is U.S. aid limited to agriculture and industry. There's a health program which includes teaching 7 million Thai householders to spray for mosquitoes (this would be followed up with a surveillance program), training doctors, organization of district health units.

And so it goes on. The educational program embraces projects on the elementary, secondary, and university levels of the Thai school system. "Usom's" arm also reaches out, through the public administration division, into local city planning, the national government's taxing and budget offices. The United States also plans to improve the Thai Government economic policy and planning procedures, to revamp its statistical services, and in general guide its officials in doing their jobs.

In short, ambition is a small word for the U.S. aid program in Thailand. Indeed it looks less like a program to give an economic boost to these hard-working and self-reliant people than an effort to redesign, if not to remake, their country. The visitor must constantly remind himself that this is a very small program, less costly, less complicated, and less comprehensive, compared to others.

A visitor, touring the country, can see that some of these projects have in fact helped the Siamese people. You can't put $20 million a year into so small a country, build highways through the jungle, or fight malaria, without leaving some benefit behind.

But passing over entirely the question whether the program has a point other than generosity, you can't look at this program—a plain, rather ordinary, standard U.S. aid program—and its effect on the Siamese people and fail to see that by its very nature it has some built-in problems that the system itself makes insuperable.

For example, one of the chief complaints of foreign aid officials—and one of their excuses (when things go wrong) is that they can't get enough good people to fill all the billets in these far-away places.

ONE OF 70

Yet Thailand is only one of 70 countries in which we have aid programs. And the scope of this comparatively small program would require, to be carried out properly, more than a hundred first-class officials, not only technically knowledgeable in their fields but in their manners, vision, and understanding.

So it is hardly surprising that the director here, who strikes the visitor as an able man, has his personnel problems. To run a program of such magnitude he needs superior accountants, horticulturists, entomologists, soil chemists, veterinarians, livestock biologists, parasitologists, sanitation engineers, highway engineers, electrical engineers, civil engineers, machinists, geologists, doctors and nurses, electronics technicians, air operations specialists, police administrators, and meteorologists, just to name a few.

Look, for instance, at what the aid director's "TO"—or technical organization chart—calls for in just the single category of police administrators: He needs a chief police adviser, a deputy police adviser, a police program officer, two police program assistants, four police adviser investigators, and a police adviser who's a training specialist. That's only the beginning. He also needs police advisers who are specialists in border control, traffic control, logistics, identification and laboratory investigation, not to mention a police adviser (administrative) to run it all.

In addition to all of this there are, of course, the secretaries, clerks, auto drivers and miscellaneous personnel necessary to keep all this administrative machinery functioning. And these people, too, are unofficial U.S. ambassadors abroad.

Now since it is difficult to find enough competent people to fill all these billets in little Thailand, it is plainly impossible to find them in sufficient numbers for all the other countries too, in many of which the program is mammoth compared to here.

Thus the inquiring visitor is brought relentlessly to the conclusion that the sheer size of the U.S. aid program, and the scope of what it is trying to do, makes the personnel problem an almost impossible one.

Unfortunately this is not the only problem built in by the size and concept of the foreign aid program. More important, for our own self-interest, are the irritations it

creates among those blessed with our giving.

Consider that here is a country which, for all that it may be backward by American standards, has managed to get along for a thousand years without U.S. dollar aid or U.S. aid advisers. Its people are proud of their independence, their tradition, their own way of life and are probably as successful in the pusuit of happiness as any people can be.

Yet here come the Americans with a program which, when you look at it, would remake the country from one end to the other, from top to bottom. There is no area of Siamese life—schools, farms, business, language, homes, government, customs—left untouched in some fashion by the U.S. aid program.

No one, be he a visitor here among the ancient temples and palaces or a stay-at-home reading about it, need be surpised that a program so conceived rubs many Siamese the wrong way. Certainly the evidence of it is not hard to find.

It crops up even in the official ICA documents when officials plaintively report that all is not going well because the Siamese are reluctant to accept all their advice. "Only limited progress has been made to date due to the reluctance of the Thai highway department to accept the advice . . ." Or when they note that part of the job is to sell a program to the Siamese; one operational goal for the 1959 health program, which we designed, is "to secure official backing of the Thai goverment."

REFUSE ADVICE

It crops up in conversation, polite and courteous though the Siamese be. By any abstract standards it may be progress to fill in the dirty, old klongs (or canals) that once made Bangkok the Venice of the East. But it's bound to seem a mixed blessing to poor people who once could move readily by boat and now have to forage for some kind of motor transport for the modern boulevards.

The government officials with whom the visitors talks are not unmindful of the value of dollar bills but nonetheless they can be a little rueful of all that comes with them. Some of what comes with the dollars is the feling that the Americans are meddling in everything. And sometimes what comes are real practical problems.

One such practical problem is inflation. Since every country nowadays (including the U.S.) has an inflation problem, Thailand might have one without our help. But our help does intensify it. The U.S. aid also intensifies the management problems of the Thai government by increasing the number and the scope of tasks undertaken by the government. Furthermore, the Thais could not possibly keep such a program without the United States, some of them are beginning to wonder if the Americans will not have to stay forever.

This last feeling is met quite frequently once the visitors gets outside the government offices. Among the people, who may not see how helpful the Americans are being, it is even easier to find a kind of weary wishing that they would just all go home.

One friendly Siamese, with a twinkle in his eye, put it to his American visitor this way: "I suppose we ought to be glad that you are helping us, but we do wish you wouldn't help us so hard."

So here is the U.S. aid program to Thailand, a clasic minature of our economic aid programs. It's small in dollars, perhaps, but it's plainly big in ideas. And as this visitor says farewell to Bangkok it is with a growing sense of wonder at what we think we are trying to do all over the world.

Conference on India and the United States—1959

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I call attention to the conference to be held on May 4 and 5 in Washington on India and the United States—1959. The conference is sponsored by the Committee for International Economic Growth.

No one can observe the march of recent events in Asia without realizing the pivotal importance of India to the future of freedom in that most populous region of the world.

Red China's massive economic push, achieved through the brutal regimentation of the Chinese people—and now Red China's ruthless subjugation of Tibet—have made it clear that Communist imperialism is on the move in Asia.

It seems to me vital for all of us to understand this, and to understand also the crucial role which the great parliamentary democracy of India can play in counteracting Communist influence throughout the whole subcontinent of southeast Asia.

In this connection I wish to call the attention of my colleagues to the letter of invitation recently received by all Members of the Congress from Mr. Eric Johnston, chairman of the Committee for International Economic Growth, inviting our attendance at a national conference on Indo-American cooperation in Washington on the 4th and 5th of May.

This Conference is sponsored not only by the private organization of which Mr. Johnston is chairman, but by such eminent institutions as the National Planning Association, the Stanford Research Institute, the Asia Foundation, and the Center for International Studies of the Massachusetts Institute of Technology.

The Conference will bring together some of the most eminent and distinguished authorities on India and Indo-American relations available in industry, the universities, labor, education, and other walks of life, both here and in India.

Their discussions will offer a unique opportunity to obtain authoritative information about the urgent problems of economic development confronting India today and may suggest new avenues of cooperation between that country and our own.

Certainly at this particular time, when events leave no doubt as to the importance of India in the community of free world nations, the calling of this conference is most fortunate. I can think of no more effective way of producing the facts on which sound judgment about Indo-American relations can be based.

Since we may all be called upon to make such a judgment in the months ahead, I hope as many Members of this body as possible will take advantage of the opportunity offered by the initiative of the distinguished citizens associated with Mr. Johnston in the Committee for International Economic Growth.

Statement of Chief Postal Inspector David H. Stephens Before the House Post Office and Civil Service Subcommittee Investigating the Mailing of Obscene and Pornographic Material

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. REES of Kansas. Mr. Speaker, under unanimous consent approved by the House, I am including an interesting and forceful statement by the Honorable David H. Stephens before the House Post Office and Civil Service Subcommittee investigating the mailing of obscene and pornographic material. I am sure Members of the House, as well as the general public, will be interested in Mr. Stephens' statement. He is one of our outstanding public officials. His views are entitled to careful consideration.

The statement follows:

The responsibility for the investigation of all instances of the use of the mails for the sale and distribution of obscene matter is charged by law to the postal inspection service. Included in this responsibility is the identification and apprehension of offenders, and the presentation of evidence to United States attorneys and, through them, to the courts.

Investigations of this nature have always been regarded as among the most important and serious of the various crimes which are committed against the postal establishment, even though it appears that over a long period of time there was limited public knowledge of these offenses, outside of the homes which were directly affected.

The rapid increase in the sale of filth through the mails, and otherwise, seems to have developed far ahead of general public awareness of its scope. The volume today can be measured in tons.

That juvenile delinquency stems in large part from the demoralizing influence of exposure to obscenity and pornography is well known to all law enforcement groups. Time after time in our investigations of armed robbery, extortion, embezzlement and forgery it is learned that those responsible for such crimes were early collectors of obscene pictures and films. Also in the many vicious murder and other sex crimes, with which all law enforcement agencies come into contact, it is often disclosed that criminals responsible were addicts to pornographic and sadist material.

There is no particular mystery to the fact that many of the mailings of trashy circulars

soliciting the sale of even worse material is sent unordered, or delivered into the hands of schoolchildren by salesmen who lurk in school areas. It is well established that mailing lists have been compiled from the responses of children to apparently innocent ads offering a model airplane or auto for a dime or quarter. Promptly after the receipt of such remittances children have received from the same business address circulars of the most objectionable nature soliciting the sale of nude pictures, slides, and related material.

Mounting profits, which today can be measured in terms of really big business, enable dealers in obscenity to retain high-priced and clever legal talent, which has successfully defended, on repeated occasions, some of the largest dealers in obscenity. Small fines—even short jail sentences, mean little to the big promoters, some of whom to our knowledge have continued to operate during rare occasions of short prison confinement through associates and members of their own family, using assumed names.

All of these continuing successes and huge profits have served to build an increasing smugness and defiance on the part of dealers in obscenity, who are quick to declare their privileges and recite court decisions favoring them incident to each and every investigative inquiry into their operations.

However, the increasing pressure in the Departments' program to identify and bring to attention these same and other promoters, plus the legislation enacted by the last Congress by which dealers can now be brought into the communities to which they mail their merchandise for trial, are having an important and beneficial effect.

We note an increasing interest on the part of the public to bring to the attention of the Post Office Department evidence that obscene matter is reaching their communities. These same groups are also insisting upon a clean up of newsstands in their areas. However, the success of the program to completely rid the mails of filth requires greatly expanded public response.

It is considered to be significant that few public complaints are received from some cities, even though evidence obtained during raids elsewhere reveal that wholesale mailings have been made to those same communities.

Dealers in obscenity are well aware of the sanctity of sealed mail and, therefore, know they can rely upon this security, intended for lawful mailings, and are safe unless complaint is made by the receiver of their mailings. They know, too, that a percentage of addressees will refrain from making complaint due to personal embarrassment which they think may result.

We regard it as absolutely essential that the public be continuously alert to the type of matter which is being delivered into their mailboxes and that they turn over to the Post Office all matter which they consider to be objectionable. Not only will this action prevent obscene matter from reaching the hands of children—as we know it does in many instances, without the knowledge of parents, but it will enable prompt action against mailers of such trash.

It is well established that the nature and number of public complaints have had an important bearing upon the decisions of prosecutors and courts.

As we see this problem, continuing and accelerated public cooperation on this program, plus public demands for prompt and positive prosecution and court actions, will enable the Post Office Department to rid the mails, and keep them clear, of indecent and filthy matter, which the postal establishment does not desire to handle, and the public does not desire to receive.

John Foster Dulles

EXTENSION OF REMARKS
OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 23, 1959

Mr. CHAMBERLAIN. Mr. Speaker, there is little I can add to the many tributes which have been paid, both within and without these halls, to John Foster Dulles, a great Secretary of State whose true greatness is only beginning to be fully appreciated. In the current issue of U.S. News & World Report, David Lawrence expertly analyzes wherein this greatness lies.

The sorrow which freedom-loving peoples everywhere feel at Secretary Dulles' resignation is reflected typically in another editorial, entitled "A Free World Loss," in the State Journal of Lansing, Mich. Under leave to extend my remarks in the RECORD, I include both editorials, as follows:

[From U.S. News & World Report, Apr. 27, 1959]

THE MAN WHO HAS KEPT US OUT OF WAR

(By David Lawrence)

John Foster Dulles will be known in history as the man whose bravery kept his country out of war.

For it takes no courage to appease, to retreat, to accept the promises of an unscrupulous enemy at a time when it is being urged that "concessions" and "compromises" are the way to avoid bloodshed.

It takes no courage to argue that because the Communists are strong militarily and have already achieved a sort of "right of conquest" in Eastern Europe we must, therefore, "accept the status quo."

It takes no courage to become so "flexible" as to desert moral principles in international life.

It takes no courage to yield to the temptations of domestic politics and to seek political advantage by claiming to be a crusader for "peace"—even if it's peace at any price.

But it does take courage to fight the insidious doctrines of those, inside and outside of our Congress and the Parliaments of the West, who think that the easiest way to deal with your adversary is to appease him.

One reason why John Foster Dulles has been able to see through the deceptive tactics of the Communists is that he has had a long experience in diplomacy—covering perhaps the longest span of any living American.

The critics of the outgoing Secretary have been so preoccupied with one objective in the last 3 years—to force the resignation of Mr. Dulles—that they have discounted his consummate skill in dealing with the ever-changing wiles of the Communists.

Thus, there has been no lack of conferences at high level with the Communists on almost every subject—from the question of suspending nuclear tests to the matter of "cultural" exchanges. Even the artificially stimulated campaign to secure the admission of American press correspondents to Red China resulted in Mr. Dulles making a concession, only to find, as he had suspected, that the Communists were not sincere. For they immediately insisted on a diplomatic package involving, in effect, the right to send a host of espionage agents into the United States as the price of admitting American newsmen to the Chinese mainland.

The critics have made much of the liberation policy advocated by Secretary Dulles. He never implied that America would use force to liberate Eastern Europe, but his opponents mischievously distorted his words in trying to impute such a purpose to him. By upholding the cause of peaceful liberation as a goal, he has kept the fires of freedom burning in the hearts of the peoples of the captive states.

Among those who so often have assailed Mr. Dulles for the phrase "massive retaliation" are many of the unwitting appeasers. They shortsightedly took his words to be an empty threat. They shuddered at a policy of resoluteness. Yet this is the only way to warn a potential enemy not to miscalculate our strength or our purpose.

Today massive retaliation is the embodiment of the military power of the West, though there has lately been more frequent use of the phrase "deterrent power." Actually, peace rests today on the knowledge in Moscow that an atomic attack on any country now a member of the North Atlantic Treaty Organization will result in a massive blow from our bombers based both overseas and in this country.

To John Foster Dulles belongs the accolade for having effectively warned the men in the Kremlin of what America would do if they started any general attack. President Eisenhower deserves the greatest credit for his unswerving support of these policies.

The strength of our determination has been tested at Quemoy and in Lebanon and in Indochina and lately in the West Berlin crisis. At no time has there been any doubt that Mr. Dulles would recommend military action in our defense if he thought it necessary. He was chastised in the press for using the phrase "brink of war." This has often been sarcastically referred to as "brinkmanship." Yet it is this basic readiness to fight if necessary—to let your enemy know you are willing to risk war to avoid war—which is the essence of brinkmanship.

It is to be regretted that in the 1930's we didn't let Hitler know that Britain and France and America would join in fighting him if he started a war. He was convinced that, with the Soviet Union as an ally on his eastern flank, he could quickly finish off the western countries. It took a tremendous sacrifice of human beings to show the Nazis the error of their way. May no such demonstration of error ever be necessary again.

If a world war is averted in the next decade, it will be because in the United States, irrespective of whether a Republican or a Democratic administration is in power, the principles that have been applied by John Foster Dulles in shaping America's policies in world affairs have been faithfully followed by his successors.

[From the State Journal, Lansing, Mich.]

A FREE WORLD LOSS

Announcement that ill health has forced John Foster Dulles to resign as Secretary of State has saddened America and its free world allies.

The millions of people Mr. Dulles had served tirelessly and courageously during the six years he has headed this country's State Department had clung to a hope that recovery from cancer would make it possible for him to represent the United States at forthcoming crucial Big Four meetings.

That hope was dashed Tuesday when President Eisenhower sadly announced that the man who had stood faithfully by his side during years of global tension and crisis had resigned because illness had made it impossible for him to continue to carry the administrative burden of office and assist in making policy as well.

While some free world diplomats had disagreed with Mr. Dulles on some points of his approach to east-west problems, he was widely admired for his firm support of the basic principles on which all who cherish freedom and desire an honorable and enduring peace are agreed.

Disagreement on details of policy were put aside as western leaders expressed both regret at the loss of Mr. Dulles' services in a crucial period of the cold war and sympathy because of the personal tragedy which has forced him to put aside duties to which he was so deeply devoted.

Many jokes had been made about Mr. Dulles' farflung travels but many of those who spoke of them humorously recognized that his travels were in the interest of freedom and in quest of peace and therefore a part of the measure of his staunch support of these causes.

Mr. Eisenhower, in announcing his Secretary of State's resignation, said Mr. Dulles will continue to serve him as a foreign policy consultant.

While the President will be able to find another to take over direction of the State Department and carry out the basic policies which he and Mr. Dulles have shaped, he will be able to find no one more devoted to America and the principles for which it stands, nor better able to speak for his country in world councils, than John Foster Dulles has been through his years of untiring and devoted service.

There Is Nothing Fair About "Fair Trade" Laws

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the RECORD an editorial appearing in the Atlanta (Ga.), Constitution on Thursday, January 15, 1959. That editorial describes the so-called fair trade bill pending before the Congress at this time.

I hope all will read the views of the Atlanta Constitution in opposition to fair trade:

THERE IS NOTHING FAIR ABOUT FAIR TRADE LAWS

That old bugaboo of the consumer, resale price maintenance, better known as "fair trade," is back in the news again. Before Congress had time to warm up, Representative OREN HARRIS, of Arkansas, introduced a bill for a national fair-trade law.

"Fair trade" has had a sordid history as far as legislation on the national level is concerned. The Miller-Tydings Act which slipped through the back door of Congress in 1937 as a rider on an appropriations bill, opened a Pandora's box for the consumer which has never been completely shut since. The act specifically exempted fair trade laws passed by the States from the antitrust laws.

However, the fair traders made one mistake. Most State laws included a so-called nonsigner clause.

In 1951 the Supreme Court ruled nonsigner clauses were price-fixing by compulsion, a violation of antitrust laws in regard to interstate commerce. This decision knocked the props from under the fair traders, but only temporarily. In 1952, when Congress convened, one of the most powerful lobbies in Washington was back at its old stand. It paid off in the passage of the McGuire bill, which amended the Federal Trade Commission Act of 1914 to permit minimum resale price agreements between manufacturers and retailers and to extend the agreements to nonsigners.

There are a number of legitimate objections to fair trade laws. They are discriminatory. They unfairly gouge the consumer. They do not prevent unfair competition; rather they eliminate competition on the retail level. They legalize price-fixing, a procedure abhorrent to the American public.

Rather than pass another fair trade law, Congress had better busy itself in repealing such discriminatory legislation.

Our Position in Space

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I wish to call to your attention the following editorial appearing in a recent issue of the Evening Star. This is a report on the able speech made by Dr. T. Keith Glennan, Administrator of the National Aeronautics and Space Administration, to the National Petroleum Association meeting in Cleveland:

OUR POSITION IN SPACE

The great problems and promises involved in our country's effort to achieve leadership in space have been effectively outlined by Dr. T. Keith Glennan in the address he has just delivered to the National Petroleum Association meeting in Cleveland. Taken as a whole, the picture he has drawn is encouraging, but he has been at pains to emphasize that our position in the field is still second to that of the Soviet Union in at least one important respect.

Thus, speaking as head of our National Aeronautics and Space Administration, Dr. Glennan has made clear that the Russians are substantially ahead of us at present in terms of being able to place heavy payloads in orbit—a superiority explained by "the fact that they began serious work in the ballistic missile field 6 or 8 years earlier than we did." As a result, we have quite a lot of developmental labor cut out for us in trying to catch up with them in the power of our rocket propulsion, and they may therefore be the first to send a man on a successful round-trip orbital flight.

But this does not mean that the United States has lost the race. Far from it. Actually, as Dr. Glennan has pointed out, our position in spatial fields other than rocket power is a good one. For example, "with respect to the acquisition of data obtained from sensors in our small but highly instrumented payload packages, and the analysis and interpretation of that data, it seems clear that we have done as well as the Soviet scientists—indeed, in some areas, somewhat better." Accordingly, in terms of technological know-how, there is every reason for confidence that we can come abreast of the Russians, and eventually surpass them in the exploration of the universe around us.

In any event, to that end, the NASA, wholly apart from the Pentagon's Advanced Research Projects Agency, has prepared short-range and long-range programs designed to make the United States second to none in space. These programs, besides being aimed at such objectives as placing an American in orbit some time in 1961, include the establishment of spatial laboratories, orbital systems of weather forecasting and global communications, and unmanned and manned landings on the moon. Above all, they envision the production—for use within the next 4 years—of a single-chamber rocket booster engine that will provide between 1 and 1.5 milion pounds of thrust.

Given such an engine (a comparable but makeshift intermediate version is expected to be developed much earlier by the Army Ballistic Missile Agency), our country will be equipped to do many spectacular things. In Dr. Glennan's words, we will be able, for instance, "to propel a payload weighing more than 18 tons into a satellite orbit. Or we can land as much as two tons on the moon intact. Furthermore, by arranging four of these engines in a cluster, we can raise our orbital payload to 75 tons, or place up to 8 tons in a soft landing on the moon." And the exploration of places like Mars and Venus will then become anything but fantastic.

This is a prospect that speaks pretty much for itself. Within a matter of just a few years, the United States will be moving out into space in ways and to distances which only recently were regarded as inconceivable. Russia will be doing the same thing, of course, and probably one or two other countries as well. But we need not fear losing the race if we act with vigor and dispatch in meeting the challenges it poses.

Foreign Military Aid—Doubts of Its Combat Effectiveness Reflected in Congressional Debate

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. HOLTZMAN. Mr. Speaker, I would like to take this opportunity to include in the RECORD an article by Hanson W. Baldwin, which appeared in the New York Times recently.

The article deals with the question of foreign military aid, and I urge all my colleagues to read it carefully:

FOREIGN MILITARY AID—DOUBTS OF ITS COMBAT EFFECTIVENESS REFLECTED IN CONGRESSIONAL DEBATE

(By Hanson W. Baldwin)

The continuing debate on foreign military aid, now resumed after the congressional recess, has become a recurring phenomenon of each legislative session.

The debate reflects far more than a thwarted longing for the dear dead days beyond recall when isolationism and a "Fortress America" strategy were viable political-economic-military concepts. Nostalgia and a human desire to get away from the world's problems are inherent in the perennial foreign aid debate, but there are other more important factors.

One is a feeling, fostered by the origin of the foreign aid programs, that there should be some finite end in sight to a program of overseas aid. When foreign aid was started Congress and public opinion believed that the aid was temporary, to help fill the vacuums of power left by World War II. But it has assumed a permanent character over the years and the pressure of high taxation prompts an annual reexamination of the program.

Another factor that has provoked increasingly intensive analysis of foreign military aid by Congress is the lack of adequate mechanisms in the executive branch of Government for continuous critical review of the program's combat effectiveness.

An ad hoc committee to study foreign military aid, headed by William H. Draper, Jr., is now undertaking such a review in behalf of the President, but such judgments should be continuously available, in the opinion of Congress.

There are, also, some serious military reservations in the Pentagon. These apply not to the principle of collective security, of overseas allies, nor of foreign aid, but to some of the methods and practices that have characterized the program.

The old shibboleth, so often used to sell the program, that a dollar spent overseas to train and equip allies buys much more combat effectiveness than a dollar spent on U.S. forces is particularly resented by some officers in the Pentagon. It is certainly open to serious challenge.

The basis for this easy generalism is, of course, that foreign soldiers and equipment are cheaper, that the Nation can get more divisions, more bang for a buck. But omitted from this inaccurate formula is the factor of comparative quality. Too often no detailed analysis, country by country, is applied as a qualifying factor.

There are other factors in certain countries that, in the opinion of some qualified military men, have seriously reduced, in those countries, the value of the foreign military-aid program. Too often military aid has been used as a political prop, or for nationalistic prestige purposes, as in Iraq. It would be hard to prove that the money spent for military aid to Iraq has served any really useful purpose.

Too often the United States attempts to build in small, undeveloped countries armies after its own image, with all the informal trappings that go with a major industrialized state. And too often, when dealing with its largest allies, the Nation has been reluctant, or slow, to furnish them the arms that have for them major political and military significance today—nuclear weapons and missiles.

CHANGES ADVOCATED

Many military observers believe that there should be some important changes in the Nation's objectives and methods in some countries. In many of the smaller countries the original objective of military aid has been completely altered with the years. In small countries, like Thailand, there are really only two valid goals for any military-aid program: an internal security force powerful enough to prevent any Communist coup or conquest by subversion and a small trigger force, ready to fire the first shots against external aggression.

Both of these forces should also have the capability of organizing, leading and developing, with this country's help, a major indigenous guerrilla effort in case of invasion. The kind of armed force needed and the type of warfare to be waged would obviously vary with the terrain, climate, people, and other conditions.

But the sort of defense that the Tibetans have employed against the Chinese Communists offers far more hope in terms of combat effectiveness for each dollar spent than a show army of tanks and jet planes that would always be outnumbered and that the smaller nations could never properly employ.

In the case of our larger allies—France, the United Kingdom, Italy, West Germany, and so on—the problem differs materially. Despite the political and military dangers of a greater dispersal of nuclear arms, it is clear that such a dispersion will take place, no matter what the United States does.

These nations have acquired or will acquire nuclear weapons and missiles, but with this country's help they can become nuclear-missile powers of importance far more rapidly and at less cost than if they must depend upon their own resources. This affirmative policy, fortunately, has been endorsed, but practically it has been implemented far too slowly.

These factors, plus individual mistakes and inefficiencies, are some of the problems that underlie the congressional debate on foreign aid. They deserve continuing critical examination, not only by Congress, but also by the executive branch of Government.

Fair Trade

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an editorial appearing in the Arkansas Gazette on Monday, January 12, 1959. That excellent newspaper carefully recognizes and chronicles the danger inherent in the so-called fair-trade bill, H.R. 1253, now pending in the House of Representatives.

I hope all will read this excellent editorial and will be aware of the dangers not only to the consuming public but to the small businessman inherent in H.R. 1253:

FAIR TRADE

One of the first legislative presents offered to voters who thought they were electing a more liberalized Democratic Congress is a Federal fair trade proposal.

This measure was introduced on the first day of the new Congress by Representative OREN HARRIS of Arkansas. Because Mr. HARRIS has been elevated to the chairmanship of the governing House Interstate and Foreign Commerce Committee through the workings of the seniority system, the apprehensive consumer can be assured that this piece of arbitrary price-fixing legislation will get favorable treatment in committee.

The Harris bill is an attempt to write around court decisions invalidating similar State laws, the most extreme of which sought to bind every tradesman in a State to a price-fixing agreement which might have been signed by only a single retailer.

One of the recurrent mysteries of American economic life is the fact that where price (and wage) ceilings are widely regarded as unthinkable even in times of near-war, there is no comparable outcry against the imposing of price floors, except, as we have seen, in the courts.

This is in part because there is no consumers' lobby in Washington. There are manufacturers' lobbies and retailers' lobbies but no consumers' lobby, unless one is naive enough to believe that Congress itself is supposed to act in that capacity at least part of the time.

The consumer's only chance lies in his ability to cut through the fog of extraneous issues every 2 years to get at some of the men in Congress who have done him wrong.

If the majority in the House is wise it will reflect that the protest vote heard last November 4 was in large measure a rebellion against the cost-of-living squeeze.

The 86th Congress was not elected, we are certain, in order to settle a burden of high fixed prices around the shoulders of the presumed end beneficiary of the American economic system. Not, that is, if the purpose of the American enterprise system is the free and full movement of goods.

Desegregation and the Law

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. PORTER. Mr. Speaker, one of the most important of the recently published books in the United States dealing with a problem vital to the Nation is "Desegregation and the Law," by Albert P. Blaustein and Clarence C. Ferguson, Jr. It was published late last year by the Rutgers University Press.

As Adlai Stevenson wrote to the authors, "You have made an important contribution to this field which is so important and so urgent."

The most comprehensive review of this book, setting forth its scope and importance, is the review by the outstanding lawyer, Nathaniel Phillips. A portion of this review, which appeared in the January-March issue of the New York County Lawyers' Bar Bulletin, follows:

AVOIDANCE, EVASION, AND DELAY

(Review of "Desegregation and the Law," by Albert P. Blaustein and Clarence Clyde Ferguson, Jr. The Rutgers University Press, 1957. $3.50.)

The drama of the struggle for integration and the dread accompaniments of the efforts toward desegregation are brilliantly and frighteningly set forth in a notable work, "Desegregation and the Law; the Meaning and Effect of the School Segregation Cases." The authors, Albert P. Blaustein and Clarence Clyde Ferguson, Jr., are members of the faculty of Rutgers University Law School.

In the first sentence of the book, and with fine simplicity, they have expressed the aim of their work. "Here is the story of a case decided by the Supreme Court of the United States. And the purpose of this book is to explain the background, significance, and future of that case." They have told the story admirably.

They refer to *Brown* v. *Board of Education* as the most important legal decision of the 20th century. They go on to say it may well have been the most important legal decision ever rendered by an American court. This reviewer agrees, while remaining fully mindful of *Marbury* v. *Madison*, *McCulloch* v. *Maryland*, *Gibbons* v. *Ogden*, and Dred Scott.

The authors have presented a balanced work, authoritative, capably indexed, and fully but not overwhelmingly annotated. The book is more than a mere study of legal phases of desegregation. It is a lucid and very readable approach to a survey of a most complex admixture of legal, economic, and sociological factors. It is a fine recital of the legal history that preceded *Brown* v. *Board of Education*. In fact, the authors admit that in considering the Brown case, the Supreme Court might have agreed with John W. Davis as principal advocate for the South that after 50 years of failure to declare separate but equal invalid, it was too late to raise the argument anew in 1954. But the authors show that in no case since Plessy did the Supreme Court reach the specific determination

of whether a racial classification was unconstitutional per se. The nine men in 1954 met the specific question head on.

Said the Court in the Brown case, "Did separation itself result in an inequality which deprived Negroes of their personal and present rights as guaranteed by the equal protection clause?"
